Most readers are familiar with the old individual stands used as recently as 1909, where the rear stay carried a clamp and the leg of the stand swung down and was held in place by a thumb-nut. There was one of these on each side of the machine, and riders had to adjust them separately. Well, one of these individual props makes a fine sidecar stand, fitted on the rear member and swinging up toward the left. You can still get these stands at most of the big supply houses. A strap for holding the leg up to the frame member should be used as an additional precaution, as the clamps on many of these stands will not hold.

SECRETARY GIBSON reports having received an application for affiliation with the F. A. M. from China.

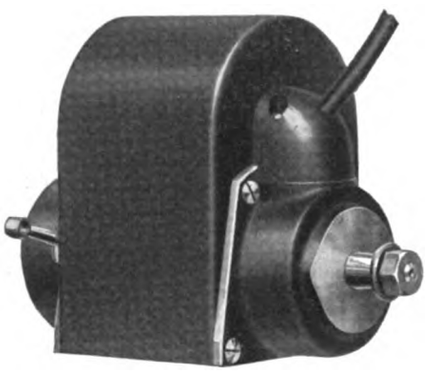
BERLING MAGNETO OF IMPROVED DESIGN

Motorcycle Ignition Product of Ericsson Mfg. Co. Embodies Results of Three Years' Tests in Up-to-date Buffalo Factory—Simplicity and Efficiency are Combined to Marked Degree and Special Attention has Been Given to Water-Proofing—Both Single and Twin Motorcycles are Provided for.

A RECENT addition to the field of motorcycle ignition fitments and one calculated to impress riders favorably is the Berling magneto, produced by the Ericcson Mfg. Co., of Buffalo, N. Y. This magneto is the invention of W. C. Berling, who has been associated with the Ericsson company for three years, and whose experience as a magneto engineer extends over eight years. Practically all of Mr. Berling's time at the factory during the last three years has been devoted to developing the magneto which is now being introduced.



Berling Magneto, Showing Waterproof Construction.

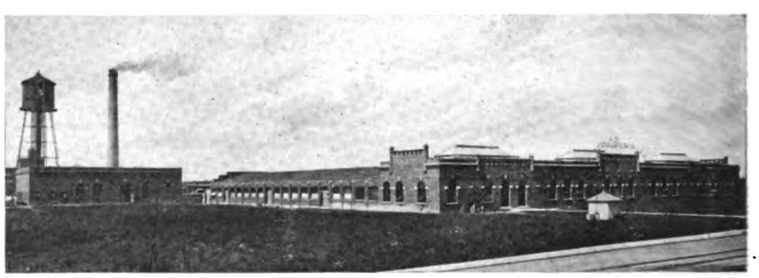
In order to be thoroughly reliable, a motorcycle magneto must, in the first place, be proof against water and dirt to the greatest possible extent. This point is attained in the Berling magneto by providing a drawn metal cover, which completely and tightly encloses the main body of the magneto. To further this same purpose the interrupter is enclosed within a tight-fitting cap. This cap is in one piece instead of being made in the usual manner, in two pieces, and this greatly decreases the possibility of water or dust reaching the interrupter.

Another important point which adds to the water and dustproof qualities of the Berling magneto is the fact that the high-tension cables are brought out directly from the terminals in such a manner that no metal parts are exposed, thus eliminating the possibility of "missing," caused by water and dust grounding the high tension terminal. Dirt and water are prevented from entering the driving end bearing by a felt washer.

A motorcycle magneto is necessarily exposed to excessive jarring, and it is therefore important that all parts be securely fastened together. This result has been obtained in the Berling magneto by the use of a special range of gauges of screws which are of standard size, yet are within such very close limits as to insure tight fitting screws wherever used, thus preventing looseness.

The Berling will throw an efficient spark of 3/16 inch length at a speed of 75 revolutions per minute. This efficiency is the result of painstaking effort in the design of the magneto, the selection of material and the building up of different units. An extremely small air gap between armature and field—about 5/1000 of an inch; accurate proportioning of magnets and armature; equally accurate balancing of armature windings and condenser with relation to the strength of the magnets; an extremely lively and snappy interrupter, as well as a correct treatment of application of the magnets to the field, are all factors of design accounting for the high efficiency of this magneto.

Magnets and pole pieces, armature iron and laminations, as well as the interrupter, spring steel and platinum contacts, are made according to Ericsson's own specifications and anlysis, and each and every new lot of material received is thoroughly tested and must correspond to certain high grade standards before being approved for production. The most minute care and supervision is employed in the winding of the armature and the building up of the mica condenser, which is made proof against breakdowns by a special process of impregnation which prevents water and damp atmospheric conditions interfering with the efficient operation of the magneto.



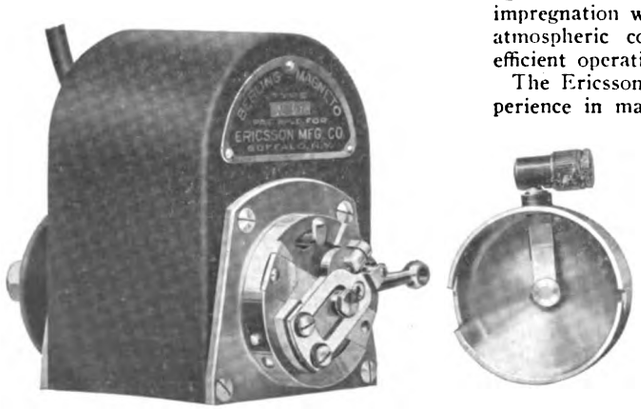
Buffalo Factory of the Ericsson Mfg. Co., Home of the Berling Magneto.

The Ericsson Mfg. Company's years of experience in making magnets is the best possible assurance of the life of the magnets in the Berling magneto. Ericsson knows exactly the right grade of steel, the proper treatment and the proper specifications for the making of magnets that will have long life.

The bearings are of the highest grade obtainable (the imported Norma ball bearings); the platinum contacts are extremely hard and proof against deterioration; the insulating material is of a kind that will stand very high heat without decreasing its electric strength and without warping; the device actuating the interrupter is made in such a manner and from such material that the possibility of wear is practically eliminated.

In appearance, the Berling magneto is very symmetrical and without a number of protruding studs and springs, thus making it easy to keep clean and preventing any interference with the mechanism of the magneto. It is furnished with several different kinds of mounting dimensions, which makes it possible to mount the magneto on motorcycles arranged for other standard makes.

The magneto is easily accessible when attached to the machine, all parts which require inspection and adjustment being within easy reach. The cap protecting the interrupter can be removed by a simple turn and pull; removal of this cap will completely disclose the interrupter, and when so disclosed the interrupter still remains in operation. This result is obtained by having the cams which operate the interrupter an integral part of the machine and not a part of the dust cover. The advantage of this arrangement is apparent; the interrupter can be inspected while the engine is running, in order to ascertain if it is working properly. Another advantage claimed for the interrupter is the ease with which it can be adjusted. There are no cumbersome hexagon screws and lock nuts to be manipulated. On the Berling the interrupter adjustment is made in a simple manner by loosening an ordinary screw locking the platinum contact screw. This screw is made in the form of a capstan screw and is easily adjusted with a pin, small nail or similar instrument and without the necessity of using a specially made tool for this purpose. On the single cylinder Berling magneto the high tension terminal can be removed by unscrewing two screws, which are easily accessible from above. On the two-cylinder magneto the high tension terminals can be removed without using any tool whatever, a simple turn of the knurled knob on the block wedged in between the two terminals removing them with ease.



The Berling with Cover Removed to Show Mechanism.

A WORCESTER OUTING

A PARTY of Worcester (Mass.) riders, consisting of Joseph H. Bennett, C. Nelson Robinson, M. L. Ripley and Dorace Bottomly, the latter two riding tandem, recently made a Sunday trip to Springfield.

Digitized by Google

A CHICAGO BOOSTER.

ONE of the most active figures in trade and F. A. M. circles in Chicago is John L. Donovan, Federation State Commissioner for Illinois, and a live wire in the sales organization of the Beckley-Ralston Company.

The accompanying photograph shows Mr. Donovan to be just the sort of genial and enthusiastic booster to obtain results wherever he may happen to go after them—and he is going after them in some direction every hour of the day. Donovan was one of the busiest representatives at the recent Chicago show, and he is a strong rooter for independent motorcycle exhibitions.

BOUND BROOK DANCE

MOTORCYCLE riders of Bound Brook, N. J., recently attended the first dance given by the Bound Brook M. C. The affair was held at Voorhees Hall, which was decorated with pennants from numerous towns and cities which the riders have visited.

The present staff of officers of the B. B. M. C. is as follows: W. Haelig, president; W. Smith, vice-president; D. Beonio, secretary; F. Stangle, treasurer, and L. S. Brokaw, captain, with A. Karno and I. Sweazy, lieutenants. E. A. Younger and R. Rhinehart are directors. The club moved into its new quarters on March 1.

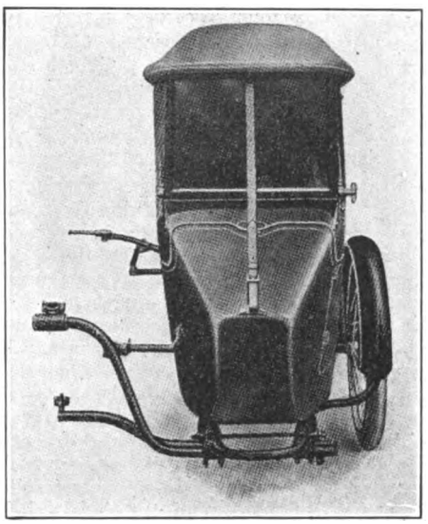
J. Walter Benton, 67 years of age, a sidecar enthusiast of Reading, Pa.

F. A. M. COMMISSIONERS

E. B. EWELL, of 310 North Park street, Richmond, F. A. M. State Commissioner for Virginia, has appointed the following local commissioners: T. D. Shumate, Roanoke; G. H. Tompkins, Richmond; W. H. Jeffrys, Newport News; W. H. Fuerstein, Norfolk, and J. F. S. Duke, Charlottesville. This body, together with W. C. Jones and E. Ball, of Norfolk, J. T. Preston, of Roanoke, and E. B. Ewell constitute a committee which will meet at Richmond on March 1 for the purpose of perfecting plans for a state tour and convention which is to be held in Norfolk during the spring. Mr. Ewell is anxious to secure information from riders who have toured through the state regarding the road conditions.

HOLD BEACH RACES

THERE are now about 60 motorcycle riders of Atlantic City, N. J., who are members of the Atlantic City M. C. A run is held every Sunday, and since permission has been obtained from the Mayor they have held a number of races on the beach. These are always watched by a large crowd on the board walk.



A type of enclosed sidecar that is growing in favor abroad.

OFFENDERS ARE WARNED

A NUMBER of members of the Bakersfield (Cal.) M. C. have been appointed special officers to assist in curbing speeders and open-muffler fiends, and they have adopted a novel method to obtain results. Offenders are interviewed and advised to turn over a new leaf, and if they persist in violating the speed or noise regulations they are dealt with more harshly.

AN UPKEEP RECORD

OFFICIAL records from the Detroit (Mich.) Police department show that the up-keep cost for the six twin Indians used by the department was $13.13 for 8 months, or $2.18 for each machine. The distance covered during that time exceeded 30,000 miles.

DURING the month of January, Ben Spain, a paper carrier for the Phoenix (Ariz.) *Republican*, who uses a motorcycle over his route, covered 1860 miles. He rode about 60 miles a day and his average consumption of gasoline was 1 gallon to 84 6/11 miles.

Motorcyclists of Red Bluff, Cal., recently made a Sunday run to Redding.

A POPULAR MANAGER.

IN appointing Oscar S. Brandt manager of his new uptown branch at 208-210-212 West Seventy-fifth street, New York, F. A. Baker, Indian distributer for that district, made a selection which is popular throughout Metro-

politan motorcycle circles. There probably is no better liked motorcyclist in Greater New York than "Red Devil" Oscar Brandt.

Brandt is a native son of Pennsylvania and an old time bicycle rider of note. He rode frequently at the famous Springfield tournaments, where he became acquainted with President Hendee and Vice-President Hedstrom, and in tandem races he has been both teammate and competitor of the latter.

When the motorcycle came in, Brandt became active in the new sport, and long experience as an Indian rider has well equipped him for his new duties. He is prominent in Metropolitan motorcycle club circles, and is president of the Motorcycle Touring Club.

MOTORCYCLES will be exhibited for the first time in connection with the annual automobile show at Pittsburgh, Pa. This is the seventh annual show in Pittsburgh and will be held April 5-12.

ABOUT seventy motorcycle enthusiasts of St. Louis were present at the recent banquet given by the Independent Motorcycle Association at its clubrooms, at 308 North Jefferson avenue.

Mrs. A. Strogonoff, Schenectady, N. Y., who drives her own Emblem on some long trips.

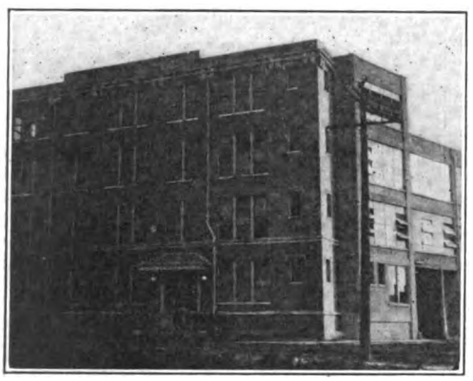
NEW BUILDINGS AT BIG MIAMI PLANT

IN the photographs on this page are shown the new office building of the Miami Cycle and Mfg. Co., at Middletown, O., and a view of the new wing which was recently completed. The office building was taken over only about a week ago and is undoubtedly one of the best equipped and most attractive of its kind. The building is four stories high, and is concrete and steel throughout, and the front is faced with artistic buff brick.

Just inside the door is located a waiting room for visitors, and on the left is a large telephone switch-board connecting with every department in the factory. President K. R.



Entrance to new Miami office building.

Jacoby's office is located on the right, and just beyond him J. F. Merkel also has an office. The left side of the first floor is occupied by the accounting department, purchasing department, pay-master's office and the cashier and H. S. Wise, assistant general manager and treasurer, also has his office here. The sales and advertising department occupy the entire second floor, the production department is on the third floor, and the experimental department on the top floor.

When they moved into the new offices, the Miami Cycle & Mfg. Co. discarded all the old furniture, and now has the most up-to-date office and equipment obtainable. Specially designed filing cabinets and sanitary flat top desks are part of the equipment. Dictaphones are used exclusively throughout the entire office. Each department has its own fire proof vault, although there is little likelihood of any damage by fire as the latest automatic sprinkler system is placed so as to reach every nook and corner of the building.

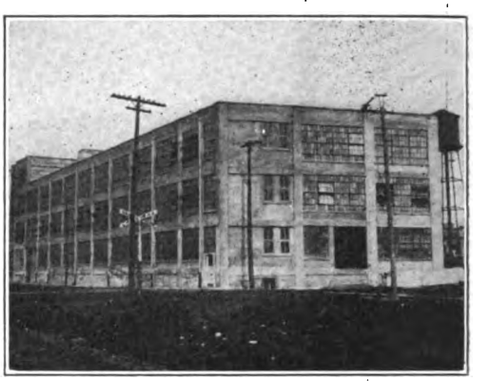
The new wing shown in another photograph was added to the plant this fall and has just been taken over from the contractor. It will be seen that it is entirely a steel and concrete structure. Practically the entire wall surface consists of glass and affords usually fine lighting and ventilation. The entire first floor is given over to the shipping department and an extra long platform makes it possible to load three cars at one time. As the receiving is done from a special track laid at the other end of the factory, there is no congestion between incoming and outgoing freight.

The motor assembling department occupies the entire second floor, and with the new specially designed assembling stands which have just been put in operation, it will be possible to assemble 100 motorcycles every day.

The top floor is occupied entirely by the bicycle department. So active has this branch of the Miami Cycle & Mfg. Company's business become that it is necessary to ship out 300 to 350 bicycles every working day of the year in order to keep pace with the orders.

Directly between the office and the factory extension is a brick areaway or driveway entering into the spacious yard between the factory buildings. Here the three big automobile trucks of the company pass in and out many times a day, while twenty-five testers ride into the areaway and discharge and mount their machines from a large elevator which descends to the level of the driveway. It is necessary to keep twenty or twenty-five testers on hand all the time as every machine is given a thorough road test before being shipped from the factory to a customer.

Several changes have been made in the Flying Merkel organization within the last month. A. C. Bryan has been made factory manager and has entire charge of the company's plant and its production. That he has made good is shown by the increased production apparent



New Miami wing that is now occupied.

in the last month. H. Cameron Forster, who has had wide experience in the selling end of other lines, is now connected with the sales department and will devote his energy to promoting sales of Flying Merkel motorcycles. Louis Weinman has been put in charge of the order department, with several assistants. C L. Hartsell is in charge of the pricing department, a new institution, and C. L. Miller, formerly with the Stoddard-Dayton factory, has been placed in charge of sales statistics. E. W. Adams, who looks after the sales of the entire Miami product on the Pacific coast, arrived at the factory last week and will spend some time in Middletown conferring with Sales Manager J. W. Ash concerning the company's various lines for 1914.

A night shift was put on at the factory last week and the Miami plant is now the busiest plant in the city. Despite the unprecedented rush or orders, prompt shipments are being made.

NEW HAGSTROM MANAGER

CHARLES LANDER, who will take up the management of the Hagstrom Brothers Mfg. Co., of Lindsborg, Kan., on the retirement of P. E. Zimmerman, who will be State representative for one of the leading motorcycle manufacturers, is one of the big men of Kansas from a standpoint of politics and business ability. He served a term in the legislature, and is at present the vice-president of the Board of Regents of the State Normal schools. He has been successful in business and farming and now owns and operates a large ranch near Lindsborg. Scientific farming is one of his specialties, and he is known as a high authority on agricultural matters. He is also an ardent motorist, and his influence will soon be felt in the realm of supply manufacturing.

"MECO" CATALOG

ANNOUNCEMENT is made by the Motorcycle Equipment Company, of Hammondsport, N. Y., that its new catalog, a well-illustrated 40-page booklet, is now ready for distribution and that the output will be 60,000 copies. Thousands of copies have already been sent out to dealers and riders and the remaining supply will be disposed of as rapidly as applications for them are received.

The company now has a Pacific Coast branch at 3664 South Main street, Los Angeles, where arrangements have been made to meet all the requirements of the coast trade.

USED J-D SPARK PLUGS

IT is with justifiable pride that the Jeffery-DeWitt Company, of 55 Butler avenue, Detroit, Mich., calls attention to the fact that its spark plugs were used by Lee Humiston in his trials at the Playa del Rey saucer which hung up a new set of world's records. It goes without saying that absolute dependability in the ignition system is a requisite for record-smashing, and the Jeffery-DeWitt folks feel that their claims relative to J-D plugs have now received new backing of the most substantial sort.

ALCORN RESTING UP

TOLEDO, O., March 1.—Factory Manager W. C. Alcorn, of the Yale, has been suffering poor health for some time, and has asked for and obtained leave of absence in which to rest up and get back into shape. For about 60 days, Mr. Alcorn has felt the necessity of easing up the strain of business cares for a time, and as he has now gotten things at the factory in condition so that all will go smoothly without him, he will follow his doctor's orders, and seek a change of climate.

In the absence of Mr. Alcorn his duties will be taken up by Superintendent Samuel J. Chubbuck, veteran of many endurance runs, and Short Grass tourist. Chubbuck's knowledge of all factory details is most intimate, for he has been in the Yale factory since its "prehistoric" days, and has every little point at his finger's ends. As superintendent, he has shown executive ability of an uncommon order, knows how to get the most out of a given number of men and machines, and gets results without making any fuss about it. Chubbuck will take up the work of factory management at once.

IN order to encourage a larger membership the Toronto M. C. has reduced its membership fee from four to two dollars a year. The club recently held a euchre party, and an "evening at home" is the next on the slate.

ANNOUNCEMENT is made that owing to the high cost of material which is being built into the new Eagle chain-drive twin by the American Motor Company, it has been found advisable to increase the price of this sturdy mount from $275 to $285.

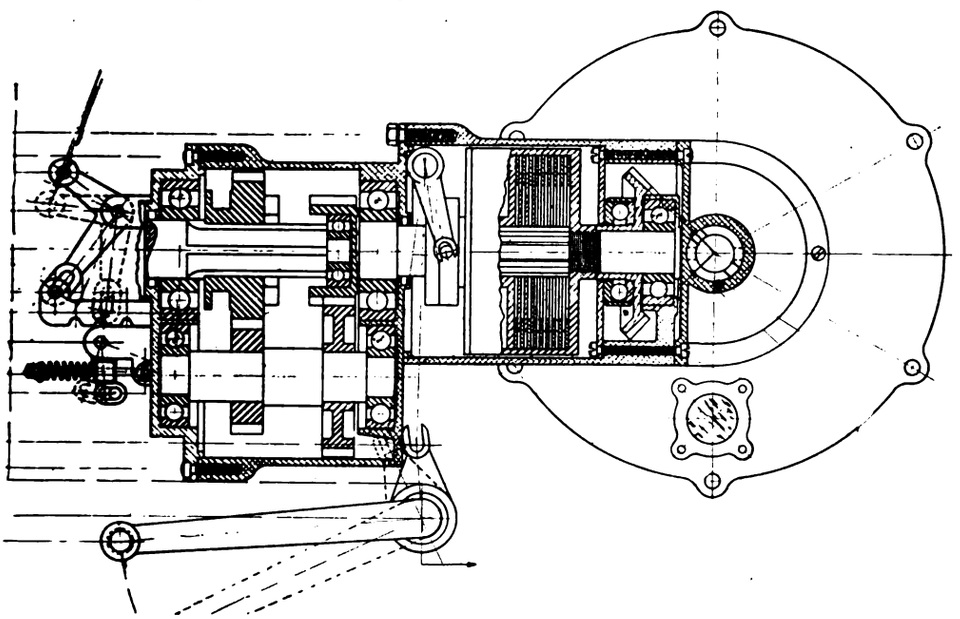
OPPOSED MOTOR ON BAILEY FLYER

Unique Portland Product has Automatic Two-Speed Gear, Shaft Drive and Pedal-Operated Band Brake—Ball Bearings Throughout and Handle Starting are Also Features of 9h. Air-Cooled Twin.

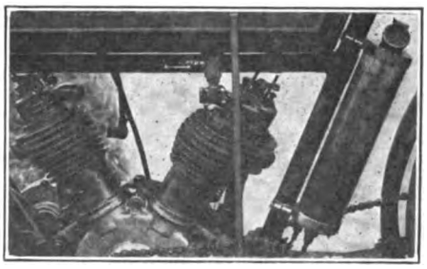
FITTED with a two-speed gear of the sliding type and driven by a two-cylinder opposed air-cooled motor, the new Bailey Flyer, the product of the MacLeod Manufacturing Company, Thirteenth and Johnson streets, Portland, Ore., is a most interesting addition to the motorcycle ranks. It can be claimed that this is the most powerful opposed motor ever mounted in a motorcycle frame, and with the recent performances of smaller motors of this type abroad, the Bailey product should be of unusual interest as well as being of a form in which the running, standing and firing balances are the peer of the best four-cylinder types. Robert L. Bailey, the designer, tested one of these machines for over 23,000 miles before placing the type on the market.



The motor is all ball-bearing and has a bore and stroke of 3¼ and 3¾, respectively. Automatic inlets are fitted and the ignition is by Bosch high tension magneto. The carbureter is a Schebler. The motor shaft drives a bevel pinion which meshes with a bevel gear on the drive shaft, which is located on the righ hand side. There is a multiple-disc clutch fitted at the front end of this shaft. The rear end of the shaft has another bevel pair which drives the rear wheel.

Ample ball-bearings are fitted throughout the machine in additon to those in the motor, and particular care is taken as regards the thrusts of the bevels, and the frame is thus prevented from distortion. The two-speed gear is fitted behind the clutch in a casing forming a prolongation of that carrying the drive shaft and is operated by a lever. The gears used are of chrome nickel steel, carefully treated and rectified. The method of shifting is unique, the operator setting the change gear lever on the frame to the proper position for the desired gear and on releasing the clutch, the shift or change is made automatically. The casings used for the gear set and clutch are of aluminum, and the latter connects to the crankcase of the motor, making the whole a unit for all practical purposes. The initial impulse to the motor is given by a hand crank, and consequently there is no pedal gear fitted. The brake is of the contracting band type, fitted at the left side and the drum forming part of the rear hub. A backward pressure on the pedals fitted sets this brake.

The tank has a capacity of 2½ gallons of fuel and 2 quarts of oil. The spring fork is of the coach type with scroll end, and the saddle fitted low down on the rear construction for an unusually low position. The handlebars are of the V-type and grip control is fitted. The wheels are 28 inches and 3-inch tires are standard equipment. The wheelbase is 58 inches and the standard color is French grey. Price is quoted at $350.



Glass Oil Reservoir on English Enfield; Note Also Method of Fastening Cylinders.

FEBRUARY GROWTH.

F. A. M. membership gains for the month of February are reported by Secretary Gibson as follows: Maine, unaffiliated 1; New Hampshire, unaffiliated 1, renewal 1; Massachusetts, affiliated 3, unaffiliated 7, renewals 25; Rhode Island, renewal 1; Connecticut, unaffiliated 1, renewals 2; New York, affiliated 25, unaffiliated 14, renewals 20; New Jersey, affiliated 23, unaffiliated 5, renewals 7; Pennsylvania, affiliated 14, unaffiliated 9, renewals 15; Maryland, affiliated 11, unaffilited 1, renewals 8; Virginia, affiliated 2, unaffiliated 2, renewal 1; West Virginia, unaffiliated 1, renewals 3; Delaware, affiliated 1; District of Columbia, affiliated 1; North Carolina, unaffiliated 1, renewal 1; Tennessee, renewal 1; Georgia, renewal 1; Florida, renewal 1; Alabama, renewals 5; Arkansas, renewal 1; Texas, affiliated 10, unaffiliated 3; Kentucky, unaffiliated; Oklahoma, unaffiliated 1, renewals 2; Ohio, affiliated 31, unaffiliated 5, renewals 34; Indiana, affiliated 3, unaffiliated 4, renewals 11; Illinois, affiliated 22, unaffiliated 7, renewals 13; Missouri, affiliated 11, unaffiliated 1, renewals 3; Wisconsin, unaffiliated 6, renewals 2; Michigan, affiliated 19, unaffiliated 2, renewals 5; Minnesota, unaffiliated 4, renewals 2; South Dakota, renewals 2; Nebraska, renewal, 1; Kansas, affiliated 12, unaffiliated 2, renewals 6; Iowa, unaffiliated 3, renewal 1; California, affiliated 29, unffiliated 15, renewals 16; Utah, unaffiliated 1; Colorado, unaffiliated 1, renewal 1; Wyoming, renewal 1; Montana, affiliated 4, unaffiliated 6, renewals 2; Idaho, unaffiliated 1, renewals 9; Oregon, affiliated 13, unaffiliated 4, renewals 3; Washington, affiliated 1, renewals 4; Canada, renewal 1; Philippine Islands, affiliated 8, renewal 1. The totals for the month are: Affiliated, 243; unaffiliated, 112; renewals, 213. The last card issued in February was number 20,134.

THAT there really can be something new under the sun in the way of local advertising for motorcycle dealers is indicated by the accompanying photograph which shows how Oron Overton, of Mobile, Ala., announced that he had received his consignment of 1913 Indians.

A MACHINE RECOVERED

CHARLES F. SCHRAEDER, Sheriff of Mesa County, Col., has received a check for $25 from the F. A. M., as a reward for the recovery of a member's machine. This is the tenth reward paid by Secretary Gibson. The machine, which belonged to Felix Carson, of Grand Junction, was stolen on September 29 last, by Ralph Berry, who has been sentenced to two years in prison.

ERNEST C. COX, former sales manager of the Texaco Oil Co., has taken a position with the Findeisen & Kropf Mfg. Co., makers of the Rayfield carbureter. He will be manager of the eastern sales and service branch, at 1902 Broadway, New York.

MORE than 300 motorcycles are registered in Ashburton, New Zealand, according to latest figures.

Digitized by Google

MOTORCYCLES WIN TEST

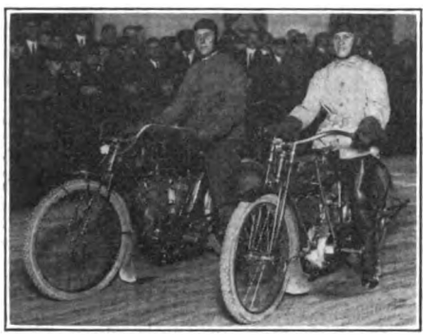
FOR some time past the firm of Bishop McCormick & Bishop, Long Island distributors for Page, Cole and Ford automobiles, and located on Halsey street, Brooklyn, have conducted an emergency repair department. Automobiles have been used for this purpose, but the service has not been found satisfactory and the cost of maintenance has been high. The company recently concluded a series of tests in which automobiles and motorcycles were rushed about on hurry jobs. The motorcycle proved so efficient and the upkeep was so low that a number of machines were purchased. Harry A. Patterson, the "live-wire" Brooklyn and Long Island Indian agent, was successful in landing the order. These machines were exhibited at the booth of Bishop, McCormick & Bishop at the Brooklyn Automobile Show, held in the Twenty-third Regiment Armory last week.

LIMA AGENTS

LIMA, Ohio.—The Lima Cycle Co., 212 West High street, has taken the agency for the Yale for Lima and vicinity. Z. L. Bedford & Co., 125 East High street, will handle the Harley-Davidson.

A SKATING RINK COURSE

BOB PARKER, on the Flying Merkel with which he won a recent race at the Elyria (Ohio) skating rink, appears at the right in



the accompanying picture. The event was for two miles and Parker won over Carl Hiller, who is shown at the left on his Indian, by 10 feet. Both riders mounted 7 h. chain-driven machines.

NEW ENGLAND AGENTS.

THE Boyd Motor Company, of Boston, one of the most important motorcycle concerns in New England, will handle "Flying Merkel" motorcycles exclusively during the season of 1913. This arrangement, which was just concluded last week, means that the self-starting two-speed "Yellow Jackets," and others of the Flying Merkel family, will receive proper representation in that portion of New England contiguous to Boston.

The Boyd Motor Company is planning the most comprehensive advertising campaign ever undertaken in New England, and, in fact, several large advertisements have already appeared in the New England daily newspapers. This has produced such a flood of inquiries that this week they wired for a carload of machines.

SOME MERKELITES

NEIHAUS & DOHSE, of Dayton, Ohio, who handled the Flying Merkel last year in that territory, have renewed their contract and will have a larger field. An order has been received from the Dayton police department for a number of machines. The entire motorcycle squad in Dayton will now be equipped with Merkels.

A week's additions to the list of Merkel agents are reported as follows: Sawyer & Son, De Kalb, Ill.; Matthew Lamberg, Bridgeport, Conn.; A. A. Stoddard, Jacksonville, Fla.; A. D. Swanson, Galesburg, Ill.; A. L. Marple, Cumberland, Md.; John G. Ledyard, Camden, N. J.; Cliff Tunti, Lorain, Ohio; G. E. Grass, Troy, Ohio; H. A. Jackson, Soottdate, Pa.; Roanoke Cycle Co., Roanoke, Va., and the Poultney Auto & Machine Co., Poultney, Vt.

SWINEHART EXTENSION

ACCORDING to a recent statement made by President T. F. Walsh, of the Swinehart Tire & Rubber Co., of Akron, Ohio, contracts have been signed for a new building which will be erected at once. The large increase of orders received by this company of late has made it necessary to increase the facilities. The new building, which will be 102 by 70 feet and three stories high, will enable the company to triple its present output.

MUDD LANDS CONTRACT

T. N. MUDD, Reading-Standard agent in Washington, D. C., has for the fourth consecutive year landed the contract for furnishing the police department with motorcycles. The contract called for two 5 h. chain-driven machines for the use of officers who escort the President on his automobile trips around Washington and vicinity. There are now eight Reading-Standard machines in use in the national capital police department.

MURPHY MAKES CHANGE

GERALD H. MURPHY, known in trade circles as "Jere," has severed his connections with the Splitdorf Electrical Co., of New York, his resignation going into effect the last of February. Mr. Murphy has acted as assistant treasurer for the company for seven years, and in that time has become very popular throughout the executive departments of the motor industry.

BOSCH DISTRIBUTORS

THE Doubleday-Hill Electric Company, of 719 Liberty avenue, Pittsburgh, Pa.; the Motor Parts Company, 185 Columbus avenue, Boston, Mass., and the Phoenix Automobile Supply Company, 3974 Olive street, St. Louis, Mo., are reported as new Bosch Magneto distributors.

MINNEAPOLIS DISTRIBUTORS

THE John F. Wingate Company, 1204 Hennepin avenue, Minneapolis, Minn., has been organized with a capital of $25,000, and will have the distributing rights for the Minneapolis in North and South Dakota, Montana and Iowa.

WANT MORE EXCELSIORS.

AN order for three Excelsior singles has been received by Waters & Co., of Savannah, Ga., from the local police department. There are already three Excelsiors in use in the department, one of them having covered 59,000 miles, and another nearly 40,000.

IT is reported that nearly every up-to-date druggist in Savannah, Ga., employs one or two single-cylinder motorcycles in his delivery department. The motorcycle is also popular with the photographers in Savannah.

A MILWAUKEE RIDER

MISS LILLIAN SLAUGHTER, of 428 Jackson street, Milwaukee, Wis., Milwaukee's first motorcyclist of the fair sex, appears in the accompanying photograph. Miss

Slaughter has been a Harley-Davidson rider for the last three years and has established a reputation as a dependable long-distance roadster. The photograph was taken February 16 last when Miss Slaughter was on her way to the skating park for an hour's recreation on the ice.

AN ORDER FROM PARIS

A CONTRACT for 100 machines, to be delivered as soon as possible, has just been closed with a large distributor in Paris, France, by the Henderson Motorcycle Co., of Detroit.

IN NEW BUILDING

THE Goodyear Tire & Rubber Company's Toledo, O., branch, is moving into its new building, corner Madison avenue and Fourteenth street. This concern will carry about a $500,000 stock of tires.

MONNOT & SACHER, motorcycle dealers of Canton, Ohio, have contracted for the 1913 Excelsior agency. The Excelsior company has also closed with F. C. Scott, 55 East Market street, Tiffin, Ohio, to handle its line in the vicinity of Tiffin.

VINCENT BROTHERS, of Cleveland, have placed sub-agencies for the Pope with the Herman Cycle Company and the Woodland Avenue Cycle Company.

Lewis May, agent for Indian machines in Savanna, Ill.

The Greatest Police Machine Built

THE Harley-Davidson twin without question fills the needs of police department use better than any other motorcycle made.

HERE is what Wm. Root, Chief of Police of Freeport, Ill., says of their Harley-Davidson:

"It has been in daily use for the past six months and the running expense has been about $6.00 per month for oils and repairs of all kinds. We have had no engine trouble whatever and have run the machine about 9,000 miles. Up to date we have not failed in a single instance to run down all violators of the speed limit, although we have had a few cases where it was attempted by both automobiles and motorcycles. The use of our Harley-Davidson on the force has enabled us to make some very important arrests which would have been impossible without the machine. We consider the Harley-Davidson the best and best adaptable to police work on the market, and would not be without one."

THE Harley-Davidson is built for service—hard continuous service—but it has more speed and power than any other stock machine made.

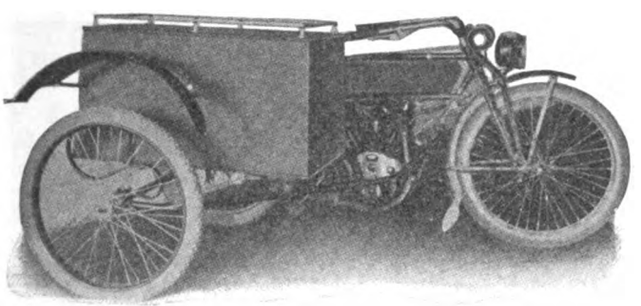
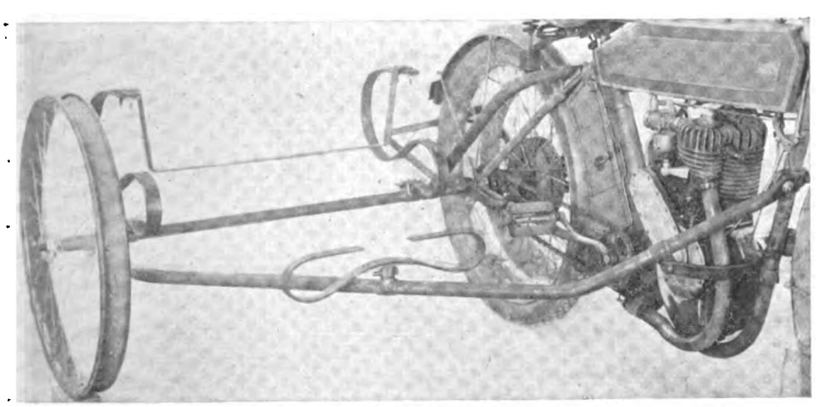
MODEL 203



MODEL 206



THE ANDERS CHASSIS

Head Bars of chassis adjustable from the third wheel to fit any make of motorcycle, also to take up and adjust the side drag to make the center of sidecar to correspond with center of motorcycle, INSURING PERFECT ALIGNMENT at all times.

AnderS Sidecar

"With the Rocker Motion"

Here is a sidecar every inch of whose construction makes for absolute and undeniable comfort. It cannot help but be so. Every detail of its manufacture is constantly under the supervision of men who have had years of experience in sidecar building—and they have profited by their experience.

The Unique Rocker Springs

The Springs in the "ANDERS" are made of oil tempered Swedish Spring Steel, body resting on body loop, bringing springs on either side of body instead of directly under it, therefore doing away with the side motion. We use one type of chassis—made to fit your machine.

Front spring on which foot of body rests is a departure from the old time spring, and is called the Rocker Spring. This is fastened to the frame by a "T" socket. Thus, instead of the usual swaying motion, you have the rocker motion, the spring under the foot of the car working in unison with the rear spring, which insures comfort and safety for the passenger. Frames are seamless steel tubing. Sidecars are attached by two lock-joint couplings. No clips or clamps to get loose and rattle.

Note the Classy Designs

Clean-cut, graceful shapes predominate in the "ANDERS" Line. There is an absolute absence of "freaky" shapes. "ANDERS" sidecars add distinction to any motorcycle.

Our catalog gives complete details of our sidecars and our national accessory line of tandem attachments. Let us send it to you.

Time Always Tells The Truth

We do not ask you to take our word alone when we say "nowhere else can you get as satisfactory service and as low prices on motorcycle supplies." However, we do ask you to take the word of our several thousand permanent customers—the ones who have built up our business from almost nothing, ten years ago, to its present large volume.

MECO Prepaid Guaranteed Supplies

are favorably known by thousands of riders. What thousands know you can believe. If we have made it pleasant and profitable enough for the majority of motorcycle riders to buy from us, isn't it reasonable that you will also be benefited by letting us take care of your supply wants.

If you haven't one of our new 1913 catalogues with prepaid prices, you are missing something and should write for your free copy today. If you have one, anticipate your wants a little and send us a trial order and find out why our business has grown so large.

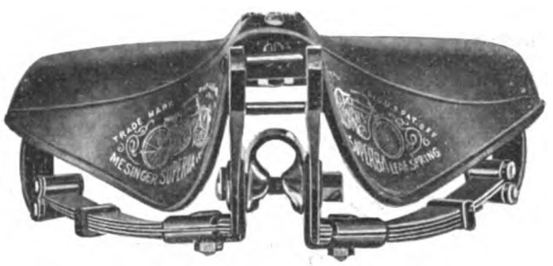
The "*Superba*"--the supreme achievement of master saddle builders

If we could condense the remarks of those fortunate riders who are already astride the 1913 "Superba" saddle, these three opinions would predominate—"Smooth as velvet," "It won't bottom," and "Positively the most durable saddle made." And more and more riders, as the season grows older, will learn the truth of these words.

They will understand **why** we divided the front springs—to give lowest saddle position. They will learn the reason for the leaf springs, with swing hinges, which give the much desired "swing motion" without a trace of bottoming.



Front view of the "Superba" showing divided springs

And, finally, after a year's hard service, the saddle's perfect condition will show them why we use only chrome-vanadium spring steel, absolutely proof against crystallization in the construction of the "Superba."

Will you wait for others to tell you of the "Superba's" incomparable comfort or will you learn for yourself? Our catalog will be sent upon request.

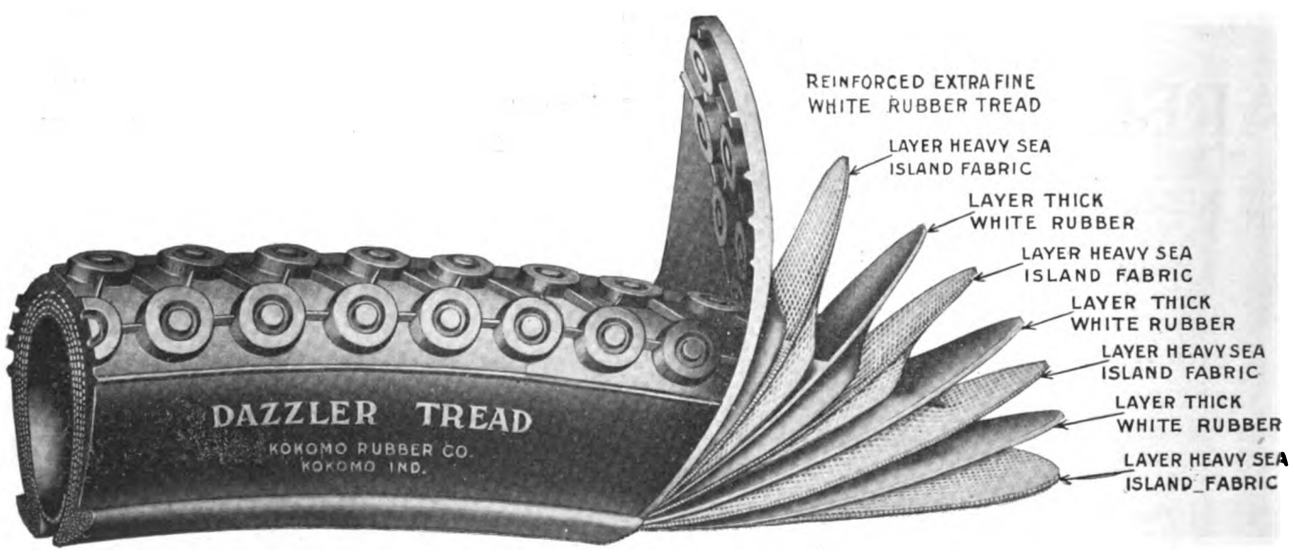
144th Street Austin Place, New York



The Dazzler—A Real Non-Skid Tread

Dazzling indeed in its aggregation of service insuring features is this new arrival in the Kokomo group.

Note the distinctive studs. Your eyes give you the most convincing testimony as to their efficiency as skid and side-slip preventatives. Your common sense tells you that it would be impossible to find a more effective tread. And give your close attention to the seven alternating layers of thick white rubber and heavy Sea Island cotton. Can you find anywhere a more efficient, business-like tire? (Chorus) NO!

Send for our catalog. It tells the whole story.

WITH "OLD SOL" MOTORCYCLE LAMPS THE OVERSIZE LENS

No. 8. One-half more light. — The Diameter of the Mangin Mirror lens in "Old Sol" No. 8 is 6 inches. This increases the light 50% over "Old Sol" No. 17 or over any other motorcycle lamp. It is positively the most powerful motorcycle lamp made, and is the equal in many respects to the finest automobile lamps. 1,500 candlepower. Price.....$6.50

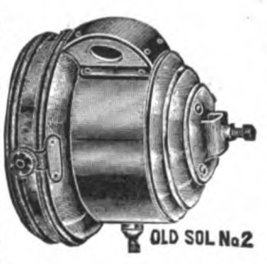
Here are a few rays of light on the "Old Sol" line, distinguished for its diversity and for the absolute perfection of each one of its models. The strongest feature of OLD SOL lamps is the fact that each lamp has a lens larger in proportion to its size than any other lamp made. This insures at least 40% more light for a lamp's size than is possible with any other make.

No. 17. Two-fifths more light. — The Diameter of the Mangin Mirror lens in "Old Sol" No. 17 is 5¼". This increases the light 40% over 5" lens lamps. 5" lens are used in other lamps of the same size as "Old Sol" No. 17. 1,000 candlepower. Price $5.50

Model No. 20. Electric Tail Lamp. Description: Wt., 22 oz. Combination bracket holds number plate and allows white light from lamp to illuminate the same. Red jewel on head throws rear signal. Burns from 20 to 25 hours intermittent. Supplied complete with 1 c. p. bulb and battery No. 790. Price.....$3.00

Old Sol No. 9. Tail Lamp. Weight, 8 oz. Diam. of body, 3". Acetylene type. Lamp bracket "P" to bolt to mudguard, with bolts, included in listed prices. "Old Sol" No. 9 meets all requirements of the law.

Model No. 2. One-half more light. — The Diameter of the Mangin Mirror lens in "Old Sol" No. 2 is 4½". This increases the light 50% over regular 4" lens lamps. 4" lens are used in other lamps of the same size as "Old Sol" No. 2. Price, $4.25



Generator No. 5.—New type, double clamp, coupling bottom portion to top. Fitted with sifting carbide chamber, allowing ashes to fall below. Capacity, 12 oz. carbide, producing 3¼ cubic feet of gas. Gives a steady flow of clean, cool gas. Height, 8½". Diam., 3¼". Wt., 25 oz. Will supply sufficient gas to burn tail-light at the same time as searchlight. Price, No. 5 Generator..$3.75

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

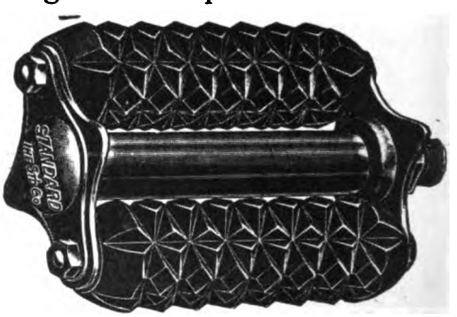
Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

The Standard Company

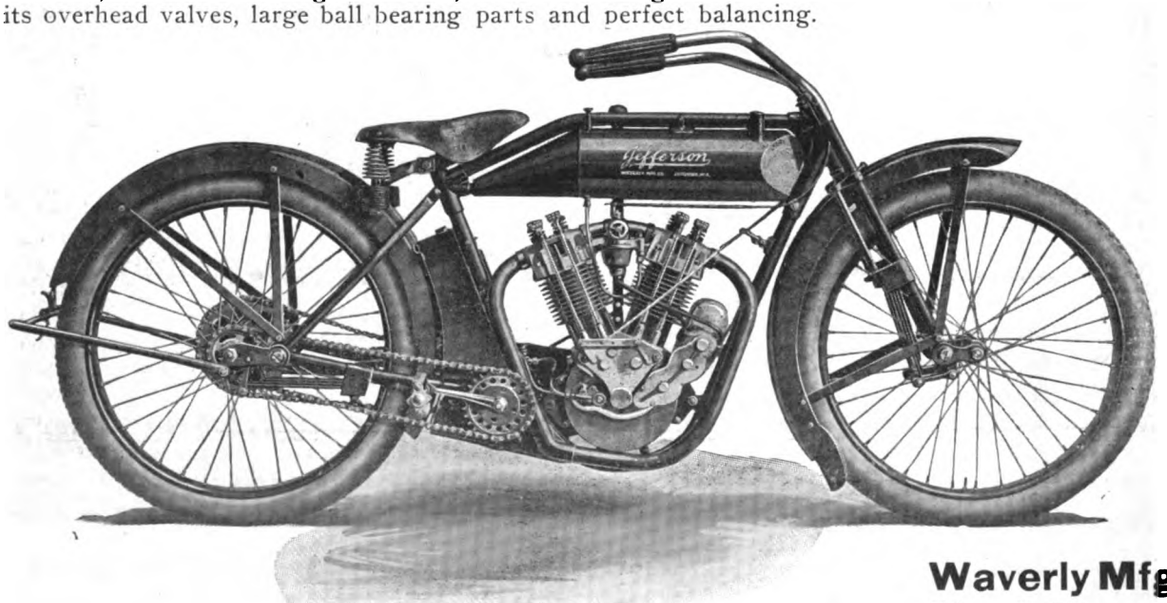
Torrington - Conn.



THE 1913 JEFFERSON HAS EVERYTHING

Speed—Power—Comfort—Durability

The JEFFERSON has these features in abundance. Its speed was proven beyond a doubt when, under the name of P. E. M., it won six races against twins, besides winning 37 out of 47 races which it entered. Power is assured by its overhead valves, large ball bearing parts and perfect balancing.



Aside from the automobile leaf springs, which not only make comfort a striking feature in the JEFFERSON, but add immeasurably to the strength of the JEFFERSON'S frame, the construction of the JEFFERSON—re-enforced frame parts, makes it proof against wear.

1158 Cass Avenue **Detroit, Mich.**

Even with porcelain BROKEN it sparks perfectly

Unlike all other plugs, J-M Plugs spark just as well with the porcelain broken, as when it is whole—even when the current is supplied by a magneto.

This perfect sparking service is made possible by the **double insulation** of the

J-M Spark Plug

There are two absolutely independent insulations in the J-M Plug—an inner insulation of mica protected from injury by a porcelain insulation. If the porcelain is broken, the mica prevents current leakage, and sparking will be just as strong as if the plug were not damaged.

Other exclusive features of the J-M Plug are—

Case hardened center electrode that cannot expand and contract when heated by the engine. All joints packed with asbestos or high temperature cements, baked so that they never require adjustment or "tightening up."

Look for name "J-M" on every plug. Shipped direct, prepaid, from our nearest Branch on receipt of price, $1.00, if your dealer doesn't sell them.

Ask our nearest Branch to send you Booklet

Maroline MOTORCYCLE OIL

MOTORCYCLE dealers, manufacturers and speed kings everywhere are recommending the exclusive use of Maroline Motorcycle Oil. They have proven by actual test that it

"Keeps Your Motor Young"

Being manufactured from brightest, filtered Pennsylvania stock, it insures perfect lubrication and renders full power and speed. Carbon proof.

The Sealed Package

protects motorcyclist and dealer. Ask your supply man for Maroline Oil, put up in handy tins—halves, ones and fives (gallons). Insist on original tins.

If your dealer doesn't carry it write us, giving his name, and we'll see that you're supplied.

MARSHALL OIL COMPANY
-INCORPORATED-
Marshalltown, Iowa, U.S.A.

To Dealers: Price for 50-gallon lots, same in tins as in barrels, thus protecting you against leakage. Cases packed as follows:

Two 5 gallon lithographed tins
Twelve 1 gallon lithographed tins
Twelve ½ gallon lithographed tins

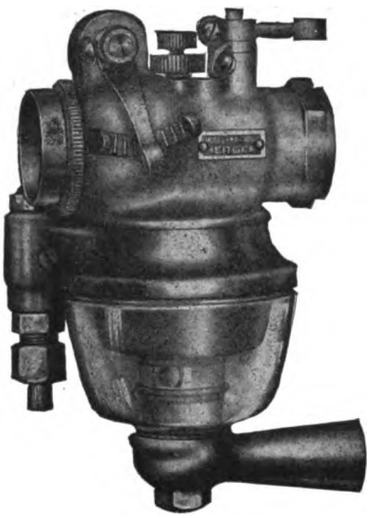
HEITGER MODEL K—1913

Made in ¾" and 1" pipe threads, and special threads for Spacke, Pope, H-D, Excelsior, Merkel, and Emblem, same list, ¾", $10.00; 1", $10.50. Where special fittings are needed, extra price. Has new air valve, no friction, or stems to wear, causing air leakage in low; air adjusted instantly from saddle, for starting, etc. Needs no priming in coldest weather. Furnished with glass or metal bowls, same price, the two being interchangeable.

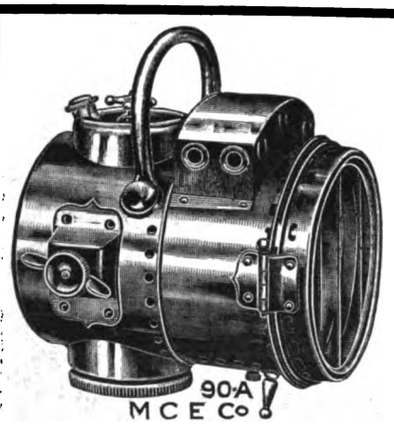


HALF SIZE

Has new gasoline feed, two jets, one for low, one for high, with separate adjustments, giving minimum and maximum speeds. Owing to air valve action, etc., gives greatest possible speed to motor on minimum gasoline consumption. Light in weight, castings of aluminum, polished nickel plate.

Heitger Carbureter Co.

1129 Beecher St., INDIANAPOLIS, IND.

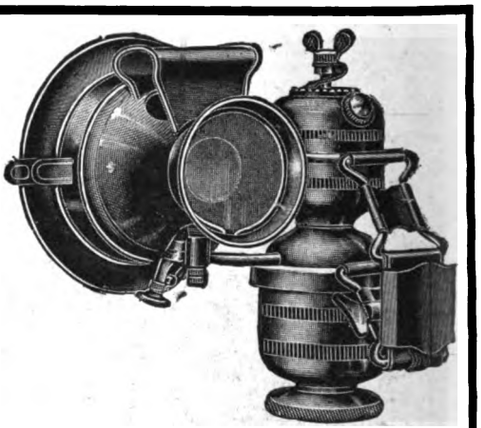


An Ideal Motorcyclist's Lamp. A "Close Coupled" Searchlight and Generator Combined. Weighs 28 ounces; size, 4 x 5 inches. Nickel Plated, Neatly Designed. No. 90 rear prop; No. 90A, side props.

Price $6.00 each

Dealers! Your Attention Please!

Do you realize that our enormous stock of high-grade automobile, motorcycle and bicycle supplies is **entirely** at your disposal? That not one penny's worth is sold to the rider direct? Consider what this means to you. Here are two stunning successes any dealer can handle with amazing results.



Duplex "Self-Lighter" Lamp

The law in most States requires rear lights on bicycles and motorcycles. The combination Duplex MEETS THIS REQUIREMENT. It lights up the road in front of the rider and also shows a RED LIGHT WARNING SIGNAL in the rear. This lamp is finished in nickel, has a flare-front door 4½ inches across and is fitted with a compact generator 2¼ inches in diameter. Height of lamp 5½ inches. This lamp attaches to fork on left side of wheel.

Price $3.00 each

WARNING

Every motorcyclist is looking for a pleasant warning signal which will work equally well in the city, or country and under all conditions.

1913 BARCO MOTORCYCLE CHIMES

offer the only solution to this problem. They are much larger than last year's model, and the three tones are deeper and richer. It is remarkable what a volume of tone may be produced with this horn on the average motorcycle and how easily the horn will blow.

The Barco Outfit is easily installed and will attract attention everywhere.

The Barco Chime Valves are the only valves with an absolutely unobstructed exhaust passage. Experienced motorcyclists appreciate the necessity of keeping the exhaust free from obstruction and back pressure, and this is only accomplished by the Barco Valve.

HARRIS
TRADE MARK REG. U.S. PAT. OFF.
OILS

Make A Good Motorcycle Better

Because they increase its efficiency. Motorcycles are especially susceptible to poor lubrication—likewise, they quickly respond to good treatment. Cheap oils not only give poor results, but injure your machine. Special care is taken in making our motorcycle oils, and the same high standard of quality found in our other products, is maintained.

Only the ***best*** crude stock is used, and every process of its manufacture is carefully tended by experts. Treat your motorcycle right—lubricate it with HARRIS OILS—it will fully repay you in service.

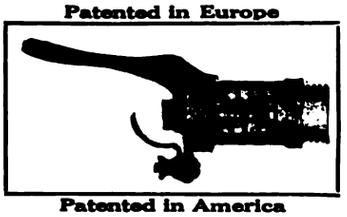
SPEED WITH ECONOMY

Patented in Europe



Patented in America

The M&M Economizer is guaranteed to increase your speed and power 20%, **WITH LESS GASOLINE**, and **LESS CARBON. IT IS ALSO GUARANTEED** to save from 40 to 50% of gasoline. It is the only known carbureter adjuster on the market. Do not throw your old carbureter away until you have applied our device. **THEN NOTICE RESULTS.** It is **GREAT** for priming the engine, and acts in the capacity of an air brake.

The M&M is nickel plated and highly polished, and it is positively air tight when closed. It requires a ¼" pipe tap to insert into manifold. It is made with six portholes, which when open, admits auxiliary air into the manifold.

READ THIS! Then watch for next month's testimonial.

Dunellen, N. J., February 21, 1913.

Moller Bros., Philadelphia, Pa.

Gentlemen: I beg to advise the results that I have received from your Economizer are satisfactory thus far. Owing to the recent bad weather, a thorough test of gasoline consumption was impossible, but your Economizer gives all you claim for it in the way of added speed. I have installed it on a PIERCE single, and find that it increases the speed by giving a perfect mixture at all times, a thing which no ordinary carbureter can do. I am sure I will let you know favorably in the near future in regard to the gasoline consumption.

Yours very truly,
(Signed) E. J. PARKER.

Money refunded in 30 days if unsatisfactory. **PRICE $1.25 Prepaid.** **Send for catalog and information.**

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

NO "DOPE," GUM, PASTE OR OTHER STUFFING MATERIALS.

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Jeffery-Dewitt Company 55 Butler Avenue, Detroit, Mich.

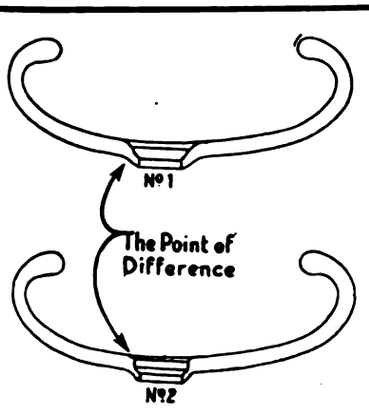
MOTORCYCLE ILLUSTRATED, 51 Chambers St., New York



Mott Rims for Strength

THE superiority of the Mott motorcycle rim lies in the little points that the average riders never notice, but that show up strongly in hard service. For instance, take the way the spoke holes are punched. On Mott rims this is carefully and accurately done so that there is ample strength to hold the nipple securely. Sketch No. 1 shows the idea.

Most other rims come out like No. 2. This part of the work is hurried over, carelessly done, and as a result the holes are counterpunched too deep, making a weak spot, which often allows the nipples to pull through the rim.

Mott thoroughness shows up in the tests. Note the wheels that come through the severe endurance runs in the best condition. You'll find them fitted with Mett rims. To be sure of satisfaction, specify Mott rims for your machine.

The Future of the Motorcycle

Right now the prospects of the motorcycle are very bright. The one single possible bugaboo that hangs over the trade is that unhealthy mania for an impractical speed. Accidents on the track and road are invariably the result of "speedomania," and that is what gets us in wrong every little while with the general public. Remember, the real growth of the motorcycle business depends upon that same general public, thinking we're all right.

Practically every motorcycle engineer and designer knows that the belt is the best transmission for road riding and general use. Any experienced dealer knows it, too. But many riders who are not skilled mechanics have "speedomania" in severe form, and want the chain for its race-track possibilities. So they order the chain and secure a theoretical speed they can never, never use, and pay a fearful price for it. The manufacturers have to cater to the "speedomania" demand, for it is easier to accede than to argue.

It's that "speedomania" that has caused the present demand for chain-driven machines, because, unquestionably, the "positive transmission" of the chain makes a theoretical higher speed possible than by the belt.

If you are a racing man you NEED that possible extra speed; but if you are just Mr. Plain Regular Rider your belt will furnish you all the speed you can possibly use and something extra corked up for any contingency.

The price you pay for your chain transmission is THE HEALTH OF YOUR MACHINE! For it is unavoidable that the racking, grinding, straining, positive action of the chain tears on the wellness of your motor. There is not the slightest "give" or pliability to the chain; it is entirely "positive," it simply cannot adjust itself to the demands of a complaining motor. If you have ever taken a motor apart you know that it is a fine piece of machinery, much too delicate to be subjected to the unyielding, gruelling pull of a steel chain.

Spartan Belts Save the Motor

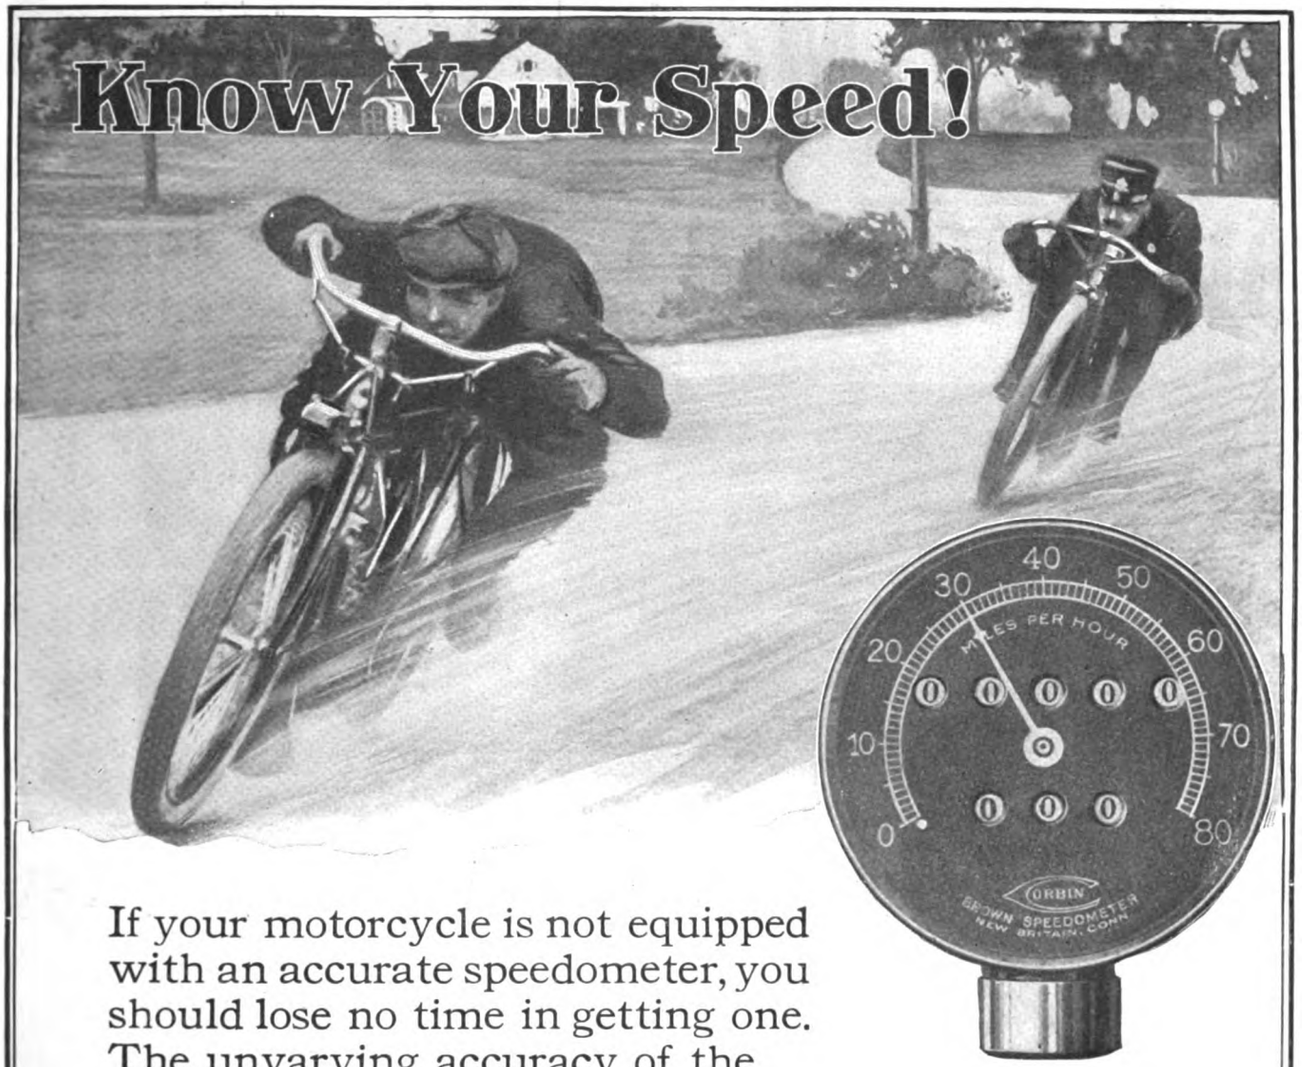
Know Your Speed!



If your motorcycle is not equipped with an accurate speedometer, you should lose no time in getting one. The unvarying accuracy of the

CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

is the result of the correct scientific principle—***centrifugal***—upon which it is built, and the strength and simplicity of its mechanism.

The Corbin-Brown will afford you more than insurance against possibility of arrest and its incidental cost through unconscious infraction of speed laws—a sufficient reason in itself for your so equipping your machine. It will enable you to keep record of your total mileage, trip mileage, tire mileage and mileage-per-gallon of gasoline.

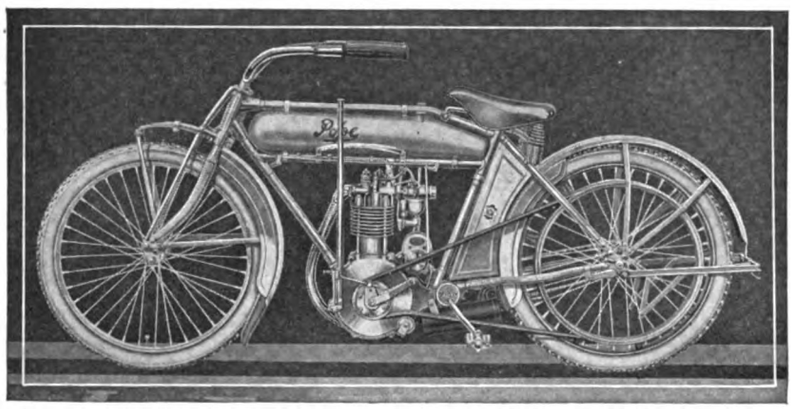
Pope, Model K, Wins Portland, Ore., Hill Climb



Model K—"Big 4"—$200—Magneto Equipped.

Contest A Triumph For Overhead Valves

A. F. Post, riding a Pope, Model K, 4 H. P., single, won its class event in the Portland Hill-Climbing Contest, held February 23, under the auspices of the Portland Motorcycle Club, defeating a field of four well-known makes.

Course	Total Rise	[redacted] Grade	Pope's Time
1940 ft. long	278 ft.	Last 200 ft. 22%	41 3/5 seconds

The Pope beat its nearest competitor by over 7 seconds. The contest was run under the F. A. M. rules—from a standing start; the street, Bancroft avenue, has a macadam pavement; the last block (the steepest grade) was very rough, with loose rocks on the surface. The best time made in the twin class was 33 seconds.

THE POPE MOTORCYCLE WITH ITS OVERHEAD VALVES IS ALWAYS THERE ON THE HILLS.

Send for Pope Catalogue and Dealers' Terms.

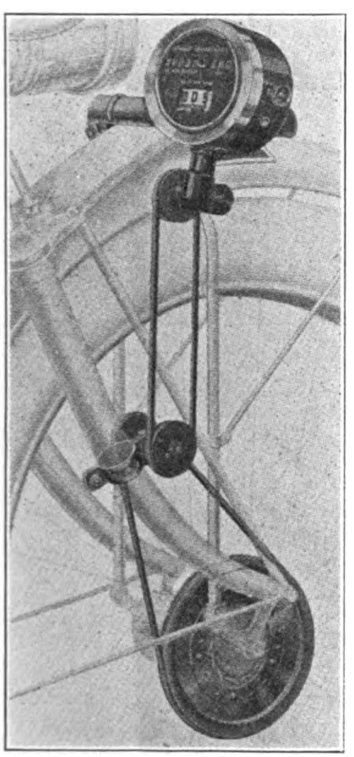
Complete
Model D

75-mile speedometer; 100,000 mile season odometer; 100 mile trip register, which can be readily reset to any tenth of a mile without disturbing total mileage of season register, front wheel two belt drive complete with pulleys and brackets.

The New Stewart Motorcycle Speedometer

Magnetic Type

Showing the new Two-Belt Front Wheel Drive



HERE is the only practical motorcycle speedometer made. Just as accurate, reliable and complete as our most expensive automobile speedometers. Our Front Wheel Two-Belt Drive and manner of installation render it impossible for the speedometer to get out of alignment with its driving equipment, this because both instrument and driving equipment are attached firmly to parts that move in unison.

Is installed upon your mudguard or extension spring. As it thus is within the range of your headlight you can read it as easily at night as during the day. This is an exclusive feature not to be had with any other make.

Indicates accurately miles per hour, miles per day or trip; miles per season.

This special instrument is made on the famous magnetic principle. Over 95% of all the speedometers manufactured (for either motorcycles or automobiles) are now built on this practical principle.

For sale by dealers all over the world. Price $12 complete.

Write us for a handsomely illustrated catalogue which explains in detail, the many advantages and fine construction of this improved motorcycle instrument. This book is free. Write today.

This Brake Was One of the Most Important Features of the Shows

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile—or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions;—

Fool-proof—a brake that will not wind, bind or lock;—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

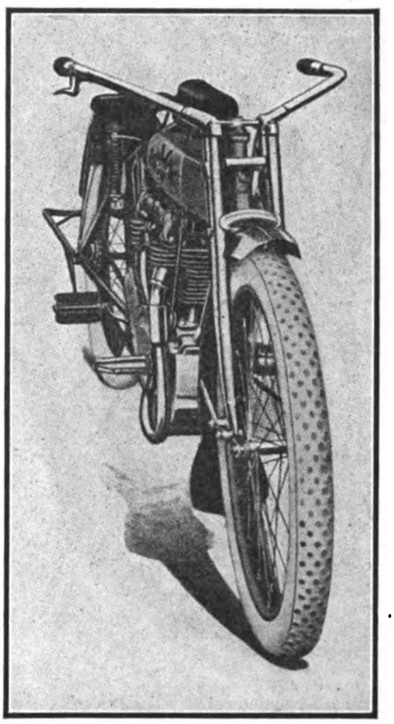
YALE

No Mistakes for Sale



Fastest road machine made, the big Yale twin. National Road Champion, $275.

WHEN any feature becomes an accepted part of Yale design, it is proof that it has been tried to the limit and has *made good*. The "Big Y" has no mistakes to regret. Experiments are all made *before* any feature is incorporated in the regular design—not after the machine has been sold to a rider.

In a corner of a back room of our factory, covered with cobwebs and lying with other mechanical junk, rests a spring frame that we built over two years—not "18 months"—ago. It is practically identical with a much-boasted-of 1913 "revelation" on another machine. Only a few week's tests proved to us that it was absolutely wrong—the fundamental principle is a mistake and can't be made good—so we discarded it and the experimental model now rusts peacefully in the junk heap.

When a man buys a Yale he knows that every point is the best that it is possible to make—not a "cheap" feature in the whole machine.

This bit of news, printed on page 19 of the February 27th issue of "Pacific Motorcyclist," the Los Angeles motorcycling journal, points a moral that all riders should bear in mind:

...ol showing a prospective custom... chine in a perfectly clean room, without interruption

...ay that 40,000 ...geles in March ...e proportion of ...n California Last 25 and October This spring

...motor- ...n Cali- ...rticu-

YALE GOING WELL

An indication of the growing popularity of the Yale in Los Angeles alone is that more than fifty riders of this city who last year had machines of other makes arranged to dispose of them so as to get Yales. The Los Angeles Motorcycle Co. is so fixed as to be able to offer easy terms, which helps. The company continues to receive large shipments from the factory, and inquiries are brisk from all parts for agencies.

...RATING

They have learned where to get real value.

Experienced riders all over the country are finding out the same thing—that it is better to pay a fair price and get a "Big Y," with real quality and real ability, than to buy a "cheap" machine with merely a racing reputation made with special machines, and get troubles and repair bills instead of service.

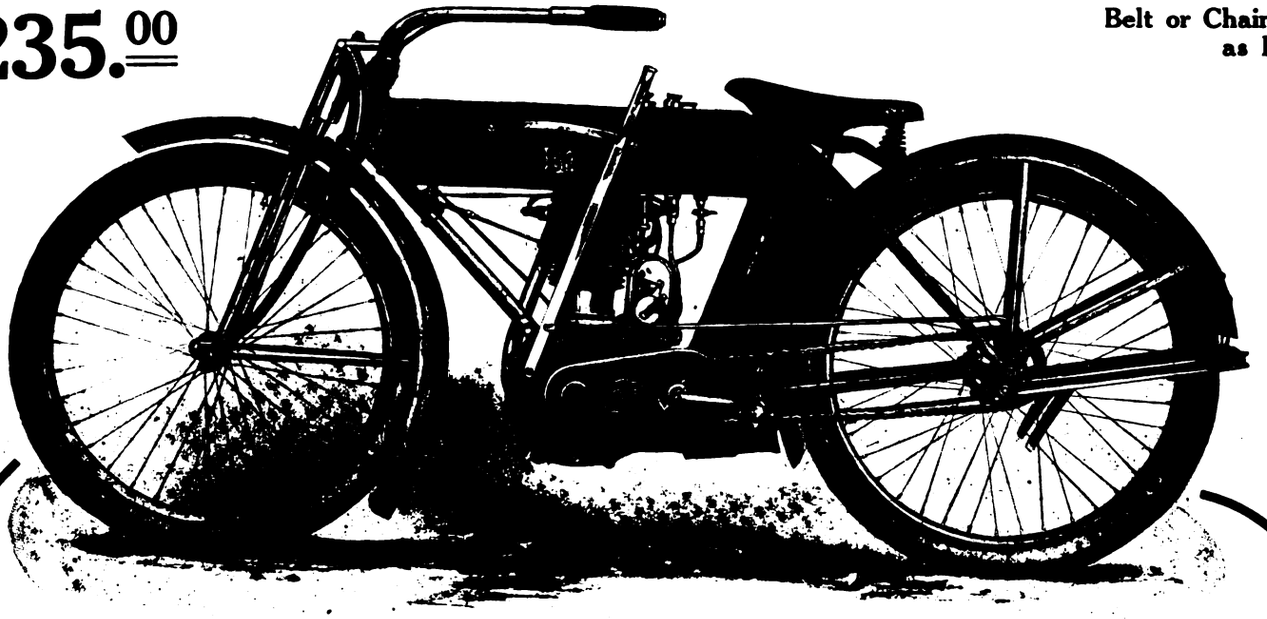
Belt or Chain Drive as Desired



Good "Black Hawk" Territory Still Open

If you as a dealer desire to give your patrons good, sound, honest motorcycle value, you will look into our proposition and make application for agency in your territory—providing it has not already been assigned to someone else.

The "Black Hawk" Will Make Good For You

Its selling possibilities are greater than that of any other motorcycle on the market because it is so far ahead of other models when it comes to a "show-down" that competition cannot rank with it.

Another thing, very little persuasion is needed to sell the "Black Hawk." Riders have been wanting speed, power, comfort, safety—without extra cost—without buying a "twin"—and the problem has been solved in the construction of the new "Black Hawk."

The dealer handling this machine has it on his competitor, where real value, real quality is concerned—and

The rider has it on the crowd when it comes to performance, for the "Black Hawk" is the **best-looking, best-acting** motorcycle that ever came out of a factory.

Now, won't you decide to obtain the agency for the "Black Hawk" in your territory. Deliveries are certain. Write for proposition.

Trade Mark

BLACK HAWK

BH

Star Features That Sell the "Black Hawk"

In showing the "Black Hawk" to a customer, all that will be necessary to make a sale will be to point out that this motorcycle looks better, acts better—is better—and yet the price is only $235.00. For instance:

If the rider wants speed, he gets it up to 60 miles per hour.

If the rider wants power, he gets enough to take him up the highest hills, over rocky roads, over sandy stretches—through mud or snow—or anywhere he wants to go—and then have some in reserve.

If the rider wants riding comfort, the "Black Hawk" beats them all with its Spring Seat Post and Spring Fork which cannot bottom. The low center of gravity adds greatly to its ease of handling.

If the rider wants appearance, the "Black Hawk" stands way above the rest. Straighter, neater, more graceful lines, have never been seen even in the highest priced automobiles.

That's speed, power, comfort that can't be beat. And when you come to figure in the Mechanical Oiler, automatic in action—which answers the lubricating problem—the Simple Grip Control, Free Engine Clutch in rear hub—which makes the rider a master of the machine at all times—you will admit that the "Black Hawk" has it on any other motorcycle that ever came out of a factory.

If you are looking for a motorcycle that won't disappoint you or the rider, get the agency for the "Black Hawk"—it will pay you.

Pittsburgh, Pa., Feb. 24th, 1913.
Continental Rubber Works, Erie, Pa.

Gentlemen: I am writing this letter to inform you of the wonderful service of a Continental Tire that was purchased by me from a Buffalo jobber last summer; this tire is the regular 28 x 2½ size and was installed on the rear wheel of a Yale Motorcycle. After 2500 miles of hard service, it was put on the front wheel and entered in the Columbus tour to the F. A. M. meet last summer, since that time the tire has traveled 1500 miles on the front wheel and has never been punctured.

This tire is still in excellent condition and has certainly proved that the tire for service is the Continental. When the buttons are off the tread, you still have some tire left and this is where the rest fail.

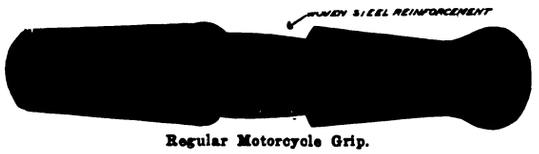
I have specified my new machines to be equipped with your tires and know I will not be disappointed.

If this letter will be of any assistance to you then use it as you wish, as all the facts are absolutely correct.

Wishing you every success, I remain,
Very truly yours,
(Signed) EARL W. DEAN.

4000 Miles on Continental-Erie Tires without a puncture!

That's Service for you!



Regular Motorcycle Grip.

Continental-Erie Woven Steel Reinforced Grips are the only grips made that are ABSOLUTELY INDESTRUCTIBLE. The Woven Steel Reinforcement in the center part of the Grip strengthens it at its weakest point and prevents it from breaking. In addition to the steel reinforcement, our Grips have an inner lining of fabric which makes them as pliable and as resilient as any other grip on the market. These are made to fit all makes of machines.

When ordering your 1913 machines, specify these Grips and thus avoid replacements.

Continental-Erie Non-Slip-Lag The only pulley lining on the market that gives entire satisfaction, prevents belt from slipping, increases power, applied without removing belt or wheel. Carried in stock by all jobbers and dealers.

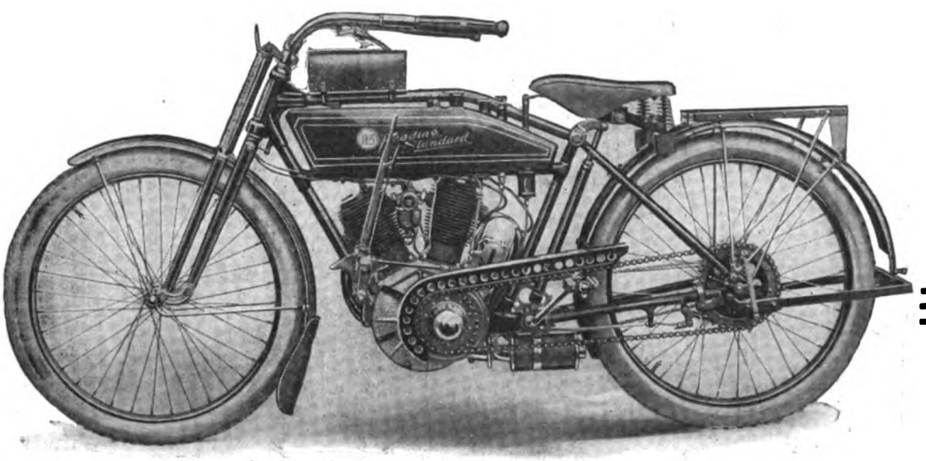
Worrying About Deliveries?



Get the R-S Agency and Stop Worrying

Prompt Deliveries, Complete R-S Perfection

Near the end of the 1912 season we suddenly came to the realization that, insofar as perfecting the R-S was concerned, our work was completed. Try as we might, we could not find anything to improve in its construction.

But there was room for improvement in our service department. So we applied the same critically analytical methods, the same concentrated thought, the same keen engineering knowledge to the perfection of our factory organization as we had to the R-S itself. The result is that we can now guarantee **prompt deliveries.** Nor more need be said. It's entirely up to you.

SPEED

It Was Abraham Lincoln Who Said

"You can fool all the people some of the time, and some of the people all the time, but you cannot fool all the people all the time"

Dyed-in-the-wool motorcycle riders—those veterans who have been riding motorcycles ever since there were any motorcycles—are not easily misled. New riders and prospective motorcyclists, however, may be deceived by misleading advertisements, and it is for this latter class that this advertisement is written. Those men who have been riding for years will admit that all the laurels ever won by the Flying Merkel Motorcycle—and their number is legion—have won by sheer merit, nothing else. We have never "pulled off" phony road races, endurance runs, and hill climbs merely to be able to write an advertisement about it. We have never said that all other motorcycles are wrongly constructed except the Flying Merkel, for it would be an untruth. All our advertisements have been plain statements of facts. We do say, however, most emphatically that the Flying Merkel has been the pioneer in many features now practically accepted as standard by leading manufacturers. The Flying Merkel was the first motorcycle to employ a loop frame; the first to market a magneto model and the first to market magneto models exclusively; it was the first to make a ball-bearing motor; it was the first to employ a spring frame and now is the first and only motorcycle in the world employing a self-starter for its engine. That is undeniable motorcycle history.

A PLAIN HONEST STATEMENT OF FACTS!

Because it embodies so many new and exclusive features certain manufacturers recently have attempted to belittle Flying Merkel features which they themselves have attempted to copy without infringing on our patents. The Flying Merkel Spring Frame compelled every other motorcycle manufacturer to seek some device of comfort for the rider. In the 1913 Flying Merkel motorcycle the EXCLUSIVE Spring Frame is positively the most comfort-promoting device ever offered the motorcycle buying public. Instead of two jiggley springs placed where they can easily rust, thereby losing their resiliency and breaking, causing serious inconvenience to the rider, the Flying Merkel Spring Frame employs but one spring, placed in a steel barrel, so that no dirt or water can injure it, and constructed in such a manner that it is kept lubricated at all times, and can be readily adjusted to compensate for wear or for varying weights of riders. In addition there is a recoil spring and a pneumatic plunger which further promotes comfort. This spring frame contains 306 inches of spring steel instead of about 100 inches as in most machines. Before being adopted, these springs were tested over thousands and thousands of miles of the roughest kind of roads, and—POSITIVELY NOT ONE OF THEM HAS EVER BROKEN AND WE DOUBT IF THEY EVER WILL. Should for any reason one of these springs break it would be possible to ride the machine the remainder of the season in safety. We ask you, Honest rider, to examine every spring device on the market and judge for yourself whether or not you would be able even to get home should *ONE* of the springs break. As in the past, we shall continue to win the approbation of the rider purely through the merit of our machine and not through purchased space in the newspapers.

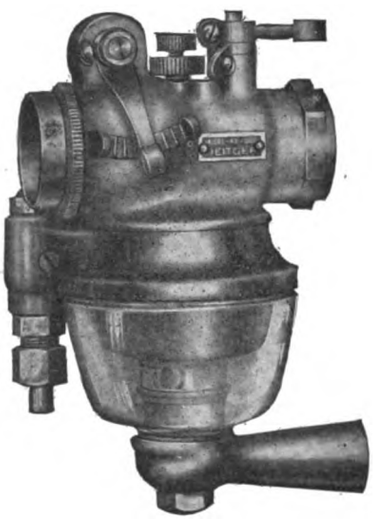
HEITGER MODEL K—1913

Made in ¾" and 1" pipe threads, and special threads for Spacke, Pope, H-D, Excelsior, Merkel, and Emblem, same list, ¾", $10.00; 1", $10.50. Where special fittings are needed, extra price. Has new air valve, no friction, or stems to wear, causing air leakage in low; air adjusted instantly from saddle, for starting, etc. Needs no priming in coldest weather. Furnished with glass or metal bowls, same price, the two being interchangeable.

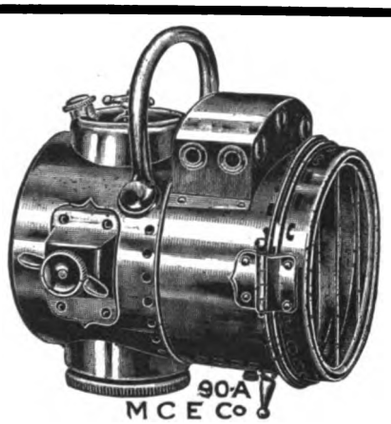


HALF SIZE

Has new gasoline feed, two jets, one for low, one for high, with separate adjustments, giving minimum and maximum speeds. Owing to air valve action, etc., gives greatest possible speed to motor on minimum gasoline consumption. Light in weight, castings of aluminum, polished nickel plate.

Heitger Carbureter Co.

1129 Beecher St., INDIANAPOLIS, IND.

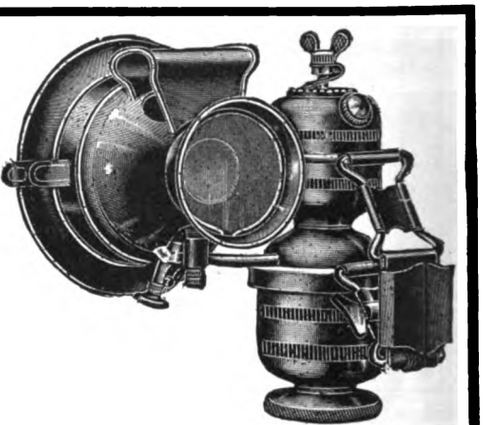


An Ideal Motorcyclist's Lamp. A "Close Coupled" Searchlight and Generator Combined. Weighs 28 ounces; size, 4 x 5 inches. Nickel Plated, Neatly Designed. No. 90 rear prop; No. 90A, side props.

Price $6.00 each

Dealers! Your Attention Please!

Do you realize that our enormous stock of high-grade automobile, motorcycle and bicycle supplies is **entirely** at your disposal? That not one penny's worth is sold to the rider direct? Consider what this means to you. Here are two stunning successes any dealer can handle with amazing results.



Duplex "Self-Lighter" Lamp

The law in most States requires rear lights on bicycles and motorcycles. The combination Duplex MEETS THIS REQUIREMENT. It lights up the road in front of the rider and also shows a RED LIGHT WARNING SIGNAL in the rear. This lamp is finished in nickel, has a flare-front door 4½ inches across and is fitted with a compact generator 2¼ inches in diameter. Height of lamp 5½ inches. This lamp attaches to fork on left side of wheel.

Price $3.00 each

RENOLD CHAIN

Costs the most—yet the least expensive

We're proud of the fact that Renold Chains cost more—because we know every far-sighted rider would rather pay for the difference between Renold Chains and others of inferior quality, just for the assurance of perfect satisfaction which the RENOLD CHAIN affords.

There are no flaws in the RENOLD CHAIN, because every one of the six thousand operations employed in each chain's manufacture is carefully inspected.

Because integrity of manufacture is the keynote of the success of RENOLD CHAINS.

Because our system of inspection absolutely certifies

RENOLD RELIABILITY

We make 90 per cent. of the chains used on foreign motorcycles. But we do not want this to weigh so heavily with you. We want to have you learn **why** the discriminating motorcycle manufacturers and riders in England and other foreign countries choose RENOLD CHAINS.

And as the most convincing argument we can put forth is a demonstration of the chain on YOUR machine, we want to send you a set of RENOLD CHAINS. The true test of quality is service and that is where the

RENOLD CHAIN

excels.

We will send our invaluable booklet, "Hints on Chain Drives for Motorcyclists" to anyone who gives us the name of the dealer in his town.

The following advertisement appeared in the Sacramento, California, papers after receipt March 1st of our first shipment of 7-horse-power twin Jeffersons.

WAVERLEY MFG. CO.,
Jefferson, Wis.

Jefferson

TWIN HAS ARRIVED

The SPEED KING Is Here!

Immediately upon receiving these motors we took one of them out of the crate and timed it for one mile on the Stockton Road. She made the mile under stop-watches in exactly 46 2-5 seconds, or a speed of **78 miles an hour.** This motor was positively just the way it came from the factory and just the way we sell them to our customers. In a few days we are going to tune one of them up for one of the boys who has bought one, and we expect to get at least ten miles an hour more. This motor is the Big Brother of the Little 4-H-P. Single P. E. M., on which **Mr. Cap. Scott,** the owner, has defeated every fast twin, both 7 to 9 horsepower in Sacramento, a remarkable performance for a 4 horsepower single, but nevertheless a positive fact. Of course you don't need the **intoxicating speed** with which these motors are gifted, but you do need that terrible power which they have in the hills. One of the boys who owns a seven h. p. twin of a certain popular make, said after we had given him a ride on a Jefferson: **Honestly, that machine will go over a hill that mine will scarcely make at all, faster than mine will go on a level road.** We have his machine here for sale this morning. (He wants to get a Jefferson.) Come down and look at it, for it is a real bargain in a 1912 7 H. P. motor, capable of making a mile a minute itself.

These machines are guaranteed to develop twelve full horsepower, three more than any other motor on the market.

It has three times as many hand-finished parts as any other machine you can buy and all parts are machined to one one-thousandth part of an inch. They are not made in a large factory and there is not going to be a large amount of them made, but the man who builds them takes a personal interest in every machine, and he builds them with a conscience.

Come down and ask Mr. Hardy Tompkins, the man who rode the machine, how it feels to go 80 miles an hour.

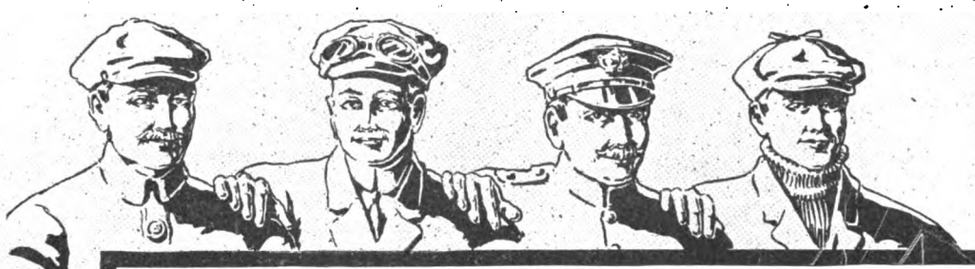
United States Tires



The Tires that have reduced the high cost of touring

By putting all the best features of the two most famous motorcycle tires in the world into one tire, the United States Tire Company has forced down the item of tire expense to the lowest point ever reached by any tire maker.

The rider who uses United States Tires for this season's riding will actually get from 25 to 50% more mileage out of his tires than he possibly could out of any tire two years ago, before the formation of the United States Tire Company.

Why not have your machine equipped with United States Tires now and get full advantage of this saving in tire expense.

Cost no more than you are asked to pay for other kinds.

CALIFORNIANS WELCOME F.A.M. LECTURER

HAVING sprinkled organization and boom meetings as liberally as possible among motorcyclists along his trail through the Southwest, Director J. Leo Sauer, of the F. A., M., has arrived in southern California on his round-the-country lecture trip. As is generally known, the only friction worthy of the name between clubs and the national body has been developed in California, and it was here that the Federation traveler expected to find his work cut out for him. To a great extent his expectations were realized, but it is worthy of note that he found motorcyclists in general ready to hear his arguments and to give reasonable consideration to the proposals of the F. A. M. He was given a warm welcome on his arrival in Los Angeles, despite the stand-pat attitude of the leaders opposed to the F. A. M., and at the first meeting of importance, held at Venice, near Los Angeles, there was a large attendance.

This meeting was featured by a debate between Director Sauer and George F. Douglass, the latter representing the element on the Pacific coast that is antagonistic to the F. A. M. In his explanation of the causes that led to the present dissatisfaction, Mr. Douglass dwelt on the claim that the Federation had not shown definite results in California; that promises had been made without being fulfilled, and that the motorcyclists on the coast had arrived at the conclusion that they were being overlooked.

WHY STATE ACTIVITY IS NEEDED IN F. A. M.

In reply to these arguments Director Sauer stated that the riders could not afford to take a narrow view of the situation, and that even casual inquiries would show the F. A. M. to be making progress along practical lines. He said that while the Federation was being so severely criticised on the Pacific coast it had actually under way legal action cases in New York, New Jersey, Indiana, Ohio, Virginia and California. He explained that these cases had been taken up at the request of clubs or State officials, and that they would be fought to the last trench in order to protect the interests of motorcyclists and establish satisfactory precedents. He further called attention to the fact that immediately upon his arrival in Los Angeles he had appointed Lawyer I. B. Potter to represent the National Legal Action Committee of the F. A. M. on

Digitized by Google

the coast. Mr. Sauer stated that he had instructed Lawyer Potter to give special attention to the motor vehicle legislation now pending in California, and to leave no stone unturned to insure a proper regard for the rights of motorcycle owners.

Referring to the criticism that the coast territory was not properly represented, Director Sauer explained that under the F. A. M. constitution and by-laws each State is privileged to organize its own government, elect its officials and referee and handle its racing affairs, just as any State in the national government is privileged to dispose of matters that concern its particular territory or interests. He stated that failure on the part of the riders to form their State organization was responsible for much of the dissatisfaction now being expressed by California motorcyclists.

ONLY ONE FEDERATION NEEDED.

Continuing along this line Mr. Sauer asked for co-operation with the various departments of the F. A. M., and referred to the recently established Touring Bureau. He declared that if each F. A. M. rider would make it a point to send in details of one tour a year the country would soon be fully covered. He concluded by requesting Mr. Douglass to offer a proposition to the F. A. M., and the former advanced the opinion that nothing short of a separate organization would satisfy the riders. To this Director Sauer replied that two organizations intended to govern motorcycle affairs could not exist in one country, however big the country might be. He denied that there was justification for the remark that the F. A. M. was an eastern organization, and pointed to the fact that some of the strongest boosters of the organization are westerners; that Denver is being most seriously considered as the scene of the next national assembly, and that there can be no East or West in a body which is working for the advancement of a sport and its devotees.

The F. A. M. official stated that not until recently have Federation funds been available to give the riders practical benefits, and that considerable money is now being devoted to the development of the Touring Bureau and to legal action work. He made it clear that no section of the country is to be favored, and stated further that arrangements are under way—and have been for some time past—to give systematic attention to touring conditions on the Pacific coast and in the Middle West.

PRESENT BENEFITS OF F. A. M.

F. A. M. benefits already directly or indirectly available were pointed out as favorable publicity for the motorcycle; registered repair shops; rewards for the recovery of stolen machines; accident fund for racing men; excellent set of competition rules; a well-developed national organization; a broad legal action policy and the Touring Bureau. Mr. Sauer said that proper activity on the part of State organizations would insure satisfactory distribution of these benefits. Questions were asked and answered by both speakers. The meeting was held under the auspices of the Los Angeles M. C., with President Bissett in the chair.

Leo Owens, of Pasadena, has succeeded R. Y. Leslie, who recently resigned the State commissionership, and Percy Howers has been named as the new local referee in Los Angeles. Both Owens and Howers are hard workers and popular.

PANTHER CITY CLUB IN LINE

FT. WORTH, Tex., March 10.—At a meeting held here Sunday afternoon the Panther City M. C. was reorganized and affiliated with the F. A. M. with a paid-in membership of twenty. As many more are assured, and J. A. Massie, an active local worker for the F. A. M. was elected temporary president of the club. There are about 175 motorcyclists in this city, the dealers are working harmoniously for the advancement of the trade and the sport and it was with enthusiasm that the local riders learned of the intention of Director J. Leo Sauer, of the F. A. M., to visit Ft. Worth on his journey westward. The Federation traveler expressed the opinion that Ft. Worth and vicinity should produce a fine crop of motorcycle enthusiasts during the coming summer and the dealers assured him that they would leave nothing undone to back up his good impression of the city.

Our Dallas correspondent writes as follows:

"As a result of the favorable impression created throughout this district by Director Sauer, of the F. A. M., positive assurances are given that an affiliated club of Dallas motorcyclists will be formed in the very near future. This city has had several clubs, one of them affiliated with the Federation, but none having the support of all the dealers and various differences of opinion have prevented riders and dealers from getting together for a long, strong pull.

"The conditions were not improved when Chairman Thornley of the F. A. M. Competition Committee, appointed his referee here. Two men were equally recommended and both were capable of handling the work. When one was appointed the supporters of the other felt that a mistake had been made. The riders are now coming to the conclusion, however, that the competition chairman acted without bias and that his attitude toward all the motorcyclists of the district, regardless of factions, is one of fairness."

F. A. M. "KNOCKS OUT" ALBANY BILLS

Prompt Work by Legal Action Committee and Riders Convinces New York State Lawmakers That There is no Need for Additional Motorcycle Regulations at This Time.

AS a result of the prompt action taken by the F. A. M., through Alexander Schwalbach, who is acting for the National Committee on Legal Action, the proposed motor law amendments which were designed to impose a tax on New York State motorcyclists have been satisfactorily disposed of, and there will be no new regulations applying to owners of motor two-wheelers in this state. At a hearing held in the Assembly chamber at Albany on Thursday, March 13, the bills were threshed out by legal counsel for the automobilists of the state and by an attorney representing the F. A. M. The hearing was attended by hundreds of motor car owners and dealers and a strong delegation of motorcyclists. Before, during and after the hearing Mr. Schwalbach was in conference with the lawmakers, and he was given positive assurances that the bills affecting motorcyclists would not be reported by the committee to which they were referred.

In other words, the proposed amendments, at least insofar as they have a bearing on motorcycles, will rest peacefully in the hands of the committee. The hearing was, strictly speaking, a matter of form, for the lawmakers had been convinced that there was no justification for new motorcycle regulations at this time, even before the arguments of the State motorcyclists were formally presented. This highly satisfactory state of affairs resulted from the rapid-fire canvass of the senators and assemblymen by Mr. Schwalbach and his cohorts throughout the state.. No less than 1,500 postcards were circulated by the F. A. M. in the state, asking riders to state their objections to the contemplated amendments and to request the aid of the legislators to defeat them. Many assemblymen expressed surprise at the magnitude of the movement started in opposition to the bills by the motorcyclists, and advanced the opinion that the state could ill afford to work against the interests of such a body of riders.

Mr. Schwalbach had a personal conference with Governor Sulzer relative to the bills, but as the state executive had not found time to read the proposed amendments, he could not state his policy with reference to them. He intimated, however, that he believed the new measures would be disposed of to the satisfaction of motorcyclists. When it is realized that no less than 3,000 bills have been printed for the consideration of the lawmakers during the present term, it will be easy to understand why the motor law amendments had not reached the eyes of the Governor—or the eyes of most of the senators and assemblymen, for that matter.

One of the leaders among the assemblymen stated in conversation with Mr. Schwalbach that in his opinion the state will not be in a position to draft ironclad regulations taxing motorcyclists for many years to come. However, the policy of the F. A. M. in New York State, as elsewhere, is to be one of untiring vigilance. Every precaution has been taken to guard against unfavorable action on any measure affecting motorcyclists before the latter have been given an opportunity to state their case. This will apply to the present bills, until they have been positively put out of the running, and to all other measures that may be submitted with a view to hedging the owners of motor two-wheelers with objectionable regulations.

BALTIMORE'S NEW FIRM

HAVING obtained an option on a four-and-a-half-acre plot of land in South Baltimore, Md., the Dreadnaught Tire and Rubber Company, recently incorporated under the laws of Delaware, with a capital of $1,000,000, will erect a factory for the manufacture of various rubber products. It is stated that 400 men will be employed, fifty of whom will be brought from Akron. The officers of the company are: A. F. Gilbert, president; Wilmer Dunbar, vice-president and general manager; Walter E. Hill, secretary, and C. P. Triplett, treasurer. R. H. Diggs, Walter B. Swindell, A. B. Whitlock, Albert W. Adt, and H. E. Whitlock, together with the officers compose the board of directors. It is stated that construction work will be started at once.

LARGE TIRES AND THE SIDE-SLIP PROBLEM

Veteran Roadster Favors Three-inch Tires for Muddy Traveling and Gives Some Advice Anent Balancing.

A PARAGRAPH which appeared in these columns recently to the effect that an experienced motorcyclist blamed 3-inch tires for increasing the tendency of a machine to side-slip has aroused considerable interest, and a number of riders have rushed to the defense of the large tire, claiming that in general the results obtained from it are directly opposite those mentioned in the original item. The defenders of the 3-inch tire state that there is an appreciable improvement over the 2½-inch casing in reference to side-slipping, and they attribute this, naturally enough, to the fact that the non-skid tread of a 3-inch tire grips more of the road surface than a similar tread on the narrower tire.

It has been suggested that the writer of the original paragraph used his rear tire without sufficient air, and that when it flattened under the load it presented a relatively broad surface which would have a greater tendency to "float" in soft mud than a narrower tire at the same degree of inflation. In other words, it is necessary to keep the large tire quite hard in order to benefit by its advantages over the narrower casing. That tires should always be inflated to the point where they will not flatten noticeably under the load is generally understood, but few motorcyclists observe this rule systematically.

When the theory that a 3-inch tire is conducive to side-slipping was presented to a well-known racer and endurance rider he greeted it with a broad smile.

"Don't believe it," he admonished, "for I have proved to my entire satisfaction in heavy road work that the 3-inch tire has marked advantages over the narrower casing, aside from its additional strength and durability. In past seasons I have had considerable trouble from side-slipping in slush and soft mud on winter and early spring trips, but during the last two months I have used a 3-inch rear tire and find that the tendency to side-slip is almost entirely overcome. I may say, however, that a soft tire—no matter how broad it may be—will not give satisfactory results in mud-larking. The tire must be hard enough so that its studs, or corrugations can "bite" through the slime and "grease" of the road and find a comparatively solid surface on which to obtain traction."

The same rider referred to the fact that chronic side-slipping is often caused, or aggravated, by an improperly balanced mount. He admitted that the standard high-grade motorcycle usually has the weight well distributed when it leaves the factory, but, he argued that the manufacturer's calculations are sometimes completely upset when the rider adds special attachments or changes his handlebars or the position of his saddle. To minimize side-slipping the saddle should be well forward in order to distribute the rider's weight as fairly as possible between the two wheels, and the handlebars should be quite broad and of such length that the rider will lean slightly forward. A gas tank, heavy tool-box or similar attachment should not be carried any higher on the frame than is absolutely necessary, and the custom of attaching a tool-bag to one of the handlebars is particularly frowned upon. Care should be taken to see that the wheels "track," and that there is no lost motion in the steering head.

"The inexperienced rider may consider some of my suggestions rather unimportant," continued the veteran roadster, "but I can assure him that no balancing detail, however trivial, can be overlooked if side-slipping is to be reduced to the minimum. I have practically cured a chronic side-slipper by changing the length of the handlebars, getting the wheels in track, shedding a cumbersome tool-box from the top of the tank and shifting the saddle a bit to the front. All side-slipping is not to be charged against the tires, by any means."

IT is stated in recent reports from California that there are now 55,000 motorcycles in use throughout the state, thus making it the banner motorcycle state of the Union.

IN the striking photograph reproduced above an English rider is shown getting into difficulty on a sharp turn littered with loose stones. The picture was taken during the recent Mid-Warwickshire reliability trial, which imposed a number of hairpin turns and baffling ascents in a downpour of rain. There were 180 starters in the trial, including three women enthusiasts.

FROM PITTSBURG TO ALBUQUERQUE

by C. E. PARKER

BEING dissatisfied with climatic conditions in Pennsylvania and having been considerably impressed by accounts of the inducements held out by southern Pacific coast cities, I decided some time ago to make my way westward and it seemed only natural that I should choose my motorcycle as a means of locomotion. For years past I have been an ardent advocate of the single-tracker, and I welcomed an opportunity to enjoy a long tour through interesting territory and at the same time to carry out my plans for a change of climate.

At the time of which I write I was living in a coal-mining town in Pennsylvania. I wrote to several motorcycle journals and had no trouble in getting in touch with riders from various parts of the country. I chose for a partner a young man from Pittsburgh, and we decided to leave for the coast as soon as possible.

It being agreed upon that we would, as far as possible, camp out at night, I included in my equipment a good woolen blanket and a large piece of oilcloth. Before starting I attached a cyclometer to my machine, but the rough roads soon broke the brackets that held it in place. In making such a tour as this one should have a good speedometer; this not only provides for the keeping of an accurate record of speed and total mileage, but it is really necessary when traveling in the sparsely settled districts of the Far West. Here one may travel for hours without meeting anyone, and, of course, it is impossible to ask for directions. An ordinary luggage carrier was attached to my machine, to which I added a strong cottonwood board and then secured my suitcase to it. I carried a new inner tube and a good assortment of small parts.

THE START FROM WASHINGTON.

For some time prior to the date set for our start there was almost continuous rain in our district. We had arranged to meet in Washington, Pa., for the real start, and on the way to this point I encountered considerable rain, had some trouble with my clutch and got a bad puncture. Pretty interesting for a start, eh? Part of my route to Washington was over the Old National Road, some of which offered good going. I stopped the first night at Brownsville, which is a quaint old town. In the morning it took a great deal of kicking on the door before I managed to arouse the garage keeper. After passing through Beallsville I reached Washington and found that my partner had not arrived. I spent the afternoon riding around the town and shortly after supper "Bill," my companion, made his appearance.

We went to bed early and the next forenoon we worked on Bill's machine, as he had run through an open bridge culvert and twisted the front fork badly. It was nearly noon when we finally left Washington, and the weather was fair. The country becomes hilly immediately and the rider in this section need not fear monotony. We passed through Caysville and West Alexandria to Elm Grove. Here we stopped to inspect my rear tire which had gone flat. After going through the usual procedure to find a puncture—which we couldn't locate—we discovered that the valve was leaking. By the time we were ready to start again my motor balked and all my efforts to get it started were unavailing. Then Bill tried it and met with success the first time. Later on in the day I found that my magneto cut-out was grounding the magneto circuit.

ENGINE TROUBLE AND A PUNCTURE.

After leaving Elm Grove we rode down in the valley and soon reached Wheeling, where we stopped long enough to get a supply of gasoline. So far the roads we had traversed were from fair to good, with some very long and steep hills. We crossed the Ohio River over a toll bridge, paying five cents. This brought us to Bridgeport. While riding through the town I noticed all the people were looking upward and, of course, I did the same and saw a fine flight of an aeroplane. I waited a while but as my partner did not show up I started back to find him. I had not gone far when my motor stopped. It halted in front of the home of an electrician, who came out and after experimenting a little we decided to disconnect the magneto cut-out. After doing this the engine started all right.

On going back to the city I found that Bill had picked up three nails in one of his tires and he was forced to use a new tube. The punctures were in the rear wheel so we had to remove the wheel, brake and chains. We were soon under way again, and after leaving Bridgeport we rode up the Wheeling Mountain. This road is very steep and there are many sharp curves. We arrived at St. Clairsville at nightfall, where we ate supper and then

Digitized by Google

made our way slowly out of town for our first night's camping. We were up early the next morning and proceeded to Morristown over good roads. We made a stop here for breakfast, but as we were rather late there was an extra charge. Leaving here we continued over fair roads through Fairview, Washington and Cambridge. There are many hills in this section, on which are numerous water breakers and one has to use caution to avoid being thrown.

GOOD PROGRESS OVER FAIR ROADS.

Many stone bridges are seen along this Old National Road. Before reaching Zanesville we passed through New Concord and Bridgeville. After dinner, which we had at Zanesville, we were advised by an acquaintance to go to Columbus by way of Lancaster and Fultonham, and we acted upon his instructions. This was an improvement over the Old National Road and we had good gravel and macadam roads to Columbus, where we arrived at nightfall. Both being without lights we were at loss as to how we should enter the city, as we feared being halted by the police. However, an automobilist came to our rescue by offering us the protection of his lights. To this point the trip had been very enjoyable and the roads generally good.

We got under way at 9 a. m., and went over a fine boulevard toward Springfield. The first 17 miles afforded excellent going, but after that the macadam was rutty and dusty. We were now riding the National Road which runs straight for about 50 miles, although the rolling nature of the country gives it a rugged appearance. We stopped at Brighton, having passed through Alton and Lafayette, which place we reached in time for dinner. The road leading to this point was in fearful condition. That afternoon we passed through Donnellsville, Brandt, Vandalia, Arlington, Lewisburgh and Gettysburg to Richmond, Ind. This country is marked by large corn and tobacco fields and is of a rolling nature. We slept that night at the college grounds in Richmond. In the morning we bought a bottle of kerosene oil. This we used daily in the cylinders and found it to be very beneficial.

A CLOSE CALL FOR BILL.

We rode on to Pennville for breakfast, but as the restaurant keeper was not up when we arrived, we made some adjustments on my rear cylinder which had not been firing regularly. We found that the nut joining the inlet pipe and valve dome was broken which caused a leak, thereby weakening the explosive mixture. The application of some friction tape wound tightly around the break effectually checked the leak. After leaving here we had some bad going. Just outside of the town the roads were being repaired and we were forced to go into the ditch. This was followed by miles of loose gravel, dumped on the road, and we took several spills in trying to turn out for automobiles and teams. Our route to Cleveland was through Cambridge City, Lewisville, Ogden and Knightstown. It was raining when we reached the Mile High City and we sought shelter in a barn. The storm did not last long, and as the gravel roads dried quickly we had no trouble in reaching Greenfield, where it had not rained. The roads to Cumberland and Indianapolis were better than we found earlier in the day.

As a rule it is confusing to find one's way into and out of a large city, but we had no trouble in locating a motorcycle store in Indianapolis, and on leaving a guide from the shop escorted us out. We had to cross a number of railroad tracks just outside of the city and in going over one my partner took a spill. For an instant I thought he would be killed as a fast freight train was almost upon him, but a flagman managed to drag him and his machine out of the way just in time. He was not injured and a broken pedal pin was the only damage to the machine. By the time we were able to start it was dark and we had ridden only a short distance when my mount skidded out from under me. We then decided to camp out for the night.

In the morning, while we were eating breakfast a couple of motorcycle racers, riding from Terre Haute to Indianapolis passed by. Later on we met another motorcyclist who gave us directions how to avoid some bad sand. However, I made the wrong detour and turned back just in time to get the worst of the sand. Plenty of sand was encountered at Belleview and Mt. Meridian. We met a number of riders near Rullsville and Manhattan. We had dinner at Brazil, after which we continued on through Seeleyville to Terre Haute.

(To be continued.)

SLIDE-VALVE MOTORCYCLE MOTOR

New Yorker Perfects Unique Power Plant and Proves Its Advantages in Practical Trials Covering Two Years.

WHAT is probably the first successfully used slide-valve motorcycle motor is that designed by A. E. Osborne, of 2058 Valentine avenue, New York City, the present form of which is illustrated here. The original motor was brought out in January, 1911, and is still running, mounted in a tank-frame machine.

As part of the cylinder casting there is a smaller cylinder formed at the right side and within this cylinder operates a piston valve which is reciprocated by a small crankshaft and connecting-rod. The crankshaft is driven at one-half the motor speed and the valve serves to open and close the inlet and exhaust ports at the proper intervals. There is also a small V-section ring (shown black in the motor section) fitted in the inlet passage whose duty it is to prevent the expanding gases entering the inlet pipe just before the exhaust port is opened. This ring floats with a limited movement in the little chamber until seated by the expanded gases and is insulated from the burning charges by the piston valve during the firing stroke. It is cooled also by the new charges passing over it. The inlet passage is that nearest the combustion chamber and its opening to the cylindrical passage in which the piston valve works is controlled by the V-ring previously mentioned. The exhaust passage is the lower one and is annular, while the inlet passage to the valve cylinder is a combination of annular and ports, the latter establishing communication between the little chamber and the small cylinder in a most satisfactory manner.

The operation is as follows: With the motor piston at the top of its stroke and the charge compressed, the firing of the charge would force the piston down and the piston valve, being driven by the timing gear, will travel downward successively uncovering the inlet and the exhaust ports. As the inlet port is exposed, the V-ring covers it until the gases escape through the exhaust port. As the main piston performs the exhaust stroke the exhaust port still remains open but as the main piston commences the inlet stroke, the piston valve ascends, closing the exhaust port and exposing the inlet port. The suction lifts the V-ring and the charge is admitted. As the motor gets on compression stroke, the piston valve rises to its top position, cutting off communication with both ports. The movements are timed so as to occur properly whether the motor is running at 250 or 2,500 revolutions, a feature which is not the case with other slide-valve designs which cannot be run slowly with any certainty of operation.

Lubrication is well provided for. The valve piston is formed with oil grooves on its lower two-thirds and gas-tightness is secured by two packing rings on the upper part. There is a connection to the valve cylinder near the bottom for an oil lead and oil is thus sent past the piston valve to the main piston.

HOW TO BUILD A MOTORCYCLE GARAGE

BY CARL · L · WEIL

HAVING learned that one of the chief problems confronting me as a motorcyclist concerned the housing of my machine, and that many of my friends among the riders are about in the same position, I set to work recently to design a satisfactory motorcycle garage that could be erected at a small outlay, and I believe that the plans which accompany this article will be found to meet all requirements. Being a rider, I have kept in mind the special needs of the motorcyclist without ever losing sight of the fact that economy in construction was a big factor, and it will be noted that the total expenditure as required in my specifications is $15.04. I do not believe a rider can lower this figure materially and still obtain the results he desires, and on the other hand I do not see why it should be necessary to increase it.

Hundreds of riders keep their machines in barns that at best are insecure and leaky, much to their depreciation (and sometimes resulting in their theft by night prowlers), and it strikes me that with the approach of Spring there will be a widespread demand for just such a building as I have planned. It will be found from study of the plans that the dimensions are such as to minimize waste in cutting by making the sizes conform to standard lumber stock. In the following paragraphs I give some alternative details and also outline the methods to be followed in keeping the total cost down to the figure I mention.

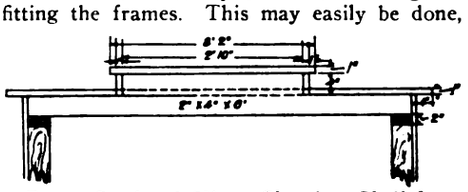
SOME SPECIFICATIONS IN DETAIL.

If a wooden floor is to be used it will be necessary to have a foundation of gravel or cinders, six inches deep and of a ground area slightly larger than the garage. This foundation will bring the floor about one foot higher than the original ground surface, and as a result it will be necessary to have an inclined runway of cinders, concrete or wood to permit of getting the machine in and out of the building easily. By raising the floor one foot above the ground proper the machine owner will guard against flooding of his garage in wet weather and will reduce to the minimum the danger of a damp floor which, naturally, would not do his mount any good. Some riders may prefer a concrete floor and for these I would suggest a mixture of three bags of cement to fifteen bags of gravel. This mixture will give the desired results and will prove quite economical.

The mud-sill is made up of 2 x 4 in. material, laid on the 4 in. side, and the stringers to which the flooring is nailed will rest on this sill. The studding, which is 2 x 4 in., and of the lengths shown in the plans, is fastened on top by pieces laid on the 4 in. side. On the studding is then placed the rafters which carry the roofing. The section B-B also shows a pitch to the roof of half a foot, the front being 7 ft. high and the rear 6 ft. 6 ins. This is sufficient to prevent rainwater and snow from settling and remaining long enough on the roof to leak through.

PROVIDING FOR LIGHT.

The skylight and a single window can be procured from a dealer in second-hand building material at a very reasonable price. If they are bought made up it is not likely that they will be of the sizes shown on the plans, and it will then be necessary to make a change in fitting the frames. This may easily be done,



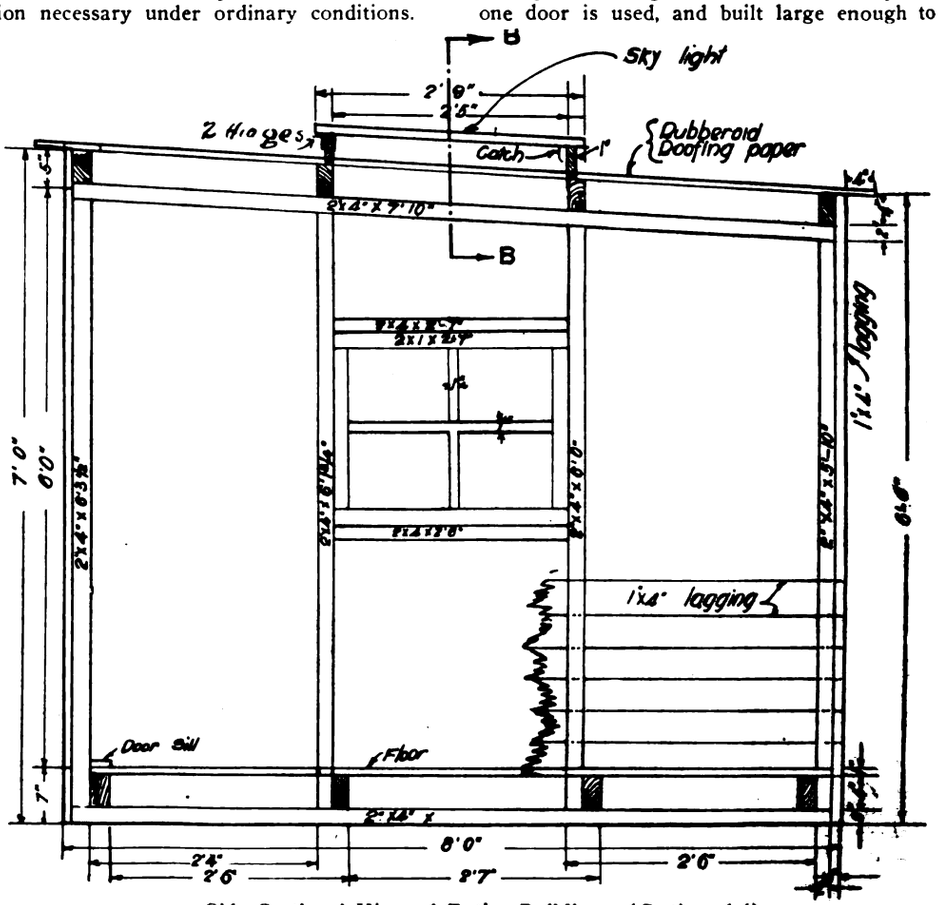
Front Sectional View, Showing Skylight.

however, and the frame accommodated to the sash of the window and skylight, whatever size they may be. The window is to be framed in, at a height above the floor that will permit of placing a workbench under it. No provision is made for opening it, since the door will be found to provide all the ventilation necessary under ordinary conditions.

Section C-C gives a longitudinal view of the skylight and a transverse section of the upper part of the garage. It should be noted that the vent runs lengthwise across the main portion. If section C-C is studied in conjunction with section B-B the rider will obtain a clearer working knowledge of the plan. The hinges of the skylight are 2-inch ones, placed outside. On the other side is a hook and screw-eye for fastening the vent down. If it is found desirable to raise the skylight for additional ventilation a piece of board, say ⅞-in. thick by three or four inches wide, may be hinged to the loose edge of the skylight frame, and holes may be bored at intervals in the board to permit of adjusting it at varying heights. In this way it will be a simple matter to push this board upward and open the skylight to any desired distance.

ADDITIONAL POINTERS.

The construction of the door should give the builder no trouble. The diagram tells its own story. It will be seen that double doors are used instead of a single wide door. There are several reasons for this construction, chief among them being handiness and stability. If one door is used, and built large enough to

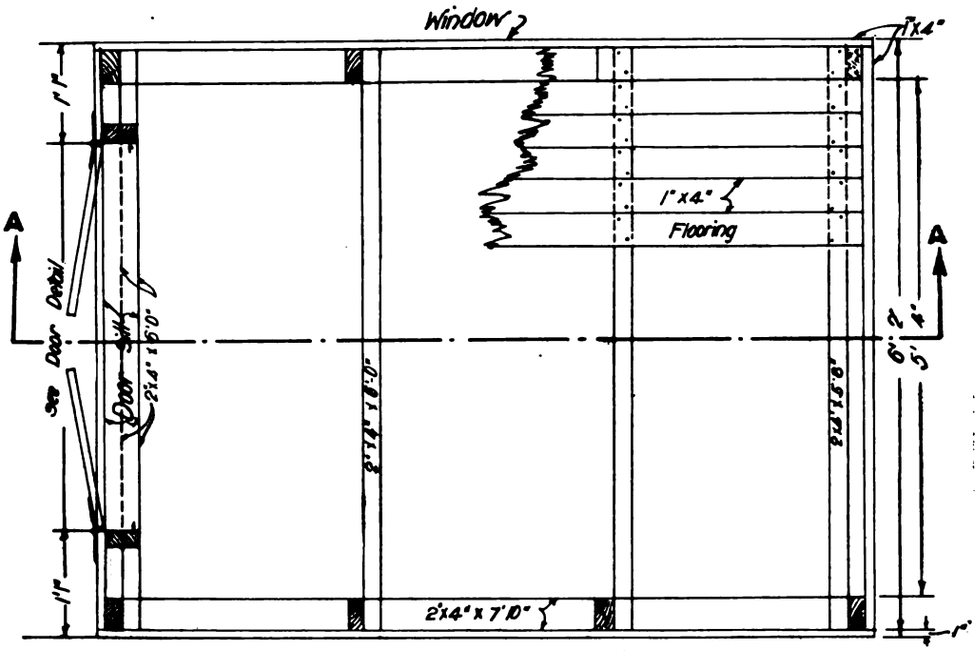


Side Sectional View of Entire Building. (Section AA).

Digitized by Google

permit of the passage of a motorcycle with the utmost comfort for the person handling it, the door will be quite heavy and sooner or later it will sag and cause trouble. Double doors cost very little more, are twice as handy and will never bother the owner. Besides, with double doors it is possible to give the building a more presentable front.

The dotted lines in the door diagram show the inside braces. Four 6-inch strap hinges are used and placed outside, this method permitting the doors to be swung outward. The lock may be left to the choice of the individual rider; an ordinary hasp and staple with a good padlock will usually meet the requirements. Some time ago I saw a locking system of this character that had a feature of special interest to motorcyclists, but unfortunately I neglected to learn whether it was being manufactured for general use. In the system I refer to the hasp was hinged at the end containing the screws and it then doubled back over itself so that when the lock was in position all the screws were covered. It is obvious that a thief would find it difficult to remove such a hasp, and that the locking system would have to be pried from the building entire before the door could be opened.



Floor Plan, Showing the Frame in Section.

MAKING THE ROOF SECURE.

The roof is made up of 1-inch boards, covered with roofing paper. The paper should be carried well up on the sides of the skylight frame to insure a watertight job. Wide boards are to be used on the sides of the roof so that a suitable overhang may be obtained. Shingles may be used if desired, in which case it will be necessary to place the rafters longitudinally and then nail on shingle lath to receive the shingles.

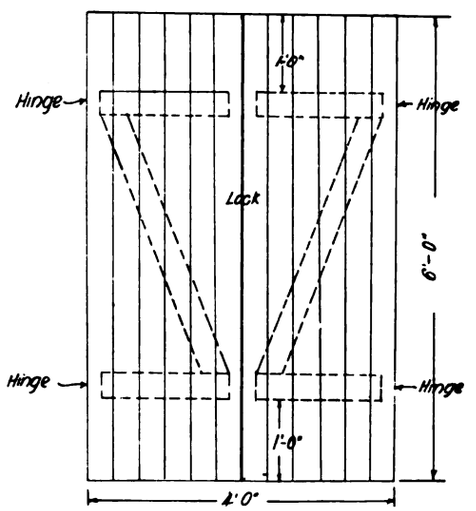
Pine, of the common grade, tongued and grooved, may be used for the siding, roof and floor. Hemlock or "short leaf" yellow pine is suitable for the 2 x 4-inch material, and 8d., 10d. and 12d. wire nails will be found to meet all the requirements of the builder. The rider who desires a concrete floor in his garage will find that cement costs about two dollars a barrel, there being four bags to the barrel.

In preparing the following schedule of prices I have not adhered to rates in any one section of the country, but have obtained prices from wholesalers in widely separated districts, so that I believe the builder will find that my table strikes a fair average, no matter where he may be located.

SCHEDULE OF PRICES.

I have prepared my expense schedule as follows: Sides of garage, 6¾ x 8 feet—108 board feet; front, 6 x 7 feet—42 board feet; rear, 6 feet 6 inches by 8 feet 8 inches—56 board feet; floor, 6 feet x 8 feet—48 board feet; total, 193 board feet. I add to this for shelves and waste 24 feet of material, so that I have a final total of 217 feet. At the rate of $30 per thousand feet it will be seen that the outlay is $6.51. Sixteen pieces of studding will be needed, 2 inches by 4 inches by 6 feet, giving a total of 64 feet; there will be four pieces 2 inches by 4 inches by 8 feet, giving a total here of 21 feet, and six pieces 2 inches by 4 inches by 7 feet, giving a total of 28 feet and a grand total for this material of 103 feet. At the rate of $27 per thousand feet, this lumber will cost $3.78.

Now for the incidentals. Two pairs of hinges, with screws, will cost 50 cents; ten pounds of nails, 8d. and 10d., $1; roofing paper, $1.50; window and skylight, $1; lock, hasp and staples, 75 cents. By footing up our totals we will find that the outlay has been $15.04, and that we have provided a building ready to receive our garage equipment. A work bench has not been included in this estimate for the reason that nearly every rider has ideas of his own as to how he can turn out his work most satisfactorily, and it probably will be best for him to arrange his bench to suit the amount of fittings and general equipment he desires to have on hand. However, I understand that another writer in this issue, dealing with the equipping of the home garage, has offered some helpful suggestions for the erection of a bench.



Detail Drawing of Double Doors.

ENDURANCE RUN PLANS

A 20-MILE an hour schedule will be maintained in the 24-hour endurance run which will be held under the auspices of the Indianapolis Motorcycle Club May 16-17, when the state convention will be held. President McClain, of the Indianapolis Club, and the state organization have received many letters inquiring about the run and the convention, and predicts that over 100 riders will take part in the 24-hour event. The route is to be kept secret until a short time before the run.

QUEBEC-MIAMI HIGHWAY

MOTORISTS of Washington, D. C., are delighted with the news that the Quebec-Miami highway from the Great Lakes to the southern part of Florida and passing through Washington is expected to be completed by the end of September. Already that section of the road from Rouse's Point, on the Canadian border, to Washington is ready to travel, save for a few miles in Maryland, and this bit of road will be completed during the spring.

From Washington there will be a new road through Virginia, and the highway will pass over historic ground, crossing no less than twenty-seven battlefields of the Civil and Revolutionary wars. The road is being built by county bonds and by popular subscription. The Chamber of Commerce of Richmond has already raised $75,000 to aid in the work.

One hundred and fifty thousand dollars in bonds for the Richmond-to-Washington highway, from Spottsylvania Courthouse south to the Hanover line, have been issued. This is the last link in the chain. The money is now all in sight and the work will be completed during the fall of this year.

NEW HAVEN M. C. SCHEDULE

AT a special meeting of the executive committee of the New Haven (Conn.) Motorcycle Club recently held at the headquarters, a schedule for the coming riding season was mapped out. The club will hold its annual spring run Sunday, April 6. It has been decided to go to Saybrook, and it will be a secret time event. A three-day run to Providence will be held May 30, 31 and June 1, and on June 9 the club endurance run will take place. Other Sunday runs will be held as follows: April 20, to Springfield, Mass.; May 4, to Norwalk; May 18, to New London, and June 22, to Coney Island, N. Y.

CLUB AFFILIATIONS

SECRETARY GIBSON announces the affiliation of the following motorcycle clubs during the week ending March 15: Freeport M. C., Freeport, Ill.; Newburgh M. C., Newburgh, N. Y.; Malta Motorcycle Club, Buffalo, N. Y., and the West Philadelphia M. C., of West Philadelphia, Pa.

SELECTING the GARAGE EQUIPMENT

BY D. R. HOBART

N considering the equipment of a private motorcycle garage it is to be assumed that the owner wishes to be as independent of the professional repairer as possible, visiting him only for fuel, oil or certain renewals of parts. Under these circumstances, a complete set of tools and spare parts, some "sundries" and a work-bench, and equipment therefor, will be ample for maintaining and repairing the machine which is the owner's pride and joy. A foot-power lathe might be added for those who are very remote from an agency handling their make of machine, and it is probable that a mechanically-inclined rider will have one anyhow, if there is space in the rather restricted area occupied by a motorcycle shed.

WORK-BENCH AND FITTINGS.

An ideal work-bench should be located in front of a window and its top should be about three feet from the floor. The top should be sufficiently strong to take any work that can be placed upon it, and a thickness of two inches will be quite sufficient for this. The material used should be some rather hard wood, or well-seasoned pine, the dimensions of the top being at least four by two feet. Where the garage wall will admit of its being done bolts should be put through the entire width of the top and fastened *outside* the wall to give greater steadiness. There should be four stout legs, well braced, and the chief tool, the vise, should be fitted opposite the window. The construction of an all-wooden bench should be left to a carpenter unless the owner is more or less experienced in this kind of work.

In addition to the vise, which should be strong enough to take the entire motor, say eight inches, it is an excellent thing to have a tool-board close to the bench and a drawer below the top. The tools are to be fitted on the tool-board, which can be made of a sheet of zinc with nails or pegs for the various screw-drivers, wrenches, etc. The spare parts, such as can be accommodated in the limited space, are to be kept in the drawer. The latter should be arranged in sections, so that the cotters, washers and springs do not injure any reserve spark-plugs, for example.

COMPLETE TOOL SET.

If the rider is methodical, the complete tool set may consist of those tools in the tool-bag accompanying the machine, plus a ten-inch monkey wrench, a six-inch one of the same variety, a Stillson wrench of six inches, a pair of cutting or combination pliers, a spark-plug wrench, and a corrugated handle screw-driver about eight inches long for valve-grinding. To this may be added a flat file, a half round file, a small Swiss file for trimming up platinum points, a valve spring remover, a small soldering kit with lamp, chain tool (where chains are used and the tool not included in the kit), and a set of tire levers. The last are most important, as taking off a tire with a screwdriver is injurious to the flap and bead. The owner-rider should be superior to the professional in providing the proper implements and using them.

SMALL TOOLS AND SUNDRIES.

Usually a drift, center punch and soft hammer are not found in a tool-kit, but they will probably be needed badly some time or other, and should be provided. The hammer should be of copper or fibre, and is to be used for striking where a steel hammer would crack or distort the work. Copper wire is very useful, and should be carried at all times, so that a small roll of it can be kept in the garage. A length of cable for replacing that from the magneto to the spark-plug is another useful "spare," and a kerosene can should be provided. A long-spouted oil can to get at the various oil-holes, etc., without difficulty, and an ample supply of wiping rags are essential. Some of the latter should be clean at all times, so a sufficient number is desirable. For cleaning the machine, a three-inch flat varnish brush and a sash brush, the latter about an inch through, and to be used for washing in cracks or corners, will give fine service.

ARRANGEMENT OF THE EQUIPMENT.

The chief motto for the private garage is "A place for everything and everything in its place." Hence, in arranging the pegs or rack for the various tools on the board, have those most used nearest the bench, so that they will be the more easily returned when the work is finished. The soldering lamp should be more or less isolated from the rest of the outfit on general principles, and have a peg of its own. The spares (valve springs, washers, extra plugs) go in the drawer, as previously mentioned, as do the chain tool and Swiss file. The wiping rags and brushes have their pegs on the wall, as has the wash pan. Spare tires, wrapped in cloth or put in a bag, and inner tubes, similarly housed and rubbed with chalk, are also hung up but away from the light.

FIRE PROTECTION.

For protection against fires, a hand extinguisher of the "Pyrene" type should be hung up near the door, and a box of sand would not be superfluous. The sand is useful in soaking up oil, etc., that has accumulated, and is easily swept out, carrying the oil with it. But the best way to avoid fires is to do all cleaning outside the garage and ventilate the latter by means of the open door as often as possible.

THE LATHE.

Where a lathe is decided upon, it should be placed in front of a window and have the gears, and other extra equipment on board close at hand. A lathe with six to eight-inch swing will generally be ample, and, using the small headstock cone, can be driven fast enough to do light grinding and drilling. About the only extra fitting for a regular lathe for this purpose is a drill-chuck, which can be obtained very cheaply.

BELLEVILLE TURNPIKE NOW OPEN

Important Traffic Route Between New York and Newark, N. J., Has Been Rebuilt to Avoid Half a Dozen Railroad Grade Crossings.

THE Belleville Turnpike, one of the most important connections between New York and Newark, has recently been opened to traffic after having been closed on and off for over nine months. The road has recently been entirely rebuilt to avoid five or six dangerous grade crossings. It is constructed on a heavy stone foundation, with a covering of very well-laid macadam, and as it runs the greater part of the way across the swamplands, it is as level as a billiard table.

Motorists going to Montclair, Denville, Lake Hopatcong and the Delaware Water Gap (without going through Morristown), are advised to use this road, as it presents a much better and more direct route than by the Newark Turnpike, which leads into the business center of Newark.

In order to use this route, the Newark Turnpike is followed as far as the dangerous D. L. & W. railroad crossing, which the trolleys go over on an odd double trestle; immediately after crossing the railroad tracks the first right-hand road is taken. The motorist is now on the Belleville Turnpike, which is followed past the cemetery at the foot of the hill, up the hill across the trolley tracks, and down the other side of the hill, across the Passaic River bridge into Belleville.

Immediately after crossing the bridge, turn left, taking the next right turn, up hill, crossing the Erie railroad tracks, and the trolley line on Washington avenue. Then continue straight ahead on John street, connecting with Glen Ridge avenue, which runs into Bloomfield avenue, in Montclair. From this point the regular route is followed through Montclair to Denville, Lake Hopatcong and the Delaware Water Gap, making a complete alternate to the other line via Newark, Morristown, Chester and Hackettstown.

AN APARTMENT DWELLER'S GARAGE

How One Rider Stores His Motorcycle Safely in a Case Placed in Basement and Ingenious Platform System Which Permits of Getting Machine To and From Its Place of Concealment.

By William Hetherington, Jr.

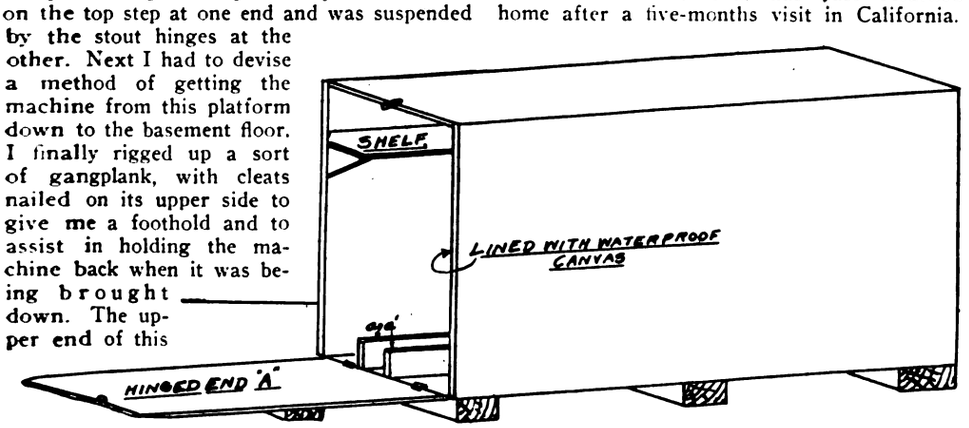
COMPARATIVELY few city riders realize how much satisfaction can be derived from a little home garage, no matter how humble it may be, and it is for that reason that I am undertaking to pass along some pointers that I have acquired in half a dozen years' experience as a motorcyclist. As a rule the city rider who attempts to keep his machine at home finds himself encountering all kinds of obstacles, and in desperation he finally stores it in a public garage. I have found this unsatisfactory, especially when the motorcycle is left at an automobile garage, and I feel certain that I am not alone in this opinion. After several unpleasant experiences I set about solving the garage problem from the viewpoint of an apartment dweller, and I am going to tell how I did it.

To begin with, I had to overcome a fine assortment of objections that were raised by the landlord of the apartment house in which I live. He regarded a motorcycle as a general trouble-maker, and especially a breeder of fires, and all my diplomacy was called into play before I finally obtained his consent to proceed with my plans. At that, I had to agree to pay the additional fire insurance premiums which were tacked on by the company as soon as it became known that I was to store a motorcycle. I did not object to this as I saw it was the only way to clear the way for my home garage.

GETTING THE MACHINE IN AND OUT.

Having disposed of the landlord I turned to the question of getting my motorcycle in and out of the apartment basement, for that was the only available place on the premises to store it. Obviously, I could not hope to get the machine up and down the basement steps, and it became necessary to rig up a platform system. I worked out several plans and finally hit upon a scheme. I decided that I must have a platform over the steps upon which to wheel the machine from the street level, and I managed that by swinging a strong but comparatively light platform from the wall facing the steps. This platform was hinged to the wall so that it could be hooked up out of the way when not in use and quickly let down when I wanted to bring my machine in or get it out.

The platform was so braced that it would carry the weight of my motorcycle. It rested on the top step at one end and was suspended by the stout hinges at the other. Next I had to devise a method of getting the machine from this platform down to the basement floor. I finally rigged up a sort of gangplank, with cleats nailed on its upper side to give me a foothold and to assist in holding the machine back when it was being brought down. The upper end of this gangplank was bolted to the platform above referred to so that it could be readily detached, and the other end simply rested on the basement floor. That is how I got around the problem of handling the machine. It is not a very simple matter even yet to get the mount in or out, but it can be done without great difficulty.



Waterproof case with hinged end for storing motorcycle at home.

A CASE FOR THE MOTORCYCLE.

Then came the arrangements for storing the machine. I built the case shown in the accompanying illustration and lined it with stout waterproof canvas. I placed the two wooden strips shown at "AA" to assist in keeping the machine upright and to prevent it from scraping along the side of the box when being placed in storage or removed. When the machine is not in use the end "A" is raised and the case is locked. This eliminates the possibility of anyone tampering with my mount while I am away.

In one corner of the basement I partitioned off my workshop, in which I fitted a workbench, vise, tool cabinet and clothes locker. For the convenience of my friends I installed two rocking chairs, and they were quite willing to sit around and give me advice. All in all, I found that I had a very satisfactory little shop and garage.

The various small parts, such as screws, nuts, washers, etc., I placed in glass jars which enable me to see at a glance what each receptacle contains. The total expense of fitting up this apartment garage was much less that I would have been called upon to spend for storing my machine in a public garage for a year. Besides I found it a great advantage to have the motorcycle at hand, for I was able to give it more attention and thus obtain greater satisfaction from it on the road. I believe every rider likes to tinker about his machine to a certain extent and I feel well repaid for the special efforts I had to make in order to perfect my home storage system, and I am certain that almost any other apartment dweller can achieve the same results. Some of the boys can get through with less trouble than I had while others may encounter a few more obstacles than bothered me, but "where there's a will there's a way."

A. L. OSBORN, the well known referee of Denver, Col., has just returned home after a five-months visit in California.

CIRCULATION OILING

By Britisher.

A WRITER on page 47 of your December 26 issue criticizes the "circulation" oiling system on the ground that when the oil has circulated a few times it is found to contain chips and fine powder, consisting of aluminum, bronze and cast iron. He asks us to imagine the rubbing effect of these little chips on the bearings, and remarks that no gauze screen is sufficiently fine to intercept them. I want him to wear his thinking cap a little longer. I have never put the drainage of a crankcase under a microscope, but I will take his word that his analysis is correct.

The first question I shall ask is what becomes of these chips in the ordinary oiling system? I have analyzed carbon deposits scraped off the piston and combustion head, and I can inform him there is only a tiny percentage of metallic matter in these scrapings; ergo, with ordinary oiling systems this powder remains permanently between the bearing surfaces, or, alternatively, stops by its weight at the lowest bulge of the crankpit; if so, not being carried in the oil, it would not travel round with a circulatory system. The second question I shall ask is how many riders use any filter at all with the ordinary handpump system?

On the average machine the oil never gets any straining; it carries with it any impurities remaining from process of distillation, dirt off the can top, dirt out of the funnel used to get it in the tank, and *all* the abraded metal ground off parts of the engine in running. Thus the oil of a circulatory system, being filtered at least once in each circuit, is necessarily cleaner than the oil splashing about in a standard engine. Finally, I will satisfy his imagination about the effect of these circulating particles of metal on the bearings. Practically every first grade automobile engine utilizes a forced oil circulation. Yet it is common knowledge that the bearings of a first grade automobile engine wear *very much longer* than the bearings of a first-class motorbicycle.

I am very fastidious about my engine bearings, and I reckon to renew the big end bearings of my motorcycle engines about every 3,000 miles, if I am looking for perfect efficiency. I have just taken down the engine of a British automobile (a cheap $1,500 four-seater) after four years' use, and I have not found it needful to replace a single brass. Durability is all on the side of a circulating oil system, and the hare your contributor has flushed is purely imaginary.

EARLY BIRDS GET FUNDS

COUNTY commissioners throughout Ohio are being requested to make their application for road appropriations early. Last year many counties were late in filing their applications and as a result several of them received no funds.

IT has been officially announced that John U. Constant will occupy the position of official starter at the Brighton Beach Motordrome during the coming season.

A MUD-GUARDING SYSTEM FOR THE BELT

How Simple and Inexpensive Shields May Be Fitted to Protect the Transmission Agent in Heavy Going.

WHILE experienced users of belt-driven motorcycles obtain satisfactory service from their transmission agents under widely varying weather conditions, there is, especially at this season, a persistent demand for some sort of effective shield to keep the belt fairly clear of mud and thus enable it to put forth its best efforts. The problem of shielding the belt has been approached from various angles, and with considerable success in some instances, but the fact remains that the rank and file of motorcyclists do not give this feature the attention it deserves. Beltmakers are embodying all that is possible of ingenuity and high-grade material in their products, but even this care in construction cannot be expected to offset all the conditions encountered in a long trip over muddy and flooded roads.

As the belt passes around the engine pulley it is liberally splashed with mud and water from the front wheel; then as it passes the rear wheel on its way to the beltrim it receives a second splashing, and in especially heavy going it also has to contend with mud and water that drips down upon it from the rear mudguard. Owing to the fact that the latter only falls upon the outside of the belt as it passes over the beltrim it is not likely to cause immediate trouble, but the splashings from the wheels are more serious. In other words, it should be the primary aim of the rider to protect his belt from below.

In one belt-shielding system recently observed by the writer a light metal shield had been contrived to extend from the lower rear fork member on the belt side to a point about two inches below the line of the belt. At this point it was turned outward under the belt to a width of about three inches. A curved metal shield, slightly wider than the lower one just referred to, was brought up forward of the engine pulley, and in this way the belt was fully protected as it passed over the pulley, on its way rearward and as it passed the line of the rear wheel. Strange to say, the whole guarding system was quite compact and did not detract materially from the appearance of the machine.

In order that the shield extending downward from the rear fork member will not flap or be bent inward against the wheel a brace may be attached to it on the inside and carried upward to the opposite side of the lower fork. In this way it will be held rigid without being encumbered with the assortment of metal straps and braces found on some home-fitted attachments. If the rider desires to protect his belt from above he may have a light strip of tin or zinc, from two to three inches wide, attached by an arm extending outward from a clamp on the seat-mast tube. As there will be no strain on this shield it can be held quite easily. If additional rigidity is found desirable the rear end of this shield may be fastened to the rear fork.

The mere fact that a belt does not fail on a muddy road is not sufficient reason for neglecting arrangements to shield it. If the machine is driven to any extent over wet highways the material thrown up by the wheels and splashed upon the belt is certain to convey grit and road gravel to the inner surface of the transmission agent in time and this will be imbedded in the leather, to the ultimate ruination of the belt and the pulley faces. This process may not cause immediate trouble, but it is certain to cost money in the end. Therefore it behooves the careful rider to give thought to his belt even when it is not bothering him.

In addition to protecting the belt the mud-shielding system referred to above helps to keep the machine clean and adds not a little to the comfort of the rider on a long trip.

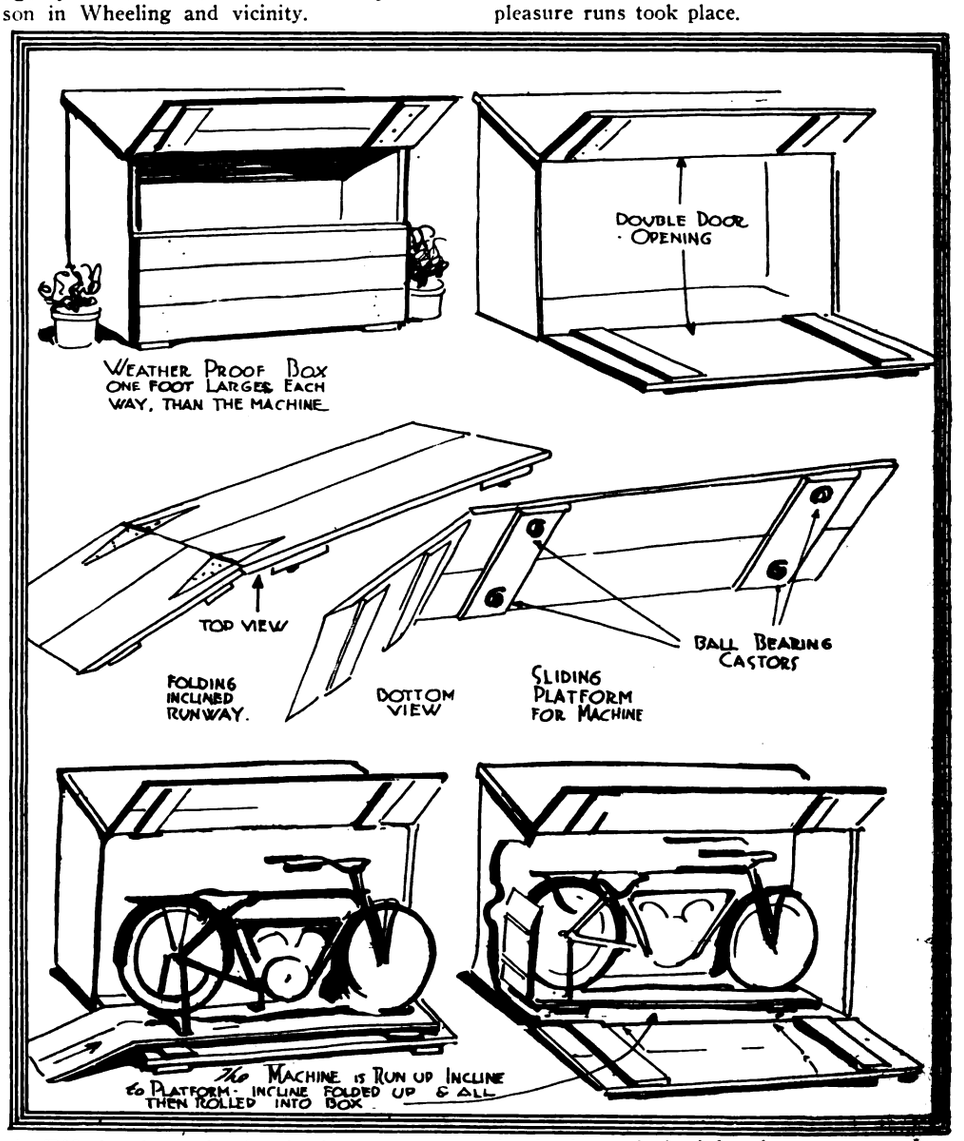
C. F. BRAUMLICH & CO., of 1012 Market street, Wheeling, W. Va., have taken the agency for the Excelsior and Harley-Davidson in Wheeling and vicinity.

BALTIMORE CLUB TO INCORPORATE

VICE-PRESIDENT SHAFFER, of the Maryland M. C., of Baltimore, announces that plans are now under way for incorporating the club under the laws of Maryland. Shaffer is also chairman of the house committee and asserts that the prospects for obtaining a site for a new clubhouse in the near future are bright. The Baltimore club now has a membership of 112.

WALLA WALLA RIDERS MEET

AT a recent meeting of forty motorcyclists of Walla Walla, Wash., the Walla Walla Motorcycle Club was formed. Informal discussions relative to race meets, endurance and pleasure runs took place.



IN the above sketches is shown an extremely simple method of housing a motorcycle at home, when there is not sufficient room for a full-fledged garage. The structure is nothing more than a large case, fitted with a rolling platform on which the machine stands when housed. When the motorcycle is to be used this platform rolls out on the lower door (as shown in the lower lefthand sketch) and is then wheeled off. It is an easy matter to push the machine up on the platform and slide it back into the case when it is to be stored again. The case should be waterproofed and fitted with a good lock. It is intended to be fastened against the side of another building to give it stability.

IN & ABOUT OLD CHARLESTON

BY ROBERT BRUCE

THE city of Charleston, South Carolina's chief seaport and commercial center, presents to the motorcycle visitor a romantic and charming aspect. This city, so rich in colonial history, still retains many of the characteristics of its early Huguenot days. The old churches are still to be seen, and a visit to the cemeteries brings to notice many historic names, and some of the romances of Colonial days.

Starting at the Battery, the visitor rides up Meeting street to Broad street, which is the center of the old town, passing many quaint residences of ante-bellum days with their broad two-storied verandas, invariably facing the south or the shore. On one corner is picturesque St. Michael's Church, from whose belfry was rung the first call of Secession. On the opposite corner is the City Hall, in back of which is the old park. In this park there are several monuments to the heroes of the South.

AT THE OLD MARKET.

The new post office opposite St. Michael's appears incongruous from its very newness. In this city, which has lived so long in the romance of the past, it almost seems as if even the new buildings should take on the mold and rust of bygone days. Passing further up Meeting street we come to the old market. This long block of buildings with their brick floors, worn down by the tread of passing feet, are relics of days long since past. The middle market was used in early days as a mart for slaves, of which we are not very proud. The visitor is not often told that this market was used for the selling of slaves, but the second building still bears evidence of its use for this purpose in the early days.

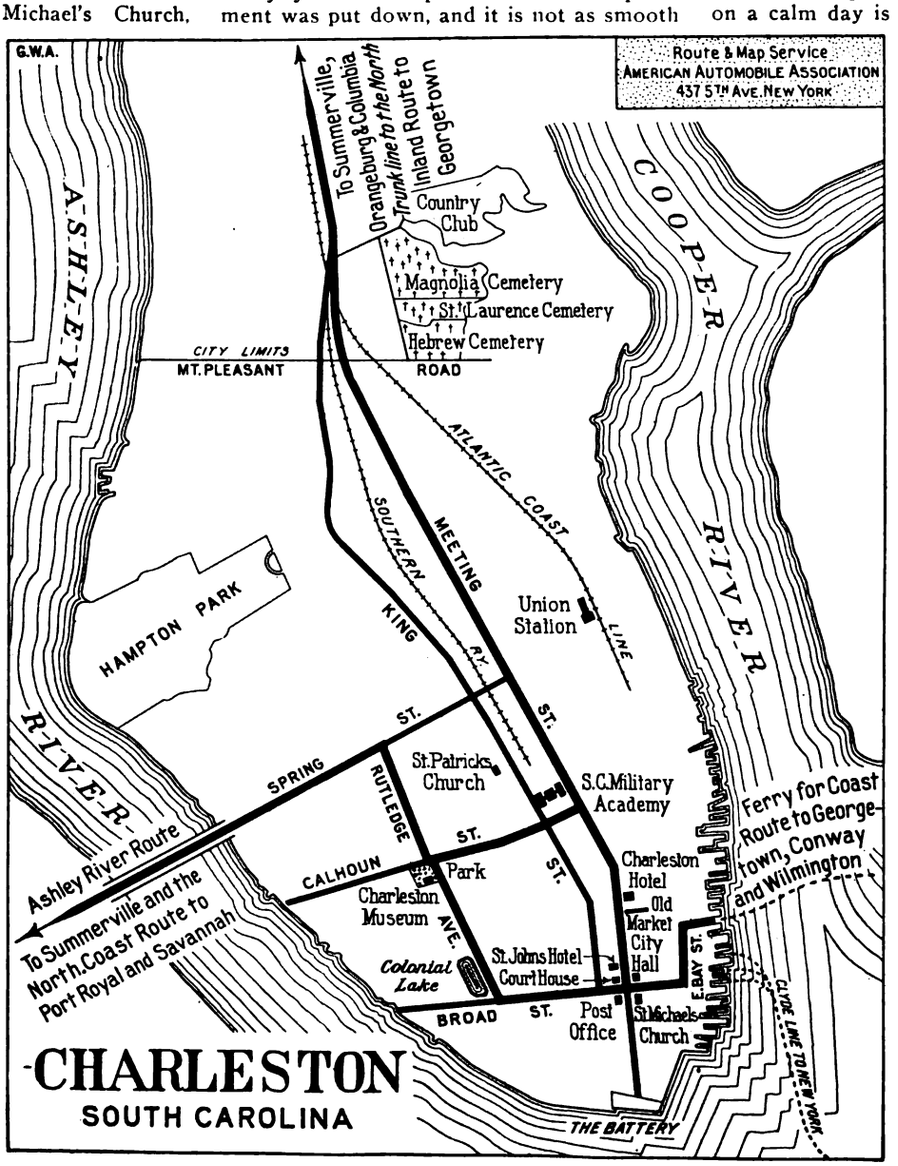
One block from Meeting street is the business thoroughfare of Charleston. In the beginning it is very narrow and paved with brick, but it is now gayly decked with streamers of incandescent lights along its entire length. There is a street car running through King street, but when we say "run" it is a misnomer; for owing to the traffic, its rate of speed is somewhat slower than an ordinary walk. Charleston boasts of King street and exultingly tells the visitor that "on our main street we have two miles of stores." In the days before asphalt was known as a paving material, Charleston boasted of being the best paved city of its size in the Southern States; probably at that time it was not an empty boast, for there are many miles of granite block pavement. Many years have passed since this pavement was put down, and it is not as smooth and good as in the days of its pristine glory. There is some asphalt paving in the town, a real good stretch, several blocks long, which some day will be part of a fine boulevard along the Battery.

THE CHARLESTON MUSEUM.

Probably the best street for the motorcycle visitor is King street, although owing to its narrowness there is little danger of breaking the speed law. King street, as far as the Battery, is paved with brick, while Meeting street, the one most generally used, is of worn granite blocks. On Rutledge avenue there are two points of interest: one the pretty Colonial lake; this lake on a calm day is extremely pretty, and the children of the better class sail their little boats upon it, but on a day when the east wind blows, how very different is the picture! If the wind is strong, it blows all the water out of the lake, and there is nothing but a muddy morass.

Farther up the street is to be found the Charleston Museum, which is particularly interesting to both Northerner and Southerner. The latter will find many relics of the "lost cause" set up almost as little shrines, where the unreconciled may worship. There are many evidences of the sacrificing love of the Southern mother of 1861. This museum will be very interesting to the visitor from the North.

With all of his love for the flag of his country as it is today, the old-time citizen of Charleston and his children cherish a love and veneration for the South as it was (before the war), and there are many reasons why, even today, the Southerner or the Charlestonian cannot love with wholeheartedness his brother of the North. In those past days he suffered the hardships of the war, and his wife, mother and sister often



Digitized by Google

were in absolute want of food. And then when Sherman came, it was not the actual devastation of his troops as much as the fear which came from the magnified tales of what he was about to do. The motorcyclist riding along the road on the west side of the Ashley River will pass many estates, now gone to ruin, which were in the height of their glory before the war. Many of the buildings and Colonial homes, which never can be restored, were burned by their owners lest the "Yanks" should have the satisfaction of ravaging them.

THE NEW SPIRIT OF PROGRESS.

The Charlestonian of today has, however, learned that the "dead past should bury its dead," and that the future holds much of glory for his city. No task is too great for him to attempt, and better than all, when he attempts, he succeeds. Commercially, the city is larger and better than it had once dared hope to be, and improvements are under way which some think will eventually make Charleston the metropolis of the South.

In the building of roads they have done much. Many miles of the road toward Columbia have been sand-clayed or covered with Augusta gravel. Both of these methods produce an excellent hard surface road, which is good throughout the whole year. Owing to the nature of the soil, the roads of Charleston and Dorchester Counties never become really dusty. There is an under layer of sand, which by its capillary action retains enough moisture so that the roads do not become dusty. Many miles of this road are through pine forests, and the climate is so even that here is located the only commercially successful tea gardens on the American continent.

The State of South Carolina has established, a few miles from the city, a very excellent experimental farm, which has done much to improve the agricultural production of the counties. Along the banks of the Ashley River may be seen what are undoubtedly the most magnificent assortment of magnolias in this country. At this season, when the north country is still sleeping under its blanket of snow, these magnificent trees of the South are in full bloom.

Geographically, Charleston is very similar to New York City. It is a long peninsula, terminating in a point known as the "Battery." On the eastern side is the Cooper River, and on the western the beautiful Ashley. To the south and the southeast is a rather large bay dotted with many islands, and farther out is the main channel which passes between historic Fort Sumter and Fort Moultrie. Its strategic position again reminds one of New York, as Fort Johnson is placed similarly to that of Fort Wadsworth, while Fort Moultrie corresponds with Fort Hamilton. To the south is Cummings Point, which is a long, narrow peninsula very similar in shape to Sandy Hook. This channel has been dredged by the government and today the largest ships may safely steam to the wharves of the city.

SALT PALACE SAUCER

SALT LAKE CITY, Utah.—Harry Heagren recently obtained a nine-year lease on the Salt Palace saucer track in this city. Mr. Heagren has signed up with a number of well-known riders, and will conduct both motorcycle and bicycle races.

FIREARM LAW BOTHERS TOURISTS

Motorcyclists Who Carry Weapon of Defense on Long Trips are Confronted by Problem on Entering New York State.

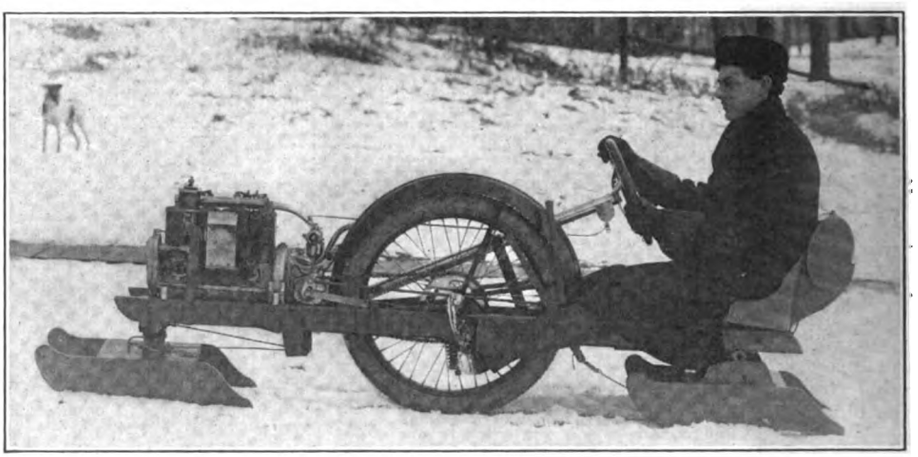
IT is a matter of common knowledge that many motorcycle tourists carry a firearm, and in almost all the states no liability is incurred thereby. On long trips in the West and South, some weapon is practically necessary, especially against marauding animals when camping out at night. However, it is fairly well known that New York State has a stringent law against carrying firearms, and frequently our friends from other states coming into or passing through New York, are in entire ignorance of it, and therefore unconscious breakers of that law.

From the standpoint of any officer who might make an arrest, ignorance of the statute would be no excuse, except that the judge might rule less harshly on that account. So motorcyclists who include any fiearms in their equipment, are advised to keep it securely packed with their other equipment while within the state. Of course the law was passed to keep deadly weapons out of the hands of thugs in the largest cities, and not to prevent their legitimate use by responsible parties, but here again the statute knows no distinction. It is applied impartially to all, both natives and visitors.

Under the law of May 25, 1911, it is a misdemeanor for anyone to have in his possession, in any city or town in the state, a pistol or other firearm without a written license, issued by a police magistrate or a justice of the peace of the place where it is carried. Obviously, it is impossible for the tourist to meet this condition, and he is forced either to throw away any weapon he may have brought with his other baggage to the border of the state, or to hide it where no officer can discover it.

In some instances, such as crossing the international bridge from Canada to Niagara Falls, N. Y., the motorcyclist carrying a revolver would be in a curious predicament, as of course the Custom House Officer would examine all baggage. In the last analysis, the tourist would be "not guilty" on the Canadian side, but "guilty" on the American side, in which case the only logical action (according to the strict letter of the law), would be to stop long enough on the way across the bridge to get out the firearm and throw it down into the seething Niagara River.

Another phase of the law is that no one not a citizen of the United States can procure a license under any conditions, the idea being of course to keep firearms out of the hands of ignorant aliens. But its rigid and impartial enforcement would prevent a bona-fide tourist from Canada or Europe from bringing any weapon into the state or buying one here.



BUTLER'S MOTOR-SLED

FOLLOWING a recent snowfall in Toledo, Lee Butler, a motorcycle enthusiast of that city, attracted considerable attention with a novel type of motor-sled. This outfit, which was designed and constructed by Mr. Butler, is claimed by local motorcyclists to be the most complete ever made. Butler has obtained a speed of fifty miles an hour with it.

NEW F. A. M. HAND BOOK

SECRETARY GIBSON announces that a complete new copy of the F. A. M. "Helping Hand" Book is now in the hands of the printers, and will soon be ready for distribution. This book will contain more than twice as much general motorcycle information as the 1912 edition. Descriptions of the 1913 motorcycle models will also be given. Announcement is made that the new repair shop booklet which goes to press April 1 will be ready for distribution about April 15.

"ZIM'S" LATEST RECRUIT

P. E. ZIMMERMAN, of Lindsborg, Kan., has been trying to interest lawyers, bankers and merchants in motorcycling with a view to elevating the sport in Kansas, and his latest convert is Gust Lund, Latin professor at Bethany College, and also an athletic director. Mr. Lund has become so popular in the latter capacity that he was recently chosen president of the Missouri Valley College Athletic Conference, which includes colleges and universities in several States. He was recently elected vice-president of the Short Grass Club, and is proving a strong factor in the promotion of the 1913 tour.

BACK FROM THE COAST

GUY JACKSON, a prominent member of the Terre Haute (Ind.) M. C., who has spent the winter motorcycling in California, is making the return trip to Terre Haute. He will be one of a party of Terre Haute riders to make a tour to New York this summer.

The MOTORCYCLE AS A VOTE-GETTER

By R. S. SPEARS.

WILLIAM QUACKENBUSH was city treasurer of Little Falls, N. Y., last year when he made up his mind that if he could get out into the environs of his home city and throughout Herkimer County he would be able to convert enough voters to his way of thinking to be elected county clerk. Getting at the voters involved a problem, however, for Herkimer County is not noted for its good roads and Quackenbush's plan called for a lot of traveling and first-hand canvassing. He could not afford an automobile, a horse and buggy would be too slow and costly and a bicycle was out of the reckoning, for two reasons. In the first place the roads did not invite bicycle travel, and secondly Mr. Quackenbush is deprived of the full use of one of his legs, and could not pedal his way into the country on long trips. While he was still pondering the situation a friend called to his attention the advantages of the motorcycle, and he saw that the problem was solved.

The prospective candidate did not fully make up his mind that the motorcycle would meet his requirements until he saw a young man go up Salisbury street in Little Falls one afternoon on a motor two-wheeler. People who do not know Salisbury street will not be able to form a proper idea of what it means to see any vehicle going up that grade—for it is a grade of the gradiest kind. They say a man almost rode a bicycle up that street on a memorable occasion—almost, but as a rule folks go around it. Well, the young fellow on the motorcycle curved up out of Main street, took the middle of the street like a scared cat, turned up on the sidewalk at a crossing, reared up over a graded terrace onto a lawn and pulled up calmly at the entrance to his garage.

"Um-m-m—hem!" mused City Treasurer Quackenbush, doing some strictly political thinking. "It's going some to get up that hill."

A FULL-FLEDGED MOTORCYCLIST.

A day or two later the official visited some of the local dealers and asked questions anent motorcycles. The time for making county nominations was coming on and Quackenbush has rubbed some of the politicians the wrong way, but he managed to obtain the nomination for county clerk. As a result it was necessary for him to get down to business without delay. No politician believed that Quackenbush could win, for he had few acquaintances outside the city of Little Falls. It was acknowledged that the county clerkship would bring on a hard fight, and it was taken for granted that Quackenbush's limited acquaintance outside his home district would leave him out of the race. But they figured without the motorcycle.

Quackenbush bought a machine, learned how to operate it and in jig time he was out on the road. From that time forth he was out of the saddle only long enough to snatch a bite to eat now and then and to steal forty winks when physically exhausted. According to the stories told by the politicians he traveled day and night. There was no cyclometer on his machine, so it is not possible to state his mileage, but it suffices to say that he covered all of Herkimer County, up one road and down the next—and always on the go. It was a tough campaign in more ways than one. There was plenty of rain, the roads were very muddy and Quackenbush did not always know his routes, but he managed to get through.

A SAMPLE EXPERIENCE.

One night he was down in the big hills south of the Mohawk river. The great ridge is not often traversed by anyone, but tucked away in the gullies and along the ridge crest there are votes—many of them. As a rule campaigners do not attempt to cover this territory, for it offers too many obstacles, even for automobile travel. Quackenbush decided that he needed the elusive votes scattered in this section and he went after them. He rode hundreds of miles up and down the flanks of that ridge, into little settlements and out into the woods where the men had forgotten that elections came any oftener than the census. He went into every farmhouse, into every cross-roads store and into every nook and cranny where he suspected that a vote might be lurking.

So it came about that he found himself in this district on the night before referred to, and that he was overtaken by a nasty squall. It was one of those beating storms that turn roads into wallows of mud. Quackenbush floundered through it on his motorcycle and finally lost his way. He chugged on aimlessly until he saw a light and finally obtained shelter in a farmhouse. It was such work as this that earned Quackenbush his reward.

SOOTHING A SKEPTICAL FARMER.

When Quackenbush reached the farmhouse a rather irritated old man answered his knock at the door.

"Who are you; what do you want?" the man demanded.

"I want to stay all night with you—my name is William Quackenbush."

"What's that thing you've got there?"

"It's a motorcycle!"

The farmer backed away apprehensively, and edged around from in front of it.

"Where would you put it?"

"Why, in the barn."

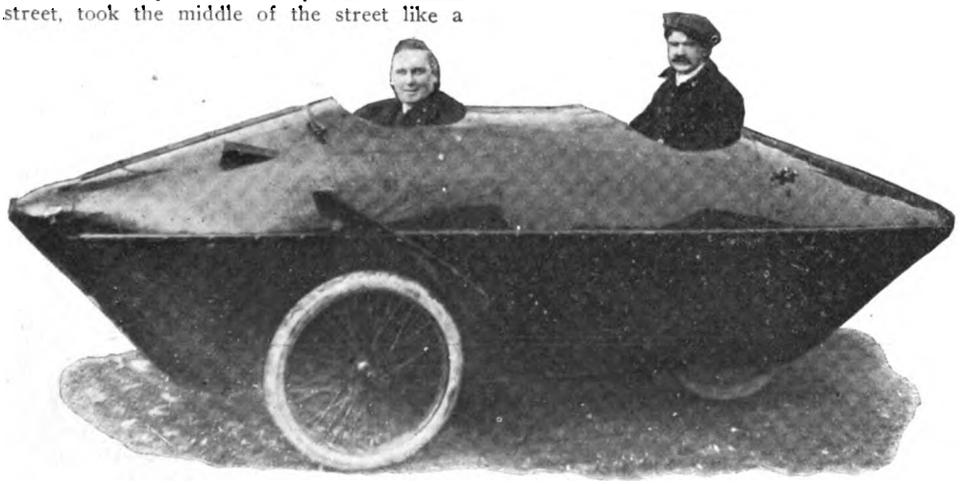
"No siree! Why, that durn outfit would blow up; I know them things. They blow up. My mother's 76 years old, an' we ain't goin' to have no sech excitement around here. She'd never 'low any one to put one of them things in the barn!"

The storm kept rolling up, with booming of thunder and flaring of lightning.

"Well, ask her—tell her to come out and look at it," pleaded Quackenbush.

The farmer thought that was reasonable, and brought his mother and sister to the door. They looked the machine all over by lantern light.

"Wall, naow, Dick, that's all right," said



R. C. BOYD, of 27 Stanhope street, Boston, Mass., agent for Flying Merkel motorcycles in the Hub, is the designer and owner of the wierd outfit shown above. What appears to be the hull of a submarine really is a metal body built over a motorcycle and forecar attachment. The nose, which is designed to look as much like that of a fish as possible, carries an electric headlight when in night service and above, in the position eyes, are two electric lights, red and green, so arranged as to flash alternately. Boyd designed the outfit primarily for advertising purposes, but states that he also finds it handy for mud-larking. The owner is seen in the rear "cock-pit."

Digitized by Google

the old lady. "It's real purty an' nice, spite o' the mud."

That settled it. If the women folks didn't kick, the old man could stand it. They went out to the barn, and rolled the machine in.

They raised the machine up on its stand, and the farmer stepped back to admire it. Something about the adjustment didn't just suit him, and he proceeded to balance the machine as he thought it ought to be. He gripped the feed-pipe and the saddle and lifted. Something had to come, and the feed pipe came out by the roots. The gasoline poured out of the tank on the floor.

"Fire! Fire!" yelled the farmer as he ran to bring buckets of water. He returned with two buckets half full, but there was no fire—only a strong odor of gasoline.

"Never mind!" Quackenbush remarked, as the man viewed the damage he had wrought. "It's all right, only you'll have to take me to town tomorrow on your wagon."

HOW THE VOTES WERE GATHERED.

In the morning, Quackenbush went to town on a springless lumber wagon, easing the motorcycle over the hard places. He had spent a comfortable night in an outside bedroom in a bunk across from the hired man's room, and while turning out in the morning, he nabbed the hired man's vote, too. Later he landed the farmer's promise.

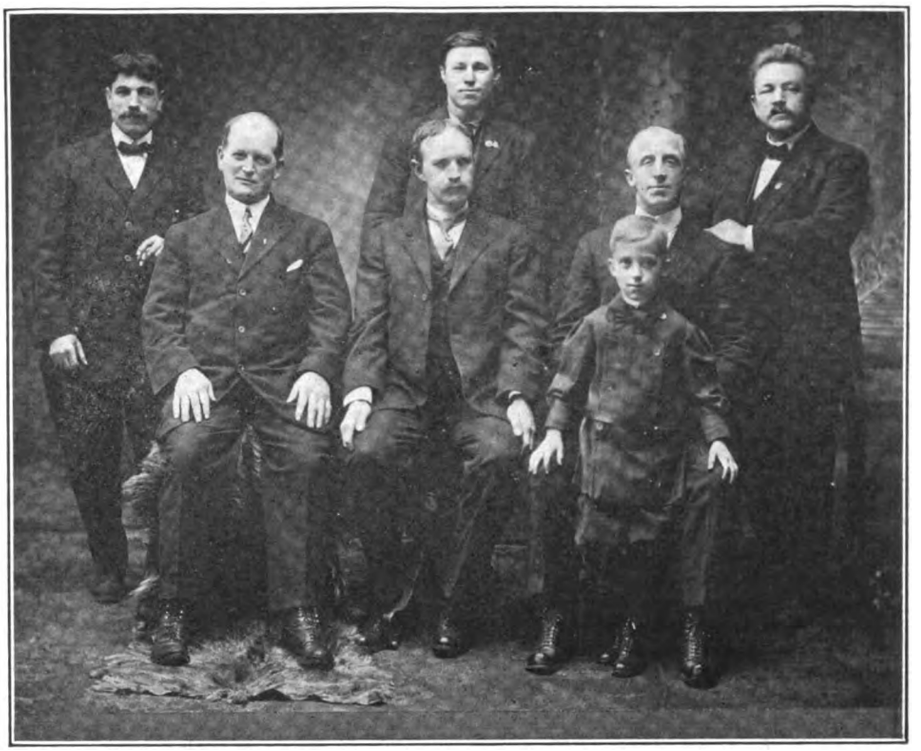
"Bill" Quackenbush worked into Stark, Russia, Fairfield, Salisbury, Columbia, Manheim, Norway. He rode through eighteen of the twenty-two towns, striking into the most remote places. He came down to the rich farms of the country's great dairymen, and whether he was on the far hills or in the fields, he laid down his card, announced his ambition, said why, and then left the matter with the hearts and consciences of the voters.

The politicians tried to squash "Billy" Quackenbush. He wouldn't have had a ghost of a chance to win, with ordinary means of travel. He just had to see the voters, talk to them face to face, to get the votes. He saw thousands. He went into Bull Moose strongholds, and won a shower of ballots; he raided Democratic districts and pulled a storm of votes; among the Republicans, in spite of efforts to keep his vote down, he ran far ahead of his ticket.

QUACKENBUSH VICTORIOUS.

He won handsomely and was the only county man to win. Everything was against him, except his personal reputation and his faithful old one-cylinder which threw the sand, spattered the mud, bumped over the water-washes and hummed up the made-roads. His whole campaign centered on the motorcycle and the fact that it carried him from house to house, from field to field, wherever there were votes to be had. He would lean the machine against a fence, and walk out to the potato diggers and the corn huskers—and he gathered the votes in, without regard to party.

The more the politicians think of it, the more they stroke their chins. Three years ago, T. Douglas Robinson, the nephew of Theodore Roosevelt, introduced the automobile into Herkimer county campaigns, and now Billy Quackenbush has introduced the poor man's campaign traveler. Billy couldn't have afforded the automobile transportation, but going on the motorcycle was cheaper, quicker, and more efficient than the automobile, as those who opposed him discovered.



AT a recent meeting of the executive committee of the New Haven (Conn.) Motorcycle Club, held at the club headquarters, a schedule for the coming season was laid out. Officers of the club for 1913 appear in the accompanying photo as follows: From left to right standing, Henry Jarmie, captain; B. D. Lattin, president, and George Hinman; sitting, J. Boyce, treasurer; W. W. Benham, secretary, and first lieutenant John Noll and his son.

RE-ENAMELING THE OLD MOUNT

Process of Giving the Machine a New Coat is Not an Intricate One But Utmost Care is Needed for Good Results.

THIS is the time of year when motorcyclists who have decided to make their 1912 mounts carry them through another season are puzzling over the problem of brightening up the faithful bus without laying out large sums with the repairmen, and in this connection it is likely that there will be numerous attempts at home enameling. The enameling process is not as intricate as many riders believe, but it must be entered upon with great care if satisfactory results are to be obtained. Above all things, the rider who is giving his mount a new coat should not try to hurry the job. He should carry through each phase of the work painstakingly and as if time were no object.

In cleaning off the old enamel, for example, infinite care is needed if the new coat is to present a smooth appearance. This cleaning operation will be the most tedious encountered by the enameler, but it cannot be neglected or slighted at any point. In due time the frame will be perfectly smooth and free from the old enamel, and the rider will then be called upon to select the new color for his mount. Black, gray and green are the favorite tints, with a growing preference for the latter. If either gray or green is chosen, special care should be taken to see that the color is not too light. There is a happy medium that combines attractiveness with serviceability.

The tank may be finished in aluminum paint, lined with blue or green, or any other color combination may be worked out as long as it does not contrast jarringly with the general treatment of the frame. For all practical purposes the aluminum paint with a thin, neat stripe of the color used on the frame should give satisfaction and wear well. The frame should have three coats of enamel, each being applied in a very thin coating, and then allowed to dry thoroughly before the next coat is applied. If the plated parts are badly rusted they may be covered with aluminum paint or enameled. In this way much labor will be saved and the result will be quite satisfactory. In the case of a machine that is in first-class condition mechanically it may be worth while to have these parts replated, but as a rule this will not be found desirable.

Some eminently practical riders are getting to the point where they follow the example of the Britishers and enamel some of the parts and fittings that formerly showed bright surfaces, and as a result they are dodging much work and worry and still keeping their mounts fairly shipshape. Where black enamel is used on the lamp, horn, handlebars, etc., it must be admitted that the machine presents rather a funereal aspect, but its owner is able to wipe it off after a run through rain with the knowledge that he will not find a lot of bright covered with rust when he is ready to take it out again.

The appearance of the cylinder may be improved by an application of blacklead and water after all dirt has been removed.

The LADY MOTORCYCLIST

By NORA HOUGH

AS an English lady rider who takes a keen interest in the sporting side of motorcycling, I read with interest the accounts of competitive events held by American clubs, and I notice with regret the fact that there are no lady entrants to be found on the lists. True enough, one or two of your feminine enthusiasts will figure in an endurance run in connection with a sidecar outfit occasionally, but I know your lady riders do not appreciate as yet the excitement to be derived from riding solo in a full-fledged reliability trial.

The accompanying photographs show two of the tests provided in the recent British reliability trial organized by the Mid-Warwickshire M. C., in which I had the honor to ride. There was an entry list of 200 riders, and 180 faced the starter. Nearly every make of English motorcycle was represented in addition to an Indian, of your American make. No doubt the extremely bad weather was responsible for the scarcity of lady riders, there being only three, the writer, on an open-frame Douglas twin lightweight, and two ladies driving sidecar combinations. The latter are being favored very much by ladies over here, and passengers are not at all hard to find, especially among the men folk, who prove their worth when one has mechanical trouble or a bad puncture.

To get back to the trial itself. The course was an extremely interesting one, passing through Kenilworth, Warwick, Stratford-on-Avon and the pretty village of Broadway. The novelty of the trial lay particularly in the variety of the observed tests. There were no less than four severe hills, an acute right-hand turn on an upgrade being included, so that, all in all, the trial was one of the most severe yet held here. Out of the 180 competitors only eight obtained full marks.

The first hill encountered, Saintsbury, was of the snaky kind with a surface of sticky clay, and I am quite convinced that your most experienced lady riders would have found it sufficiently exciting. Next came the descent of Willisey. This we did not ride down; we simply sat tight and skidded down. Nevertheless we were glad to do it, for it showed us what we would have to climb on our return journey. The second acclivity was a

Miss Hough rounding a bad turn.

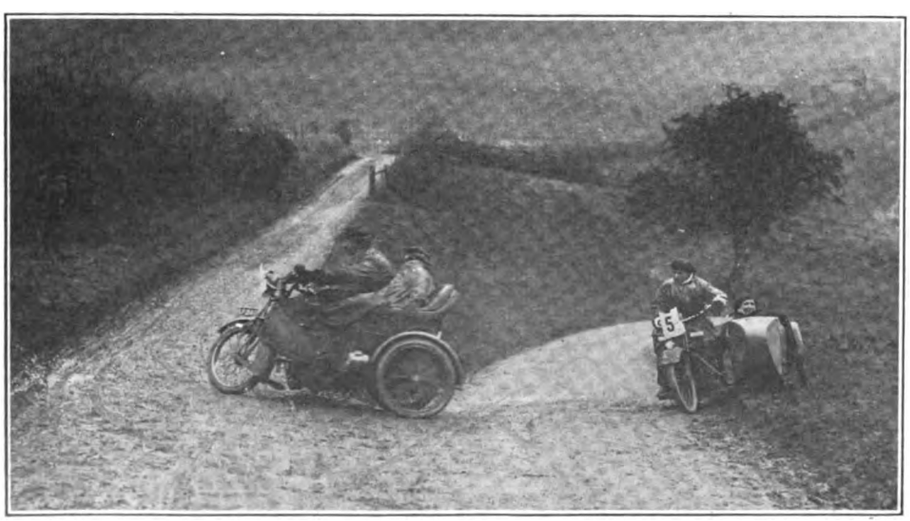
straight, steep grade with deep cartwheel ruts; this was Ludeley, an easy climb, provided one kept the middle track. Getting into one of the ruts meant disaster, of course. I must mention that the Indian simply streaked up these hills, but the rider was unfortunate in getting a fouled plug on the way home.

The latter two tests accounted for a considerable number of failures. We were now heading for Cheltenham, the luncheon stop, and a two-hour rest. In the afternoon ride came the dreaded Rising Sun hill and the above-mentioned hairpin turn. The hill proved a steep gradient with water gullies running across it and a surface of stones several inches deep. The gullies prevented the riders from rushing the hill, and as a result the successful ones were few. The writer made a satisfactory climb, passing heavy-powered machines on the hill, and thus demonstrating the flexibility of the little Douglas. Then came the hairpin bend, and more riders lost marks. As we neared Broadway on the return trip rain was pouring down and the ascent of Willisey proved a trial indeed.

I was very unfortunate, for after gaining full marks on every hill and at the hairpin bend I got into trouble by having a drop of water on my spark plug a few miles from home. This put me out of the competition as thoroughly as if I had failed on every hill. Nevertheless, I enjoyed the trial and considered it real sport from end to end. I earnestly wish that more lady riders would interest themselves in competitive events, as well as pleasure riding, but always, let me add, on open frame machines.

I understand that you have no motorcycle model designed for feminine riders at present, and this is something of a surprise to me. With the excellent roads near your large cities, and even in some quite out-of-the-way places, one would expect to find hundreds of ladies driving their own machines and entering the club runs. Obviously, the lady rider needs a light machine, but one with sufficient power so that she will not be getting into trouble on every little grade. I should think your manufacturers would find this branch of the trade worth attention and that the clubs would take steps to offset the prejudice which they tell me still exists in some quarters in America against ladies riding solo machines. We no longer hold such an impression over here and there is no reason why American riders, traditionally progressive, should frown upon the feminine enthusiast who wishes to pilot her own mount.

In future articles in these columns I hope to throw considerable light on the most advantageous methods to be pursued by the lady enthusiast in selecting her mount, equipping it and operating it in all kinds of weather. You will hear from me frequently.



Sidecar outfits on a tricky turn in a downpour of rain.

CALIFORNIA HIGHWAY

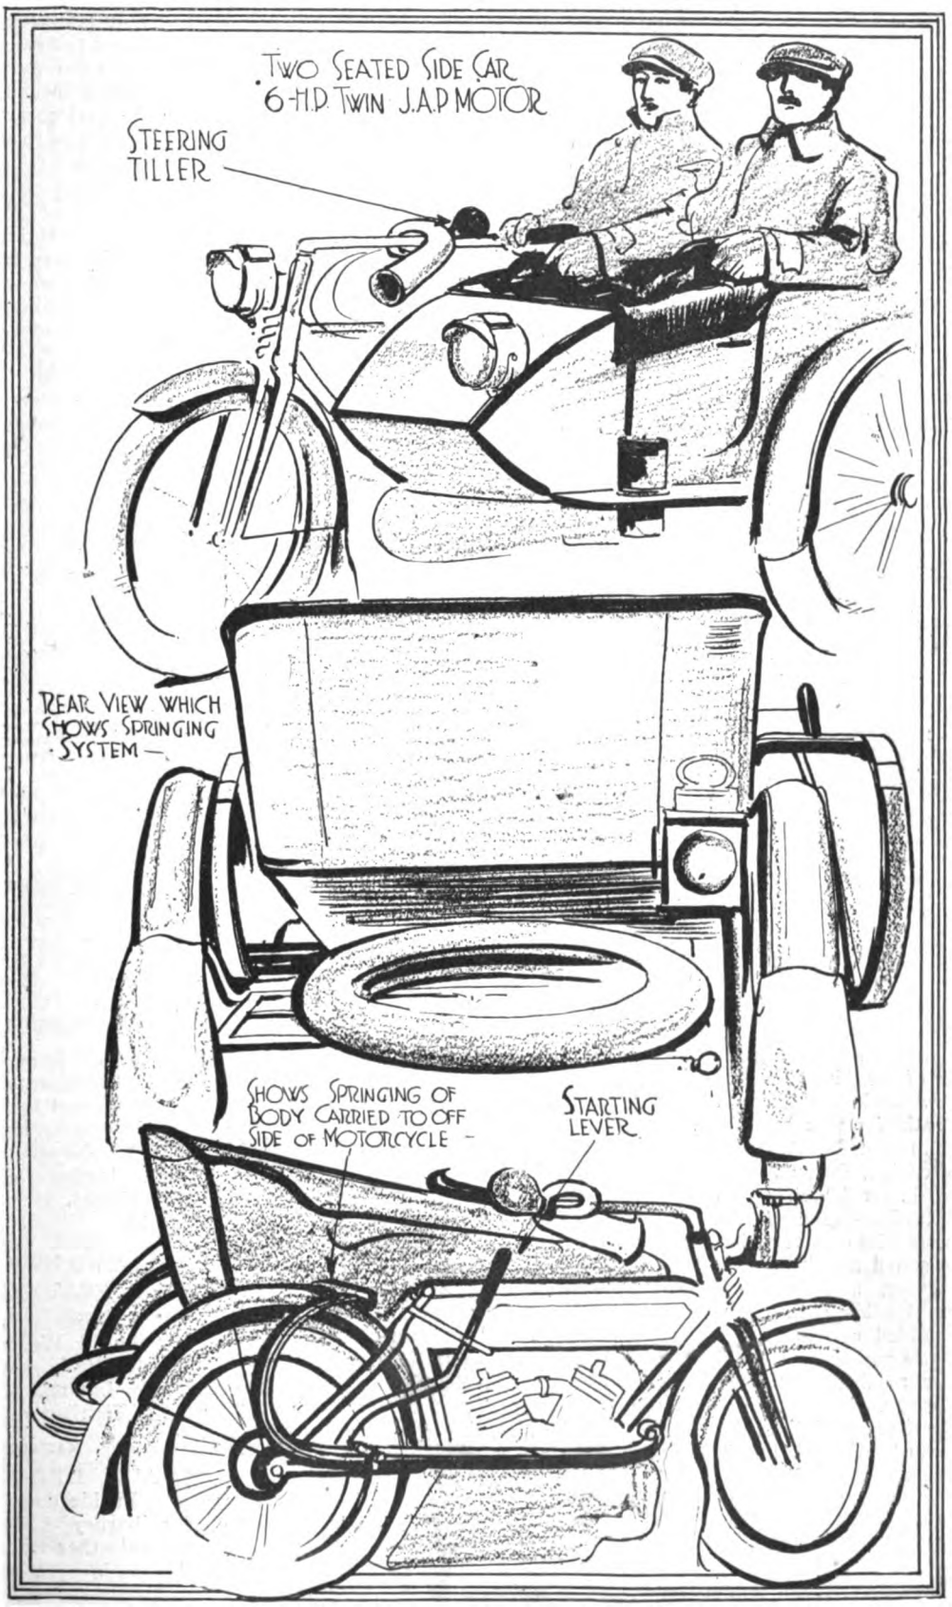
IN solving the problem as to how to spend most satisfactory the $18,000,000 in highway funds at its disposal and to build roads totalling 2,700 miles and have them ready for travel at the opening of the Panama Exposition, the California Highway Commission has decided upon nine main routes. These routes are: 1, San Francisco to Orelan line, 421 miles; 2, San Francisco to San Diego via Los Angeles, 582 miles; 3, Sacramento to Oregon line, east side of river, 344 miles; 4 Sacramento to Los Angeles via San Joaquin Valley, 445 miles; 5, Stockton to Santa Cruz via Oakland, 133 miles; 6, Sacramento to Woodland Junction, 20 miles; 7, Tehama to Benicia, 191 miles; 8, Hopland to Vallejo via Lake County, 107 miles; 9, Los Angeles to Riverside, 46 miles. These standard roads will have a right of way of at least 60 feet and will be as direct as possible between points. The gradients will not be over 7 per cent. and the curves not less than 50 feet in circumference.

FOREIGN TOUR

PREPARATIONS for a six-months' tour of the Old World are being made by Walter S. Tripp, of Sioux City, Iowa. He will leave his home on May 7 and ride cross country to New York, from which point he will ship to Liverpool. He expects to cover practically all of the European countries, and will ride a 1913 model Indian 7. His equipment will consist of Tucker wood rims, Diamond tires, electric lights, clock and Stewart speedometer. Tripp had leather cases made to fit the Indian carrier. He will carry three inner tubes, a camera, extra parts, tools, clothing and a silk tent. In addition to these he will carry Weed chains and an extra casing and will have two casings expressed ahead.

TREIBLER BROTHERS, of 105 Grove avenue, Yale and Excelsior agents at Elgin, Ill., have built a speedy motor bob-sled.

IN the sketches below are shown three views of an interesting English attachment which provides for the operation of a motorcycle from the sidecar. It will be noted that the car is designed to carry two people and that its springing system extends over the motorcycle and makes a compact outfit.



SIDECARS IN NEW ENGLAND

FROM B. A. Swenson, Indian agent at Providence, R. I., and one of the best known dealers in the East, comes the report that sidecar sales in his district are highly encouraging. Swenson is an experienced sidecarist himself and is well fitted to demonstrate the possibilities of the third-wheel pasenger attachment. During the week of February 17 he sold six sidecars, two Indians, two Millfords, one Majestic and one Universal, the latter a $125 model. Swenson has placed orders with the different manufacturers for fifty sidecars, and he is confident that there will not be one of them left at his headquarters when the the riding season is a month under way.

Reports from other points in New England indicate that this section of the country is taking a keen interest in sidecar developments, and that it is likely to become a popular stamping ground for sidecar enthusiasts.

A BUSY CLUB

A MEMBERSHIP contest is being carried on by the Broome County Motorcycle Club, of Binghamton, N. Y., the winner of which will receive a single cylinder motorcycle of a standard make. The club is also conducting a series of hill-climbing contests and road races. The racing committee is planning to have a number of Saturday afternoon races on the club's half-mile track.

The 1913 staff of officers of the Binghamton club are: President, L. M. Clark; vice-president, A. Pratt; secretary, E. Sirowatker; treasurer, S. Oftering, and captain, J. Braies. The club cordially invites all touring riders that pass through Binghamton to visit the club headquarters, and assures them a good time.

MOTORCYCLISTS in and about San Diego, Cal., are enthusiastic over an announcement made by Jack Prince that he is to build a track there.

MARYLANDERS LAUNCH STATE BODY

BALTIMORE, Md.—As a result of the visit of J. Leo Sauer, chairman of the Legal Action Committee of the F. A. M., to this city several weeks ago, a meeting was held at the rooms of the Maryland M. C. Wednesday, March 12, at which a state organization was formed.

Officers and commissioners for various towns in the state were named, but plans for the state convention and meet were left over for another meeting. The meet will probably be held in the western part of the state, at which time officers for all the towns and cities in Maryland will be selected, as well as delegates to the national convention. The meet will be a big affair, as there will be track races, economy contests and hill climbs with the best riders in the state as contestants.

The officers of the state organization are: William Wood, F. A. M. state commissioner, chairman; Henry H. Hickman, secretary; Frederick L. Shaffer, chairman legal action committee; Nelson Johnson, chairman good roads and highway committee; Hames Basilicata, chairman tour and run committee; G. W. Hess, Union Bridge, chairman membership committee. Local commissioners were appointed as follows: H. C. Frankforter, Manchester; J. L. Frankenfield, Cockeysville; Clinton Wolff, Taneytown; G. B. Schnepfe, Havre de Grace; Benjamin G. Foaxall, Cumberland; W. F. Stealer, Jessups; W. E. Baker, New Windsor; G. W. Hess, Union Bridge. These men will go to work at once in their towns and cities to form organizations which will work with the state body in promoting motorcycling and looking after the interests of all the affiliated F. A. M. riders in the state.

A COLLECTOR'S MILEAGE

HARRY A. ROBERTS, of Portland, Ore., a collector for the New England Telephone and Telegraph Company, has used a motorcycle in his work for the last three years. In that time he has covered 21,000 miles. The machine used was a 4 h. Indian, 1910 model.

GRAVES IN HOSPITAL

JOHN U. CONSTANT, the Brooklyn speedster, has received a letter containing the announcement that Marty Graves fell during a dirt track race at Santa Ana, Cal., recently and broke several bones in his left foot. It is expected that he will be laid up for at least a month.

CLAIMS 400 M. P. G.

AN English exchange reprints a paragraph from the Southland *Daily News* of New Zealand, to the effect that a local rider there has perfected a device for obtaining an enormous saving in fuel on a motorcycle or other motor propelled vehicle. Riding a 2½ h. Torpedo Precision motorcycle in the presence of a committee, the inventor of the device reeled off ten miles at the rate of 22.85 m. p. h. on a consumption of gasoline equivalent to 355.5 m. p. g. Later, it is stated, the rider used kerosene as fuel and covered five miles on a basis of 400 miles per gallon. The English journal states that an additional advantage claimed for the device is remarkable flexibility, but that details as to construction and operation are lacking.

THE "FRA" A YALE RIDER

ELBERT HUBBARD, the philosopher and writer, has become a motorcyclist. "Fra Elbertus" purchased a two-cylinder Yale recently, and has become one of the most enthusiastic riders east of the Mississippi.

NEW CANADIAN CLUB

A NEW motorcycle club has been formed in Saskatoon, Sask., Canada, and will be known as the Saskatoon M. C.

T. M. DUNHAM, OF HAWTHORNE FAME, TAKES INTEREST IN GREYHOUND

OUR OWN FILM OF MOTORCYCLE "MOVIES"

RECOVER STOLEN MACHINE

QUICK action on the part of Eugene Coughlin, manager of the Riverside Motorcycle Garage, of New York, enabled him to pursue a motorcycle thief and recover a stolen machine. Coughlin and H. A. King were going over to Tottenville, Staten Island, from Perth Amboy, N. J., on March 12, to call on agents for the Reading-Standard machines, and on the ferry got into conversation with a young man who stated that he rode a similar machine. D. Beyer, a New York rider, had had a green Reading twin stolen early in January and needed certain repairs on it, and the young man's mount, as he told Coughlin, needed similar repairs. He stated that his machine was brown.

The two parted at the ferry, and Coughlin and King rode on toward Midland Beach, when the same young man suddenly emerged from a side road on a green machine and opened up. Coughlin, with his suspicions aroused, gave chase and finally the thief came down in a mud hole, but arose and fled to a nearby wood where he was soon lost to sight. With the help of some laborers the machine was lifted out of the hole and placed on a wagon. Upon examining the motor, the number corresponded to that of Beyer's stolen machine. It was turned over to its delighted owner that same night. An alarm has been sent out for the thief.

RAY PECK AND SHAW MEET

THE events made up a program of the recent race meet held at Association Park, Redlands, Cal. A match race between Ray Peck, of San Bernardino, and Roy Shaw, of Redlands, was the feature event. Other riders from Los Angeles, San Diego, Santa Ana, Riverside and San Bernardino participated in the meet. The track was in fine condition and the meet was well attended.

TO VISIT STATE CAPITALS

ROBERT H. GIBBONS, of 371 Fulton street, Brooklyn, New York, plans to visit every capital city in the United States on a motorcycle trip. He will be accompanied by a tandem passenger.

EXPORT STATISTICS

FIGURES from the bureau of statistics show that motorcycles to the value of $223,257 were exported from the United States during the six months from July 1, 1912, to January 1, 1913. The number of machines shipped was 1,246. During December 186 machines were sold abroad, the total value of which was $32,623.

TWO NEW BOSCH AGENCIES

E. A. FEATHERSTONE, 1018 South Main street, Los Angeles, Cal., and the firm of Sallou & Wright, of 817 East Pike street, Seattle, Wash., and Seventh and Oak streets, Portland, Ore., are recent additions to the list of distributors of Bosch products.

MANAGING AUTO RACERS

PAUL DERKUM bulletins from the Pacific coast that he is booking races for Barney Oldfield, Teddy Tetzlaff and several other well-known automobile racing drivers in addition to staging a few motorcycle races now and then.

WASHINGTON STATE OFFICERS

MOTORCYCLISTS of Washington are among the latest to perfect a state F. A. M. organization. At a meeting held last week officers were elected as follows: C. J. Ritchie, 608 L street, Hoquiam, state commissioner; Leon McNeal, Aberdeen, state secretary; E. P. Miles, 304 East Fourth street, Olympia, legal action; Thomas Hastings, 2428 Simpson avenue, Hoquiam, membership; Eveart Lobdell, 209 West First street, Aberdeen, roads and highway improvement; E. W. Morningstar, East Wishkah street, Aberdeen, competition and touring.

MISS WOODMAN IN HOSPITAL

MISS "CY" WOODMAN, who for some months has been riding toward the Pacific coast, on her New York to San Francisco tour, was taken suddenly ill with appendicitis at Trinidad, Col., and is now in a hospital there. Miss Woodman left New York on a Flanders machine, and has been making steady progress westward in spite of severe falls and other setbacks.

A VARIETY OF ROADS

A 260-MILE endurance run covering both level roads and mountain highways, will be held by the San Jose (Cal.) Motorcycle Club early in April.

BOARD TRACK RACING LEAGUE

WITH a view to systematizing board-track racing and avoiding the complications that have been encountered by track owners from time to time a number of well-known promoters met in Cleveland, Ohio, about a week ago and formed the American League of Motorcycle Racing Clubs. The purpose of the League is stated officially as follows:

"To organize the sport of motorcycle racing upon board tracks with a view to its perpetuation, by surrounding it with such safeguards as will warrant public confidence in its integrity and methods, and by maintaining a high standard of skill and sportsmanship in its riders; to protect the property rights of those engaged in the sport as a business without sacrificing the spirit of competition; to promote the welfare of motorcycle riders as a class by developing and perfecting them in their profession and enabling them to secure adequate compensation for expertness; to adopt a uniform code of legislation for the general conduct of motordromes and riders."

The League will include every motordrome in the Middle-Western states, according to the announcement, and several that are to be built this spring. These include the following: Chicago Stadium Motordrome, located at Riverview Park; Cleveland Motordrome, located at Luna Park; St. Louis Motordrome, located at Priester's Park; Detroit Motordrome, to be built; Cincinnati Motordrome, to be built at Lagoon Park.

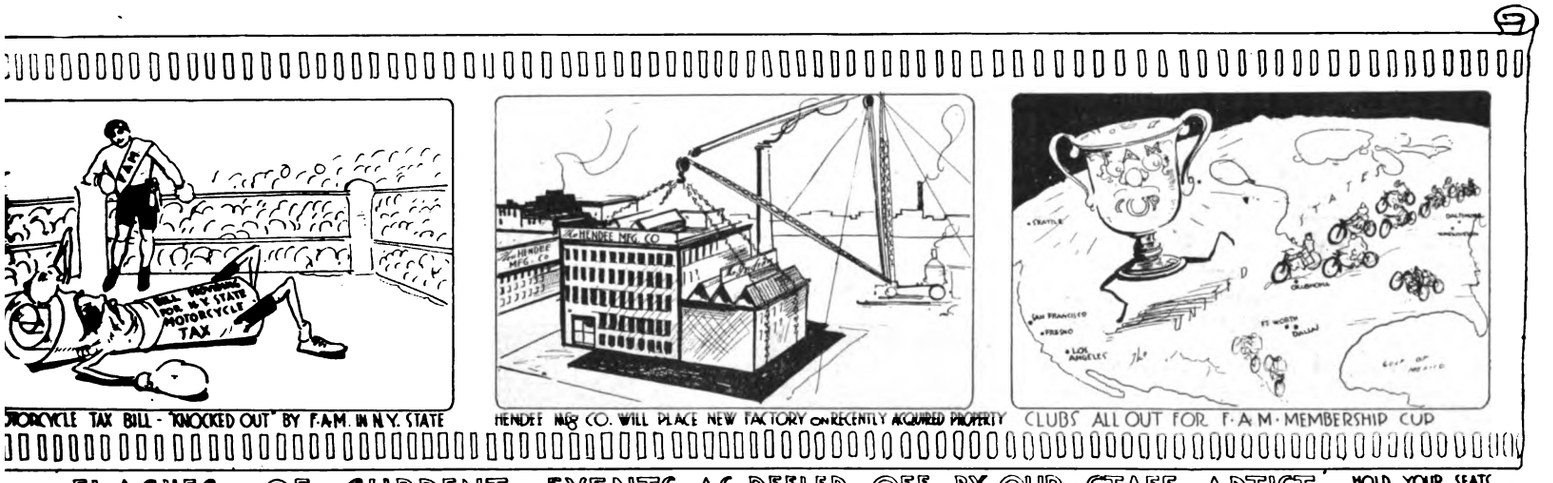
The officers of the American League are: M. F. Bramley, president; J. H. Smith, secretary; Jake Mintz, treasurer; J. H. Rush and Chas. P. Salen, managers; L. J. Mueller, mechanical superintendent. Riders and others desiring information may address Chas. P. Salen, 303 Cuyahoga Building, Cleveland, O.

GREENFIELD RIDERS ELECT

OFFICERS of the newly organized Greenfield Motorcycle Club, of Greenfield, O., have been elected as follows: President, A. Rosberry; vice-president, C. I. Page; road captain, Oscar B. Turner; secretary, Alan H. Sawyer, and treasurer, Dr. F. Wr. Steadman. The club now has a membership of twenty-five and plans for sociability and endurance runs have been made.

SALT LAKE M. C. RUN

ABOUT fifty members of the Salt Lake City (Utah) Motorcycle Club recently participated in a 100-mile run to Grantsville.



MOTORCYCLE TAX BILL - KNOCKED OUT BY F.A.M. IN N.Y. STATE — HENDEE MFG CO. WILL PLACE NEW FACTORY ON RECENTLY ACQUIRED PROPERTY — CLUBS ALL OUT FOR F.A.M. MEMBERSHIP CUP

FLASHES OF CURRENT EVENTS AS REELED OFF BY OUR STAFF ARTIST — HOLD YOUR SEATS MORE COMING

SAN JOSE ENDURANCE RUN

MEMBERS of the San Jose (Cal.) Motorcycle Club participated in a 245-mile endurance race, Sunday, March 9. The course led through Pacheco Pass, in San Benito County, through Modesto around Livermore, and then back to San Jose. The club recently gave a banquet.

MEMORIAL DAY MEET

A NUMBER of open events as well as club races will be held by the National M. C., of Washington, at the Bennings Track on May 30. This is the only event of the season in which non-members will be allowed to participate, it being the club policy to hold races for its members only.

TO HOLD ANNUAL DANCE

AT the last business meeting of the Fort Wayne (Ind.) Motorcycle Club sixteen new applicants were elected to membership and arrangements were made to hold the third annual dance of the club April 2.

SALT LAKE M. C. PARADE

BY way of celebrating St. Patrick's Day members of the Salt Lake City (Utah) Motorcycle Club participated in a parade which was led by the city motorcycle police squad. Every rider and machine was decorated with green. After the parade the club gave a dance and entertainment.

AGED SIDECAR ENTHUSIAST

C. A. BRADLEY, of Shelburne Falls, Mass., who does extensive sidecarring throughout the Bay State, writes that his outfit has proven so satisfactory from a point of resiliency and comfort, that his grandmother, although 75 years old, does not hesitate to accompany him on many trips.

NEW CLUB IN MONTREAL

A NEW motorcycle club with 26 members has been formed in Montreal, Quebec. A. R. Radmore was elected president; W. J. Ahern, vice-president; A. J. Wilson, secretary; G. H. Knott, treasurer, and W. L. McLean, will have charge of road events.

TO PROTECT MEMBERS

A REWARD of $25 is offered by the National Capital M. C. for the arrest and conviction of any person stealing or maliciously damaging a member's machine. This is offered in addition to the $25 given by the F. A. M. for the recovery of a stolen machine, as all members of the Washington club belong to the F. A. M.

NEW ROOMS CHOSEN

THE National Capital M. C., of Washington, has voted to rent new club rooms at 938 N street N. W. It was suggested to raise the dues to fifty cents per month, but this was temporarily voted down.

MEMBERS of the Arrow Motorcycle Club, Inc., of Hudson County, N. J., made a run to Greenwood Lake March 16. Road Captain Leo Herzig was in charge.

TEN motorcycles have been purchased by the United States Reclamation Service, of Phoenix, Ariz., for the use of the canal superintendents and engineers.

FROM TAMPA TO JACKSONVILLE

Tampa Motorcyclist Makes Report on Trip That Was Featured by Heavy Going Through Sand Patches and Water.

DR. L. M. ANDERSON, of Tampa, Fla., recently accompanied a party of motorcyclists who made a trip to Jacksonville, and throughout the journey the doctor made notes of road conditions with a view of assisting other riders who might desire to cover the same route. His report on the highways between Tampa and Jacksonville indicates that the route followed provided considerable hard going, especially in the way of sand. Dr. Anderson's statement is as follows:

"Our party left Tampa early in the morning for Brooksville. The roads between Tampa and Brooksville are anything but good. They are sandy and hilly with some water. The real trouble, though, is the lack of road signs which resulted in our being lost on numerous occasions and doing a lot of unnecessary traveling. The information given by the natives along the route is absolutely unreliable. We got on the right road about fifteen miles from Brooksville, and had no further trouble.

"From Brooksville to Floral City the going is fairly good, and you have a good hard road for three miles out when you run into the sand again for about three miles, then on a hard road into Inverness and a beautiful road from there into Dunnellon, twenty-seven miles. For ten miles out from Dunnellon the road is graded, but bad in some places. On the crest of a hill you find a good hard road that leads to Ocala, about twenty-five miles. From Ocala to Gainesville the going is fairly good, though rather rough and rutty in places. It is about forty-seven miles between the two places. From Gainesville to Waldo, twelve miles, the road is graded sand, but there is no water. From Waldo to Starke, fourteen miles, the roads are very bad; lots of water and mud. From Starke to Middleburg is mostly very deep sand, with some water. From Middleburg to Orange Park I would advise tourists to keep off the graded road, It is very soft and this was the only place we bogged good and proper, requiring the efforts of the three to get one machine out of the mire. About five miles from Orange Park you find a graded sand road, which is fairly good. This road takes you on through Orange Park to the Duval county line, where you find a fine brick road right to Jacksonville, via Ortega and Riverside.

"To those contemplating the trip I would say that we learned in Jacksonville that the roads would have been better had we gone via Palatka and St. Augustine, but as most of the information we had on the trip was misinformation we had to find out for ourselves. Might also add that the Goodyear signs are a great help in following the right road and don't see why more of the route is not posted in this way, particularly between Tampa and Brooksville."

NEWS OF COLUMBUSITES

COLUMBUS, Ohio.—The Twyman Motor Car Company, 264 North Fourth street, has taken the central Ohio agency for the Pennsylvania line of motorcycle and automobile tires.

The Barr Motorcycle Company, of East Gay street, has received its first carload shipment of 1913 Indians.

In addition to the Emblem and Henderson, which the firm handled last year, the American Machine Company, 338 North High street, has contracted with the Miami company and will also handle the Flying Merkel.

Kienzle Brothers, of 844 West Broad street, have taken the central Ohio agency for the Jefferson. Previous to this time the Jefferson machine has not been represented in the Buckeye Capital.

Motorcycle dealers of this city participated in the Automobile carnival which was held here last week in place of the annual automobile show. Among the agencies participating in the carnival were: Barr Motorcycle Co.; Franklin Cycle & Supply Co., agent for the Excelsior, Reading-Standard and Yale; L. P. Birkenbach, Thor and Pope; P. I. Haynes & Co., Harley-Davidson, and The American Machine Company, Emblem, Merkel and Henderson.

Representative Warnes, of Holmes county, has introduced a bill into the Ohio General Assembly which provides for state licensing of all motorcycles at a fee of $3.

COOLEY IS GENERAL MANAGER

SAMUEL M. COOLEY has been appointed general manager of the Presto-O-Lite Company, of Indianapolis. Mr. Cooley has been connected with the company for several years, and for the last two years has been assistant general manager.

PLANS are under way to enlarge the factory of the Canton (Ohio) Rubber Company, manufacturers of penumatic tires.

BUFFALONIANS REACH COAST

HUGO A. FARGO and Harrison H. Crawford, the Buffalo attorneys who left Atlantic City last September on their cross-country motorcycle tour, have reached the coast. The trip was made on a Henderson motorcycle with sidecar. Including the weight of the sidecar, the luggage and the passengers, the machine was called upon to carry 850 pounds. The riders encountered some very rough going, but report excellent service from their Henderson. The sidecar also stood up well under the severe conditions.

TO ENTER ACCESSORY FIELD

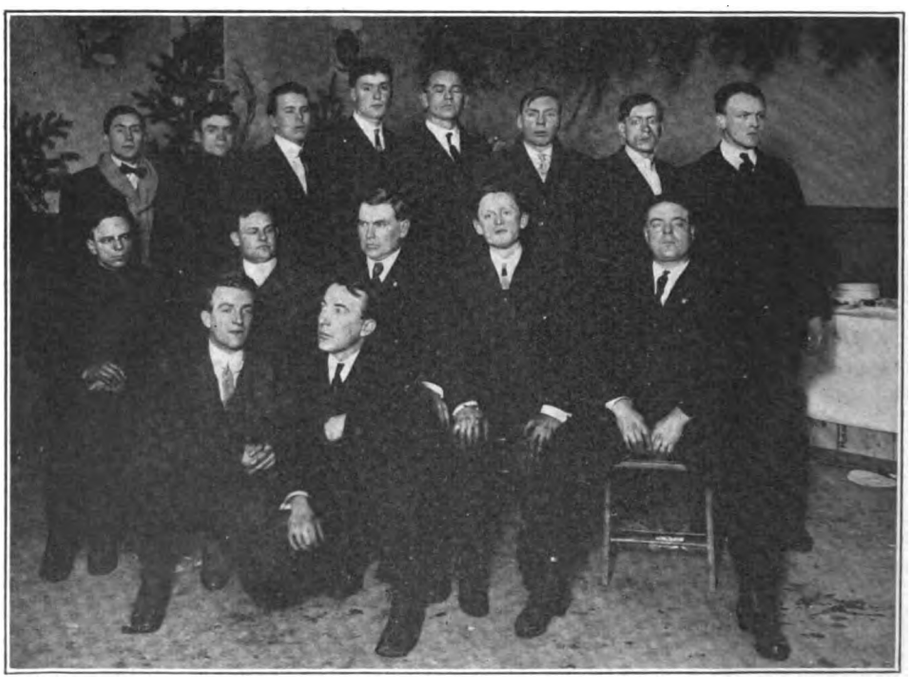
ANNOUNCEMENT is made that the Toledo retail branch of the Consolidated Manufacturing Company will enter the jobbing field at an early date, and that an attractive catalog is now being prepared. The company will carry a complete line of motorcycle accessories and Manager Harry D. Capron is making arrangements to go after new business with a wide-open throttle.

FIGHTING RUST

AN appliance of linseed oil, which forms a good skin on metal, especially on plated parts and rims, has been suggested to prevent rust. A motorcyclist who resorted to this finds it very satisfactory, and states that it is easily cleaned off.

A. L. WILSON, 408 Front street, has taken the Baltimore agency for the Iver-Johnson motorcycle, and A. Trust Poehlmann, of the Coles Sales Co, is to handle the Schickel line in the Monument City.

IT is reported that John E. Hogge, of Urbana, Ohio, has accepted a position with the Hendee Mfg. Co., as a foreign representative.



A NUMBER of motorcycle enthusiasts of the northwest appear in the accompanying photograph. From left to right those standing are: W. Hodecker, R. Heath, D. F. Bryer, A. H. Rasmussen, P. L. Abbott, V. G. Carlson, H. J. Farnham and L. Simon; sitting, R. W. Brown, A. Dunnegan, E. L. Moore, W. Brush, and C. Howard; front, D. Harry and H. E. Mead. The photo was taken at an organization meeting held recently in Portland, Ore.

TO HAVE FOUR-STATE RUN

BALTIMORE, Md.—Plans are being laid by the Maryland M. C. for a four-state tour on May 30, the decision to hold one being arrived at during the meeting of March 12. The course to be covered will be about 250 miles, and the contestants will have to finish inside of twelve hours. The start will be made at 6 o'clock in the morning, and a stop for dinner at noon will be made at Hagerstown. Secret checking places and controls will be arranged, so that the boys will not be able to speed over the course. Howard A. French, chairman of the committee in charge of the event, is determined not to have the entrants turn the tour into a road race and thus get motorcyclists in general in bad repute. A twenty-mile an hour gait will be maintained, and prizes will be offered to those who make the best time and finish inside the limit.

Three routes were suggested, but the one decided upon is as follows: Baltimore to Frederick, Harpers Ferry, Berryville, Winchester, Martinsburg, Hagerstown, Waynesboro, Gettysburg, Littletown, Westminster to Baltimore. The route to be traversed will take the riders over roads in Maryland, Virginia, West Virginia, and Pennsylvania. The roads on this course are generally good.

YALE BULLETINS

ONE of the latest features of the broad-gauge advertising campaign that is being waged by the Consolidated Manufacturing Company, of Toledo, is the distribution of slips duplicating telegraph forms and carrying bulletins received from riders relative to unusual achievements of Yale machines. W. B. Tully reported to the home office from Chattanooga, Tenn., that his Yale had climbed Missionary Ridge and Lookout Mountain without difficulty, starting on the clutch on some of the stiffest grades, and this information is now going broadcast on the tidy little first cousins to telegraph blanks.

BIG EASTERN SHIPMENTS

H. L. PETERS, of 330 Pearl street, Buffalo, N. Y., and Alexander Klein, of 2204 North Broad street, Philadelphia, Pa., Harley-Davidson dealers in their respective cities, have recently received carload shipments of the Milwaukee machines. Reports from the factory are to the effect that eastern business is more active than ever before, and the fact that dealers have begun to receive their machines by the carload indicates that these conditions are likely to continue.

IN NEW PLANT APRIL 1

THE Prest-O-Lite Company will move into its new building at the Speedway on April 1, leaving the present office and factory rooms on East Georgia street. An automobile and accessory industrial center has been built up at the Speedway and the Prest-O-Lite plant is a substantial addition to it.

NEW CANTON COMPANY

CANTON, Ohio.—The Harper Tire & Rubber Company has been incorporated with a capital stock of $400,000, to manufacture and deal in automobile and motorcycle tires. The incorporators are: Warren D. Harper, James Thomas, Albert H. Vayo, Byron B. Baughman and Carroll B. Bour.

During the past month the Elmira (N. Y.) M. C. has enlisted 26 new members.

N the accompanying photograph appear two of the 1912 Indian machines used by Uncle Sam in the Philippines. The picture was taken at Samar, 400 miles from any repair shop, and the machines have not yet given trouble. These machines are used by the engineer corps, and have covered 6,800 miles over the uncertain Philippine roads.

"E. & C." SPRING TANDEM

MOTORCYCLISTS who carry tandem passengers find much to interest them in the product of the E. & C. Manufacturing Company, Filbert and Fifty-second street, Philadelphia, Pa. The "E. & C." spring tandem, which is termed by the makers as the "Acme of Perfection," is stanchly built with comfort the chief aim of the producers, and on this score they are convinced that they have achieved their goal. A Mesinger Standard No. 4 saddle is used and both compression and recoil springs are fitted. The tandem is constructed of cast steel fittings and heavy-gauge tubing, and is strongly reinforced at the vital points. The outfit is of nickel plate finish, is equipped with handlebars and pedal foot-rests, and is listed at $16.

BAILEY ON GOODYEAR STAFF

I. R. Bailey, formerly manager of the mechanical goods department of the Diamond Rubber Company, has recently been appointed manager of the mechanical goods department of The Goodyear Tire & Rubber Company, Akron, Ohio. During his 25 years in the rubber business Mr. Bailey has acquired a host of friends and the entire trade recognizes him as a leader in his line.

ADJUSTABLE-GAP PLUG

ONE of the most interesting motorcycle accessories to come to light of late is an adjustable-gap spark plug, now being placed on the market in England. In this plug the points may be set while the engine is firing, and should the plug become fouled with soot an adjustment may be made to remedy the difficulty. On a machine that gives trouble in starting the points in the new plug can be set close together to facilitate starting and then opened to meet requirements after the motor is running.

The main electrode can be rotated eccentrically to enable it to be handled without the rider receiving an electrical shock and terminates in a cap of insulating material with a knurled edge. A graded scale provided with a small pointer indicates the position of the electrode, and stops are placed to prevent the main electrode from turning completely around. It is stated that the gap can be varied from seven to fourteen thousandths of an inch.

MANILA CLUB HAS HOME

FROM Squires, Bingham Company, Manila, P. I., comes the announcement that the motorcycle club organized some time ago in Manila has rented a fine club house and that systematic plans are under way to boom the interests of the motorcycle in the islands. The Squires, Bingham Company handles motorcycle and bicycles in addition to a large assortment of sporting goods and clothing.

JEFFERSON AGENTS AT NEWARK.

TO accommodate a variety of tastes in motorcycles, Watson J. Kluczek, of 54 William street, Newark, N. J., has taken on the agency for the Jefferson in addition to the Emblem and Harley-Davidson machines. Kluczek's "suburban" branch is at 301 Valley Road, West Orange, where a complete line of auto and bicycle supplies is kept.

TO WARN FRENCH RIDERS

STEPS are being taken by the Touring Club of France to reduce the danger that confronts the motor tourist on French roads at the present time. Many of the main thoroughfares are crossed by railways over unprotected grade crossings, which constitute a real danger to the motorcyclist. The Touring Club has drawn the attention of the authorities to the matter and all the grade crossings are to be properly marked by warning signs at least 200 yards from the danger point.

MOTORDROME COMPANY INCORPORATES

INCORPORATION papers have been filed by Charles P. Salen, Jake Mintz, L. J. Mueller, J. H. Smith, M. F. Bramley, H. J. Conover and J. H. Bush for the Cincinnati Motordrome Company, of Cincinnati. The company has a capital of $15,000.

CARRY ARMY MOTORCYCLES

THE latest models of army automobiles built for the German army are fitted with side pockets, in each of which is carried a motorcycle for use in emergencies.

A NUMBER of motorcycle enthusiasts of Tarrentum, Pa., and neighboring towns in the Allegheny valley, recently formed the Tarrentum M. C. Howard Robinson was elected president, and C. C. Bichl, secretary.

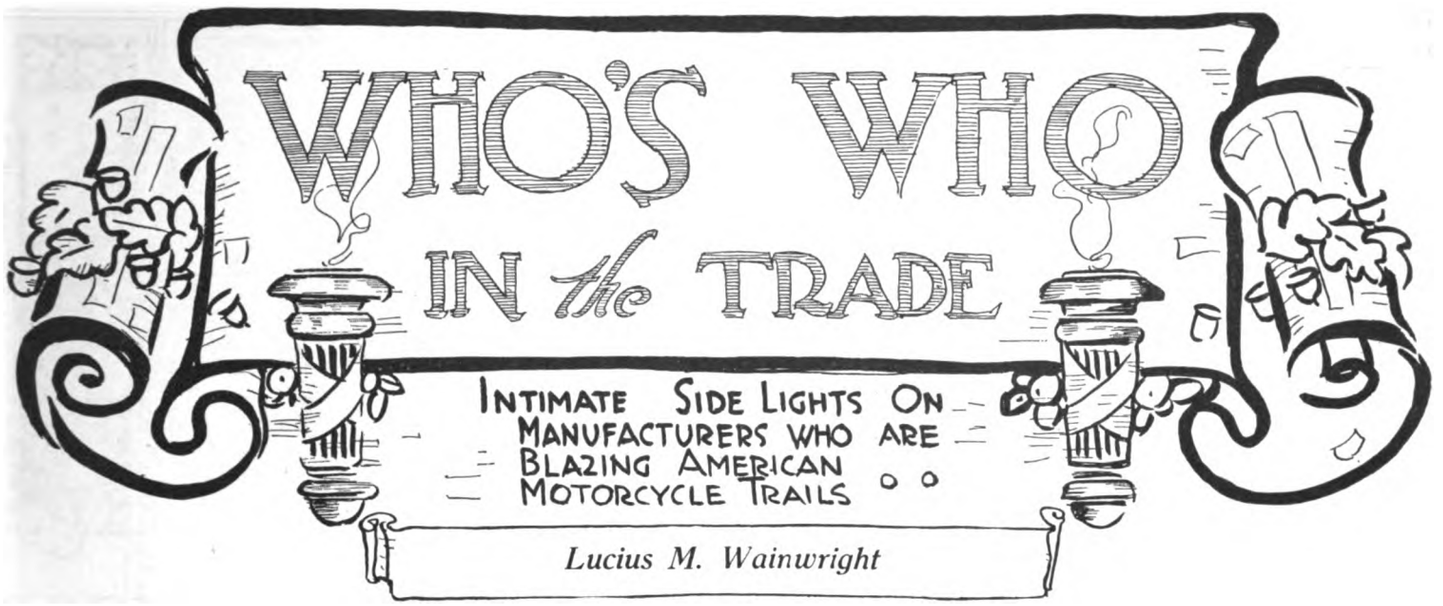
LUCIUS M. WAINWRIGHT

Digitized by Google



IF Lucius M. Wainwright, of Indianapolis, had not been sufficiently foresighted and progressive to make the most of every opportunity in his early life a heavy percentage of American motorcyclists might be confronted today by the problem of getting over the roads without a transmission agent—for Mr. Wainwright is the man who made the organization that made the factory that makes Diamond chains, and according to late reports these products are found on more than half the motorcycles in use in this country. True enough, these motorcyclists might have equipped their mounts with belts, or with chains of another make, but for the purposes of this article it is to be assumed that they would not have done anything of the kind; that they would have stood about railing against fate—with their motors churning futilely—unable to get anywhere, because Lucius Wainwright hadn't made chains for them. That would have been a pretty serious state of affairs, and it follows naturally that the story of how it was avoided is of considerable interest.

Lucius Wainwright was born in Noblesville, Ind., January 4, 1860, and is therefore entitled to recognition as a full-fledged Hoosier. His early life was spent on a farm—and today the farm is proud of it. He tinkered about between school and odd jobs for quite a while after reaching the school age and continued to grow, as boys will, even on a farm. Finally he developed to the point where he made trips to Indianapolis and other neighboring points of interest, and on a certain fateful day he became interested in a bicycle. In a short time he bought one, and it was then that the first work was done on the foundation for the business now handled by the Diamond Chain and Mfg. Company. Young Wainwright soon figured in the bicycle racing game and held his own with the cracks of the day. Even yet he harks back to memorable occasions on which he had for track opponents such racing pioneers as George Hendee, Oscar Hedstrom and Zimmerman.

GETTING A START IN BUSINESS.

In time Wainwright tired of racing and devoted himself to trick bicycle riding, visiting the street fairs and other amusement places and startling the natives with stunts that were then looked upon as superhuman. Young Wainwright established an agency for bicycles in Shelbyville in 1879 and rode all over the State taking orders. His was the second bicycle in Indiana, and he is still a bit proud of the fact. Before taking to the bicycle he had given some attention to the three-wheelers, but they did not measure up to what he believed a pleasure vehicle should be, so that most of his enthusiasm was held over for the bicycle. Wainwright's generalship began to show itself when he organized the Indiana division of the League of American Wheelmen during the year in which he opened his bicycle agency. He made satisfactory progress during his racing and exhibition tours and gave up about five years to this work.

Finally he returned to Shelbyville, where he went into the bicycle business on a larger scale. Three years later—in 1889—he decided to spread out a bit and accordingly he moved to Indianapolis and organized the Central Cycle Mfg. Company, which produced the well-known brand of Ben Hur bicycles. He conducted this business for nine years, and then retired from the company to take an interest in the Indianapolis Chain and Stamping Company, which was organized in 1890, with Mr. Wainwright as manager. He remained in this position until 1905, when he formed the present Diamond Chain and Mfg. Company, which bought out the Indianapolis Chain and Stamping Company. The plant was from the first devoted exclusively to the manufacture of block and roller chains, and at present the motorcycle line is one of the most important on the company's list.

DEVELOPING THE BIG PLANT.

Mr. Wainwright was drawn into the motorcycle naturally, as so many other veteran bicycle men have been. It was a short step from riding bicycles to making chains for them, and an equally short step from bicycle chain to motorcycle chains. Over 400 mechanics are now employed in the big Indianapolis plant of the Diamond company, and it is one of the largest in the country. While Mr. Wainwright is kept pretty busy as president of the company, he finds time to display unusual interest in the progress of his son, Guy A. Wainwright, who occupies the office of vice-president. Not content with sending his son through Purdue University, one of the best known engineering schools in the West, Mr. Wainwright has just had the satisfaction of seeing him complete a post-graduate course in mechanical engineering at Charlottenburg, Germany. Having laid the soundest kind of a foundation for his work in the interests of the Diamond company, Guy Wainwright is now at the plant and making every move count. In addition to being vice-president he carries the title of Efficiency Engineer.

Lucius Wainwright is probably better known throughout the accessory and parts industry than in the motorcycle field, for in the former he has been honored frequently with offices. He is now serving his second term as president of the Cycle Parts Association, and he is also treasurer of the motor and accessory manufacturers' organization. In Indianapolis Mr. Wainwright is on several important committees of the local business clubs and organizations, and he is recognized on all sides as a result-getter. It is not likely that Mr. Wainwright has a hobby worthy of the name today—for he no longer rides two-wheelers—but he has a distinct liking for Southern trips during our bleak Northern winters, and he is rarely to be found in Indianapolis during February and March. For example, if you wanted to tell him just at present the precise degree of satisfaction derived from a Diamond chain on your motorcycle you would have to jump to Florida to do it. He has been there for several weeks past.

NEW LAW ADOPTED

INDIANAPOLIS, Ind., March 12.—A new law has been passed by the legislature here, which just finished its sixty-days' session last Monday, providing for a state license of $2 for all motorcyclists. It also provides for eliminating all local licenses and taxes. Heretofore the riders have been forced to pay a state tax and a city tax, besides the one dollar fee they paid for the life of each machine. These taxes amounted to as much as $5 in some cities, and the new law permits material saving. President O. F. McClain, of the Indianapolis Motorcycle Club, is responsible for the new law.

The new law also abolishes all local speed limits under ten miles an hour, and states that only one light need be carried upon the machine at night. The law as originally proposed provided for two lights.

ECLIPSE

The Brake You Can Trust

More than one hundred square inches of braking surface!

A square inch for every 3½ lbs.

What more positive assurance of ABSOLUTE SAFETY can the rider require than the knowledge that his brake is stronger, proportionately, than the most powerful automobile brake made?

Figuring the average machine and rider to weigh approximately 350 pounds, that allows a square inch of braking surface for every 3½ pounds weight. No automobile brake made is proportionately as strong as the Eclipse Perfection Multiple Disc Brake.

This brake differs is design from previous Eclipse Brakes, in fact it is different from any other brake yet made.

The Brake operates on the multiple-disc idea, similar to the Eclipse clutch. The discs are mounted on one side of the hub, instead of inside it. There are six discs 5¼ in. in diameter.

The bearings contain ⅜-inch balls. Lubrication is a matter that will require little attention, for the hub can be packed with hard oil at the start of the season and this supply will last the entire year.

The Ideal Brake for Sidecar Riding

The great working surface and simplicity make this brake fine for heavy service, such as sidecar work. No matter what momentum the outfit may attain, the Eclipse can and DOES absolutely annul the most terrific speed and brings the machine to a quick halt.

Dealers should stock heavily.

Eclipse Machine Company

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:
HARRY G. JACOBS
1220 First National Bank Building, Chicago. Telephone 5908 Central.

CIRCULATION THIS ISSUE MORE THAN 14,000 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

ADVERTISING SERVICE

DIOGENES is credited—or discredited—with living in a tub (when he was not Sherlocking up and down the countryside with a lantern in his search for an honest man), and as a result he is still being talked about. Had he proclaimed his doctrine of simplicity from the housetops—and eschewed his tub—few of us would know today how to spell his name. Diogenes knew the value of an illustration. He knew that well-worded arguments do not always carry themselves, that we must have an idea so presented that it hooks itself in our memory. He desired to be known as a man of the utmost simplicity; hence his tub.

In the presentation of an advertising argument folks aim to convey an idea so strikingly to a reader that it will step out, so to speak, and tap him on the cerebellum the instant he finds himself in need of a product in their line. But all ideas are not tappers. Some don't make good. Distinguishing the workers from the shirkers is a fine art, and that is why the Advertising Service Department of MOTORCYCLE ILLUSTRATED *devotes ten hours a day to the task. It is the aim of this Department to handle your advertising copy so that the idea you mean to convey will strike home—and stick around until it delivers the goods. This is the only paying policy.*

EDITORIAL VIEWPOINTS

REPORTS from Albany that the New York State legislators have seen fit to give the proposed motorcycle tax bill its quietus will naturally be received by machine owners with rejoicing, but their satisfaction over the successful outcome of the present protest should not lull them into the belief that further vigilance is unnecessary. As a matter of fact, motorcyclists of the State should always be ready to answer a hurry call to arms. Objectionable regulations applying to the motorcycle may at any time be couched in a general motoring law, and only constant watchfulness can prevent the adoption of harrassing measures under the guise of needed legislation.

IN connection with the tax provision that has just been disposed of, it is worthy of note that few, if any, of the lawmakers knew the full import of the bill as applying to motorcyclists. They were surprised and favorably impressed by the magnitude of the movement started by the F. A. M. Legal Action Committee in opposition to the contemplated measure, and pledges were quickly forthcoming that the riders of the State would not be interfered with at this time. A continuance of this businesslike attitude on the part of the F. A. M. and its riders in New York State—and elsewhere—will work wonders.

A BIG FIELD FOR DELIVERY VANS

LATE developments indicate that automobile manufacturers have keen eyes on the parcels post field and that in many quarters special efforts are being made to adapt four-wheelers to the new requirements of the postal authorities. This is a cue that should not be overlooked by motorcycle van builders. It is obvious that there will always be districts in which an automobile truck cannot be operated economically for parcels post deliveries, and it is into this breach that the motorcycle van can work its way most effectively. Hundreds of post offices, some of them in bustling cities, do not handle enough parcels post matter to justify the use of a truck, but they feel the need of a vehicle that will cover the ground rapidly with a reasonable load. Motorcycles with van attachments are already filling the bill in a number of cities, but the movement is young. New ideas in van construction are needed and a lively spirit of co-operation with the postal officials is essential. Uncle Sam has the money and we have the motorcycles and the vans. Let's talk things over and get down to business.

BOARD TRACKS AND THE LEAGUE IDEA

THOUGHTFUL followers of motorcycle racing on board tracks view with some uneasiness the plans now being developed by promoters to systematize the handling of riders by operating on a circuit basis, in view of the fact that it is a comparatively easy step from the circuit policy to hippodroming, and from that to the waning of public interest in the sport. It is not to be inferred that the organization of squads of paid riders to appear on a circuit of tracks necessarily predicates an unfair attitude on the part of promoters, or that races cannot be honestly contested under such conditions of management, but simply that the odds are against the upbuilding and maintenance of a desirable sporting spirit under these circumstances.

IN baseball alone has the league system given full satisfaction, primarily because the game itself is not easily susceptible to juggling and because each player feels the need of putting forth the best that is in him on all occasions, regardless of whose feelings and interests may suffer in the outcome. The baseball-loving public sits in judgment upon him and he dare not go wrong. As long as the racers employed by a league of board tracks work along the same lines there can be no objection to the circuit idea, but that they will be hedged by many and serious temptations cannot be denied.

THE SPIRIT OF THE F. A. M.

"I FIND that the sport suffers its greatest abuses in localities where there is no F. A. M. representation," Bulletins Director Sauer, from the southwestern leg of his transcontinental lecture tour. "Where there is a good club and where the F. A. M. is in favor you will invariably find among motorcyclists a decent regard for the rights of others."

HEREIN is embodied one of the most significant tributes that could be paid to the national organization. Without regard for the rights of others no motorcyclist can hope to be a factor in the upbuilding of the sport, and those who do not upbuild, tear down. We do not believe any motorcyclist would deliberately place himself in a position detrimental to the interests of his fellow riders, but that some machine owners do this through indifference cannot be denied. That such riders are found where there is no club or F. A. M. representation simply emphasizes the time-worn argument that little can be achieved without organization.

THE motorcyclist who allies himself with a club finds himself taking pride in the standing of his squad. He is moved to defend it against unjust criticism and to assist in warding off such criticism by keeping his own actions above reproach. The outcome is a greatly improved standard for motorcyclists in the district in which the club operates. When the club in turn pools its interests with those of the national governing body its scope is broadened, there is a keener appreciation of the responsibilities that devolve upon it and the upward movement is continued. It follows that there can be no reasonable argument against the club, and certainly none against the club's affiliation with the national body that has for its sole object the advancement of the sport in which all are concerned. It is saying much for the F. A. M. that its influence breeds "a decent regard for the rights of others." Let the breeding go on.

GASOLINE FROM KEROSENE

EDITOR.—If you will oblige us, we would be glad to have information on the following: We purpose heating kerosene in a closed vessel free from air, and while in this heated condition force hydrogen gas into the vessel. Will this make the kerosene into gasoline? Will the hydrogen gas combine with the kerosene and remain combined after the mixture has cooled down? Hydrogen is easily and cheaply made; on this point we have positive knowledge, but we are at sea as to the comoining action of the kerosene and hydrogen gas.

Saratoga Springs, N. Y. C. J. CHURCH & SON.

(We fear that you would not have the success you hope for. Gasoline has approximately the formula C_7H_{16}, and kerosene is $C_{12}H_{26}$, or thereabouts. The C represents the carbon, and the H the hydrogen in the theoretical formulae given above. But kerosene has been distilled from crude petroleum *after* gasoline has come off, and a further distillation would give a lubricating oil with a residue or paraffin wax. The distillations are made under heat, also. Now, taking kerosene and heating it with hydrogen sent in as a gas, the result would be that there would be given off a part of the hydrogen from the kerosene, and the carbon and remainder of the hydrogen of the kerosene would tend to separate until the heat was great enough. At that instant the chances are that the vessel would open, and disaster follow.

But should the heat not be carried so far as that just mentioned, if the resulting series of gases and liquids were drawn off, you would get a large volume of hydrogen, a compound high in carbon and low in hydrogen and carbonic acid gas. The hydro-carbon compound would be valueless as fuel and as soon as cool, become weaker in hydrogen. The carbonic acid gas (CO_2) would be of no use in your motor, as it is a product of combustion, and the hydrogen could not be used on account of the danger. Hydrogen flames are propagated faster than any pi ton can move, and the cylinder head would probably go. If you let the whole cool the result would be: kerosene and hydrogen in slightly different quantities, and your attempt would be practically useless.—Ed.)

HINTS FOR ADVERTISERS

EDITOR.—I am a steady reader of your paper and a conscientious one, I believe, and in view of my interest in it I am going to presume upon your good nature to the extent of offering a suggestion. I am well satisfied with your editorial features, as a rule, but I find that in many cases the advertisements do not give me the helpful information I desire. More than once of late I have become interested in an advertisement in your pages, only to find that the manufacturer or jobber had not embodied sufficient information in his ad to let me know whether the fitting in question would meet my needs. It may be suggested that I should write for a catalog, and that trade journal advertisements are not intended to tell the whole story of a product. I make allowance for these facts, and still argue that the advertiser should aim—even in a small ad—to tell what his product will do and whether it is adaptable to all types of motorcycles.

At a glance it may seem that all advertisers do this, but I have found that they do not. They take too much for granted. Being fully acquainted with their product they assume that the reading public must know something about it, too, and here is where they err. The product may be quite well known, but there will always be readers who are not in possession of the most elemental points concerning it. Perhaps I am a plain "kicker," but I believe it would be a mighty good thing for advertisers to embody all the practical information possible in their ads. I don't feel like writing for a catalog unless I am reasonably sure that a product is going to be adaptable to my machine, and I believe there are many others in the same boat. BROOKLYNITE.

The above photograph is of unusual interest as showing the neatness with which a capacious van body may be attached to a light motorcycle. It is forwarded from London, where merchants are working out the van idea along the most ingenious lines. The picture shows that the van is cut away over the axle and that the load is carried well forward.

TWO-SPEED GEARS.

EDITOR.—I noticed a letter in the February 6 issue of your valued journal relative to two-speed gears and signed "F. W. V.," and would like to obtain additional information from this rider. Please forward my name and address to him with the request that he furnish me with further details or advise me as to where I can purchase the two-speed device he refers to. I will deeply appreciate any assistance he can give me.

GEORGE B. LEWIS.

24 Chestnut avenue, Dansville, N. Y.

EDITOR.—In your last issue you printed a letter from some one signing himself "F. W. V.," and this rider talked about a two-speed gear which I would like to have. Maybe you can help me to find out where this two-speeder was bought. It would be just the thing to put on my 1912 Indian twin. He goes too darn fast in places where it is not fit to ride fast, and I need something to handle the speed better. After reading the letter of "F. W. V." I think he can help me out. WILHELM NELSON.

La Conner, Wash.

EDITOR.—Will you be kind enough to give me information concerning the two-speed gear mentioned in the letter of "F. W. V." which appeared in your issue of February 6. It strikes me that this gear will meet my needs and I would like to know where it can be obtained. A. E. OBERMAN.

1302 Washington street, Kansas City, Mo.

[We regret that the full name and the address of "F. W. V." have escaped us and that it is impossible to communicate directly with this rider for the benefit of the readers whose letters appear above. We trust, however, that "F. W. V." will come to the assistance of these seekers for information and instruct them as to where his two-speed device was obtained. We shall be glad to give space to another letter from "F. W. V." in our March 20 number.—Ed.]

TIP FOR BELT USERS.

EDITOR.—I am a regular reader of your magazine and also an enthusiastic rider, and I am deeply interested in the motorcycle "kinks" you publish from time to time. I have one which I think may help some of the boys who use belt-drive machines, and I submit it for what it is worth. If a rider has trouble with pulley lagging slipping I advise him first to put on about two or three layers of friction tape such as is used by electricians. I have been doing this for some time past and find that my pulley tape never slips and that it lasts considerably longer. For pulley lagging I use tire fabric. W. H. KUTSCHER.

610 East Market street, Bloomington, Ill.

CAMPHOR AND NAPHTHALINE

EDITOR.—The articles on Fuels, written in your columns, and in the trade journals in general, are most interesting to those who see no prospect of a reduction in the prices of gasoline, and no kerosene carbureters in sight. But have we considered camphor as a "mixer" with gasoline? I know of at least one series of experiments made by a brother rider in England, and feel that his results might be of some interest.

Putting in one pound of camphor in five gallons of gasoline he got a saving of 30 per cent. in fuel consumption and a slight reduction in the amount of carbon deposited. This proportion seems to be the only one suitable, as one pound to four gallons resulted in very poor running. Note that the Imperial gallon was used; this would mean a pound of camphor to six United States gallons. The camphor was obtained in square blocks about an inch each direction, and thus was easily absorbed in the gasoline.

Naphthaline, wrongly called "camphor balls," but containing no camphor at all, is a coal-tar product, and can be used as follows: Heat the balls in a closed chamber or box by means of the exhaust gases and a gas will come off. This gas is mixed with air in an ordinary carbureter and used like gasoline. The prospect of having a heating chamber the size of a shoe box might not appeal to most riders, but it may come to this some day. Let us hope not. Experiments with this fuel were started in Germany in 1908, and made in this country in 1909, but that was about as far as it went. With both fuels mentioned, a larger jet opening is the main adjustment as compared with the use of gasoline, and most motorcycle carbureters can accomplish this by turning the jet valve.

PEARSOL SERGENT.

A GARDENER'S LETTER

EDITOR.—My business as gardener and general caretaker of private residences calls for a great deal of personal and immediate attention, and I found it impossible to accomplish this to my own and customers' satisfaction without something better to ride than an ordinary bicycle, so I bought a Pope motorcycle, Model H, which has given me great satisfaction, and the machine is in every way as represented by the company.

I have covered about 3,000 miles from May up to the 24th of December, riding in all kinds of weather, and the machine today is practically as good as new. During this season it has not given me any trouble of any kind, neither engine, magneto nor carbureter. It is light in weight, easy to operate, economical in gasoline (I have covered 290 miles with five gallons), and any man who can ride a motorcycle can easily adjust and repair a Model H.

I have not paid out over $3 for sundries, and that includes one spark plug. As for speed I find it fast enough both for business and pleasure. On one occasion I rode over 145 miles of hilly roads, passing through towns and cities where speed laws must be obeyed. On another occasion when necessity called for it I covered 16 miles in 20 minutes.

There are plenty of larger and faster motorcycles, I know, good for pleasure but, in my opinion, not so well adapted for business, as they are too heavy and the machinery too complicated.

Anyone who cannot afford or has not the time to take care of an automobile should own a motorcycle, as it increases business and you can give it closer attention with less expense than anything else I know of. In previous years I have employed 12 to 14 men—this summer I kept 18 and 20 with less personal effort than ever before.

Hartford, Conn. ROBERT WALGREN.

ADDRESS WANTED.

DITOR.—On November 17, 1912, the writer met a fellow motorcyclist named Fink while on a trip through Philadelphia. This rider showed me into the city and to the hotel where I wished to put up for the night, and gave me much general information of value. He acted the part of a gentleman at every turn, and when we parted we exchanged names and addresses—orally. There's the hitch. I have forgotten Mr. Fink's address and would like to get into communication with him. Neither of us had a card or a pencil when we parted and we were unable to make notes. However, I am deeply appreciative of the assistance rendered me by Mr. Fink and trust this letter will reach his eye so that he may write me.

Lancaster, Pa. DANIEL B. FLORY.

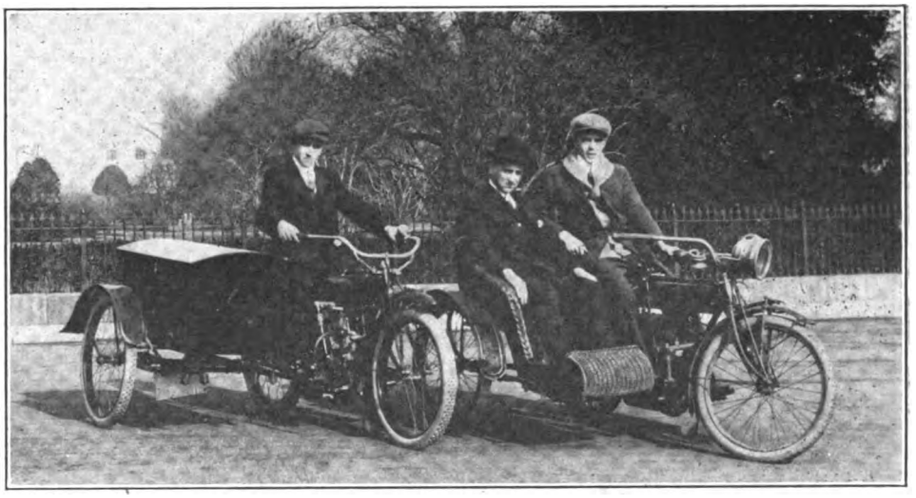
A FRIEND OF THE TWIN.

EDITOR.—From time to time I notice in your magazine hints submitted by different riders and I have found some of them quite helpful. By way of reciprocating I would like to turn in two ideas that I have worked out successfully. The first concerns a luggage-carrier which I have made from short sections of iron pipe and which is strong enough to permit of carrying a passenger on it. As will be seen from the sketch the carrier can be made in any size desired. Mine cost $2.40, including the tap and die used in the operation.

The second idea is not brand new, but I think it is worth mentioning in view of the fact that comparatively few riders know how easily it can be carried out. It provides for hinging the rear mudguard between the two rear braces. This hinge arrangement is very simple and I must say I have found it a great convenience in making tire repairs on the road.

I see by the February 20 issue that Morgan Douglas wants a small twin. As most singles are of four or five horsepower I think he should find one of these to satisfy him. I prefer a higher powered machine. In this case the throttle is used on hills with the machine on high gear, whereas with the mount of less power the low gear is used (if the machine has one), or the throttle is opened still wider, so that it seems to me the gasoline consumption is about even. I also find the extra weight of the higher powered machine of value on rough roads.

Kittery Depot, Me. ALLEN B. LEWIS.



C. S. French, Indian agent in Washington, D. C., is seated in the sidecar. Mr. French is now a full-fledged sidecar enthusiast and a strong booster of commercial vans.

CROSSING THE BORDER.

EDITOR.—In reading Mr. Helm's account of his motorcycle trip from "Finlay to the Falls" in your February 20 number, I was much surprised to learn that he and his partner were given a discomfiting reception by the Canadian customs officials. Being along the border here and having crossed numberless times with a motorcycle and sidecar without trouble from American authorities, either at Buffalo or the Falls, I certainly think the same courtesy should be extended to our American cousins. I know that hundreds of Buffalo and Falls motorcyclists cross to the Canadian side daily in the summer months without putting up a deposit, and I am therefore unable to understand why Mr. Helm had so much trouble.

This is a matter for the C. M. A. to take up and I have drawn the Secretary's attention to same and asked him to get information from headquarters at Ottawa, and if motorcyclists are not afforded the same privileges as automobilists to bring pressure to bear so that such restrictions will be removed.

S. D. DUNN,
Welland, Ont. Vice-President Welland M. C.

THE REFEREE'S TROUBLES

EDITOR:—To set at rest the ideas of those who may envy the position of an official F. A. M. board track referee, or any others who may have a mistaken view of the duties of referees, this letter is respectively submitted by one who has been through the route. To begin with, the referee's position is far from being the soft snap that it seems to be, this official being between two fires at all times, track manager on one side and the F. A. M. riders on the other. Justice must be given each side, and on delicate questions the referee often finds himself in a most embarrassing position. Unless the very keenest knowledge is at the command of the referee, he will find himself in hot water nine-tenths of the time.

There are many duties to be performed by the referee before and after each race meet. Applications for sanctions must be made out, an entry blank must be filled in for each rider, prize money must be looked after and awarded to those earning it. For this, receipts must be taken and if any mistake has been made the referee is the one to suffer. In addition to this, complete reports must be made out by the referee for each race that has been run, and if these reports are not made out properly the referee stands a chance to pay a fine.

During the time of the races the F. A. M. referee finds many duties resting upon his shoulders. He must see that the different events are pulled off according to schedule, he must see that each rider, as well as his machine, in in fit condition to race. The referee must look after the judges, timers, scorers, etc., besides seeing to it that the clerk of the course and the starter do not start the wrong men in the races.

Crooked riding must be watched for; and at times what looks crooked to the spectators may be unintentional on the part of the rider or riders. The referee must understand all of these things, and pass judgment in such a way that no hardship will be placed on those innocent of wrongdoing. There are many cases like this which happen almost daily on all board tracks, so the reader can see for himself that it is very easy for the referee to make bad decisions, and consequently make enemies for himself.

Board track managers as a whole seem to like to keep the referee in hot water. I do not mean any manager personally, but take them as a whole. Many managers have petty dislikes against certain riders, and expect the referee to help them out by punishing these riders on all occasions. If the referee does not do this, then the rule is that Mr. Manager gets "sore" at the referee and thinks he is not getting a square deal. Some managers want to pull off special stunts to draw the crowds, and if the referee should prohibit these special features as being in direct violation of the F. A. M. rules, then he finds the manager "sore" again. So taking into consideration, do you think that the responsibility, the ease with which enemies are made, and the nerve-racking work that is done are worth the $10 daily asked for by the referee?

ONE OF THEM.

DEDGE'S EXPLANATION.

EDITOR.—It is with great pleasure that I take advantage of the opportunity offered me to explain to the local public through your columns my situation in the novelty race held at Laurel, Md., on September 25, 1912, in connection with the horse races. In this race two automobiles, two running horses, two foot runners, and two motorcycles competed in a handicap event.

The reasons to which I attribute my not winning this race are threefold:—gasoline running low, a broken porcelain spark plug, and to the fact that one of my well wishers, just before the race, in adjusting the airshutter on my carbureter broke the handle off. This party will probably remember the incident. The breaking of this handle was a very serious matter, as every racing man knows that a cold engine will need less air than a hot one, necessitating first closing the airshutter and then opening the same as we get under way. I tried to use a regular stock shutter but soon found out that it was too small, and not having time and tools to make one fit, I decided to race without it and do the best I could under the circumstances. I am willing to state under oath that the race in question was run fair and square as far as I am concerned, and that I did all in my power to win, which, as the motorcycle racing fans will admit, means quite a little.

TOMMY DEDGE.
Washington, D. C.

Three new motorcycles have been ordered for the police department of New Haven, Conn.

LINE-UP OF "MECO" BOOSTERS

IN the accompanying photograph are shown the department heads of the Motorcycle Equipment Co., of Hammondsport, N. Y., with the exception of the Los Angeles branch manager. From left to right the "Meco" boosters are: M. F. Olcott, traveling representative; Leon Brink, chief of the order department; C. J. Ball, head correspondent; J. C. Cornell, who handles the money; W. L. Hayes, who buys the guaranteed supplies; C. L. Waters, manager; Ben L. Casterline, the man with the big job of superintending the shipping of several thousand packages a week to all parts of the United States and Canada. The stenographers and clerks were too busy to pose for the camera man.

Reports from the factory show that there is a 100 per cent. increase in "Meco" sales this spring. Three new clerks were added to the force last week to permit of living up to the slogan: "Goods shipped same day order is received," and the company is still able to maintain its excellent record in that respect.

THE "SPARK-NO" LOCK

ONE of the latest devices intended to thwart the motorcycle thief and guard against tampering with a machine is an electric lock sold under the trade name of "Spark-No," and manufactured by the Swyers & Lorch Manufacturing Company, Seventeenth and Carson streets, Pittsburgh, Pa. This lock has a dial over which two hands move, permitting of a series of combinations of figures which may be set by the owner. When the lock is arranged for service it interrupts the ignition system so that it is impossible to start the machine. It may also be connected to a bell that will give an alarm when an attempt is made to throw in the switch. When attached to a motorcycle the lock is grounded directly on the magneto, making it impossible to tamper with the wiring successfully. When it is desired to change the combination of the lock the hands on the dial are simply moved through outside knurled screws, and it is not necessary to take the device apart. The lock is light and compact, and does not detract from the appearance of the motorcycle. It lists at $4.

NEW DISTRIBUTING HEADQUARTERS

R. W. SAYRE, of the Appeal Manufacturing Company, western distributors for the Harley-Davidson and Flying Merkel motorcycles, announces that the company will open a branch in San Francisco. He recently spent a number of days in that city and secured quarters at Market and Franklin streets. He states that the new building will be the wholesale distributing headquarters of the Appeal company.

A SUB-AGENCY of the Henderson motorcycle has been placed with the Wyckoff, of Chagrin Falls, Ohio, by the K. V. Motorcycle Company, of Cleveland.

NEW PRESTO PRODUCT

A NEW product of the Prest-O-Lite Company, of Indianapolis, is Prest-O-Torch, an acetylene burning device which may be used instead of a gasoline torch. The torch itself is small enough to be carried in a coat pocket, and will be found as economical as it is handy for all ordinary jobs of soldering and brazing. The device is simply connected to any Prest-O-Lite tank, the gas is turned on and a match applied. Instantly a flame is at hand of such intensity that it is capable of heating an ordinary soldering iron in one minute. The torch proper is only half an inch in diameter, and for this reason may be used in small working spaces where the old-style torch would be of little value. The price, with two stem connections, is 75 cents.

L. P. BIRKENBACH, of North Fourth street, Columbus, central Ohio agent for the Pope, is having his store remodelled and will have more space in both his repair shop and salesroom.

A NEW VICTOR LAMP

MOTORCYCLISTS will be interested in the announcement that the Victor Auto Parts Co., of Cincinnati, Ohio, is now marketing a new lamp with a 6½-inch mirror, thus providing for a light sufficiently powerful to meet the most exacting demands of the rider. The products of the Victor Auto Parts Co. already stand high in the estimation of motorcyclists, and there are indications that the new lamp will be in great demand. The body of the lamp is stamped out of heavy brass and is riveted and soldered with such care that the company guarantees it to resist the hardest road usage. The company now has a force working night and day to fill orders. Ten different styles of motorcycle lamps are made, featured by the "Old Reliable" models that have proved unusually popular in past seasons.

MASON WITH NEW FIRM

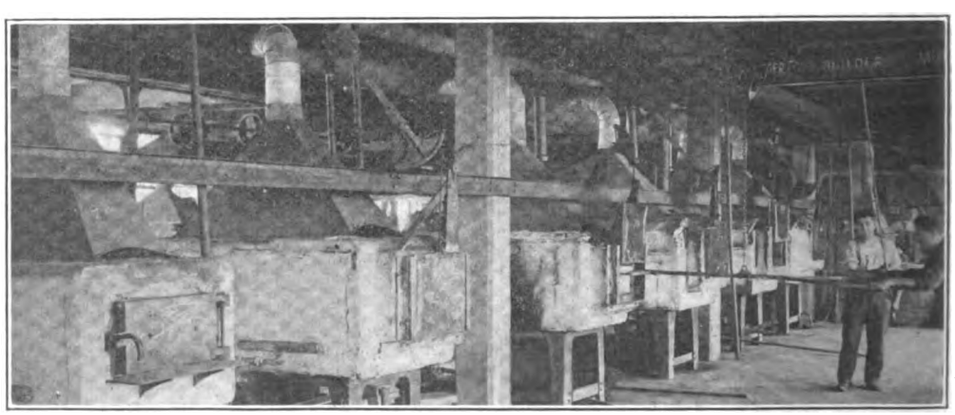
M. E. MASON, who was connected with the sales department of the Morgan & Wright company for several years and who for two years past has been identified with the Central District office of the United States Tire Company, has become secretary and sales manager of the newly organized Mohawk Rubber Company, of Akron. This firm, which is capitalized at $350,000, has bought the plant and machinery of the Stein Double Cushion Tire Company in East Akron. Only automobile products will be handled for the present, but it is intimated that the company will produce motorcycle tires when the plant is in full swing.

YALE AT TROXEL FACTORY

AN order for a 1913 Yale has been placed by the Troxel Manufacturing Company, of Elyria, Ohio, with the Consolidated Manufacturing Company, of Toledo. The Troxel company's long experience in the motorcycle business has acquainted it with the value of the single-tracker in a commercial way, and it has purchased the Yale with side-van for delivery purposes. The outfit will be used in taking goods to and from the factory of the saddlemakers.

MAJESTIC SIDECAR EXPORTS

ANNOUNCEMENT is made by the Majestic Manufacturing Company, of Worcester, Mass., that Majestic sidecars have recently been shipped to a number of foreign countries, including Central and South America and the Hawaiian and Philippine Islands. Inquiries relative to the Majestic products have been received from Sweden, France, Australia and Japan, and the company reports a steady growth in its export business.



Imposing line-up of high-efficiency furnaces at Harley-Davidson plant.

HENDEE CO. BUYS NEW TEN-ACRE TRACT

Proposed Buildings on East Springfield Site, in Conjunction With Present Plant, Will Permit of Annual Output of 70,000 Indian Motorcycles—An Auxiliary Foundry Also Provided For.

ONE of the most significant announcements in motorcycle trade circles of late is that just made by the Hendee Manufacturing Company to the effect that additional land has been purchased which will permit of doubling the output of the big Springfield plant. The new Hendee tract is located in East Springfield, and is ten acres in extent. It is bounded by three railroads, so that shipping and receiving facilities will be ideal, and all the other conditions attending the purchase are equally satisfactory. For example, the Hendee company has bought an interest in the Harley foundry, a well-known Springfield industry, to supplement the big foundry which the makers of the Indian will erect on their own land, and the Harley buildings adjoin the newly-acquired Hendee site. This will permit of the most satisfactory arrangements for handling material between the auxiliary foundry and the proposed new buildings. The former will remain in full charge of Leon J. Harley as heretofore.

The new tract lies 500 feet back from Page boulevard, in the rear of the Harley company's foundry, and the plant of the Crude Oil engine company. Street access will be afforded over a 40-foot right of way extending back between the plants mentioned, permitting visitors to land right at the office by automobile, or within three minutes' walk from the trolley line running through Page boulevard. The property is practically level, and contains no buildings at present. At the southeast apex of the tract a common railroad siding connecting with all contiguous lines, will "pick up" the company's own private siding at the boundary line. The Hendee siding will be a quarter of a mile long, and will be protected by a fence inclosure.

Artistic cover design which is a feature of the attractive new catalog of the Black Hawk Motor Co., of Rock Island, Ill.

The first building operations projected are an immense drop forge plant in the center of the plot. This structure will be of "E" formation, one story high, and of the most modern factory construction. The frame will be of steel, the walls brick and the roof, cement, providing absolute immunity from fire risk. The area of this group, which will consist of four unit structures suitably joined to afford the highest efficiency in manufacture, will be 293 by 234 feet. The central wing of the parallel group of three will be somewhat higher than its flanking structures, giving to the whole a pleasing symmetrical appearance.

Paralleling the quarter-mile siding will be an immense storehouse for receiving raw stock. From the receiving platform the incoming material will be transported to the stock preparation room in the central section of the storehouse and distributed to its proper destination in various sections of the plant by an overhead trolley system.

The die shop will be the southwest wing of the "E" group. The central building of this group will be the drop forge shop, where an initial equipment of 20 drop hammers will be installed. This battery gradually will be increased to maximum strength, 44 hammers, giving the company one of the largest and best equipped forge plants in the country. The largest drop hammer will weigh 2,500 pounds, and the others will taper down according to the class of work for which they will be used. The third parallel wing of the group will be used for spring making and similar light manufacturing.

In the location of the initial group of buildings, provision is made for further expansion to meet future needs, and, in fact, this already is projected. Plans have been accepted for an immense machine shop, of saw tooth construction, to be erected to the north of the "E" group. The machine shop will be 300 by 175 feet, and of the most modern construction. Construction on this building will be begun immediately after the completion of the "E" group, which is scheduled to be ready for occupancy July 1. To the south of the "E" group will be erected a large heating plant. Being in urgent need of much greater blacksmithing facilities, a spacious building will be erected to take care of its requirements in this line. When all projected construction is completed, there still will be available a large amount of land for further expansion.

While these buildings will be in full operation for the 1913 season, they will but partially take care of the company's requirements for next season, so that some of the class of work to which they will be devoted will have to be handled elsewhere for 1914. When all the new buildings are in operation they will, in combination with the present factory, afford the capacity of 70,000 Indian motorcycles annually. When the East Springfield works are in operation they will give employment to an additional force of from 1,500 to 1,800 men, making a grand total of 4,300 artisans devoting themselves to the building of Indian motorcycles.

Within the past year a Canadian factory has been established in Toronto, to handle Canadian business exclusively, and no less than 2,000 Indians will be built across the border this season, although certain parts will for the present continue to be manufactured at Springfield. It is stated that Canadian orders are far beyond all previous records.

STEWART-WARNER CIRCULARS

TWO circulars now being distributed by the Stewart-Warner Speedometer Corporation, 1826-52 Diversey boulevard, Chicago, set a new mark for such literature as applied to the motorcycle field and indicate that this firm is making its appeal to riders on a broad basis. One circular, profusely illustrated and printed in two colors, takes the form of a large folder and is of such a character that it may be used for display advertising purposes by dealers. The other circular gives detailed instructions for fitting a Stewart-Warner speedometer, and is so fully illustrated that the most inexperienced motorcyclist cannot fail to proceed along the proper lines in equipping his machine with the instrument.

Another striking cover, appearing on the 1913 catalog of the Motorcycle Equipment Co., of Hammondsport, N. Y. The present season has brought a most effective array of catalog covers from the publicity men.

HUSTLING MANAGER REWARDED

IN recognition of the success achieved during 1912 by its Pittsburgh branch, the Pennsylvania Rubber Company, of Jeannette, Pa., manufacturers of Vacuum Cup Oilproof tires, recently gave a dinner to its branch manager, S. W. Lawry, and embraced the opportunity to present him with a silver cup. Incidentally, the function served to celebrate the most successful year in the company's history.

The gathering was partly a "farewell" one, for Mr. Lawry's splendid work in Pittsburgh has prompted his promotion to a larger field. He will shortly take over control of the southern territory of the Pacific coast, with headquarters at Los Angeles, where he is likely to eclipse his Pittsburgh record among the company's branch organizations for growth of business and profits.

WIZARD TWIN HAS VALVES IN HEAD

One-piece Cylinder Construction and Interchangeability of Entire Valve Mechanism Feature New Indianapolis Product.

DESIGNED to obtain the maximum of power, flexibility and simplicity, are the Wizard twin motors, made by the Wizard Motor Co., Indianapolis, Ind. They are of the mechanical valves-in-head type and develop 10 horsepower, with a bore and stroke, respectively, of 3⅜ and 3⅞ inches. The piston displacement is 70 cubic inches, and they are adapted equally to sidecar work, solo riding and cyclecar service.

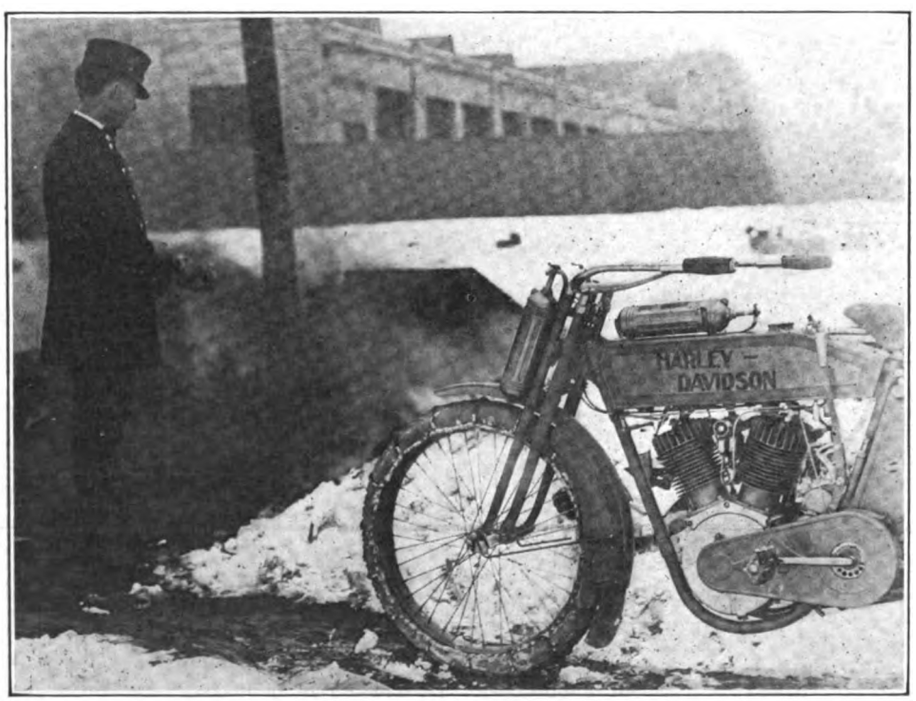
The cylinders are of first quality gray iron, and have the head and valve-pockets in one with the cylinder casting. Front and rear cylinders are similar and interchangeable, a new feature in this type of motor. The cooling flanges are scientifically designed and provide an ample surface for proper cooling under all conditions. Pistons are of the same material as the cylinders, and the rings are of the same superior quality. Oil grooves are formed in each piston to insure proper lubrication of the entire working surface.

The wristpin is of nickel steel, held in the piston so that it cannot come adrift accidentally. It moves in the bosses, but is tight in the connecting rod. The flywheel is of gray iron in one piece and is carefully balanced. The connecting rods are light nickel-steel forgings with special "non-freezing" big-end bearings. The crankcase is of special aluminum alloy, with faced joints, and an oil gauge is fitted in the left half. All gears are of chrome nickel-steel, and are jacked in before the motor is sent out, resulting in a noiseless running gear train.

One cam operates all four valves (two inlet and two exhaust), and the cam is integral with its shaft. All valves are mechanically operated and interchangeable. The springs are held on by a special method which does not involve piercing the valve-stem. The valve-operating device is direct acting and all parts are interchangeable. Oiling is by a positive-driven gear pump, the oil being sent into the camcase and front cylinder at regular intervals. Numerous oil grooves are provided in all bearings of the motors.

The bearings throughout are of special analysis phosphor bronze and oversize, giving a lifetime of at least 20,000 miles, it is stated. Ignition is by Bosch or Splitdorf armored magneto, and the Schebler carbureter is fitted. The external finish is nickel-plated with the exception of the aluminum parts which are mirror-finished.

J. L. Yarian, formerly with the Pope and Yale companies, and a designer of more than ten years' experience in gas engine work, is now identified with the Wizard Motor Co. He announces that the test motors are now ready and that it will be possible to make shipments in quantities about May 1.



MOTORCYCLE FIRE-FIGHTER

AS a result of the growing demand for motorcycles equipped with fire extinguishers, the Harley-Davidson Company has sent out a number of machines similar to the outfit shown in the accompanying photograph. Pyrene extinguishers are used because of their compactness and simplicity of operation. These outfits are to be tried out by a number of fire departments, with a view to controlling small fires.

HENDERSON IN CHICAGO

J. P. GAINER, distributor for the Henderson in Wisconsin, Illinois and Iowa, has contracted with Leo S. Bradbury, of Chicago, to handle the line in the Windy City.

LOCKNER A ROAD RIDER

SYRACUSE, N. Y.—George Lockner, who gained considerable fame last summer by winning the 24-hour race at the Brighton Beach motordrome, with Shields as his team-mate, has purchased a new machine for road use during the com-

ing season. Lockner is an enthusiastic road rider in addition to his racing activities, and never misses a chance for a long holiday tour, or a spin into the country. He has done a good deal of winter riding in Syracuse, and the neighboring country during the past month, since he got his new machine, and has become a familiar sight on the Syracuse streets while they have been covered with snow and slush.

NEW PUNCTURE-SEALER

"RUBBERSTONE" is the trade name of a new puncture-sealing compound that is being marketed by the Buffalo Specialty Company, of Buffalo, N. Y., with a view to solving some of the problems of tire users. The compound adheres to the inner surface of the tube, and when a puncture is sustained the air pressure forces the Rubberstone into the hole with such thoroughness as to obviate the necessity for further repairs. It is also stated that the compound is an excellent preservative for tires and tubes, and that its use will add materially to the life of a casing aside from the puncture-repairing process. Rubberstone is put up in handy cans.

DUNHAM IN NEW FIELD

THOMAS M. DUNHAM announces that he has severed his connection with the Hawthorne Mfg. Co., of Bridgeport, Conn., as a salesman, while retaining his stock interest in the firm, and that he has become treasurer and sales manager of the Greyhound Motor Co., of Buffalo, N. Y., manufacturer of Universal sidecars. Mr. Dunham is also a stockholder in the Greyhound company. With W. C. Chadeayne he will be engaged in the active management of the firm. W. W. Shoemaker is also a stockholder in the Greyhound company, but is not active in the management.

B. B. L. LIGHTING SYSTEM

A NEW lighting system for motorcycles attracted considerable attention at the recent automobile and motorcycle show at Dayton, O. This system was featured by the B. B. L. Company, a new firm in the motorcycle accessory line in Dayton. The company is located at 421 East Third street, and is operatetd by M. Barlow, Charles F. Budroe and Elmer M. Davis.

NEW HOME FOR THOR MOTORCYCLES

Aurora Automatic Machinery Company Leases Five-Story Factory Building in Chicago and Looks Forward to Output of 25,000 Machines for 1914—Will be in Use Before July 1.

WITH a view to separating its motorcycle manufacturing interests from the departments devoted to the making of pneumatic tools and appliances the Aurora Automatic Machinery Co., of Aurora, Ill., has made arrangements to move its motorcycle business to a large five-story building located on the North Side, Chicago. For some time past the company has experienced difficulty in keeping abreast of the demand for its motorcycles in the somewhat limited space available at the Aurora factory, and as additional accommodations could not be provided at Aurora it was decided that the Thor motorcycles should have a factory building of their own.

The Chicago building, on which the company has taken a long lease, has over 600,000 square feet of floor space, allowing ample room for all the departments incidental to the production of the Thor machines. The Thor folks have already laid plans and placed orders for material to cover an output of 25,000 motorcycles in 1914, and the factory structure for which the lease has just been closed will permit of turning out the machines on this basis. The rapidity with which orders have piled up at the factory for Thor models of late has convinced the company that the demand for its machines may be counted upon to double before the present season is over; hence the elaborate plans for meeting 1914 requirements.

The Thor company will install a large quantity of new machinery in its new building. and special pains are being taken to arrange the various departments for utmost efficiency.

Factory Leased for Manufacture of Thor Motorcycles in Chicago, Which is to be in Full Operation Inside of Three Months.

According to present expectations the Chicago factory will be in full swing before July 1, but the moving operations will not be allowed to interfere in any way with the handling of 1913 business. The 1913 models will be turned out from the Aurora plant as at present, while the new factory will be placed in condition to handle the output for 1914. In this way there will be no hitch, and patrons will be given the usual satisfaction while the new departments are in process of equipment.

The factory management will be entirely in the hands of William Ottoway, who has been associated with the Thor company since its infancy, and who is deserving of most of the credit for the excellent machine that has been developed. Mt. Ottoway will be assisted by Mr. Greene, who will have charge of the production department. The sales will be directed by General Sales Manager E. J. Knight, who is well known to the trade as a result-getter. All in all, the Thor company feels that it is now well equipped to keep abreast of rapidly-moving motorcycle developments.

KATZMANN TANDEM CUSHION

MOTORCYCLISTS who desire to carry a tandem passenger—and there are thousands who do—will give more than passing attention to the "Easy Ride" luggage carrier cushion that is being manufactured by the William Katzmann Sons Co., of Sixty-third street and Ellis avenue, Chicago. This cushion, which is designed to combine serviceability with long life and an attractive appearance, is referred to as the seat "with the pneumatic feel." Extra long oil-tempered springs are used in the Katzmann seat to absorb the road shocks so that the tandem rider is not subjected to the annoyances encountered ordinarily. The seat is made in three styles: Grade A is covered with genuine leather, has special compound filling, oil-tempered springs with swivel bearings and is hand-made throughout; it retails at $3.50. Grade B has the same internal construction but is covered with a good grade of imitation leather; price, $2.50. Grade C differs from the others only in being covered with "Katzmann Leather." This model sells at $2.

KENTON FIRM CHANGES HANDS

HAVING purchased the business of the Kenton Motorcycle Company, of Kenton, Ohio, D. C. McBeth will handle the agency for the Thor, Excelsior and Pope lines, as well as a complete line of supplies. A repair shop will be an important feature of his business. McBeth has been in the motorcycle business for four years.

ACTIVE ST. PAUL FIRM

THE Auto Cycle Company, of St. Paul, Minn., agents for Henderson, Reading-Standard and Flying Merkel machines, has made arrangements to remodel its salesroom and extend its store so that the headquarters will rank with the best. The rear of the store will be fitted with seats, tables, electric lights and electric fans so that it will afford a comfortable haven for motorcyclists who drop in to lounge for an hour or two. The firm is also making special efforts to be of assistance to tourists during the coming summer.

U. S. TIRE MEN CONVENE

HARTFORD, Conn.—Forty-six service department heads of the United States Tire Company recently met at the Hartford Rubber Works plant for a three-day session. The object of the meeting was to discuss service in relation to tire users. Talks were given by officials of the company and the factory was inspected.

MAY HAVE GIRLS' DIVISION

IT is reported that the annual tour of the Kansas Short Grass Club, will be featured this year by a division for girls, of which Miss Inez Patterson will be captain.

A PARTY of Madera (Cal.) motorcyclists recently made a run to Raymond. The members of the Madera club were the guests of the Kerman Motorcycle Club at a dance held in Kerman a short time ago.

FRENCH SETS HOT PACE

BALTIMORE, Md.—Howard A. French & Co. has probably created a record for a single dealer in motorcycles in this country by having shipped to him three carloads of Indians inside of two months. Two weeks ago the first carload shipment of motorcycles ever sent into Maryland was received by French, and the machines were disposed of as fast as they could be unloaded. On March 15 another carload left Springfield, and on April 15 a third will be sent here from the Hendee factory. French is loaded down with orders, and feels sure that he will easily get rid of over 500 machines before the summer is over. Already he has 107 new Indians out on the roads in this state.

NEW THIEM AGENCY

MESSRS GERBER AND WINTER have opened a motorcycle store in St. Paul, Minn., and will have the agency for the Thiem motorcycle in surrounding territory. They will also handle a full line of accessories and will conduct a repair department.

YALE READING ROOM

A HANDSOMELY equipped and well lighted reading room is the latest addition to the sales offices of the Consolidated Mfg. Co., at its Toledo headquarters. Motorcycle literature of every description is supplied. This room has become very popular with the local motorcyclists, and is the means of bringing many to the Yale home.

NEW JERSEY CLUB'S TWO-DAY GRIND

NEWARK, N. J.—At the last meeting of the New Jersey Motorcycle Club, of this city, a full report of the plans of the committee in charge of the club's two-day endurance run, which is to be held May 30-31, was submitted. They intend to start from Newark at 5.30 a. m. for Delaware Water Gap, 72 miles, and arrive there at 9 a. m. Leaving this point at 9.30 the riders will continue on to Scranton, Pa., 50 miles, where it is scheduled to arrive at 12.15, and leaving at 1.15 it will head for Birmingham, N. Y., 60 miles. The riders are expected to reach here at 4.45 and leave at 5.15 for Unadilla, 40 miles, arriving at the latter place at 7.30 p. m.

The ride to this point is expected to be the hardest stretch of the run as it will be continual hill climbing and the roads are not very good. Unadilla is fixed as the night control. The second day's riding will start at 6.00 a. m. and the first stop will be made at Kingston, 98 miles, where the arrival is set for 12.00 noon. Leaving there at 1.00 p. m. they will ride to Newburg, 30 miles. After a half hour stop they will leave at 3.00 p. m. on the last lap of the run. They are expected to cover the 65 miles to Newark in 1 hour and 35 minutes, reaching their destination at 4.35 p. m.

This run is a departure from their former 24-hour runs and will include the finest scenery in New York, New Jersey and Pennsylvania. The first day's run will be 224 miles and the second 227 miles, making a total of 451 miles. Out of town motorcyclists are invited to participate in this run, and special arrangements will be made for their accommodations.

AN ARTISTIC CATALOG

A NOTEWORTHY feature of the catalog of the Excelsior Motor & Manufacturing Company, descriptive of its line, is the fact that the machine illustrations are shown in the various colors, as they really appear on the motorcycle itself. It is said to be the only catalog illustrating the machine in this nature, and the effect is highly artistic.

WAUGHOP'S WINDSHIELD

IN the accompanying photograph C. W. Waughop, Henderson agent in St. Louis, Mo., is shown using a novel windshield of his own design. He has had it fitted to his machine to facilitate touring in cold and windy weather, and it has met all his expectations.

BALTIMORE DEALERS PLEASED

BALTIMORE dealers report excellent returns from the show which closed February 22 and proclaim it the best ever held in that city. It is stated that 100 orders were taken during the five days that the machines were on exhibition and that many prospects were lined up. August Zimmerman, of the Hendee Company, was on hand and incidentally took a carload order from Howard A. French & Co. This is the second carload order he has captured from French this year.

SECRETARY GIBSON reports the affiliation of the Ashland M. C., of Ashland, Ohio, in the week of March 15.

SPLITDORF SERVICE ABROAD

TREASURER and General Manager O. J. Rohde, of the Splitdorf Electrical Co., of New York, sailed for Europe on the *Kaiserin Augusta Victoria* recently. His trip abroad is being made for the purpose of securing a perfect service for users of Splitdorf ignition devices abroad. Accompanying Mr. Rohde is a corps of experts on magnetos, coils and ignition fitments in general, and they will be established in Europe, with London as headquarters. Their duty will be to attend to the wants of users of American cars on the other side and also to further the use of Splitdorf devices.

Mr. Rohde has systematized his New York service station to such a degree of perfection that his ideas will prevail in the working out of the details for the accommodation of European and visiting motorists alike. He will remain in Europe until the system is thoroughly established and will then return to New York to resume his former duties.

ZIMMERMAN IS BUSY

P. E. ZIMMERMAN, formerly manager of the Hagstrom Co., of Lindsborg, Kan., announces that he will devote the next three months to promoting and assisting in the management of the annual tour of the Kansas Short Grass M. C., he being secretary of the club. He will also handle the Pope motorcycle in the southeastern quarter of Kansas and expects to organize motorcycle clubs in all towns where they are not already established.

BALL-BEARING PIONEER

IN a recent mention of the Flying Merkel as an advocate of ball-bearings for the motor was inadvertently omitted. As a matter of fact, the Merkel was the pioneer motor in which ball-bearings were fitted, these being used in the connecting-rod and shaft on both sides, and the builders have consistently adhered to this type ever since. In the 1913 product the Middletown factory, the Hess-Bright ball-bearings are used, the Merkel being the only motorcycle motor fitting this make.

NEW MARION FIRM

MARION, Ohio.—The Automatic Puncture Stop Co., with office and factory in this city, has been incorporated with a capital of $10,000, to manufacture a puncture repair device for automobile and motorcycle tires. The incorporators are: C. E. Merkle, M. McKinstry, A. C. Queen and E. A. Eibling.

HUNTSBERY'S TRIP

HERBERT H. HUNTSBERY, assistant sales manager for I. H. Silsby, of Cleveland, Ohio, distributor for the Flying Merkel in Northern Ohio, appears in the accompanying photograph. When the picture was taken Huntsbery had just completed a ride from Cleveland to the Merkel factory at Middletown, which he made solely for the purpose of testing the 1913 Merkel over severe roads. His route was through Elyria, Oberlin, Norwalk, Bucyrus, Marion, Columbus, Springfield and Dayton, and he encountered snow and ice and plenty of mud. He experienced no mechanical trouble throughout the trip, but broke a pedal when he slid on some ice near Bucyrus. He covered 338 miles and made the trip in 15 hours and 10 minutes.

ENDURANCE TUBES

REPORTS received by the Fulton McCutchan Co., 1146 Michigan avenue, Chicago, sole distributors for Endurance red inner tubes, are to the effect that these products are giving exceptional returns in hard service. The Endurance Tire and Rubber Co., of New Brunswick, N. J., manufacturers of Endurance tubes specializes on their production and keeps in mind the unusual requirements of motorcycle work with the result that a remarkably durable tube is being marketed. Endurance tubes are made of the best grade of rubber, combined with enough toughening material to make them withstand hard usage. The rubber is scientifically treated by a special process, and in conjunction with antimony permits of better vulcanization and allows the tube to be more easily patched in case of a puncture. The Fulton McCutchan company has for some time past found Endurance tubes among its most satisfactory sellers.

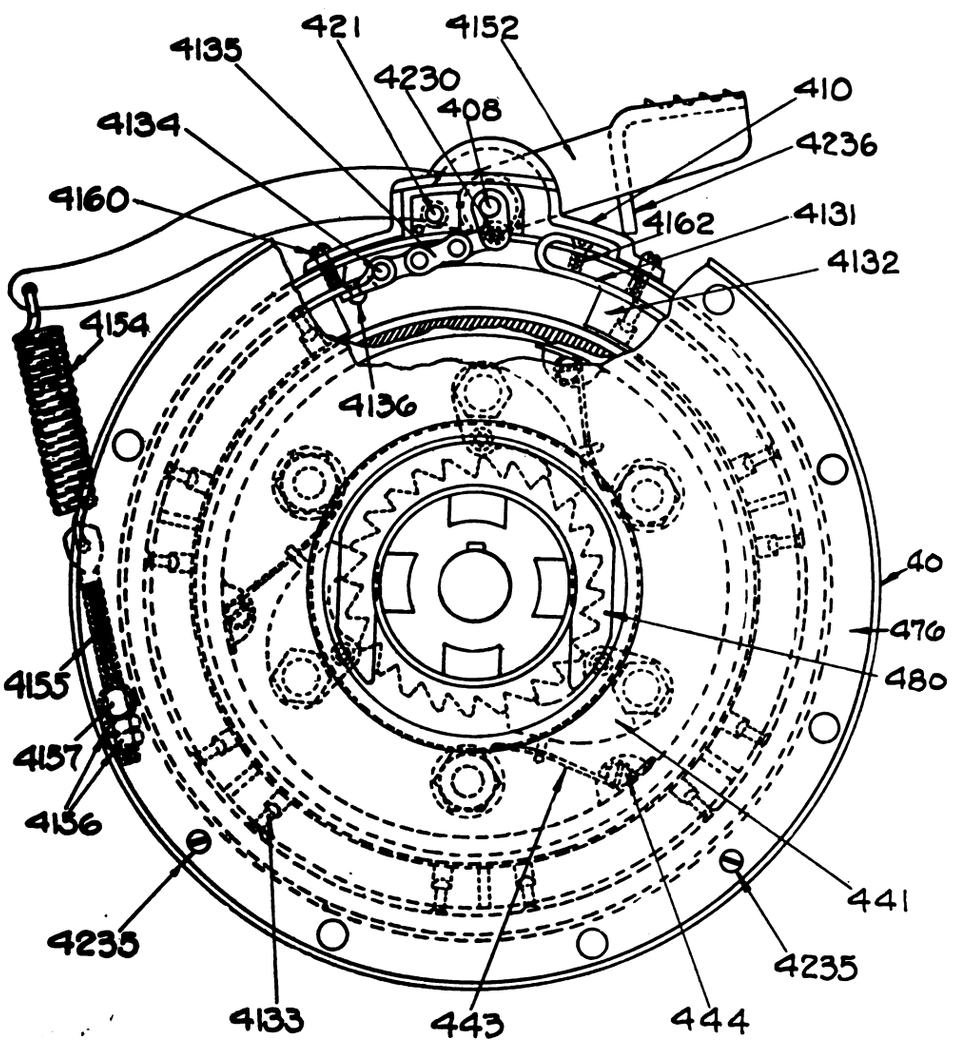
OPERATION OF SELF-STARTER

How Novel Attachment Fitted on 1913 Flying Merkels Turns Motor Eight Times on Pressure of Pedal and Rewinds Automatically to Proper Tension—Applicable to Any Motor.

UNUSUAL interest attaches to the accompanying illustration and description of the self-starter which is being featured on the "Yellow Jacket" models of the Flying Merkel line for 1913, in view of the fact that comparatively little is known of the makeup of the attachment despite the wide interest it has aroused. The device consists of a main spring which is held in tension by a brake made up of V-segments on a steel band and one end of which is fastened to the starter shell or cas-



Side View of Ever-Ready Self-Starter, Showing General Operating Scheme.

ing. The other end has a short link chain which is fastened to and wraps around a stud. The pedal lever for operating the starter is attached to this chain and there is a gear plate carrying reducing gears and starting dogs which acts as a drum to the V brake.

The main spring itself is mounted on an arbor which revolves as one with a driving shaft, the latter carrying at its inner end a series of dog clutches which engage with similar clutches on the motor shaft.

Provision is made for winding the spring by hand, using a crank which is detachable, and this is necessary when the starter is first applied, or at any time when the spring is unwound. With the spring wound the action is as follows: Pressure on the pedal expands the V-brake and releases the main spring, which in unwinding revolves the shaft and turns the motor over by means of the dog clutches. When the pedal is released, an exterior spring pulls down the pedal lever, and thus causes the brake to contract. The motor then rewinds the main spring through the driving shaft by engaging dogs secured to a rewinding spider and this in turn rotates a train of gears. These in turn rotate the spring arbor and wind the spring. As the spring arbor is rotated, a screw and nut device is forced inward, and when the proper tension is attained, this nut operates the release dogs, and disconnects them from the clutch dogs. The winding apparatus then becomes idle and the spring is held by the V-brake, the motor not acting on the starter in any manner.

The capacity of the starter is eight revolutions of the motor at the rate of about 300 revolutions per minute. A failure on the part of the motor to run means winding the main spring of the starter by hand and repeating the starting by pressing the pedal.

TANDEM FIGHT STILL ON

National Capital M. C. Will Take Motorcycle Passenger-Carrying Case to the Court of Appeals

WASHINGTON, D. C.—Following the recent hearing in the mandamus suit of the National Capital M. C. against the Commissioner of the District of Columbia and the Police Department, at which the latter was upheld in its regulations prohibiting passenger-carrying on motorcycles, the attorneys for the club announced their intention to carry the case to the Court of Appeals. The regulations in question are more drastic than those imposed upon motorcyclists anywhere else in the country with reference to passenger-carrying, and the club is confident that its arguments will ultimately prevail.

There were present as witnesses for the National Capital Motorcycle Club T. N. Mudd, Frank Long, Frank Ruppert and wife, J. E. Pyle and wife, George Parezo, W. F. Thropp, H. B. Cohen and A. L. Greecy, all of whom are experienced motorists. They were prepared to testify as to their passenger-carrying experiences. There was also present Horace Cost, who participated in one of the most serious accidents which the police department claims as the basis for its prohibition of passenger-carrying. He was present to testify that at the time of the accident in which he participated the passenger was in front of him on the machine and not on a seat in the rear as desired by the club.

Counsel for the District authorities had no witnesses, so the club's witnesses were called. Assistant Corporation Counsel White stated that it was lawful to invest the power to regulate vehicles, etc., in the Superintendent of Police. In proof of this he cited several cases. The first was that of W. Moore, who in January, 1908, was fined five dollars or fifteen days in the workhouse for having the handlebars of his bicycle on a plane lower than that described by the law. It was decided on appeal that the commissioners had power to make such regulations and delegate the power to carry them out to the police. He then cited further reports.

He therefore said that it was lawful to invest the Superintendent of Police with power to enforce the regulations which the commissioners might make regarding vehicles, etc., in view of the decisions in the cases cited, and that upon examination he decided that harm would come from allowing a permit for two persons to ride a bicycle or a motorcycle built for one. Therefore the counsel stated this was a reasonable regulation.

EXTEND TERRITORY

THE Riverside Motorcycle Garage, 533 West One Hundred and Tenth street, New York, have extended their territory as distributors for the Reading-Standard machine. In addition to Manhattan, Bronx and Westchester counties, it now includes Kings, Queens and Richmond counties, with the cities of Brooklyn and Jamaica and sales are mounting rapidly.

HOW RIDERS INCREASE TIRE MILEAGE

Growing Tendency Here and Abroad to "Doctor" Tubes and Casings Is Creating Demand for Compact Vulcanizing Outfits—American and English Types Illustrated

FOLLOWING the example of automobilists, experienced owners of motorcycles here and abroad are giving more thought than ever before to the preservation of tires and inner tubes, and many a rider who allowed his casings to "look out for themselves" a year or two ago is now doctoring them carefully, and in some cases almost doubling their mileage.

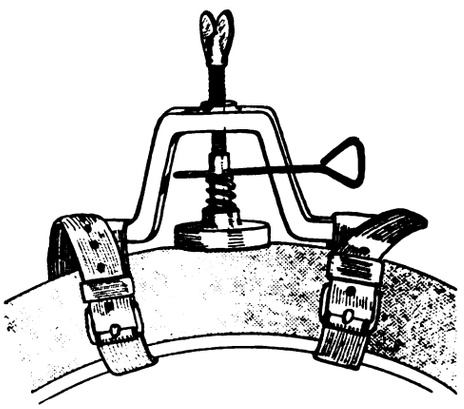
Clark Vulcanizer.

Time was when little or no attention was given to the possibilities of vulcanizing as applied to motorcycle tires, and the motorcyclist in a district of rutted and stony roads often found his item of tire expense a most formidable one. He discovered that as "great oaks from little acorns grow," so great blow-outs from little cuts and stone nicks also grow, and the present spread of interest in systematic tire repairs has been the outcome.

Tires that were used all last summer, or for a good part of the season, will no doubt be in need of some attention before they are put into service again, and it will be well to keep in mind that quite serious injuries to both tires and tubes can be treated successfully if the operator proceeds carefully and along common-sense lines. It goes without saying that such repairs should be made while the machine is out of service, if possible, in order that patched and vulcanized spots may have plenty of time to set before they are subjected to road stresses. Besides, tire repair jobs are more likely to give satisfaction if attended to when the rider is at leisure; once the riding season opens the most conservative motorcyclist can hardly be expected to devote much time to tinkering about the equipment of his mount.

Two types of vulcanizers for motorcycle tubes and covers are shown in the accompanying illustrations, one being produced by the Clark Vulcanizer Company, of Columbus, Ohio, and the other being an English product, manufactured by Messrs. Ara, Ltd., of London. The Clark device has an advantage over the English vulcanizer in that it is compact enough to be carried on the road quite handily; the Ara product is intended for shop work and not for road use.

For mending a puncture the ordinary procedure with either outfit is to cut away the rubber around the hole with a sharp knife until it presents a bevelled appearance at the edges. The edges are then rasped and sandpapered until they are smooth, and a solution is applied to prepare the way for the repair material. The illustration of the English vulcanizer shows the clamp in position for a tire repair.



Ara clamp for tire repair.

THE POPE IN INDIA

OUT of thirty motorcycles which started in the India Tourist Trophy Race held January 25 over a 297-mile course from Calcutta to Gaya, only eleven finished, and among these was a Pope, Model H, which won eighth place, in spite of being handicapped by running out of gasoline. The Pope worked splendidly until it ran out of gasoline 20 miles from the finish. Cameron, the Pope rider, then walked 14 miles, pushing his machine, until another competitor furnished him with a quart of gasoline, which enabled him to finish. The machine that finished just ahead of the Pope won out by only 10 minutes, and the one before that by only 15 minutes. A prize of $25 was awarded to the Pope rider, who covered the 297 miles in 13 hours, 33 minutes, 17⅕ seconds.

In its account of the race *The Statesman* of Calcutta has this to say: "As a race, Saturday's undertaking was perhaps one of the most difficult so far accomplished by motorcyclists in India. It was a trial not only of speed, but of endurance, and the principal feature of it was that the lightweights triumphed right along the line."

A MOUNTAINSIDE RACE

IN the recent motorcycle races held at Riverside, Cal., J. Warman, on an Indian, took first honors in the twin class, while Oro Townsend, riding a Harley-Davidson, won first place in the single events. The three and one-half mile course up the side of the mountain was negotiated by Warman in 3 minutes and 26 seconds. Townsend's time was 4 minutes and 9 seconds.

TO MAKE SPEEDOMETERS

ARTHUR, Leo and O. Friedman and Marshall R. Stewart are the incorporators of the Cleveland Speed Indicator Company, of Cleveland, Ohio. The company is incorporated for $10,000 to manufacture and deal in speed indicators of all kinds.

A NEW OBERWEGNERITE.

CLOVER FRIEDMAN, formerly connected with the Thor, Triumph and Flanders factories, has accepted a position with the Oberwegner Motor Co., of Toledo. Mr. Friedman, who is considered an expert mechanic, will have charge of the repair department.

A STEEL MOTORCYCLE GARAGE

IN addition to its complete line of automobile garages and steel buildings for various uses the Edwards Mfg. Co., of Cincinnati, Ohio, is now placing on the market a neat and serviceable motorcycle garage made of the same high-grade material that goes into the larger buildings and designed especially to meet the requirements of the motorcyclist. The accompanying illustration tells its own story. It will be noted that the structure is exceedingly strong without being cumbersome and that it presents a pleasing appearance. It is 4 feet wide, 7 feet long, 7 ft. 6 ins. high in front and 6 ft. 5 ins. high in the rear. Being constructed of galvanized material the garage is perfectly fireproof, and it will last indefinitely as there is practically no opportunity for decay. The motorcycle garage, as shown in the illustration, is sold for $30. A most interesting and well illustrated catalog telling the story of the full Edwards line will be forwarded on request.

Our Growth

OUR latest acquisition (Factory No. 7) contains 36,400 square feet of floor space.

We realize that delayed deliveries would mean business lost for our dealers and we aim to make it impossible for any Harley-Davidson dealer to be able to say at the end of the season that we fell down on a single delivery schedule. We acquired Factory No. 7 to take care of our dealers and for no other reason.

This latest edition to the Harley-Davidson factories alone is larger than our entire plant of three years ago.

The Harley-Davidson Motor Company has grown faster than any other motorcycle manufacturer. It has grown faster than any other manufacturing concern in Milwaukee, a city with nearly half a million population and more than 4,000 manufacturing plants.

The success of the Harley-Davidson Motor Company has been due directly to the success of the Harley-Davidson motorcycle.

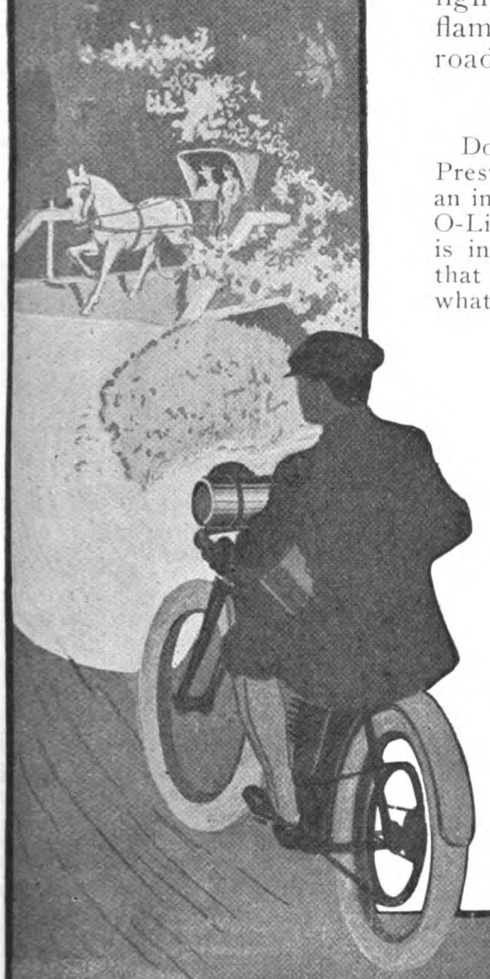
Prest-O-Lite
For Motorcycles



Test It Out on Your Machine

Don't deprive yourself of the pleasure and safety of night riding with Prest-O-Lite.

You're missing a lot by trifling with troublesome, unreliable gas generators, when Prest-O-Lite Service costs you no more, usually less. Ask any experienced rider.

With Prest-O-Lite you have a brilliant, reliable light that turns on and off like a gas jet. The flame is always steady, no matter how rough the road.

Many times worth its price

Don't consider the price you pay for Prest-O-Lite as money spent—but as an investment. Remember that Prest-O-Lite never becomes second hand. It is in such universal use and demand that it can always be sold for about what you pay for it.

$10.
With gauge.

Trial costs you nothing

We are so sure that you will find Prest-O-Lite indispensable that we make you this proposition.

Put a motorcycle Prest-O-Lite on your machine. Use it for thirty days and nights. Test it out on every kind of road, for city driving and country road work. Then if you find that you can do without it, the test won't cost you a cent. Can you afford not to make this trial?

Ask your dealer or write us.

The Prest-O-Lite Co., 246 East South Street Indianapolis, Indiana

Canadian General Offices and Factory, Merritton, Ont.

Exchange Agencies Everywhere

To Dealers—There are five times as many motorcycle Prest-O-Lites in use today as there was one year ago. Are you getting your share of this business?

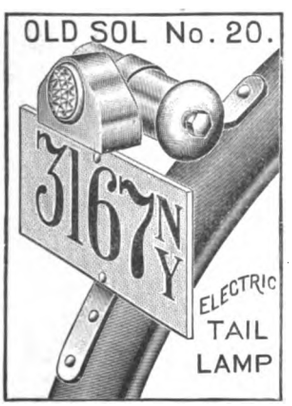
"Away with Gas Tail Lamps—Give me an Old Sol No. 20 Electric Tail Light"



Boys, it's a beaut! It does away at one stroke with the countless vexations of the gas tail lamp, with its long tube that has to be strung from the tank to the rear of the motorcycle and its steady drain on the gas that rightfully belongs to the headlight.

It's a compact little lamp, quickly detachable and can be used as a trouble lamp for fixing broken connections, adjusting the carbureter, etc., at night. Every feature of this lamp is fully covered by patents, both as to method of operation and design.

Stanley T. Kellogg, a leading dealer in Bridgeport, Conn., was so impressed with the efficiency of Old Sol No. 20 that he placed his order for 500. "Nuf sed."

DESCRIPTION

Weight, 22 ounces. Combination bracket holds number plate and allows white light from lamp to illuminate same. Red jewel on head throws rear signal. Burns from 20 to 25 hours intermittently. Supplied complete, with 1 candlepower bulb and battery No. 790.

PRICE, $3.00

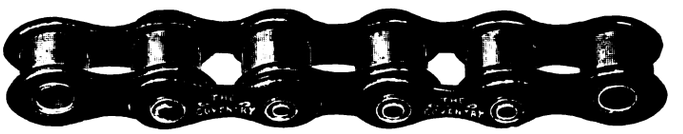
POLLOCK MANUFACTURING CO., Ltd., Berlin, Ont., Canada

Pacific Coast Representative:
L. B. STEVENS, 230 Grosse Building, LOS ANGELES, CAL.



If Your Motorcycle is Equipped with "The Coventry" Chains *Your* Transmission Problem is Solved.

This advertisement is for the attention of every motorcycle rider, but is primarily aimed at the novice and the prospective motorcyclist.

Many and weird have been the arguments advanced by makers of a transmission whose unreliability and general inadequacy to needs of the American rider have been conclusively proven after a fair and impartial test extending over a long period.

And various plausible arguments have been advanced in an effort to explain why the majority of motorcycle manufacturers have made their machines chain drive **exclusively.**

In final answer to these feeble attempts at influencing the opinions of the novice rider and the prospective purchaser of a machine —for a veteran rider would only laugh at their claims—we want to urge every prospective motorcycle rider to insist upon

"The Coventry" Chain

"The Motor's True Mate"

Let the best chain champion the cause of the best transmission. Do not start your motorcycle riding career with a **make** of chain that will cause you to think that the **type** of transmission is inefficient.

Solve the transmission problem once and for all with "The Coventry" Chains. For suppleness, for silence, for speed, for perfect indomitable strength, "The Coventry" Chains are unquestionably as far in advance of other chains as the chain transmission is superior to the belt.

They are made to withstand a strain of considerably more than 3600 lbs. They afford the acme of non-wasting power transmission for at least four thousand miles, and very often much longer.

If you will send us your name and address we will send you a copy of our handsome catalog and also one of our tiger color pennants.

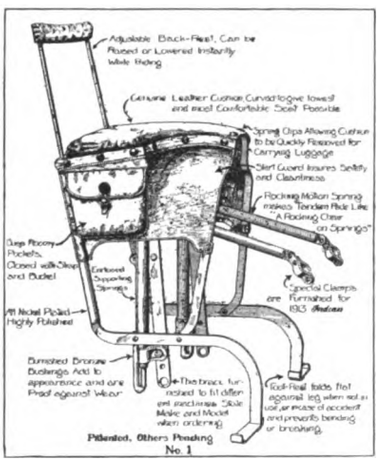
STOLL DREAM TANDEM

PATENTED

"JUST FLOATS ALONG"



A few of the features that help make the STOLL DREAM TANDEM the easiest riding tandem in the world.

Genuine leather cushions gracefully shaped and provided with skirt guard and pockets.

Folding foot-rest.

Rocking motion which allows the tandem to remain steadily in the same position, regardless of the jolting of the machine.

The back-rest combined with the rocking motion give the rider a sense of security and comfort found in no other tandem. Can be raised or lowered instantly while riding.

Send for catalog. Dealers' proposition now ready.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

NO "DOPE," GUM, PASTE OR OTHER STUFFING MATERIALS.

WARNING

Every motorcyclist is looking for a pleasant warning signal which will work equally well in the city, or country and under all conditions.

1913 BARCO MOTORCYCLE CHIMES

offer the only solution to this problem. They are much larger than last year's model, and the three tones are deeper and richer. It is remarkable what a volume of tone may be produced with this horn on the average motorcycle and how easily the horn will blow.

The Barco Outfit is easily installed and will attract attention everywhere.

The Barco Chime Valves are the only valves with an absolutely unobstructed exhaust passage. Experienced motorcyclists appreciate the necessity of keeping the exhaust free from obstruction and back pressure, and this is only accomplished by the Barco Valve.

BARCO BRASS & JOINT CO., CHICAGO

Mott Rims for Strength

THE superiority of the Mott motorcycle rim lies in the little points that the average riders never notice, but that show up strongly in hard service. For instance, take the way the spoke holes are punched. On Mott rims this is carefully and accurately done so that there is ample strength to hold the nipple securely. Sketch No. 1 shows the idea.

Most other rims come out like No. 2. This part of the work is hurried over, carelessly done, and as a result the holes are counterpunched too deep, making a weak spot, which often allows the nipples to pull through the rim.

Mott thoroughness shows up in the tests. Note the wheels that come through the severe endurance runs in the best condition. You'll find them fitted with Mott rims. To be sure of satisfaction, specify Mott rims for your machine.

WRITE US FOR FULL DETAILS

Bosch Plugs

Are Long Lived and Efficient

THE spark plug may seem of no consequence because it is small, but engineers consider it one of the motor's most important efficiency factors, also a point where most troubles are located.

Don't leave a path for trouble! The mere insistence on Bosch Plugs gives you not only a perfect plug but one which will eliminate most of your troubles, one that will add just that much efficiency to shoot you past the other fellow. Insist on Bosch Plugs—Buy Bosch Plugs only.

$1.00 each, from your dealer or direct

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

One Hundred Miles In 68 Minutes

and one mile in 36 seconds flat! On January 7th Lee Humiston made the record, using

J-D Motorcycle Standard Spark Plugs

the new porcelain type introduced by the Jeffery-Dewitt Company. Read the following:

$1.00

"It gives me pleasure to confirm my telegram to the effect that I used your J-D Motorcycle Spark Plugs on my recent record trial in Los Angeles, on January 7th, at which time I broke the records up to and including one hundred miles, at the Playa Del Rey Motordome, using your porcelain plugs. These plugs gave me absolutely no trouble and my engine never missed an explosion during the entire one hundred miles.

"I was somewhat skeptical about using a porcelain plug, but after making several tests I decided to try them and they 'made good.' I shall use them on my future trials. Yours very truly,

"(Signed) LEE I. HUMISTON.

"Witness:

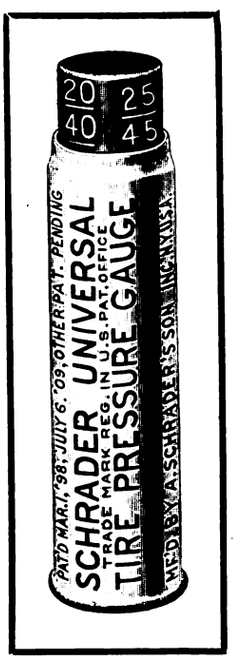
Keep Your Tire Pressure Up and Your Tire Expense Down

You cannot run your motorcycle with any old pressure in the tires AND EXPECT THE TIRES TO LAST. Tires are built to withstand a definite and specified air pressure. You can only get maximum service when you inflate them to the EXACT air pressure needed, and maintain that specific pressure at all times.

A SCHRADER Universal Tire Pressure Gauge



PRICE ONE DOLLAR

Will tell EXACTLY what pressure you carry in your tires.

Kicking the tire won't tell you and guessing won't do.

Nearly right isn't enough, the pressure must be EXACTLY right.

EMBLEM

Going, Going!

Last call, Dealers! Better make your bid for the Emblem Agency before your territory is gone. There isn't very much left right now.

The matter is entirely in your hands. We offer you the agency for a machine that has a reputation behind it that is worth "much fine gold." Its performances are as solid as its reputation.

From coast to coast the Emblem is known as the "Transcontinental Flyer," the machine which holds the world's record for the best time between Chicago and New York, M. E. Gale making the distance in 35 hours.

Hundreds of other spectacular performances going to prove the EMBLEM'S speed, strength, power, durability and comfort are matters of history in the motorcycling world.

The EMBLEM record is one of achievements. Do they mean anything to YOU?

It costs only one cent—the price of a postal card to investigate our proposition. It may cost you many dollars and days of vain regret if you "pass it up." Let's hear from you NOW.

J-M Spark Plugs are Guaranteed for 10,000 Miles

Think of It—10,000 Miles!

No other plug on the market is guaranteed so definitely by a responsible manufacturer. Could you ask for stronger proof of the superiority of J-M Spark Plugs.

Moreover, J-M Spark Plugs are guaranteed to be perfect in material and workmanship. We'll replace any plug that proves defective.

Every J-M Plug is doubly insulated—sheet mica around the electrode, and porcelain around the sheet mica. Break the outer insulation of porcelain and the mica still prevents short-circuit or current leakage, even when a magneto supplies the current.

All sizes of J-M Plugs can be used for either battery or magneto ignition. Sold by dealers, or shipped prepaid from our nearest Branch. Price, $1.00 each.

Our nearest branch will forward interesting booklet on request.

Riders! Yeur search fer perfect tandem cemfert ends here!

KATZMANN Eazy Ride Seat "MAKES RIDING A TREAT"

COMFORT

An upholstered spring tandem seat of velvety softness constructed on the "bed-rock" basis of experience, which has proven that a strong, rigid luggage carrier used in connection with an upholstered spring seat offers all the comfort minus the fragility of more complicated fittings.

CONVENIENCE

The Katzmann Eazy Ride can fit any luggage carrier. It is easy to put on and take off. The motorcyclist desiring a combination seat that is rugged and strong—that will meet every practical purpose, yet representing a small investment outlay, finds in the Katzmann Eazy Ride a seat that meets every requirement.

CONSTRUCTION

The bottoms are made of one piece extra selected spruce, ¾ inch thick, 10 inches wide, 14 inches long, especially selected kiln-dried stock.

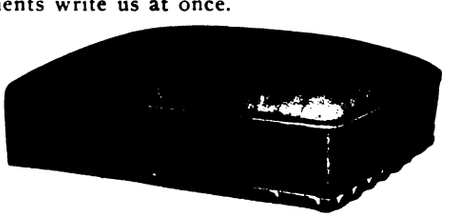
Bolts used in the Katzmann Eazy Ride of best cold-drawn steel money can buy—carefully made and tested.

Genuine springs, extra long oil tempered, arranged in a special swivel truss frame of our own. Each spring is allowed to work separately but at the same time holding its alignment. Five-inch upholstery, special arrangement of springs assuring absence of bulging in sides.

The burlap, staples, twine—even the nails are carefully selected to meet the requirements of this high-grade seat.

The filling is of a special combination, the result of months of careful experimenting and testing, and is fully guaranteed.

See it at your dealer. If he cannot supply your requirements write us at once.



FOR THE DEALER'S EYES

In selling the KATZMANN EAZY RIDE seat, we have maintained a standard set price—one price to all. And the dealer in turn is cautioned not to sell at a lower figure than the regular retail price.

The KATZMANN EAZY RIDE is, without question, the best seat on the market and, as such, should command a standard price.

We make the KATZMANN EAZY RIDE seat in three grades:

"A" Grade—Genuine Leather—retails at	$3.50
"B" Grade—Good, Serviceable Imitation Leather, retails at	2.50
"C" Grade—Best Grade "Katzmann Leather," retails at	2.00

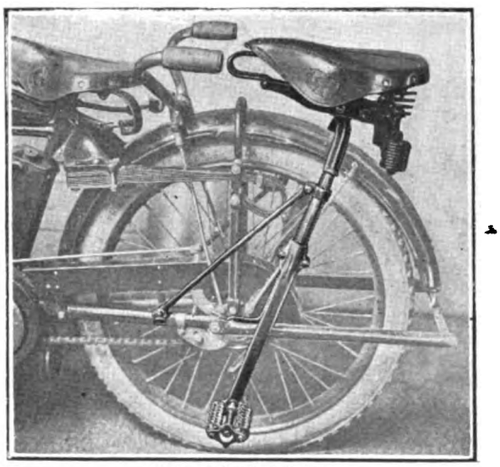
"E. & C." Spring Tandem

"Makes Every Road a Boulevard"



Riding Made Easy and Comfortable

Especially Designed for Lady Riders.

(Patent Applied For.)

Note carefully the following exclusive features:

1—Equipped with BOTH compression and recoil springs, absorbing all downward and upward shocks and vibrations.

2—Lowest possible saddle position—only 32 inches from ground to top of saddle.

3—Built of cast steel fittings and heavy-gauge tubing, and strongly reinforced at vital points.

4—Has absolutely no side-sway, so common to most tandem attachments.

5—Equipped with handle bars, pedal foot-rests. Mesinger Standard No. 4 saddle. Nickel plate finish.

6—Pedal foot-rest leg made to swivel on tubing, which prevents snapping off in case of a fall.

7—Sold under guarantee of freedom from imperfections.

Retail Price, Complete, $16.00

E. & C. MFG. CO., FILBERT AND 52D STS PHILADELPHIA, PA.

STOP THE SLIP

STOP THE SLIP

Belt transmission is acknowledged by all, to be the most satisfactory mode of transmitting power, when the belt is at its highest efficiency.

To keep a belt in this condition, it is necessary that it be dressed with the best belt dressing.

For this purpose you should use

Duncan's Belt Dressing

because it is positively, the best belt dressing on the market—bar none.

It will stop the slip, render it water-proof, allow it to run slack and double its life.

It is patented; is not a liquid and guaranteed to give satisfaction.

Sample and price quoted upon request.

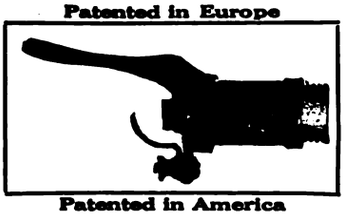
The Price of Gasoline Is Soaring

But the M&M Economizer Still Sells at $1.25

Patented in Europe



Patented in America

The M&M Economizer is positively guaranteed to save from 40 to 50% of gasoline, and increase the SPEED AND POWER 20% with less carbon. The only known carbureter adjuster on the market, and can also be used for priming the engine. IT ALSO ACTS IN THE CAPACITY OF AN AIR BRAKE.

With your throttle set at TWELVE miles per hour, by opening the M&M, your mileage will be increased to EIGHTEEN OR TWENTY miles with the SAME AMOUNT OF GASOLINE, and less carbon.

The M&M is applicable to any motorcycle on the market. IT HAS NEVER FAILED TO GIVE THE DESIRED SATISFACTION. When you once install it on your motorcycle, you would not want to be without it for many times its cost.

The M&M is made with one ground valve seat and six portholes, which, when open, admit auxiliary air into the manifold. It requires a ¼" pipe tap to insert into the manifold, and is operated by friction hand control. If ¼" is too large, same can be reduced to ⅛". The M&M is nickel plated and highly polished. It is POSITIVELY AIR-TIGHT WHEN CLOSED.

READ THIS! Then watch for next month's testimonial.

Dunellen, N. J., February 21, 1913.

Moller Bros., Philadelphia, Pa.

Gentlemen: I beg to advise the results that I have received from your Economizer are satisfactory thus far. Owing to the recent bad weather, a thorough test of gasoline consumption was impossible, but your Economizer gives all you claim for it in the way of added speed. I have installed it on a PIERCE single, and find that it increases the speed by giving a perfect mixture at all times, a thing which no ordinary carbureter can do. I am sure I will let you know favorably in the near future in regard to the gasoline consumption.

Yours very truly,
(Signed) E. J. PARKER.

Price of the M&M, $1.25 Prepaid.

THE M&M IS POSITIVELY GUARANTEED TO DO JUST WHAT WE CLAIM. MONEY WILL BE REFUNDED IN THIRTY DAYS IF UNSATISFACTORY. (Reference—Citizens National Bank, Lewistown, Pa.) No DEALER OR JOBBER is authorized to sell without our guarantee.

Ask your dealer or jobber about it. BEWARE OF INFRINGEMENTS. Send for catalog and information.

If you haven't our New 1918 Catalog of Motorcycle Equipment you are evidently going to lose money this season. We have prepared a 40 page catalog chock full of the things you want, and, in the majority of cases, at prices cheaper than you would pay in your own town, even though you have to pay express or postage.

We are in the Center of the United States and transportation is cheap in any direction.

Our goods are standard, our prices honest and what we sell is guaranteed to give you satisfacion. Write a postal now.

ASK FOR THE "YELLOW SHEET."

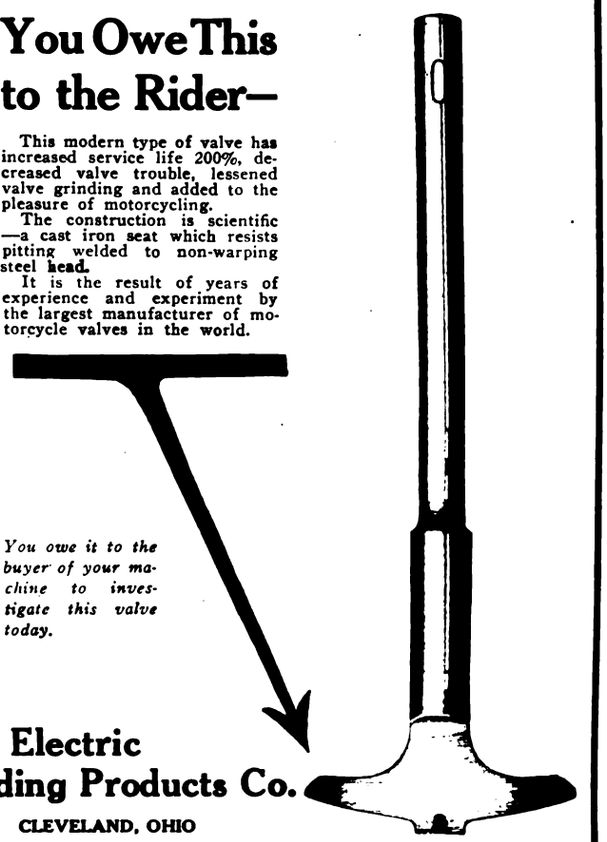
SAUFLEY SUPPLY COMPANY
622 EAST 15th STREET KANSAS CITY, MO.

You Owe This to the Rider—

This modern type of valve has increased service life 200%, decreased valve trouble, lessened valve grinding and added to the pleasure of motorcycling.

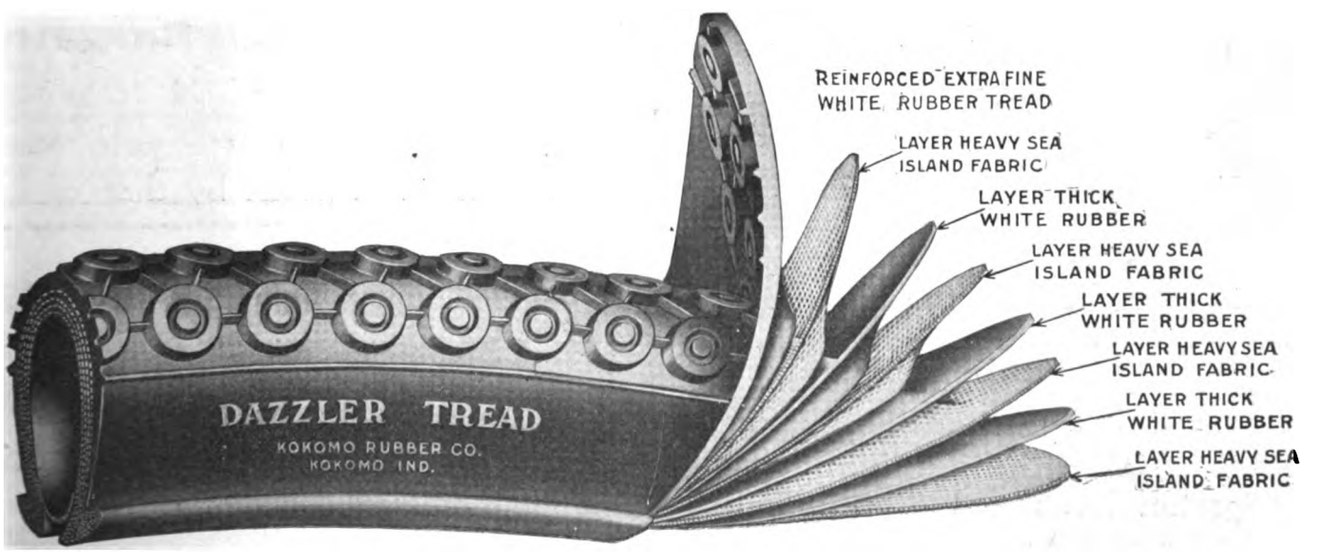
The construction is scientific—a cast iron seat which resists pitting welded to non-warping steel head.

It is the result of years of experience and experiment by the largest manufacturer of motorcycle valves in the world.



You owe it to the buyer of your machine to investigate this valve today.

The Electric Welding Products Co.
CLEVELAND, OHIO



The Dazzler—A Real Non-Skid Tread

Dazzling indeed in its aggregation of service insuring features is this new arrival in the Kokomo group.

Note the distinctive studs. Your eyes give you the most convincing testimony as to their efficiency as skid and side-slip preventatives. Your common sense tells you that it would be impossible to find a more effective tread. And give your close attention to the seven alternating layers of thick white rubber and heavy Sea Island cotton. Can you find anywhere a more efficient, business-like tire? (Chorus) NO!

Send for our catalog. It tells the whole story.

KOKOMO RUBBER COMPANY, KOKOMO, IND.

NEVER AGAIN!

One Chain-Driven machine enough for Mr. Dwyer. Read his letter, it should interest *YOU*.

31 N. Willow St.,
Montclair, N. J., Feb. 13, 1913.

"Please send me your latest catalogue of your belts and accessories, which will be very much appreciated.

"I have watched your recent belt talks with much interest, as I believe I am in a position to judge both belt and chain, as I have rode two machines in the past two years.

"First, I had a 1910 Twin ..... second-hand V-Belt Drive, which I rode for one year without the slightest transmission trouble; in fact, I forgot there was a transmission as I never broke the belt and could throttle down to five miles per hour without any jerking of the machine. Well, in 1912 I ordered a brand new machine of the same make, a Twin, and had the speed craze and ordered a chain drive; the speed craze soon wore off (it will be the same way with all the other fellows, too), and when I tried to throttle the machine down I could feel every impulse of the engine up my back; I now call it the back-breaking transmission. When I wish to throttle down I have to adjust the clutch always, and talk about breaking chains. Well, never again! Both hands up. You can bet the next machine I buy will be equipped with a Spartain 1¼" V-Belt. I have learned a lesson. Never again. Edw. Dwyer."

Experience is a mighty expensive teacher—why not profit by that of Mr. Dwyer.

Start right—insist on a belt drive machine. Your experience then will be an experience of complete satisfaction, comfort and economy.

The treatise on motorcycle transmission in our 1913 Spartan Catalog is logical, practical and convincing—the catalog also describes our complete line of Spartan Belts and accessories—send at once for your copy.

The Corbin Duplex Coaster Brake

gives you a sense of SAFETY and the CONFIDENCE that you can bring your wheel to a dead stop within a couple of lengths when riding at average speed.

The Corbin Duplex is the standard Coaster Brake of the world. No wheel should be without it. All wise riders equip it sooner or later. Very simple and compact. Operated instantaneously by pedal pressure. Combines free wheel and brake action.

Corbin Brakes, Duplex and Two-Speed, fitted by any bicycle manufacturer if specified. Can be fitted to your wheel by any bicycle repair shop also.

Write in for our free 1913 catalog showing all Brake models, Axles, Hubs, etc.

POPE
Lightweight

A Prize Winner in India

Remarkable showing in India's First Tourist Trophy Race, run over rough and rocky course from Calcutta to Gaya, 297 miles.

Model H Defeats Leading English Machines of Greater Horsepower in Plucky Race

Out of the **thirty motorcycles which started** in the Indian Tourist Trophy Race, held January 25 over a 297 mile course from Calcutta to Gaya, **only eleven finished,** and among this number was a Pope Model H, which won eighth place in spite of being heavily handicapped by running out of gasoline between stations. All but two of the other place-winners were more powerful machines than the Pope.

The Pope ran splendidly all the way and would have made much better time had not the rider been careless in watching his gasoline. As a result his supply gave out 20 miles from the finish. T. Cameron, the Pope rider, then had to walk 14 miles pushing his machine until another competitor came along and furnished him with a quart of gasoline, enabling him to make a plucky finish and win a $25.00 prize. The Pope covered the 297 miles in 13 hours, 33 minutes, 17 1-5 seconds.

In its account of the race, "The Statesman" of Calcutta has this to say: "As a race, Saturday's undertaking was perhaps one of the most difficult so far accomplished by motorcyclists in India. It was a trial not only of speed but of endurance, and the principal feature of it was that **the lightweights triumphed right along the line."**

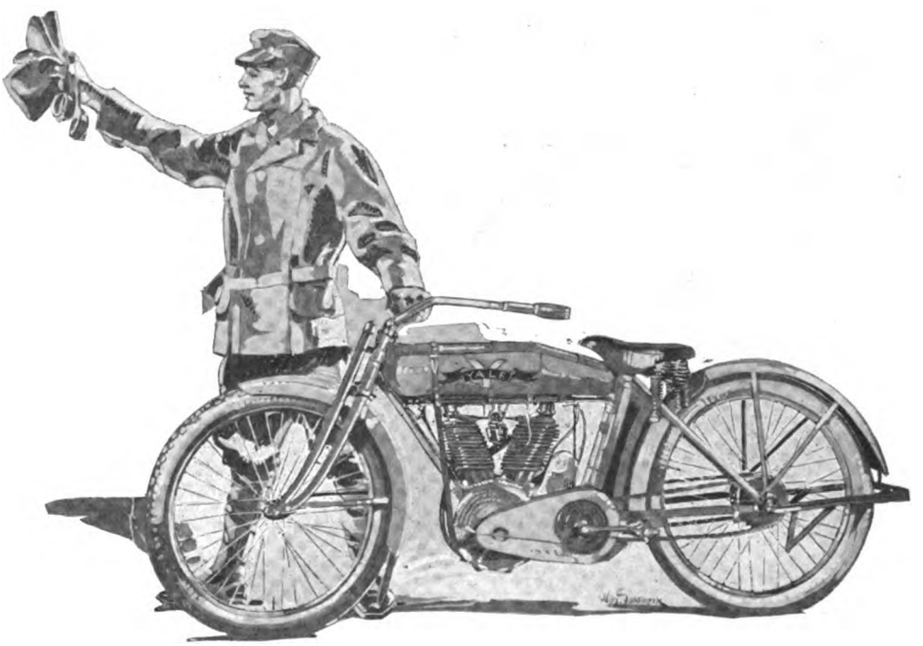
YALE

Greet the Riding Season on a Yale

START the active riding season *right*—with a machine that will continue to be right all year. On a Yale you can start on the hardest kind of trips in full confidence, for you *know in advance* that you are going to succeed.



The steepest hills, the heaviest mud, or the deepest sand are always conquered by the indomitable power of the Yale twin motor. A turn of the grip brings its great reserve strength into use, and the "Big Y" forges ahead—the nerve of the rider is the only limit to its speed.

YALE forks are of triple-stem design, admitted by all mechanical men to be the strongest and safest type—no chance for the handlebars to twist out of line with the front wheel. Both sides of the fork extend all the way up and are connected to the handlebars and to the central stem by a substantial drop-forged crosshead. This removes strain from the fork crown and head by imparting the turning effect direct to the fork sides from the handlebars, and gives remarkable certainty of control and ease of steering on rough, rutty roads or in other difficult conditions. The use of drop forgings to reinforce points where heavy strains are met gives this fork stamina and endurance that bring it unaffected through tests that wreck less substantial types. The graduated system of long, specially tempered coil springs—which cannot cause hard falls by breaking at high speed—and generous rebound springs, effectually smooth out all unevenness of road surfaces. Its vibrationless cushion fork is one of the details that contribute toward the superior capability of the Yale.

THE heavy artillery of the Yale's national campaign to help its dealers, gets action again this week, with a smashing double page in the Saturday Evening Post. It's a corker of an ad—action, life, logic—be sure to see it. Yale dealers are already doing over twice the business of any previous year, and this will make the increase even larger.

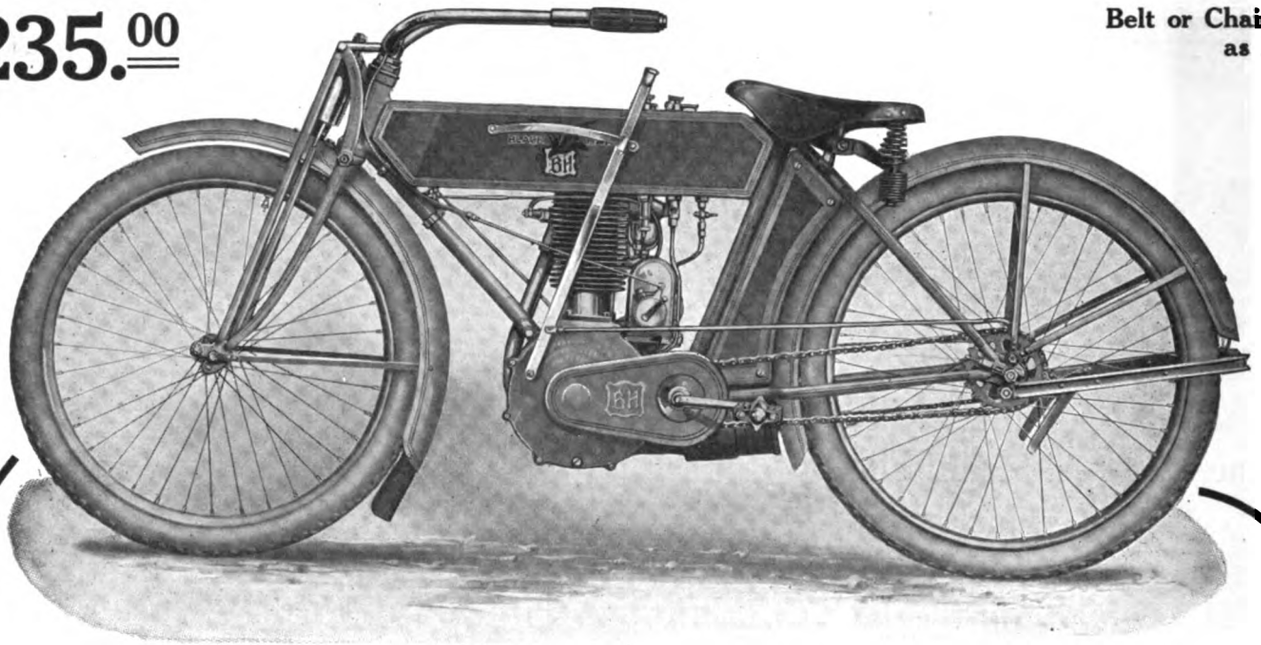
$235.00

Belt or Chain Drive as Desired



2 Good Reasons Why You Should Handle the "Black Hawk"

1st—Because the "Black Hawk" is a **better looking, better acting** motorcycle than any other model on the market, regardless of price or motor power (single, twin or quad).

2nd—Because we will live up to our agreement on deliveries, neglecting no one, no matter how few or how many machines their contract may call for.

Our first claim of superiority we can prove right now. For if you haven't learned all about the "Black Hawk" and its real value—we will send you our catalog so you can read of the remarkable points of advantage and sterling worth of the "Black Hawk's" design and the equipment which places it in a class far above the $235 asked for it.

Take our catalog. Read about the "Black Hawk." Compare it with any other motorcycle that you know of. You'll learn that this marvel of motorcycle construction excels not only in one or two features, but embodies so many good points, *most of them exclusive*, that competition cannot hope to rank with it.

For instance, take the Motor of the "Black Hawk." It is so flexible that it will take all speeds up to 50 to 60 miles per hour and down to 4 miles *without using the clutch.*

Then there's the Sight Feed Mechanical Oiler, so automatic in action that all that's necessary is to once adjust it and it regulates itself to speed at which machine is driven, the flow stopping when the motor stops.

Another feature is the Steel Tank Built Integral with Frame. A few of the advantages of this form of construction is that it adds greatly to the strength and stiffness of both tank and frame, positively prevents leakage, does away with a large number of objectionable small parts, eliminates pockets which gather dirt, makes possible large filler caps, which render funnels unnecessary and provides for Low Saddle Position.

This Low Saddle Position of the "Black Hawk" is a reality, the saddle rising only to a point of 29½ inches from the ground, allowing the rider to place both feet flat on the earth without straining.

There are a score of other good points about the "Black Hawk." Some of these are the

Spring Seat Post and Spring Fork which cannot bottom.

Improved Eccentric.

Improved Belt Tightener.

Free Engine Clutch, in rear hub, which makes rider master of the machine at all times.

Either of these features add enough value to the "Black Hawk" to make it the preferred machine wherever motorcycles are used.

Another good point in the "Black Hawk's" favor is its handsome appearance. The long, straight lines of the "Black Hawk," its clean-cut design, its real beauty and symmetry are worthy of more than passing mention. If you compare the design of this motorcycle with the ordinary type machine or those of the loop-frame construction you'll surely admit that you've never seen anything to equal it.

Trade Mark

BLACK HAWK

BH

RIDERS AND DEALERS

Don't fail to write for Our Catalog. It will aid you to a wise selection of motorcycle values. Book is the handsomest of its kind ever issued, as the "Black Hawk" is the best motorcycle ever built.

To back up all this, we will see that reasonable demands made upon us for orders are taken care of promptly. We want your business, because your interests are one with our own and because we are going to start the "Black Hawk" out right—

With Right Service Both to Rider and Dealer

We have the best of all motorcycles and a good seller for you. You ought to handle it. Ours is a good, straightforward money-making business proposition. You ought to be in on it.

May we not hear from you now asking for agency for your territory? It will pay you to write us to that effect.

Yours very truly,

It Is Day In and Day Out Service That Counts

Read what Frank M. Elmer, of Watertown, N. Y., thinks of

THE FLYING MERKEL

"Last Spring I purchased a seven-horse twin Merkel from your local agents. I think I have given it more hard usage than any other machine in town, and still it runs as smooth, if not better than when I first got it.

"As you can see by the photograph of my wife and myself, the machine is equipped with a Merkel attachment for tandem riding. I don't believe I have ridden over 50 miles alone, and I have carried people weighing 91 pounds and from that up to 206 pounds for one man and 214 for another. The slowest speed made was six miles an hour, and the fastest sixty-five, but both were made when I was carrying a chum who weighs 176 pounds, so I guess it isn't bad.

"There is one thing I can say: **'They Balance**—The Flying Merkel and Rough Roads, and Other Makes and State Roads.'"

In the 1913 Flying Merkel, equipped with a Self-Starter and Two-Speed Free Engine Hub, riders are assured of even greater power, speed and comfort which, summed up, means greater all-around service and efficiency.

"The Flying Merkel made its name on Merkel Mileage."

The extra heavy tread on Continental-Erie Tires, the high-grade fabric, and above all, the flawlessly perfect molding of the heavy studs—these features explain why Continental-Erie Tires are everywhere known as "the tires of greater service."

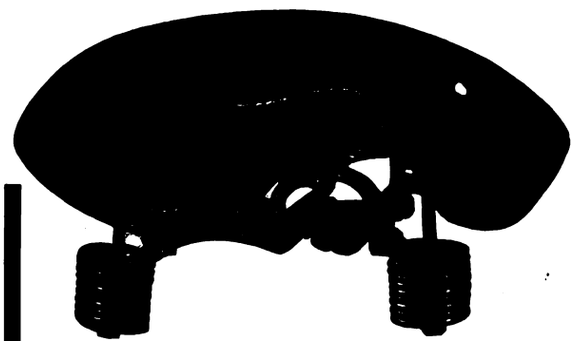
Continental-Erie Tires have conclusively proven their worth to Mr. Gale

Mr. M. E. Gale, the veteran tourist, uses Continental-Erie Tires because he trusts them. They have never failed him. On his memorable winter trips between Buffalo and New York in January and from Buffalo to Chicago in February, through howling blizzards, over frozen, rutty, almost impassable roads, his faith in Continental-Erie Tires remained unshaken.

That's what Continental-Erie Tires are for--hard work

Our motorcycle sundries line is distinguished for both completeness and that extraordinarily high quality which invariably characterizes "C. E." products. Ask the jobber, he knows.

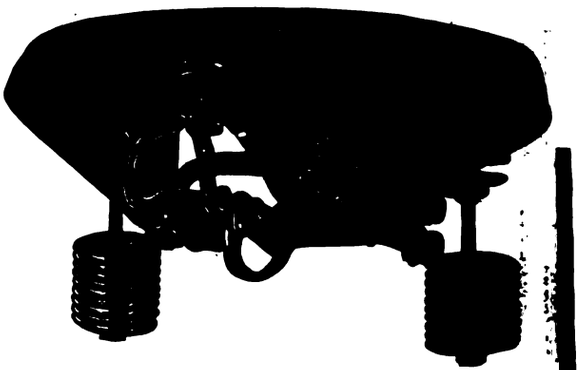
Continental Rubber Works
Erie, Pa.



WHILE THE

SUPERBA

IS SUPREME THE



Mesinger Standard and Cavalry

ARE A CLOSE SECOND

Do not gather from our continued praise and enthusiasm over the perfection and supreme comfort-affording features of the "Superba" that the Mesinger Cavalry and Standard saddles are no longer worthy of your careful consideration. While the Mesinger "Superba" is most comfortable, the most durable, the most perfect saddle made, the Mesinger Cavalry and Standard are still far in advance of any other saddle on the market, not reckoning the "Superba." We are still making many Cavalry and Standard saddles, and will continue making them so long as the demand continues in the volume which has distinguished it in the past.

We will be glad to send our catalog covering the complete Mesinger line upon request.

Thor

If it's good enough for the police it's good enough for you

The police want the best motorcycle. They want not only the fastest machine, but also a motorcycle that is under perfect control at all times—one that is always cool and ready. The Berkeley, Calif., Police Department is one of the many who have learned from experience that the only way to catch a Thor is with another Thor—Natural conclusion, the Thor is the fastest machine made.

Tremendous Speed

The reason for this speed is found in the Thor motor with its mechanical overhead intake valves, roller bearing connecting rods, the inimitable Thor undergeared internal gear direct chain drive. Result, perfect cooling, absolute silence and

Great Reserve Power

You can always coax a little more speed out of the Thor. Its perfect cooling combined with the famous Thor carbureter with improved twin air adjustments and butterfly valve—these make for that reserve power which every good motorcycle should, but very few do, possess.

Perfect Control

For loitering at a five-mile an hour pace and then making a quick get away to a fifty-mile an hour speed, the Thor is alone in its class. You will find a reason for this in the Thor improved ball-bearing free engine clutch, running in oil with the Thor improved double-grip control.

Thor Lubrication

We have paid what other manufacturers would call an entirely unnecessary amount of attention to the perfecting of the Thor oiling mechanism, but the result has been worth the effort. We challenge any other motorcycle manufacturer to produce as efficient an oiling system as the new Thor perfected force feed pump, oiling crank case direct.

The Thor Line

The Thor line comprises model 13-M, 4 H. P. Single at $225; model 13-W, 5 H. P. Single at $240 and model 13-U, a 7 H. P. Twin at $290. We will be glad to send our handsome catalogue upon request.

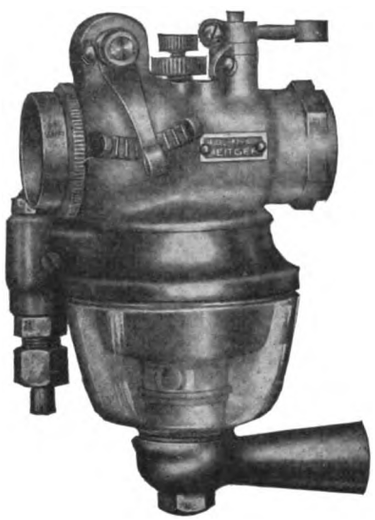
HEITGER MODEL K—1913

Made in ¾" and 1" pipe threads, and special threads for Spacke, Pope, H-D, Excelsior, Merkel, and Emblem, same list, ¾", $10.00; 1", $10.50. Where special fittings are needed, extra price. Has new air valve, no friction, or stems to wear, causing air leakage in low; air adjusted instantly from saddle, for starting, etc. Needs no priming in coldest weather. Furnished with glass or metal bowls, same price, the two being interchangeable.



HALF SIZE

Has new gasoline feed, two jets, one for low, one for high, with separate adjustments, giving minimum and maximum speeds. Owing to air valve action, etc., gives greatest possible speed to motor on minimum gasoline consumption. Light in weight, castings of aluminum, polished nickel plate.

Heitger Carbureter Co.

1129 Beecher St., INDIANAPOLIS, IND.

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

PENNSYLVANIA

Oilproof VACUUM CUP TIRES

For Motorcycles

"Automobile Tires Motorcycle Size" Means

The construction and materials are precisely the same as in the famous Vacuum Cup Automobile Tires even to the use of Sea Island Cotton fabric, which has over twice the tensile strength of other fabrics commonly used.

Also the same positive non-skid safety and the wonderful and absolutely oilproof quality. Thus these tires are the first and only tires to measure up to the wear and tear of modern motorcycle power.

With each Vacuum Cup Motorcycle casing goes a printed definite guarantee of

5,000 MILES

and the tires average far more than even this distance.

Dealers: Be ready to supply the demand so rapidly swinging over to Vacuum Cups.

RELENTLESS FRICTION

How it ruins motorcycle motors. How the remedy must be determined

Without lubrication your motorcycle could run but a few times its own length.

Friction would then stop the power.

As oil saves power, it follows that one oil will save more power than another.

An important question is:

What oil will eliminate the most destructive friction in your motor?

Motors differ. Different motorcycles demand different oils.

We present here, in plain terms, the factors that must be considered.

This statement is from a company whose authority on matters of lubrication is unquestioned—the Vacuum Oil Company.

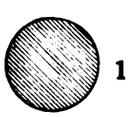

Figure 1 represents a type of lubricating oil in common use.

It has two serious faults.

First, its actual lubricating *quality* is low.

Second, its "*body*" or thickness is unsuited to the feed system of the motor it is used on.

It cannot feed properly. It cannot protect properly after the friction surfaces are reached.

Figure 2 represents a better, but still far from perfect oil. It has good lubricating *quality*. But its "*body*" is unsuited to the feed system of the motor. It cannot properly reach all the friction surfaces.

Figure 3 represents an oil whose "*body*" is suited to the feed requirements of the motor. But its *quality* is low. Under the heat of service it rapidly loses its power to protect the moving parts. It reaches the friction points but cannot efficiently protect them.

Figure 4 represents what your motor really requires—an oil of the highest lubricating *quality* whose "*body*" is perfectly suited to the feed system of your motor.

It properly reaches all the friction points. It protects properly after it reaches them. It is a complete lubricant.

With such an oil, practically your only friction is the friction of oil against metal.

You will find this grade of oil indicated in our complete chart of recommendations, which will be sent on request.

The recommendations in the chart were arrived at after a careful motor-analysis of the machines named. The oil's efficiency has been further proven-out by practical demonstrations.

If you use an oil of less correct "body," or of lower lubricating efficiency your motor must pay the penalty.

Some of the consequences are pointed out below.

Carbon deposit (excepting that due to faulty carburetion and gasoline combustion) is commonly attributed to the *quality* of the lubricating oil. Quite as often the fault lies with the oil's "*body*."

In some motors, a light-bodied oil will work too freely past the piston rings, into the combustion chamber. Lubricating oil itself is a hydro-carbon product. Carbon can never be wholly filtered out. When the oil works freely into the closed combustion chamber carbon deposit is bound to occur.

An unnecessary quantity of the oil is consumed. Ignition trouble, and in time, "knocking" of the motor results.

Another common result of faulty lubrication is **scored cylinder walls.**

The scoring is generally caused by the oil's low lubricating *quality*.

Or it may be caused by too-light a "*body*." In that case the oil fails to carry-through to the end of the piston stroke.

The piston rings then rub directly against the walls. In time they break. Scoring and scratching of the cylinder will result. Hissing of the motor follows.

Mobiloil

A grade for each type of motor

Digitized by Google

A third result of wrong *"body"* or low lubricating *quality* is **worn wrist-pins.** This trouble causes a dull, metallic knock. In extreme cases the wrist-pins break.

A fourth result is **worn bearings.** The unnecessary wear is caused either by the low lubricating *quality* of the oil, or by an oil whose *"body"* is unadapted to the fit of the bearings.

The bearings in different motors differ widely. For proper lubrication they require oils of different *"body."*

A fifth common result is **loss of compression and escape of the explosion.**

The oil's actual lubricating *quality* plays no part in this loss. The escape is attributable wholly to the oil's incorrect *"body."*

With certain types of piston rings a light-bodied oil forms too-thin a film around the ring. Loss of compression, escaping explosion, and reduced power result.

There is no plain symptom by which this escape can be discovered—other than the lessened power of the motor.

TO avoid these troubles you *must* use an oil of the highest lubricating *quality*, and of correct *"body."*

There is only one way to determine the correct *"body."* That is, to carefully analyze the construction of the motor.

Any less-thorough method can only be a hazardous guess.

To meet this problem, each season we carefully analyze the motor-construction of every make of motorcycle.

Based on this analysis, and on practical experience, we determine the correct oil for each machine.

The results of these conclusions are compiled in a lubricating chart—which will be sent you on request. This chart specifies the correct grade of Gargoyle Mobiloil for your motorcycle.

The efficiency of the oils recommended has been thoroughly demonstrated in practical use.

In sheer lubricating *quality* they stand alone.

Oil of the *quality* and *"body"* recommended is an absolutely necessary step toward:

(1) The greatest horse-power efficiency.

(2) The smoothest operation.

(3) The fewest repair troubles.

(4) The lowest operating cost per mile.

(5) The longest life to your motor.

(6) The greatest second-hand value.

WE have here discussed lubrication with considerable assurance.

You may wish to know more about the basis for this certainty.

We will speak plainly.

Lubrication with us is both a business and a profession.

Throughout the world the lubricating counsel of the Vacuum Oil Company is sought by engineers who must meet the most rigid efficiency standards.

We are depended upon to determine the lubricating requirements and to supply the oils that meet them.

Our clientele includes thousands of manufacturing plants—located in practically every civilized country.

We supply the floating armament of the world's leading naval powers.

We supply practically all of the ocean greyhounds.

We supply the aeroplane fleets of the leading military powers.

Outside of the home field we supply over seventy foreign automobile manufacturers.

Mobiloil

A grade for each type of motor

THE matter of determining the correct lubricating oil for a given purpose requires both scientific study and broad, practical experience.

This experience we have applied in carefully studying the lubricating requirements of each make of motorcycle shown in our chart of recommendations.

This chart represents our professional advice.

If you use an oil of less-correct **"body"** *or of lower lubricating* **quality** *than that recommended, unnecessary friction, unnecessary carbon deposit, loss of power, and ultimate serious damage must result.*

In buying Gargoyle Mobiloil from dealers it is safest to purchase a full barrel, half-barrel or a sealed five-gallon, or one-gallon can. Make certain that the name and our red Gargoyle appear on the container.

A booklet, containing our complete chart and points on lubrication, will be mailed on request.

The various grades of Gargoyle Mobiloil, refined and filtered to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

They can be secured from all reliable garages, auto supply stores and others who supply lubricants.

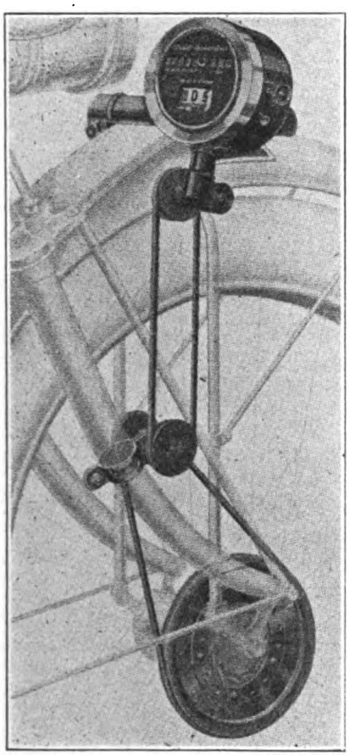
$12
Complete
Model D

75-mile speedometer; 100,000 mile season odometer; 100 mile trip register, which can be readily reset to any tenth of a mile without disturbing total mileage of season register, front wheel two belt drive complete with pulleys and brackets.

The New Stewart Motorcycle Speedometer

Magnetic Type

Showing the new Two-Belt Front Wheel Drive



HERE is the only practical motorcycle speedometer made. Just as accurate, reliable and complete as our most expensive automobile speedometers. Our Front Wheel Two-Belt Drive and manner of installation render it impossible for the speedometer to get out of alignment with its driving equipment, this because both instrument and driving equipment are attached firmly to parts that move in unison.

Is installed upon your mudguard or extension spring. As it thus is within the range of your headlight you can read it as easily at night as during the day. This is an exclusive feature not to be had with any other make.

Indicates accurately miles per hour, miles per day or trip; miles per season.

This special instrument is made on the famous magnetic principle. Over 95% of all the speedometers manufactured (for either motorcycles or automobiles) are now built on this practical principle.

For sale by dealers all over the world. Price $12 complete.

Write us for a handsomely illustrated catalogue which explains in detail, the many advantages and fine construction of this improved motorcycle instrument. This book is free. Write today.

This Brake Was One of the Most Important Features of the Shows

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile—or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions;—

Fool-proof—a brake that will not wind, bind or lock;—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

Built For "Her" Comfort! The Rogers Motorcycle Sidecar

Unequalled in Beauty of Design. Unsurpassed in Points of Construction.

Double Your Motorcycling Joys This Season

Thousands of motorcyclists are equipping their machines with sidecars this season. They realize that the sidecar eliminates the objectionable rear seat and assures a comfortable, delightful, "clear-vision-ahead" ride for a traveling companion.

When you select your sidecar, pick the **Rogers.** It is built to give "Her" supreme comfort—to enhance "Her" pleasure when riding with you. The Rogers, in appearance, resembles an automobile—sweeping, graceful lines, ample body room, luxurious upholstery. Long, resilient springs and distinctive chassis construction assure easy riding. Continued alignment. Easily attached and detached.

The Rogers Sidecar can serve you in a commercial way. In less than a minute you can remove the seat and trimmings and convert it into a safe, speedy, economical carrier of merchandise. Hundreds of merchants declare the Rogers makes a profitable delivery service. No other sidecar can offer you this advantage.

The motorcycling season is here. Don't lose the chance of increasing your joys. Let some one else share equally your joys—riding at your side in a Rogers. We want to tell you more about this sidecar. Cut out the attached coupon and mail it to us today. We will send you the Rogers Sidecar booklet. When you read it, you'll order your car immediately. Don't delay. Write us now.

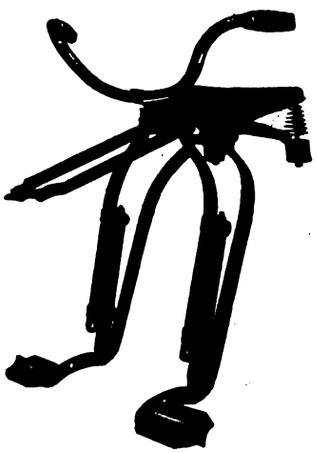
Simplicity—Comfort—Stability

The Empire Special Spring Tandem

"IT FLOATS"



You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem *"IT FLOATS"*

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

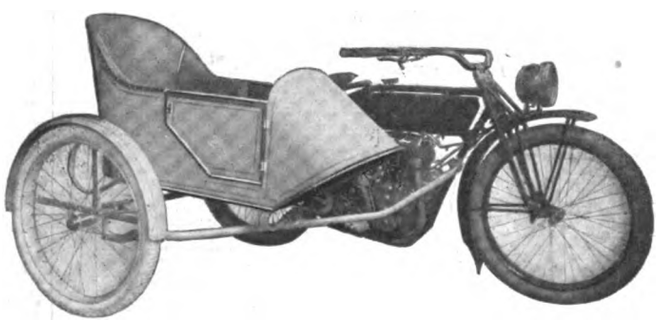
Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

EMPIRE SPECIALTY COMPANY

Office, 147 The Arcade ∴ ∴ ∴ CLEVELAND, OHIO

CHAS. E. WEAVER, Sales Manager



"AUTO CAR"

A genuine automobile body, 16 gauge aluminum over a clear, selected ash frame, automobile door with lever lock and rubber bumpers, automobile upholstery and automobile comfort.

Will last for years, brand new whenever re-enameled.

OUR SPECIALTY

For a special combination price we offer our "Auto Car" model with extra van body interchangeable with body of "Auto Car" on same chassis.

GREYHOUND MOTOR CO.

1450 Niagara Street
Buffalo, New York

Universal Side Cars

Splendidly Roomy—Perfect Protection

Upholstered in Automobile fashion, with finest curled hair, coiled springs in seat and back and best quality of imitation leather.

REED BODIES; two models in reed for those who prefer the particular grace and beauty of this style car. They are luxuriously upholstered and strong and serviceable as well.

DELIVERY VAN

A stylish metal and composition body built to stand the wear of years. Three in one, first you have a covered van; remove the top and then you have an open box truck; remove the body and a substantial platform truck is at your service. Capacity, 400 lbs.

There's nothing small about the Excelsior except the price

The EXCELSIOR is big. It is big in power. Big in strength. Big in performance. The Big "X" looks with complete indifference on every road, no matter how poor; every hill, no matter how steep. It looms large in the public eye. It is the maker of world's records.

There's nothing mean about the EXCELSIOR—except its gasoline consumption. There is nothing small about it—except the price. The price is reasonable because of the **big** manufacturing facilities and **big** purchasing power behind it. The EXCELSIOR does big things, like its recent shattering of records, from one to one hundred miles. And **your** EXCELSIOR will be of absolutely the same design, as that record-smasher. Ask your dealer.

Four Models

Model 7C—7 to 10 H.P.	**$250**
Model 7B—7 to 10 H.P.	**250**
Model 4C—4 to 5 H.P.	**200**
Model 4B—4 to 5 H.P.	**200**

Our Art Catalog, the only one showing the motorcycle in its actual colors, is free. Write for your copy.

EMBLEM

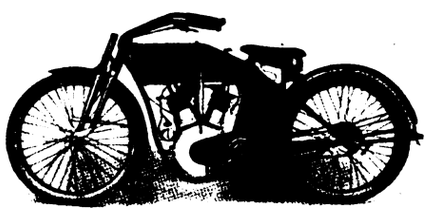
As enduring as the pyramids, as silent as the Sphinx, as swift and graceful as a tiger—the EMBLEM is emblematic of all that is good in motorcycle construction.

The EMBLEMS of former years may have been open to criticism in some slight particular, but each added year of building experience has added to the tale of EMBLEM perfection, until today the EMBLEM is as perfect as the art of motorcycle construction can attain.

The man who don't agree with us should get our catalog, illustrating and describing the details of EMBLEM quality.

Emblem Mfg. Company

Angola, Erie County N. Y.



THE EMBLEM LINE

Single, Battery or Magneto, Belt Drive, 38.3, $175, $200
Twin, 67., Magneto, $275
76.6 Magneto, $300

"I SHOULD WORRY"

RECHARGED ANYTIME ANYWHERE ANYBODY

25 HOURS LIGHT FOR 5 CENTS

So should every Motorcycle Rider whose machine is not equipped with a CARBO-LIGHT TANK.

The Peer of all lighting systems.

Install a CARBO-LIGHT and forget your troubles.

Enjoy your night rides, knowing that the little CARBO TANK is working every minute, flooding the road with a beautiful white light, giving the rider a feeling of peace and security which helps to make motorcycling the pleasure that it certainly is.

You can throw the thought of expense to the summer winds, as you know that for five cents you can charge your own tank in a moment's time.

"Economy, Convenience and Satisfactory Service" is our slogan.

Dealers, large or small, you cannot afford to pass up our proposition.

Individual riders, if your dealer cannot supply you, don't let the fact deter you from writing to us direct. We have a special department that will take care of your needs.

Get our terms and agency proposition.

CARBO-LIGHT SALES CO., Anderson, Ind.

Prest-O-Lite
For Motorcycles

"Wouldn't ride at night without it"

That's what every experienced rider says about Prest-O-Lite. You know, if you've ever tried to do any road work at night that the oil lamp won't do. Small carbide lamps are but little better.

But with a Prest-O-Lite Tank and a lamp big enough you can tour safely any time and anywhere. You have a brilliant, dependable light that turns on and off like a gas jet.

Money Invested

Regard the money paid for a Prest-O-Lite Tank not as money spent,—but as money invested. It's extra insurance against accident. And, besides, a Prest-O-Lite Tank never gets to be second-hand. It can always be sold for about what it cost, owing to the universal use and demand. Exchanges cost little—never more than the carbide to feed a generator—and in most cases less.

$10

Try Prest-O-Lite for 30 days at our risk

You need Prest-O-Lite to make your night riding pleasant and safe. So that you can see how much you gain by it, we want to have it on your machine for 30 days' trial. Then if you decide you can do without Prest-O-Lite, the trial won't cost you a penny. Fair enough, isn't it? We want every rider who isn't using Prest-O-Lite to take advantage of this offer. Write for booklet and plan today.

The Prest-O-Lite Co. 246 East South Street Indianapolis, Ind.

CANADIAN GENERAL OFFICE AND FACTORY, MERRITTON, ONT.

Exchange Agencies Everywhere

TO DEALERS—It's a poor idea to train your customers to going elsewhere for Prest-O-Lite Exchanges. The other dealer may sell them other things as well.

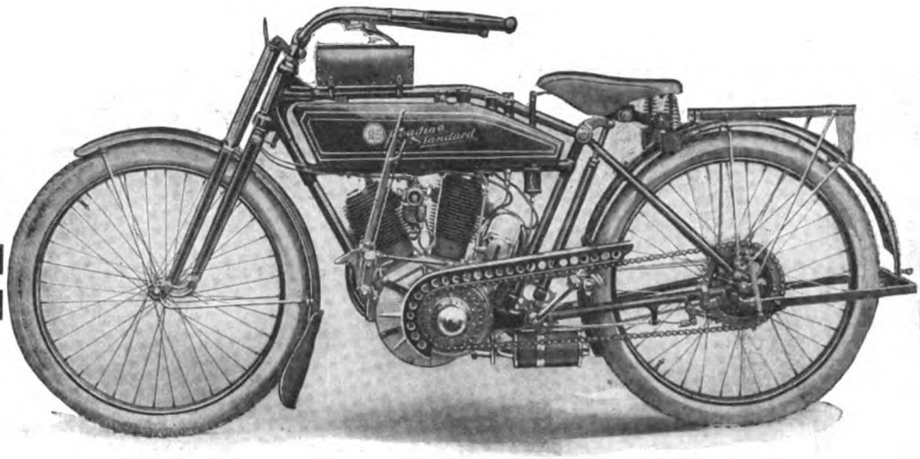
R-S Twin



$275

"What do I get for my money?"

That's the main question, isn't it?

"Looking at it from a common-sense standpoint, what is the actual market value of my motorcycle—not its value to **me,** but the actual value of each individual component part? Am I paying what I should for actual materials and labor, plus the manufacturer's purely legitimate profit, or am I paying an inflated price simply because it is the custom to do so?"

Did you ever ask yourself **that question, Mr.** Rider? Did you ever critically examine a motor cycle and, applying your knowledge of structural materials, endeavor to actually reach some definite idea as to the **cost** of making that machine? Then you'll understand us when we say

The "R-S" costs more to make--but less to use

It is a fact widely known in motorcycle manufacturing circles that each individual part entering into the construction of the R-S is of higher quality, and consequently higher cost proportionately, than the individual components of any other motorcycle on the market today. But R-S quality does not stop there—it extends to the labor. We pay more for skillful workmen—thereby decreasing to a minimum the possibility of flaws in construction. **That** is why the R-S is so irreproachably perfect in service—so economical—because **we** practice what others preach—"Economy in service—not in manufacture."

Let us send you our catalog. It conclusively proves every statement we make.

Maroline MOTORCYCLE OIL

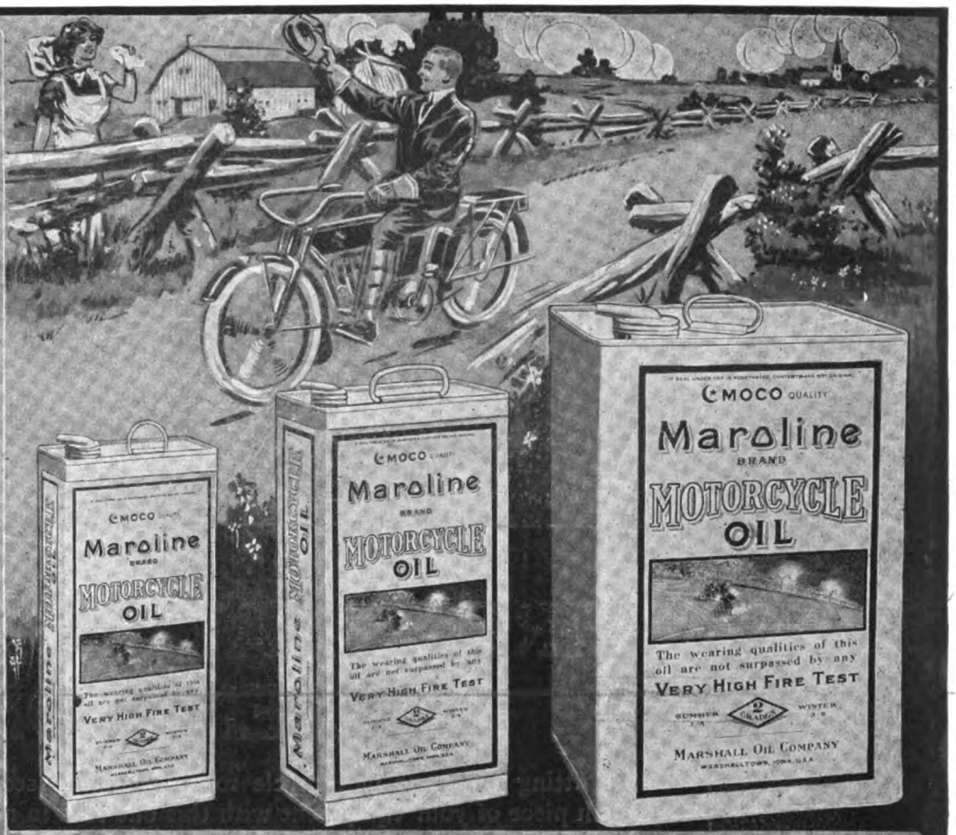
Specially manufactured from brightest filtered PENNSYLVANIA STOCK, exclusively for the Motorcycle.

It insures the highest degree of lubrication and maintains perfect compression, rendering full power and speed. Absolutely carbon proof.

Sold in the Sealed Package

Protecting motorcyclists and dealers. Ask your Supply man for Maroline Oil, put up in handy tins—halves, ones, and fives (gallons). Accept no other.

If your dealer doesn't carry it write us, giving his name and we'll see you're supplied.



MARSHALL OIL COMPANY
INCORPORATED
MARSHALLTOWN - - IOWA - - U.S.A.

To Dealers: Price for 50 gallon lots, same in tins as in barrels, thus protecting you against leakage. Cases packed as follows { Two 5-gallon lithographed tins; Twelve 1-gallon lithographed tins; Twelve ½-gallon lithographed tins

DEALERS—Write for free sample and compare with other oils you have used and get our special introductory price. Write today.

Motorcycle and Accessory Manufacturers!

You must appreciate the tremendous publicity

value of Pennants

As an effective means of advertising **your** product, pennants are supreme. They are never thrown away—always received with delight. At motorcycle shows, race meets, endurance runs, they form an invaluable method of publicity.

You should supply every one of your dealers with a stock of these pennants. You should follow the method of one of the largest motorcycle manufacturers and tie a pennant on every machine you sell.

Order now—direct from the manufacturer. No order too large for us—none too small for our careful attention. Prices astonishingly low. Samples upon request.

SPIEGEL ART CO., Dept. M, 111 Broadway, Brooklyn, N. Y.

United States Tires

TIRES THAT YOU CAN DEPEND ON

In fitting out your motorcycle for the coming season's riding, select each piece of your equipment with this one idea in mind—Can I depend on it?

When it comes to the tires, pick the tires that have offered the best proof of their reliability.

Pick the tires made by the concern that you can have the most confidence in.

UNITED STATES TIRES

measure up to both of these tests.

They have been known everywhere since motorcycles were first built as "good tires."

They are made by America's largest and most representative tire concern.

Why not try them?

They cost no more than you are asked to pay for other kinds.

51 CHAMBERS STREET NEW YORK CITY | THURSDAY, APRIL 3, 1913 | TEN CENTS A COPY ONE DOLLAR A YEAR

NORTHWEST CLUBS FAVOR ADJUSTMENT

Seattle M. C. Votes to Draft Resolutions Stating Conditions Under Which it Will Support Plan to Consolidate Western Federation With F.A.M., and Clubs in Portland and Tacoma Stand Unanimously for Settlement Along These Lines—Rousing Reception in Denver for F.A.M. Traveler—No Hearing in San Francisco.

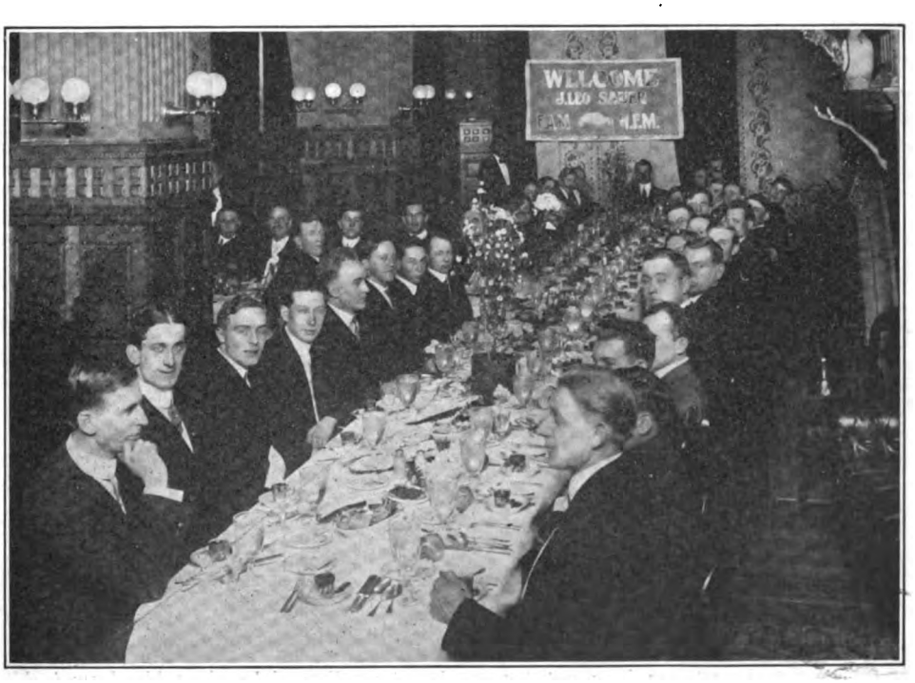
AS the result of an understanding arrived at following an enthusiastic meeting of the Seattle Motorcycle Club, during which Director J. Leo Sauer, of the F. A. M., and the officers and members of the club threshed out the Pacific Coast situation from every possible angle, there are strong indications that the Western Federation of Motorcyclists will be consolidated with the F. A. M. in reciprocation of concessions from the latter that are considered necessary to the well-being of the sport in coast territory. In Portland, Tacoma and Seattle the F. A. M. traveler was warmly received, and in the latter city a fine banquet was a feature of the program.

Prior to the banquet, Director Sauer devoted about forty minutes to a discussion of coast conditions and a delineation of F. A. M. policies, and he then invited the club members and guests to submit questions. They accepted his invitation in a business-like manner, and no phase of the situation escaped attention. During this discussion considerable progress was made toward an adjustment, and following the banquet the conference was resumed and continued until midnight.

Finally, at Mr. Sauer's suggestion and on motion of John F. Gorman, the chief organizer of the "progressive" movement, the club voted unanimously to have a committee of three draft a set of resolutions for action by the club, stating the conditions under which the Seattle M. C. would favor the consolidation of the two organizations, with the understanding that all W. F. M. members would become members of the F. A. M. It is regarded as most significant that Seattle, where the W. F. M. movement originated, is taking the first steps to bring about a satisfactory adjustment.

At Portland Director Sauer obtained a unanimous vote of the local club in support of the F. A. M. and about twenty-five memberships were received. The attitude of the riders was one of friendliness and there was plenty of enthusiasm. The same conditions were found in Tacoma, where the club gave a unanimous vote in favor of an adjustment. Both the F. A. M. representative and the clubs felt that the meetings in the Northwest had paved the way for a satisfactory understanding between the F. A. M. and the riders of the district, and the opinion was freely advanced that an adjustment was not far distant.

In introducing his resolution looking to the proposed adjustment, at the close of the conference in Seattle, Mr. Gorman brought forth hearty applause by the following statement: "If the F. A. M. will grant our reasonable demands, there is going to be 'some' F. A. M. in this part of the country." This remark appeared to echo the sentiment of the gathering, and was regarded as significant by those who wish to see the horizon cleared and harmony obtained as soon as possible.



Seattle Club at fine banquet which was a feature of the program arranged in connection with Director Sauer's visit.

On leaving the Northwest the F. A. M. traveler headed for Denver and arrived there on March 30 to find 300 motorcyclists at the station with their machines to welcome him. He was introduced by Harry N. Bursans, secretary of the Denver Convention Association, and later, in company with State Commissioner Whiting, President Beck, of the Colorado Motorcycle Club and Mr. Bursans, he was escorted through the city in an automobile. Following the car was a procession of motorcyclists three-quarters of a mile long.

At a big meeting in the club rooms on Sunday night the club voted unanimously to affiliate with the F. A. M., and the member-

Around Mt. WASHINGTON BY MOTORCYCLE

By EARLE CHAMBERLAIN

TO begin with, I am not a long-distance rider. On the contrary, my usual pleasure trips take in, perhaps, sixty or seventy miles in an afternoon, covered leisurely (so the other boys would say), and I rarely "come home in the dark." So when I read in the magazines of riders coming jauntily home with smiling (if dirty) faces, after 250-mile spins over country roads and 150-mile mud-plugging expeditions, I somehow have a feeling that I am at the foot of the ladder as far as motorcycling is concerned, if I may even be said to have attained the lowest round.

However, I have motorcycled for the last four years, and, having covered some 12,000 miles in that time, have gone over about all the rideable roads in the vicinity of my home town many times.

One day last September I felt somewhat as Alexander must have felt when he sighed for new worlds to conquer, and, mentally weighing the allurements of possible rides within a reasonable distance, I decided that to go "around the mountain," as the 125-mile circuit of Mt. Washington is called, would provide a pleasant trip off the beaten track.

My usual riding companions were not able to accompany me, so I had to venture forth unaccompanied, and at 8 o'clock I got my Indian out and, having filled it to the brim with that necessary liquid which is soaring so high just at present, I headed straight for Mt. Washington.

SOME HILL-CLIMBING.

Before I had gone five miles I had a convincing demonstration of how desirable the lightweight construction of our motorcycles is. A big Winton car had been driven too far outside the ruts, and had buried its wheels so deeply in the soft mud that it was completely helpless. Of course, I helped the occupants as well as I could to extricate the monster, and an hour's work with shovels, levers and "language" (not from me) enabled it to scramble out upon terra firma.

The roads through Conway are excellent, and hitting up a fair clip on one straight stretch, I suddenly heard a snap and felt my machine slow down, while the motor threatened to tear itself from the frame. One of the clutch spring nuts had worked loose and allowed the cup to project sufficiently to hit the sleeve-lever, throwing out the clutch with great suddenness.

Conway has some magnificent roads, and the stretch through here and Jackson is always a treat. However, just beyond Jackson I was up against Spruce Hill, and it is "some hill." I didn't have to walk, but I did pedal, and strenuously, too.

I had to stop and photograph the old Glen House, from which the carriage-road up Mt. Washington starts, and then it was all down hill to Gorham, eight miles distant. I reached there at noon, having traveled fifty miles. Now I began to go round the mountain and head southward. Just out of Gorham I came upon a hill that from a distance appeared truly appalling, but I took a fierce rush near the foot, and the machine took me up in good style, my 4-horse engine pulling with a bulldog tenacity that surprised me, until it carried over the top without assistance.

Hill-climbing, after all, is the greatest charm of motorcycling. To feel the rapid throb of the little engine and the fierce rush of the wind in your face while you are carried up and up through the flying landscape—but wait, I am writing this for motorcyclists to read, and they all know the thrill of guiding a good motor up a long hill.

PICTURESQUE SCENERY.

I won't tell about the dog that charged out so violently; the incident is unspeakable. Let me say, however, that one dog received a liberal education upon the subject of motorcycling that will be of lasting benefit to him—and to other motorcyclists who pass that way.

I now found the roads to be better than ever, and my machine took the long grades over a broad leaf-covered highway in a manner to bring joy to the heart of any motorcyclist. This section is rich in beautiful views; Mt. Washington towers on the left, across the gently rolling meadows, while away to the west one looks over Vermont, the foot hills of the White Mountains having a soft carpet-like appearance under the setting sun. These scenes are in the towns of Randolf and Jefferson. Approaching Fabyans, I stopped near the beautiful falls in the Ammonoosuc River to take some pictures; then a few minutes' ride took me to the "New Mt. Washington" hotel, where I stopped to see a friend.

I left here at 3 o'clock for the remaining fifty-mile trip home and went past the source of the Saco, down the old "Tug-of-War" hill, and a few miles further on I paused to photograph the site of the old Willey House. The scenery here is wild and rugged, the rocky and treeless mountains frowning down upon the carriage road with almost appalling grandeur. From here on I took many pictures and upon reaching Bartlett I found two friends from Conway awaiting me; they led me a rapid chase to their home town.

Leaving them, I made the remaining 10 miles to my home in quick time, arriving about 5 o'clock without having experienced any of the troubles and difficulties that a few years ago the motorcyclist was supposed to be up against. My mileage since morning was only 128 miles, and I can fancy endurance riders looking with pity upon the record of my humble journey. It *is* a very ordinary ride when compared with the rather strenuous accomplishments of some of our record-breakers. However, this trip takes in about as many attractions as are to be encountered in one day's ride anywhere in New England. In closing, let me urge all motorcyclists who have never visited the White Mountains and who live anywhere in this corner of the country to make the trip in 1913. The roads through here are splendid, the scenery beyond description, the hotels excellent; and those who come once will want to come again. Before another winter arrives, be able to say that you have been to New Hampshire, and visited the White Mountains and know their beauty. You won't regret it.

Recent snowstorms have not prevented motorcyclists of Lorain, Ohio, from making their usual jaunts into the country. In the unusual photograph shown above seven Indian riders are depicted in the act of showing Jack Frost just how little they fear him.

MOTORISTS TO HELP POLICE

JOHN P. HOOPER, a Trenton (N. J.) motorcyclist, has formulated a plan to organize the motorcyclists of his state to assist the police in criminal cases. The idea has been submitted to a number of state officials and has received their hearty endorsement. P. E. Zimmerman, of the Kansas Short Grass Club, is behind a similar movement in Kansas. It is suggested that motorcyclists enlisted in this body be authorized to make arrests upon their own initiative; that the police may be free to call upon them for assistance at any time and that their service will be rendered free.

A PLEA FOR FULLY-EQUIPPED MACHINES

Veteran Argues That Lamp, Horn, Speedometer and Luggage Carrier Should Be Included in Purchase Price

BY THE OLD SCOUT

THE bait that certain automobile manufacturers have been using for some time to delude people into buying their product is the slogan of "fully equipped." That phrase has indeed an attractive sound, involving, as it does, a considerable financial saving to the purchaser. There are a few signs that the day of fully-equipped motorcycles is approaching, and let us hope that it will not tarry over long. After a man has expended two hundred and fifty perfectly good dollars for a machine, it seems regrettable that the outlay must continue if he is to get the best service out of his investment.

It is surprising how few motorcycles one meets on the road that are completely supplied with equipment. A small kerosene lamp is often all that a machine can boast of. If more riders realized how the pleasure of the sport is increased by proper equipment, few of them would hesitate over the expense involved. Many new riders may not appreciate this point, and it is to such that the following lines are especially addressed.

A SPEEDOMETER NECESSARY.

A speedometer is regarded by many as a luxury: to me it is an absolute necessity. Aside from giving a rider the satisfaction of knowing "how fast she can go," there are other more practical reasons why a reliable speedometer should be on every motorcycle. First of all, you have a sure way of keeping tab on the oil and gas consumption. Note the mileage figure when you fill the tank; if the next time it takes two gallons of gas to fill it and the odometer has advanced a hundred and twenty miles, your machine is doing sixty miles to the gallon. One can quickly discover whether the machine is running as well as it should or not, by determining, for example, just what speed it should develop on a certain hill.

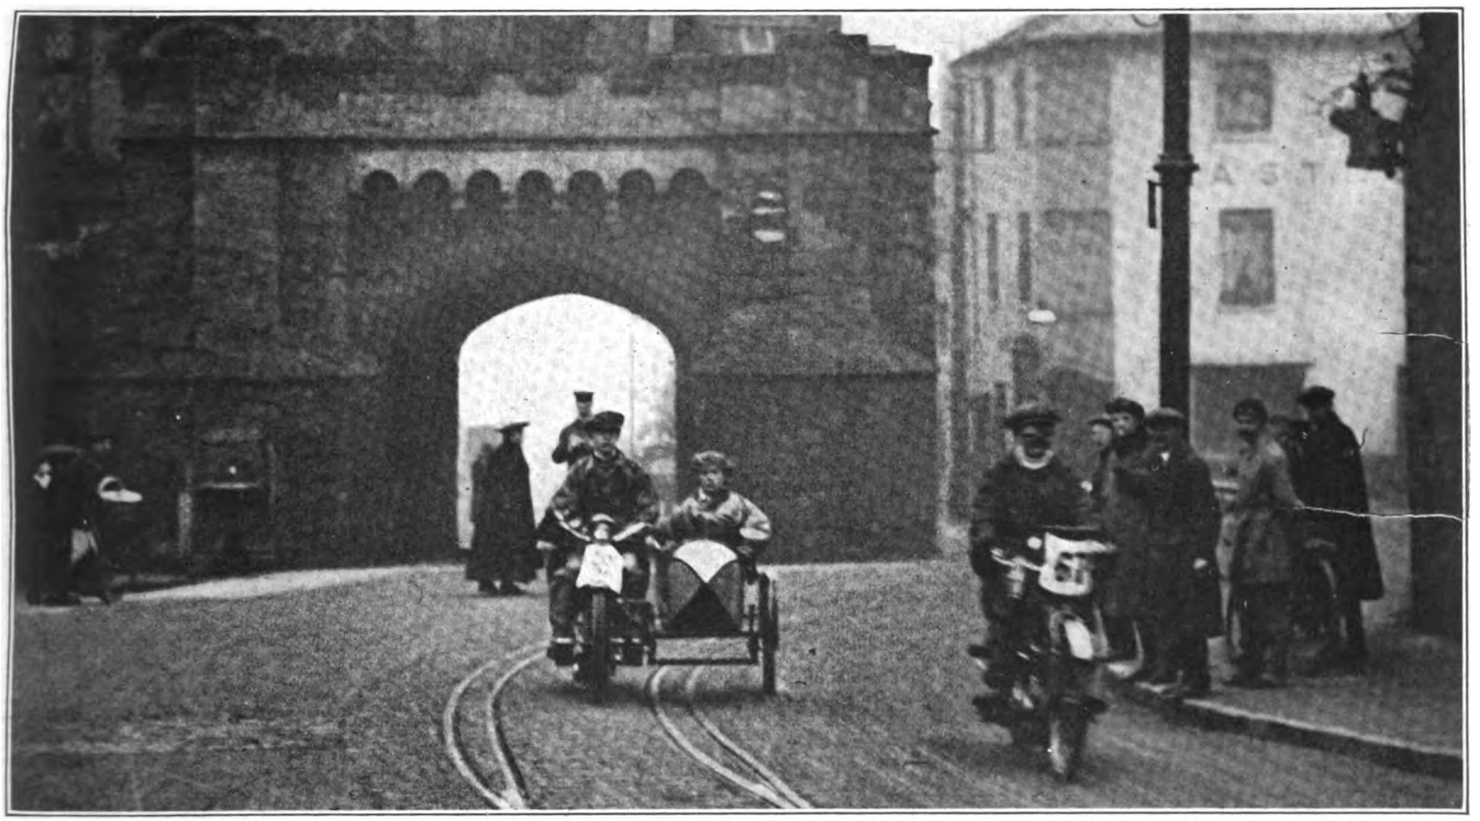
Don't think that a cyclometer will be a satisfactory substitute for a speedometer. My first machine was equipped with a cyclometer, and I was quite satisfied with it until one day, after I had covered a distance that I knew to be exactly twenty miles, the cyclometer reading was only fifteen. That ruined my confidence in the device, and I "blew" myself to a full-fledged speedometer.

It is hardly necessary to offer a plea for a horn, since this article is required by law in most places. It is better to buy a good horn to begin with than to experiment with a cheap and inferior product. The horn should be attached to the inside of the handlebars, so that it will not be ruined in case of a spill. See to it that the bulb does not vibrate constantly against the bar; that will quickly wear a hole in the rubber.

Don't waste any time with a small lamp. Get a good search light, whether electric or gas, and if the latter, don't tinker with a generator. The gas tank system costs only a trifle more, and is so much more satisfactory in the long run that it is really cheaper.

Another bit of equipment that is practically necessary is the luggage carrier. Several companies are recognizing this by fitting the attachment as standard on all models. This is a step in the right direction. You may think, when you buy your motorcyle, that you will have no use for a carrier, but just as sure as fate some day you will have something to carry on your machine, and no place for it.

There is yet one more trinket that is really a necessity, and it is a shame that it cannot be supplied on many machines—a tire chain. More than once I have wound rope on my rear tire, in the vain hope of getting a surface there that would grip and hold on slippery clay roads. My 1913 Indian was delivered early in February, when the streets were full of half melted ice and slush. I started out with a tire chain on the rear wheel, and so far have not had a single skid (I'm knocking on wood now). Most all 1913 machines have sufficient clearance between mud-guards and tires to allow these chains to be attached, and some older models also permit their use.



In the interesting picture above contestants are shown passing Warwick Castle in the recent Mid-Warwickshire trial in which 180 English riders started in spite of a downpour of rain.

WHY GOOD OIL IS CHEAPEST

by ARTHUR · J · ROCHOW

CLOSE and practical contact with thinking motorcycle riders during the last five years, added to my personal experience in that period, has everlastingly instilled in me the knowledge that a good supply of the best oil adapted for motorcycle use is a real insurance against the repairman. Without the proper grade of oil for his motor the rider cannot hope for a cool "sweet-running" power plant. Oil is cheaper than repair parts. Manufacturers have long emphasized this idea, in the knowledge that it will lead the rider to provide himself with the means of getting the greatest satisfaction from his motorcycle.

It is at this time that many new riders are entering the motorcycle field and "breaking in" their 1913 models, and dealers and experienced riders would be passing along good advice if they would instruct the beginner to use the best motorcycle oil obtainable. It has been fully demonstrated in manufacturing and in road practice that varying grades of oil are required for different types of power plants, and it certainly stands to reason that a motorcycle engine presents conditions distinct from those found in any other type of gas explosive motor.

OILING FOR EFFICIENCY

The motorcyclist has a high-compression, high-speed reciprocating engine whose only cooling agent is the natural circulation of air about its radiating surfaces, and it is of prime importance that the cooling process be assisted as far as is possible by supplying a proper lubricant to all the wearing parts. When we reduce friction we reduce heat, and incidentally work for the longevity of the motor. It has been proved the world over that best results are obtained from specialization; we demand goods manufactured for a special purpose, and turn our backs upon makeshifts. This is the proper attitude, and we should apply it to our oiling problem. We would not drink impure water, if we could possibly avoid it, nor would we eat food that gave us no nourishment; on the same principle we should not supply our motorcycle motor with poor oil and expect it to put forth its best efforts.

I have found that it is very easy to notice the difference in the work of a motor when properly lubricated and when operating under lubricating disadvantages. If you have been using cheap oil, make a change and then try your machine out on a stiff hill. There will be a difference, and you will no doubt become a convert to the good-oil idea. Not long ago, in conversation with a well-known rider, I had conclusive evidence that good oil pays the biggest returns.

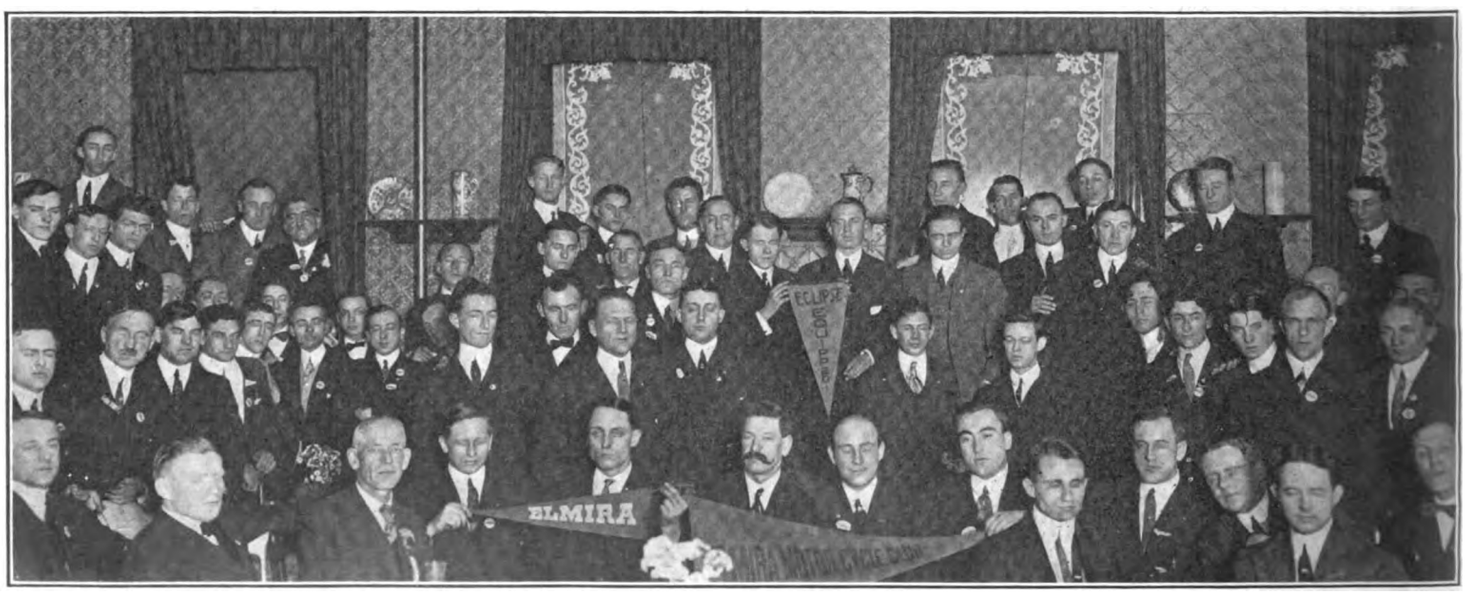
HOW HILLS TOLD THE STORY

This rider had returned from a journey of several hundred miles and was telling of his experiences. He stated that on the outward run his motor worked splendidly on hills and over rough stretches, but that on the return trip he encountered trouble. He had been obliged to purchase oil at a garage where the proprietor did not take into consideration the fact that special oil is required for a motorcycle motor, and, with his motor base filled with a cheap automobile lubricant, he undertook the homeward journey. After traveling about twenty miles the motor partially seized, and he was compelled to drain off the poor oil and obtain a supply of standard motorcycle oil before continuing on his way. After that he experienced no more trouble.

It is well to make the garage-keeper understand, if possible, that he may get you into serious trouble by supplying oil that is not suitable for your motor. If he raises the point that it does not pay to stock high-priced motorcycle lubricants give him a few figures relative to the number of riders on the roads, and explain that they must have good oil. This may not help you appreciably, but you will be planting good seed, and your advice may help some other motorcyclist who stops at that particular garage.

THE FUEL TANK NEEDS A PALATE

When they provided proper mechanical devices for forcing the oil to the parts that require it the manufacturers of motorcycles did well, but they cannot be present every time a tank is filled with lubricant, and for this reason their plans are often upset. It would be a good thing if we could have some sort of a palate attachment for every oil tank, so that the tank could reject any lubricant not suited to the needs of the mechanism it supplies, but in the absence



ELMIRA M. C. BANQUET

MANY out-of-town guests as well as a host of local riders were present at the recent annual banquet of the Elmira (N. Y.) Motorcycle Club. Representatives from the Rochester, Buffalo, Syracuse and Binghamton clubs were on hand. Ralph D. Webster, general manager of the Eclipse Machine Company, of Elmira, acted as toastmaster.

Digitized by Google

of such an arrangement we must depend upon our own watchfulness.

The next time you converse with an intelligent repairman ask him why most motors wear out more quickly than they should. It is practically certain that he will blame improper lubrication. My personal experience has a bearing on that point. In 1911 I used a 7 h. twin machine to cover about 10,000 miles, and I am not what you would call an "easy" rider. I have many a brush on the road and trips of 200 miles or so in a day have not been infrequent with me, but I made it a point to use only good oil and at the end of the season I still had a perfect-running machine. I know that many of my friends found rebushing necessary before they had traveled one-fifth of the distance I covered, all because they were careless about their oiling. Finally I sold this machine, and so strenuously did I preach my doctrine of proper lubrication to the purchaser that he has covered about 5,000 miles with it and has experienced no mechanical trouble worthy of the name.

THE COUNTRY OIL-MAN'S VIEWPOINT

Well do I remember one vacation trip when I had the misfortune to run out of oil while we were traversing the country between Lake Champlain and Portland, Me. In the last large town we had struck I felt that my oil was running low, but I took it for granted that I would be able to obtain more along the route. As a result I was stranded about a mile from a small burg with my oil tank dry. There was enough of the lubricant in the motor base, however, to get me back to the village and, after waiting an hour and a half for the groceryman to return from church, I bought some very poor automobile oil.

My comment on the need of his carrying at least one good grade of motorcycle oil was met with the usual reply: "It wasn't worth while." By way of disproving my claim that a motorcycle power plant needed special oil he told me the time-worn story of the local man who had used maple syrup in his automobile motor by mistake and obtained satisfactory service. If an automobile could run on maple syrup the groceryman figured that a motorcycle certainly should be able to operate on a poor grade of automobile oil. That is the viewpoint of many a country dealer, so it will pay to exercise the greatest care when filling the oil tank at a wayside garage. This is not intended to apply to motorcycle dealers and repairmen. As a rule they are fully acquainted with the necessity for a good oil, and they will give the motor what it needs, but automobile mechanics are prone to argue that almost anything is good enough for a motorcycle engine.

MOTORCYCLE DEALER TO THE RESCUE

I traveled about ten miles with the motor car oil and in that distance my arm was tired from using the hand pump. Finally I saw the sign of a motorcycle dealer and I broke all records for draining my tank. Then I filled up with a reliable brand of lubricant and had no more trouble. It will pay you, Mister Rider, to get a gallon of the best oil obtainable for your motor and every time you leave home see to it that the tank is filled. The average tank will keep a machine supplied for 200 or 300 miles, and when your trip is to be longer keep an eye on your oil supply and watch for a satisfactory motorcycle station at which to replenish it.

Don't get stuck without oil. If you do, you will be in worse trouble than if you ran out of gasoline. The lack of gasoline will stall your motor, of course, but no damage will be done; if you try to operate your motor without proper oil you are certain to damage it—and also your pocketbook. If you are driving a new motor I would suggest that you keep it smoking a bit for the first hundred miles or so. Too much oil for a starter is better than not enough.

SAVANNAH M. C. RUN

Riders Will Celebrate Southern Memorial Day with 300-Mile Endurance Trial.

MEMBERS of the Savannah (Ga.) Motorcycle Club participated in a sociability run to Statesboro on Sunday, March 30. This marked the beginning of the season's long distance runs for the Savannah club. Heretofore their runs have been more or less informal, being simply 50 or 60-mile jaunts near the city. However, the officers now intend to hold such runs as the last one at regular intervals.

The committee in charge has completed arrangements for the 300-mile endurance run to be held on Southern Memorial Day, April 26, and Sunday, April 27. This will be held over the Grand Prize automobile course, which is ten miles in length. Part of this has recently been improved, while other sections of it are still in rather poor condition.

The start will be made at 2:30 p. m. on Saturday and, after riding the distance designated for that day, the contestants will return to the city. At 9 a. m. Sunday the boys will begin the second day's grind. The event is for members only, and there will be separate classes for twins and singles. Four prizes will be awarded in each division. Two trophies will be given; one, donated by the dealers, will be known as the Dealers' Trophy, and another, donated by O. A. Meyer, publicity agent for the club, to be known as the Press Trophy. The event will be run under F. A. M. sanction.

SAVANNAH CLUB'S FISH FRY

ABOUT 75 riders were on hand at the recent fish fry given by the Savannah (Ga.) M. C. Before the start President Williams gave a short talk relative to the club schedule. He stated that the Sunday runs would be held every other week during the season and announced a number of other events. Races will be held on the Fourth of July and runs to Beaufort, S. C., and Statesboro, Ga., are on the slate.

The riders paraded through the city and then out to Thunderbolt, where a short stop was made before returning to the city, and out to Kings Ferry. The accompanying photograph shows the boys at the latter point. Here each rider put forth his best efforts in an endeavor to do away with the fry, and as the squad was ready to get under way again the camera was snapped.

Savannah Riders at King's Ferry Where They Enjoyed a Feast on Recent Outing.

LEAGUE AIMS TO HELP SPEEDSTERS

NOT long ago Lee Humiston, the record-breaker, arrived in Chicago from the coast to enter a protest against a combination of the board tracks, as being in opposition to the riders' interests. He claimed to represent a union of the racers who wintered in California.

The Riverview track management claims to have shown him, however, that they are protecting the interests of the men whom they are compelled to count upon as the sole attractions to draw the crowds. It was pointed out that each rider will be allowed $3 per day for personal expenses; they will be provided with machines (all of one make and power), and repairs, oil, gas, etc., will not cost them anything. Regular prizes will be given for the league events while there will always be a few events in which special machines may be allowed to start. The races will be so arranged that there will be no splitting of purses and the heats of a race will not be so numerous as to cause exhaustion. The traveling expenses of all riders will be paid by the tracks, and arrangements are to be made whereby the "spare men" of a team will be afforded an opportunity at every meet for slicing off a piece of the money hung up.

"I think the boys will soon see that our plan will insure the permanency of the board track sport," declared W. M. Johnson, manager of the Chicago track and director of the F. A. M. "It will mean the return to competition in its real sense and this is what the people crave.

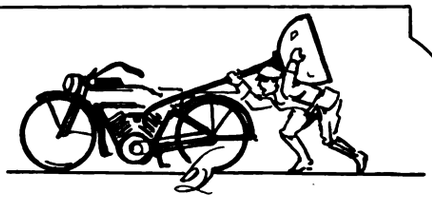
SOME FACTS ABOUT OILING



L. S. TAINTOR

IN the lubrication of ordinary machinery the oil manufacturer had a more or less simple proposition on his hands, for it was only necessary to supply an oil which would not wear out quickly and furthermore had what is known in the petroleum industry as "viscosity," or, more plainly speaking, sufficient body to keep the moving parts from rubbing together and thereby causing undue friction. Now, as the heat generated by the average journal or bearing which is not confined and does not come in contact with steam is only about 100 degrees F., and the temperature of the interior walls of the steam cylinder is really not much greater than the boiling point of water, i. e., 212 degrees F., the oil used for lubricating them does not need to have any remarkably high resisting power to heat, and the question of the oil burning up or vaporizing does not have to be considered.

Soon after the advent of the internal combustion engine, the manufacturers of oil found they had another problem on their hands, in order to properly take care of the lubricating requirements of this new type of motive power, for not only must the oil lubricate under high temperatures, but at the same time when it is through with that function and having worked its way out of the explosion chamber it must burn or vaporize as completely and cleanly as possible.

OFFSETTING THE CARBON EVIL.

When the internal combustion engine, such as now used in motor cars, motorcycles, boats, etc., first came into use in this country, it was thought that practically any kind of very heavy petroleum oil would be satisfactory for its lubrication, but it was soon found that the dark colored and black oils contained entirely too much "free" carbon, which was the cause of many of the earlier difficulties for this type of motor. In fact, carbon was so prevalent a trouble in the early days of gas engine propelled vehicles that the announcement of the oil manufacturer that he would guarantee his oils not to carbonize a motor within 200 miles of running caused much astonishment and was not generally believed by either the trade or the consumer.

A heavy-bodied oil was necessary for use in the old-fashioned gas engines, as their pistons and bearings were not accurately fitted and the greater "body," or viscosity, had a tendency to fill up the uneven surfaces and fittings and to increase and hold the compression. Later on, when gas engines were more highly refined in their adjustments, it was found that the lighter-bodied oils could be used with greater satisfaction, particularly on account of their containing less "free" carbon. This condition of affairs is now in effect in the motorcycle industry, and, notwithstanding the fact that the motorcycle engine has to depend on the lubricating oil to carry away some of the heat—to a much greater extent than does the water-cooled automobile motor—it is perfectly safe to state that within the next year or two all motorcycle engines will be able to use much lighter bodied oils than are used at the present time.

A great deal has been written and said about oils during the past few years, both from a technical and advertising standpoint, but of all the foolish and misleading statements the one that certain oils "contain absolutely no carbon" is certainly about as far wrong as it is possible for a statement to be, for all petroleum lubricating and burning oils are made up of varying percentages of hydrogen and carbon, and are, in fact, chemically known as "hydro-carbons." Therefore, the entire elimination of the carbon would mean the breaking up of the oil into some other chemical element. The writer verily believes that had Longfellow lived in the present day, he would have changed the line in "Excelsior," which reads "Beware of the pine tree's withered branch," to "Beware of the 'carbonless' oil," for one is almost as dangerous a proposition as the other.

OIL NOT ALWAYS TO BLAME.

Practically in every case where one experiences carbon trouble, he blames it on the oil he is using, little thinking that carbon deposits are oftener than not caused by a number of other conditions which may prevail in an internal combustion engine. About ten years ago when gasoline was plentiful—in fact, at that time it was really hard to dispose of the quantity necessarily made with the other petroleum products—refiners ran their crudes, as far as it was possible, to other products than gasoline. Consequently, the gasoline manufactured at that time was of a very high Baumé gravity, meaning very light in weight in its relation to the weight of water, and it was of a highly volatile nature. Quite naturally this gasoline would more readily combine with the oxygen of the air than would a lower gravity, or heavier product, on account of its gaseous nature, and when the mixture of this gasoline vapor and oxygen was burned or exploded in the explosion chamber of the cylinder, the combustion was very rapid and complete and a minimum residue was left to cause carbon deposits.

But with the increase in the number of gas engines during the last few years and the consequent large demand for gasoline the petroleum refiners found their position exactly reversed; gasoline was and is really scarce, the price of it is running up to figures which were never known before, and something had to be done to meet the demand. The only thing the refiners could do was to increase the percentage of yield of gasoline from a given amount of crude oil. This meant the producing of a lower gravity or heavier product that was not nearly so volatile in its nature, and in some instances we now find gasoline or what might more properly be called "motor fuel" which is of but slightly lighter gravity than ordinary kerosene.

Anyone can make a simple experiment and burn a small amount of gasoline and kerosene in partially covered cups; the first will flash off rapidly and leave practically no soot, the other will burn more slowly and leave quite a little soot or carbon. While the improved carbureters manufactured today will perform their functions satisfactorily with the lower gravity gasoline, it should be remembered that when it is used there is not always such combustion as there should be, and if the combustion is incomplete, there is a residue of carbon which under the heat of the explosion will bake on the interior of the cylinders, piston heads, valves and valve seats.

ROAD GRIT IN CARBON DEPOSITS.

When the percentage of gasoline in the mixture is too high, that is, when the mixture is "too rich," carbon deposits will form rapidly A mixture of this kind is indicated by a black smoke from the exhaust or by a strong odor of burned gasoline from the same place; also if the percentage of gasoline is too great, the motor will run sluggishly at low speeds and the explosions will be muffled.

No matter how good an oil is used, too much of it will cause carbon deposits on account of the inability of the heat of the explosion to burn off the surplus; this condition is readily shown by a blue or gray smoke from the exhaust pipe.

FROM J. E. FARRIS, of the Turlock Cyclery, headquarters for Harley-Davidson machines in Turlock, Cal., comes the accompanying photograph of the Harley-Davidson basketball team which has established a reputation for speedy work. "This team is one of the best in our district," writes Mr. Farris, "and is in its second year, it being a leader last year."

Digitized by Google

Another thing of which very little has been written or said is that a careful chemical analysis of scrapings from the interior of cylinders of automobile engines very often reveals that they are largely composed of silicate. Now, as silicate is an element entirely foreign to either oil or gasoline and to the motor itself, we must look around and see how it gets into the motor and how it is formed. Silicate is but another name for dust or sand, and when the road dust is drawn through the carbureter with the mixture into the cylinders, it is there retained by the partially burned oil, and the terrific heat of the explosions bakes it onto the cylinder walls, causing hard, brittle deposits. In view of this condition it might be well to suggest to manufacturers of carbureters, and to designers of motors, that they modify or change their designs so as to prevent, as far as possible, this dust from being drawn into the interior of the gas engine. If they succeed in doing this, they will have removed one of the causes of deposits in the cylinders and also another cause of trouble, for if the dust gets into the crank case it certainly helps to wear out the bearings located there.

DANGER IN UNBRANDED OIL.

There is still another thing which causes deposits of carbon to collect. After a gas engine has been run for a certain length of time, the exhaust pipe and muffler are apt to become more or less clogged with carbon, dust, dirt and partially burned oil. This results in back pressure, and when the motor cannot exhaust freely carbon trouble appears again, only this time it is caused by the incomplete scavenging or cleaning out of the cylinder. Another thing which makes it important to have the burned or exploded gases carried off quickly is the necessity of having the explosion chamber clean when the suction stroke begins, for if the partially burned gases are mixed with the fresh charge of gas from the carbureter, the entire mixture will be weakened, causing a heavy loss of power.

Summing the entire matter up, the writer's advice to the motorcyclist who desires the best results from his motor and the least carbon is for him to use as high a gravity gasoline as it is possible to secure; to be careful to see that the motor is not running on too rich a mixture, this implying incomplete combustion; that too much oil is not used; to see that the exhaust pipe and muffler are clean and that there is a free passage for the burned gases; to keep as much of the road dust out of the carbureter and motor as possible, and, finally, to use only an oil of known merit and not some cheap, unbranded product which may be adulterated and which may cause damage amounting to many times the value of what is saved by its purchase.

CANADIAN CLUB RE-ORGANIZES

AT the recent reorganization meeting of the Calgary (Canada) M. C. the following officers were elected: George Bain, president; John Barr, vice-president; C. Leslie Munroe, secretary-treasurer; F. W. Sanguine, captain, and R. S. Chisholm, lieutenant.

REPORTS ON N. Y.-ALBANY ROUTE

Bulletins from metropolitan riders state that main roads to capital and westward are in fine trim for spring touring.

LATE road bulletins that have reached MOTORCYCLE ILLUSTRATED from riders of the metropolitan district are to the effect that despite the uncertain weather of the past few weeks excellent going will be found throughout almost the entire route from New York City to Albany. This announcement will be welcomed by scores of motorcyclists who have desired to take advantage of the present periods of semi-spring weather, and who have hesitated through lack of knowledge of the up-State roads. A rider who has been over the roads to Albany and as far westward as Syracuse several times during the last two weeks asserts that the most timid novice need not hesitate to travel them in their present condition. Referring to the trip from New York City to Albany he states that most of the run can be made "without jarring the ash off a cigar." While this statement may be open to qualification, in view of the fact that the rider in question is a hardy roadster who stops at nothing, it is safe to assume that the roads referred to are quite up to the mark.

C. A. Emerald, a sportsman of Willows, Cal., is shown in the above photograph as he appeared on his return from a recent duck hunt. On this occasion he brought down 36 wild geese, and the picture shows how he carried them back to camp on his Pope "4."

One of the riders in metropolitan territory who has a fund of first-hand information relative to New York State roads is Meeds Hulse, of Weehawken, N. J., one of the best known sidecar drivers in the East. A few days ago Mr. Hulse pulled up at 51 Chambers street with his 7 Indian and sidecar and paid a visit to the editorial department of MOTORCYCLE ILLUSTRATED, during which he discussed winter riding in general and road conditions in particular. He has made several business trips over the New York-Albany route of late, and reports it in almost perfect trim. He suggests that motorcyclists using this route should cross the Hudson at Newburg, instead of further up, as is sometimes done. His bulletins on the roads westward from Albany are almost as satisfactory. It is his custom to go up on the west side of the river to Newburg and cross at this point to the east side. From this point northward on the east side of the river as far as Albany he states that the roads permit of almost any speed the rider cares to take chances on. His experience on the roads above Newburg on the west side of the river is more limited, but he states that no motorcyclist need hesitate to include them in a spring trip. Between Newburg and Kingston, where there are optional routes, one close to the river and the other a few miles inland, Hulse recommends the latter. He reports that the river route is in good condition, but that the inland road has recently been improved and is now the more desirable. Hulse has used his sidecar on these roads during the winter.

CHICAGO SAUCER DAMAGED

THE terrific windstorm which swept through the Middle West on the night of March 23 was responsible for the partial destruction of the Chicago Motordrome. No less than 500 feet of the track and grandstand were carried away for a distance of 75 feet, and this section will have to be entirely rebuilt from the ground up. The judges' stand and paddock were also reduced to kindling wood. The hurricane formed a pocket under the ledge of the track and lifted it bodily into the midfield, turning it over.

Fortunately the man who built the track for Jack Prince is still available and has been engaged to make the necessary repairs. The official opening of the motordrome league on May 21 will not be affected.

AN ADDED ATTRACTION

IN addition to the lecture to be given by Chairman Sauer to the Cleveland riders, April 19, the Cleveland M. C. has made arrangements to have Harry Vail, county commissioner of Cuyahoga County, on hand to give a talk on good roads.

BUYING the LUBRICANT

by STANLEY ROSEBERY

IMPROPER oil causes more trouble on a motorcycle motor than even poor fuel or a mania for tinkering on the part of the rider. With unsatisfactory gasoline there will be at the most a heavy carbon deposit and finally a complete refusal of the motor to run, while tinkerers rarely do more than effect a shutdown or "strike" on the part of the unfortunate source of power. But with poor oil, no matter how positively fed to the bearing surfaces, the least to be expected is abnormal wear followed by a catastrophe likely to involve the whole motor. A summary of the usual causes which lay up a motor for repairs will show that cheap or doubtful oil has been responsible for more replacements and repairs than all the other trouble-makers, with the possible exception of the rider's forgetting to give oil at all—or not enough.

Oil for the lubrication of air-cooled motors is an expensive article compared with that used in other kinds of machinery. All mineral oils are distilled from the crude petroleum originally, after a series of gases (rhigolene, chymogene), and light oils (gasoline, the naphthas and kerosene), have been obtained. Up to this point oils are usually alike, but in most of the good oils a refining process is next carried out. The result is that the high-grade oils thus obtained are free from any substance which will injure the bearing surfaces. Refining, however, involves care and considerable expense, and unscrupulous oil men cheapen the cost of production by adulterating the oil with various substances, a few of which are given here.

ADULTERATION AND ITS EFFECTS.

Oil for motorcycle lubrication must have a certain "thickness" in order to resist the "squeezing-out" tendency of the shaft in the bearing; it must be able to stand a great amount of heat before decomposing or "flashing." It must be clear and must not contain injurious additions to the bearings, as mentioned above. Refined oil being expensive, the adulterator, therefore, goes about obtaining the necessary "body" or "thickness" by using animal or vegetable fat in the mineral oil, or by adding aluminum or lead soap, and thus cheapening the production cost. He obtains the desired body in this manner when the oil is cold, but when it is heated there is a different story to tell. Animal and vegetable fats form acids which corrode the metal parts and burn at a much lower temperature than that of a good mineral oil, so that the bearing surfaces are destroyed and there is deposited a typical "fat" carbon. This carbon is very hard when cold, needing a scraper or chisel to remove it, and when warm soon becomes incandescent, resulting in the motor pounding in pre-ignitions and similar troubles. It gums the valve surfaces and piston rings also, causing loss of compression. When there is a soap adulterant in the oil it forms objectionable deposits of carbon in the cylinder as soon as the oil is thinned by heating, and decreases the flow of oil to the bearings.

But even if the oil is not "doctored" as above, it may be still unsuitable for use in a particular motor. The piston rings may be a loose fit (as when a motor is old), or they may be tight on a brand-new motor. The same oil cannot be used effectively in both motors. Most motors require different grades of oil in summer and winter, and the latter oil is generally the lighter in body and has a lower point at which it tends to become thick. To illustrate further, the diversity in oils, the writer once had the use of a little air-cooled twin for the lubrication of which a high flash point *steam engine* oil gave the best results. Ordinary motorcycle motor oil was totally unsuitable for this motor, being too light.

It is generally a mistaken idea that only one make of oil is suitable for a particular motor This idea has been fostered to rather too great an extent by motorcycle agents who wish to make a bigger profit on an article bearing the name of the motorcycle manufacturer than on other brands. There is no doubt at all that the manufacturer knows just what kind of oil gives best service in his machines, and the writer strongly advises every rider to use such oil when it can be obtained. But what if the rider cannot get his particular brand? Recourse must then be had to the oil manufacturer who can give him another oil suitable for his motor. He can get this oil by asking his dealer or garageman for it, but what proof has he that he is getting just what he asks for. He has little to depend upon except the color, and this is generally of little value.

BUYING IN CONTAINERS.

His safeguard, the only satisfactory one, is to buy oil in containers, in the original sealed cans bearing the name and trade-mark of the manufacturer and a statement of the uses to which the oil is adapted. Oils thus purchased, if of responsible manufacture, contain no adulterants, and the purchaser runs no chance of "mistakes" being made on the part of the garageman, accidental or otherwise. When oil is bought from a 50-gallon can or barrel, it may or may not be what it is claimed; the attendant may have made a mistake in filling the can, and while the color is correct the oil may ruin the motor.

Or something like the following system may be adopted: The writer once went into a country garage for oil, and got what was suitable from a barrel in the oil room. He was driving a high-speed water-cooled motor in an automobile and while waiting for the tank to be filled saw a similar oil supplied to a motorcycle, a slow-speed truck motor, and a low-compression, high-powered automobile—from three different barrels. On accusing the proprietor of using but one oil in all three barrels, the latter admitted the facts and said that "oil was oil," and it was cheaper to stock one grade than four or five. The oil company was notified later and the proprietor was brought up quickly, but two at least of the motors were damaged by this man's "economy." Such a chance as this is what the motorcyclist runs when purchasing oil at a place where he is not acquainted and where it is sold out of a barrel. The risk will be appreciated when it is remembered that motorcyclists calling for oil are rare and automobilists plentiful, and that the oil most likely to be served to motorcyclists will be that kept in stock for the water-cooled motors of automobiles. Still worse, an oil totally unsuitable for any vehicle motor, one containing fats and other cheap adulterants, may be that contained in the barrel, and this should be shunned like a plague. In the final analysis the oil sold in a container by a reliable company is by far the safest for the motorcyclist.

HAS A SPEEDY MACHINE

W. J. MÜLLER, of New York, whose reputation as an automobile racer as well as a two-wheeler track rider, is well known in motor circles, is here shown on his new Excelsior. The motor has been specially fitted to his requirements, having abnormally large exhaust valves of tungsten steel and being balanced for extreme speeds. The oiling system incorporates leads to all bearing surfaces in addition to the usual splash, and the tanks are arranged so that a maximum of oil and fuel can be carried without extra weight or wind resistance. W. J.'s experiences with Anzani and other high-speed, air-cooled motors has been of the greatest assistance in the construction of this new machine. He states that it will do the mile in 39 seconds, and he expects to make some killings this season.

HOW THE DEALER BENEFITS.

A reputation is easily gotten among riders. A dealer may be known as generally obliging and prompt in all his business relations, but there may be doubt as to the quality of the oil he stocks, and careful riders will go elsewhere for their lubricants. This going to the other fellow for oil soon results in going to *him* for other supplies, and there are two good reasons for this. First, it is easier to get several things at one place than to go to two or more places for them, especially when they are needed badly; secondly, the dealer who sells good oil is likely to have other supplies of quality. He is not trying to make a few cents extra profit at the expense of his customers by selling inferior oils; hence he is to be trusted in other things as well. The reputation of *this* kind of dealer travels widely and rapidly, and he benefits accordingly.

Practically no dealer nor garageman can afford to refine oil, nor can he afford to conduct experiments to determine its suitability to various motors. By getting his oil in containers, from reliable oil companies, he is guaranteed as to the quality of the oil and the company has done all the necessary experimenting and knows which qualities or brands are most suitable in each case. If the rider has trouble with the oil, the responsibility rests with the oil man or the rider, and the dealer has the seal on the container as his protection in case of argument. Finally, the oil company, advertising as it does most extensively, creates a demand on the part of the rider, and the dealer gets the benefit, which is not the case when the oil is of doubtful quality and from an unknown source.

NEW JERSEY M. C. SCHEDULE

Newark Riders Fix Dates for Bi-Weekly Runs to be Held in April, May and June.

PREPARATIONS for spring and summer tours of the New Jersey Motorcycle Club, of Newark, are now being prepared. Captain Cordes is anxious to revive the interest in touring that existed two years ago, and has offered a silver medal for the rider rolling up the greatest mileage on club tours during the season. The schedule for the first three months is as follows:

April 6—Easton, Pa., 132 miles, going via Irvington, Springfield, Scotch Plains, Somerville, Clinton and Whitehouse; leaving Eaton the riders will return to Newark by way of Washington, Schooley's Mountain, Morristown, Madison, Chatham, Springfield and Irvington.

On April 20 a 111-mile run to Trenton will be made. The route to Trenton is via Elizabeth, Westfield, Plainfield, Somerville, Kingston and Princeton. The return trip will be made via Princeton, New Brunswick, Plainfield, Springfield and Irvington.

The run on May 4 will be to Delaware Water Gap, a distance of 140 miles via Morristown, German Valley and Hackettstown. The same course will be followed on the return trip.

The run to Port Jervis is scheduled for May 18, is over the 162-mile course passing through Montclair, Parsippany, Dover, Port Morris, Netcong, Newton and Milford, Pa. Andover, Hopatcong, Morristown, Madison, Chatham, Millburn and Irvington will be passed on the return trip.

A 75-mile jaunt to Tottenville, S. I., will be held on June 8. The route is through Elizabeth, Elizabethport, Port Richmond, Bergen Point, Clifton and New Dorp. In returning the riders will go by way of Perth Amboy, South Amboy, Sayreville, Weston Mills, New Brunswick, Metuchen, Rahway and Elizabeth.

The last of the bi-weekly runs included in the present schedule is that of June 22 to West Point, via Montclair, Singac, Pompton, Suffern, Landentown, Haverstraw, Tompkin's Cove and Fort Montgomery. The same route will be followed on the return trip.

Runs for July, August and September are now being planned and will be announced later.

1913 COMPETITION RULES

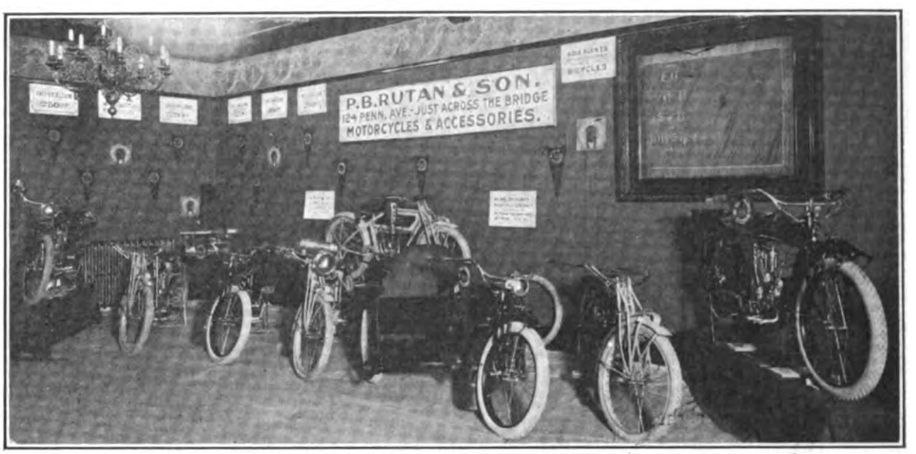
COPIES of the 1913 edition of the F. A. M. competition rules are now ready for distribution, and any one desiring them should write to National Secretary Gibson or Chairman Thornley, of the competition committee. Many requests for them are already on file.

ADDRESS ON FUELS

H. TIPPER, of New York City, chemist of the Texas Oil Company, spoke in Indianapolis before automobile men on March 11 on the subject of a substitute for gasoline. Mr. Tipper said that the expense attached to the production of naphtha, the proposed substitute for gasoline, will be so great that other fuels must be sought for. Many men interested in motorcycling were present at the Hoosier Motor Club to hear the speaker, who was brought to Indianapolis by the Society of Automobile Engineers.

RUTAN SHOW EXHIBIT

IN the photograph below is shown the attractive exhibit of P. B. Rutan & Son, of Elmira, N. Y., at the recent local motorcycle show. Rutan has the agency for the Indian and Excelsior machines and is one of the most active dealers in Elmira, as well as being a popular rider.



WHEN and HOW TO USE LUBRICANTS

Pointers for the Rider Who Demands Maximum Motor Efficiency

(Reprinted from the Motorcycle Manual.)

Intervals.	Part.	Lubricant.	Remarks.
Every time machine is used.	Cylinder, bearings, etc.	Cylinder oil.	6-12 drops per minute sight feed; one pumpful, 10 to 15 miles at ordinary speeds.
	Valve lifters.		
	Speed gear levers.	Machine oil.	Few drops from oil can.
	Steering head.		
	Controls.		
Attention weekly.	Free engine clutch (steel on steel).	Spindle oil or graphite and oil.	Few drops or renewal as the case may be.
	Free engine clutch (bronze on steel).	Graphite.	As needed for renewal.
	Belt.	Neatsfoot oil.	When belt gets hard or slips, use dressing. Keep oil off.
Attention every 350 to 500 miles.	Planetary speed device.	Non-fluid oil, oil and graphite, special oil.	Fill as high as shaft bearings.
	Hubs.	Cycle or special oil.	As per instructions from maker.
	Coaster brake.	Grease or special oil.	Renewal if necessary.
	Brake rigging (rim or band type).	Machine oil.	Few drops.
	Chain.	Graphite.	Boil in graphite and grease after washing in kerosene.
Attention every 5 or 6 months.	Magneto (ball-bearing).	Special magneto or 3-in-1 oil.	Small amount (see maker's instructions).

ALONG the OLD NATIONAL ROAD

by ROBERT BRUCE

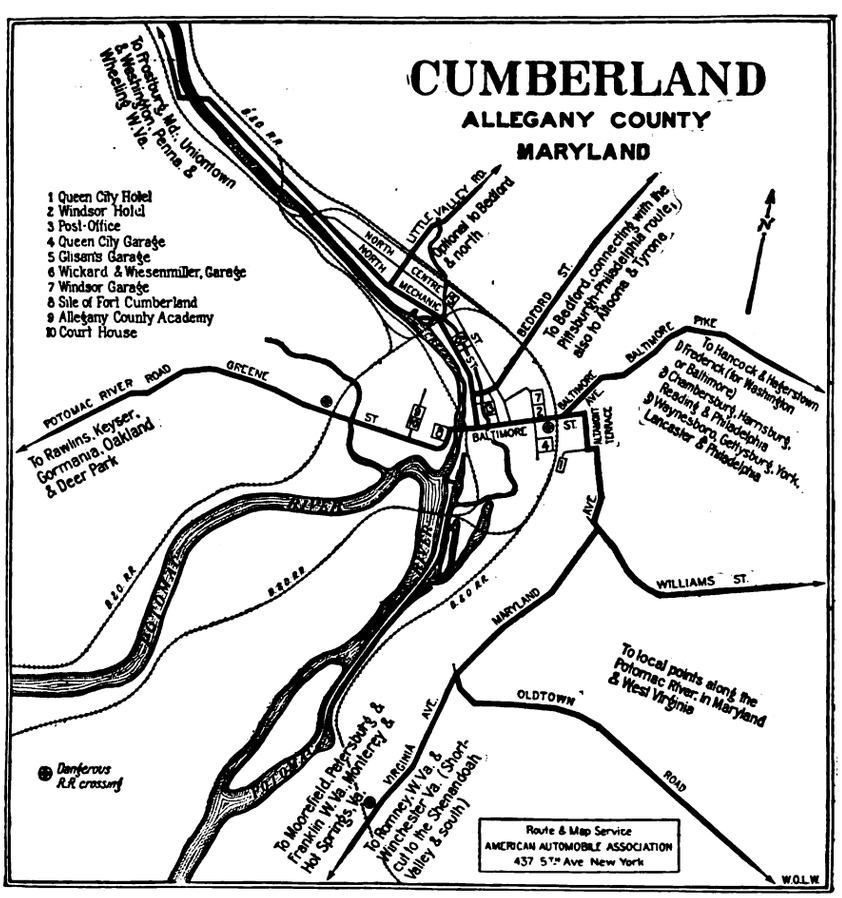
THE photograph on the opposite page was taken in the "Narrows," a short distance west of Cumberland, Md., the view looking toward Frostburg and Grantsville. It shows a strategic portion of the old National, or "Cumberland Road," built by the federal government during the early part of the last century, primarily for the purpose of connecting the National capital with the vast territory then being rapidly settled west of the Allegheny Mountains and the Ohio River. It is also one of the most picturesque localities along the entire route, and will be quickly recalled by any one of the large number of motorcyclists who have passed through on trips between Cumberland and Wheeling.

In the center of the picture is the National Turnpike, crossing the historic Wills Creek by one of those solid stone-arch bridges that are yet in good condition most of the way from Cumberland to Wheeling; note the long, easy curves at the ends of this bridge, the absence of grades and the roadbed that is as substantial as either of the two railways. On the right are the tracks of the Baltimore & Ohio Railroad, the pioneer steel highway through this section (whose building hastened the decline of the National Road), and on the left the Western Maryland Railroad. In passing, it may be interesting to recall that the road was built before either of the railways, and so had the first choice for a right-of-way through these Narrows, which provide the shortest and easiest passage into the Alleghenies.

HOW THE DISTRICT WAS DEVELOPED.

The old National Road not only assisted greatly in the settling and development of the West in general, but it was undoubtedly the largest single factor in the upbuilding of the cities and towns in the Ohio River valley, as well as Columbus, Indianapolis, Terra Haute, and a hundred smaller cities and towns on the direct route between Washington, Baltimore, Hagerstown, Cumberland and the Mississippi River at St. Louis. Before this road was opened to through travel, emigration had only the choice between the long, frequently treacherous wilderness paths, and floating down the Ohio River from Pittsburgh or Wheeling. Most of the explorers and early settlers chose the latter after once reaching that river, which carried them to Marietta, Cincinnati, Louisville, Paducah, etc., before central Ohio and Indiana had any through highways.

Not only did the Old National Road give practically an air-line across the Alleghenies, Ohio, Indiana and Southern Illinois, but it passed almost midway between the Great Lakes and the Ohio River. Along this strategic line great and prosperous cities have been built, themselves the centers for important road systems of a later day, but among them all the old federal highway stands pre-eminent. Very many automobile trips are made each year over all or part of it, despite the fact that since it was given up as a government project, and has lapsed back into the control of the states of Maryland, Pennsylvania, Ohio, Indiana and Illinois, many stretches have been allowed to fall into bad condition, especially between Hagerstown and Cumberland, Md.



Map of routes into, through and out of Cumberland, Md., the principal gateway into the Allegheny Mountains by the old National Road.

PLANS TO RESTORE THE OLD HIGHWAY.

Beyond Cumberland road conditions are much improved, and the average long distance traveler is willing to make some allowances as to surface because the Old National Road is nearly everywhere so broad and straight that no trouble is experienced in finding the way, except for the turns made in going through a few towns like Washington, Pa. (where the road from Pittsburgh comes in from the north to form one road to Wheeling and the West). Plans are now under way to restore this old-time highway to good condition throughout, a project which the pride of the several states concerned should cause them to support. It is also quite likely that some of the money now being raised by the automobile and allied industries for a transcontinental highway, under the leadership of Carl G. Fisher, of Indianapolis, will be spent on portions of this route in case any of the states through which it runs fail to do their part.

It is a matter of passing interest that the bridges on the National Road in Maryland, including the one shown in the picture, were once the subject of warm controversy between that state and the federal government. After it had been decided by Congress to let the road lapse back into the control of the several states traversed by it, Maryland and Pennsylvania accepted their parts of it only with the provision that the government should put this road in good condition within their boundaries, and construct substantial stone bridges over the largest streams. The War Department, of which Lewis Cass was then secretary, appealed to Congress for an appropriation of $600,000 to make the necessary repairs between Cumberland and Wheeling.

CLOSELY LINKED WITH HISTORY.

Congress cut this down to exactly $300,000, which led the engineers of the War Department to plan a

reduction in cost by making an understructure of stone and a superstructure of wood. But this change was refused outright by Maryland, and the government had to yield. In the end the stone bridges, such as the one shown, were built, whereupon Maryland took over its portion of this road and has since controlled it.

Through these "Narrows" passed Nemecolin, the Delaware Indian who was engaged by the Ohio Company, a considerable time before the Revolution, to blaze a path for foot travelers and pack horses across the mountains toward the West. George Washington, then a young lieutenant, also went through a few years after Nemecolin, on his mission from the governor of Virginia to Fort Duquesne (now Pittsburgh); and then followed Braddock's expedition in the French and Indian war. A generation later began the great emigration from the East and South to the West over the Old National Road, until the railroad took its place in 1853. The route certainly does not lack historical interest.

BAKER IN LOS ANGELES

WHEN last heard from Edwin G. Baker, the Indianapolis speedster, had just left Los Angeles on his way to San Francisco. Leaving Indianapolis January 27 Baker traveled southward through Georgia and Florida to Key West, and thence by steamer to Havana, Cuba. After a short stay in Cuba he went to Kingston, Jamaica, and reports that the roads in both Jamaica and Cuba are generally as good as those found in the States. From Kingston Baker took a steamer to Colon, Panama, where he enjoyed a week's inspection of the canal. Leaving Colon he rode to Panama City and then embarked for San Pedro, Mexico, from which point he rode to Los Angeles.

CLUB IN FINE NEW HOME

THE official opening of the new quarters of the Chicago M. C., at 3518 Ellis avenue, in the form of a dancing party held on Saturday evening, March 22, was appropriate and imposing. No less than ninety couples occupied the large floor of the ballroom.

The new clubhouse, which replaces the club's former home on "The Midway" which was partially destroyed by fire, has made a hit with the riders of the Windy City. Since the middle of February, the membership has been increased by thirty-five and the riders have been making more use of the facilities provided. There are three bowling alleys in the building, as against two in the old clubhouse; the ballroom is much larger, while there is considerably more space in the hall where meetings are held. The pool and billiard tables are located in a suitable room on the second floor.

WASHINGTON TO SAN FRANCISCO

HAVING left Washington, D. C., after the inauguration, Augustus Karekus, the Greek rider who is making a motorcycle tour of the world, is now heading for San Francisco, from which point he will sail to the Hawaii Islands.

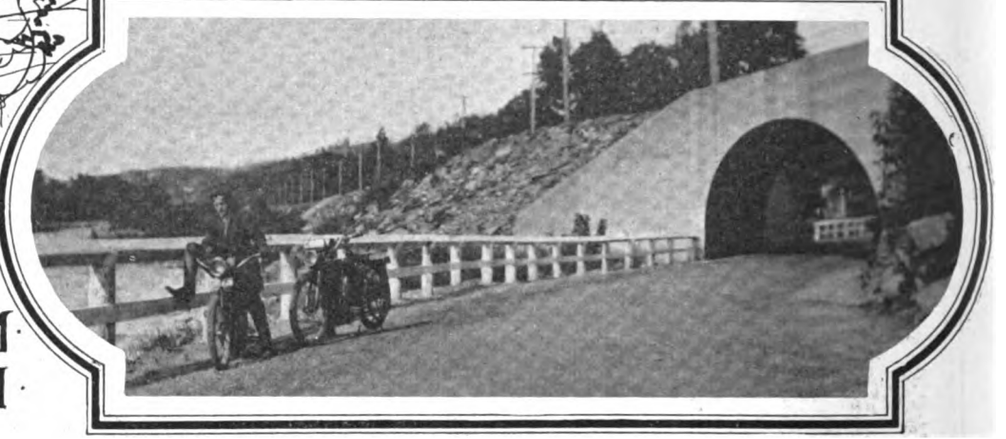
A DAY on the OPEN TRAIL

By GEORGE M. JOHNSON



IN the first place we *planned* to make it a day on the road, but you probably know what Burns—not Detective Burns, of ill repute among dynamiters, but Bobbie Burns, the Scottish bard—said about the best laid plans of mice and motorcyclists: they "gang aft a-gley," which is equivalent to saying in modern English that the deal is often gummed by unforeseen incidents.

The night before "the day," when Partner came around to ask me where we should go, I discovered that the leather lagging on my front pulley was worn down to the thickness—or thinness, rather, of tissue paper. In the light of that discovery I was unable to throw out any information on the vexing question of our route, and so we left it to chance.

As soon as stores were open on the following morning, I hustled down town and bought some lagging with which I proceeded to cover the front pulley. I had but five lagging screws, which was none too many, and furthermore I was in a hurry, which made matters worse. Owing to my haste in the necessary drilling operations, I found, on applying the new lagging to the pulley, that the holes in the leather fitted those in the pulley face about as accurately as a magneto spanner wrench fits a spark plug.

Nevertheless, I tried to force those lagging screws home, laboring under the impression that force would accomplish anything. In the case of the first three screws, all went well, but please remember that I had only five. The next one started properly—at least I thought it did—until its head began to wabble about in a peculiar and eccentric manner, which convinced me that it was not going at all properly. Examination showed that the threads had missed fire, to the vast detriment of the screw. Then I tried the other, and with similar results.

A DELAY THAT PEEVED MY PARTNER.

About that time Partner blew in, expecting me to be all ready for the road; he soon perceived his mistake, and then, on the principle that four hands and two heads are better than half that number, he joined forces with me in an attack upon that beastly lagging. We filed off the damaged threads on my two screws, enlarged the holes in the leather until they were nearly as expansive as the screw heads, and tried again. Result, more stripped threads; and all that time we were missing the joys of hitting the road on an ideal day. But everything comes to an end, and at last that lagging was in place.

"Ready now?" inquired Partner hopefully.

"Nix!" I growled. "Haven't had time to fill the gas and oil tanks yet."

Partner uttered a doleful groan, but darted into my "garage," presently to emerge carrying a chamois funnel, gallon measure, and a five-gallon can of gasolene.

"For Pete's sake!" he exploded. "Hustle your bones a bit and shoot some oil into that tank, while I feed her the gas! Jam your toe down on the accelerator and keep it there!" (Pard is only a humble motorcyclist, but he likes to talk as if he were in the four-wheeler class.)

"For Pete's sake!" barked Pard (that's a favorite expression of his), "when you write up an account of this trip, throw in a terrible warning against the chap who is never ready! And put in something about using your head, so that nobody else'll spend an hour and a half doing a twenty-minute job!"

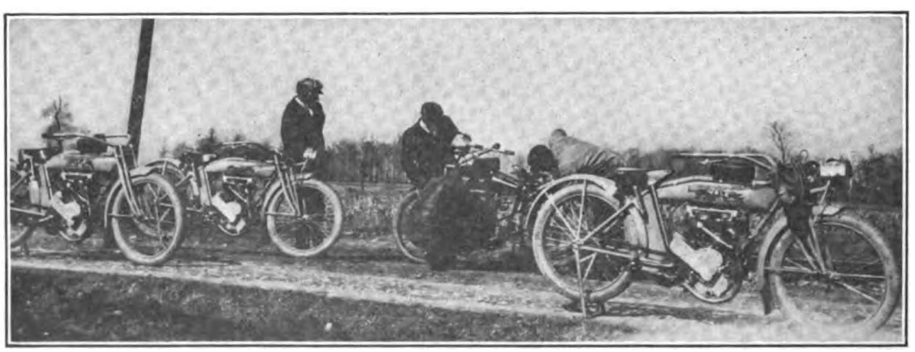
ON THE ROAD AT LAST.

The only other thing to disturb Pard was the fact that my camera turned up missing, and I took a ten-minute search to disclose its whereabouts. He had no business being peeved, though, because this was positively the first time he had ever waited for me. But he was right, just the same; I should have been ready.

As I remarked before, it was a glorious day, and no sooner were we on the road than both of us forgot the vexations of getting started. That's a fine thing about motorcycling; it's the best trouble-forgetter that I know of. If things are going just as wrong as they possibly can, get the old bus out for a run and forget everything else. When you get back, ten to one all the difficulties will be smoothed out as even as a new macadam road. The trouble is usually with *us*, not with the world in general, and when *we* are properly adjusted, so to speak—carbureter working in grand style, spark hot, compression good—there is nothing to worry over.

Pard and I decided to head in the direction of the Naugatuck Valley, our route from New Haven taking us up through the picturesque Woodbridge Hills. There are some good stiff grades through this section, but none of them bothered our mounts in the least. The first five or six miles were good macadam, after which we struck dirt roads—not at all bad, however—into Seymour, on the Naugatuck River.

The Naugatuck flows through a beautiful valley which it has cut out in the Connecticut highlands; the scenery is superb, and to make matters still better from the motorcyclist's viewpoint, one could not ask for a finer road than that which follows the river. Its sole defect lies in the numerous sharp curves, made necessary by the narrowness of the valley, though there is usually a warning notice before each place of danger; for a careful rider the road is as safe as if it were a straight line.



Riders of the Toledo (Ohio) M. C. Extending the Hand of Good Fellowship in a Practical Way to a Rider with a Cranky Mount.

ALONG THE NAUGATUCK RIVER ROUTE.

There is considerable auto traffic along this

Digitized by Google

road, and I noticed that the drivers of machines were very careful as a rule. A prominent exception was furnished by two big cars in the hands of factory testers. We met them snorting along at an inexcusably reckless pace, rounding sharp bends at forty miles an hour, and with no warning signal save the roar of the huge, unmuffled engines. Those fellows, expert drivers though they are, will surely pile up some day.

Pard and I plugged along at a good average pace, rounding the curves slowly and keeping on the right side, but opened up a bit on the straight stretches. We stopped occasionally to take a picture, and, on one of these stops, I discovered that the gears of my speedometer drive had been running at cross purposes, until they were quite badly chewed up. Fortunately the trouble had not been going on long enough to ruin the gears, and, after a few minutes' work with my screwdriver, everything was again in good shape.

A short distance beyond Seymour is a very dangerous spot—a right-angled turn in the road, which is crossed at that very point by the trolley line. When going up the valley, one cannot see the track even ten feet ahead, so that an ideal combination for a serious accident is furnished. But Pard and I are both conservative; we never believe in taking chances just for the fun of it, and very wisely slowed down as we approached the track. Then, as fate would have it, a trolley appeared around the bend, not twenty feet away. But the motorman had his car under perfect control and stopped, in spite of the fact that we had already done so, motioning us to cross.

As we neared Waterbury a big auto made several attempts to pass us, which we naturally resented. Finally, when we were well within the city limits, ye humble scribe riding ahead, the car swept up alongside with a rush. I gave the throttle of my twin a violent twist, and the old girl jumped ahead like a scared rabbit, while the car, after staying beside me for a few seconds, dropped to the rear to be heard from no more.

SPINNING ON THE HOME TRAIL.

In course of time we were again swinging down the Naugatuck Valley. We paused at the trolley bridge for a picture, and, as Pard squeezed the bulb, he emitted a joyful snort.

"There's a car coming on the track behind you," he chortled, "and I got her!" Cool of him, wasn't it? At least I thought so.

Going into Seymour, we met a chap standing disconsolately beside about the worst relic in the shape of a motorcycle it has ever been my privilege to behold. I thought he might be in trouble, and slowed up to see, but he wanted no help. We stopped a few minutes in Seymour, and later on again met the relic as we plugged up a tiny hill; the poor old bus had gone out half way to the top.

"I wish I had your machine!" we heard the rider shout. I'm sorry for him; it is indeed a shame for a lad with the true motorcycling spirit to be compelled to waste his time on a worthless has-been. Here's hoping he connects with a brand new twin for 1913.

Pard and I took a slightly different route homewards, through another part of the Woodbridge Hills. Some time in the future I hope to use a trip through them as the basis of a thrilling narrative. My motorcycle has taken me many times into that region, on fishing or hunting trips, or merely for the sake of an enjoyable spin.

We rolled into our respective front yards in plenty of time for supper, which we were certainly ready to appreciate, well satisfied with ourselves and our machines. We had experienced nothing particularly exciting, and had had no trouble of any kind. It was, in fact, just such an excursion as demonstrates most clearly the worth of motorcycling as a sport—one of the best ways of spending a holiday.

HANDY PARCEL POST VAN

FROM Cleveland, Ohio, comes the accompanying picture of a special parcel post delivery van attached to a Minneapolis motorcycle. This outfit is proving very efficient in Uncle Sam's postal service in Cleveland. The photo is forwarded by A. T. Gregg, of the special delivery division in the Cleveland post office.

A STURDY HILL-CLIMBER

CERTAIN automobiles have reputations for climbing extraordinary grades on the high gear, and one of the latter often used as a test hill is the cobble-stoned surface of West 187th street, New York. It runs east from Broadway to Wadsworth avenue and resembles a steeply-pitched roof in grade, being shunned by most automobilists and motorcyclists. Even powerful twins fail to reach the top of the 200-foot street unless they are in the best of conditon. It has been conquered by one sidecar outfit, which made the ascent six times in succession on March 21 last. The outfit, which we illustrate, is the property of H. Lichtenstein, of West 98th street, and consists of an 8 h. p. Reading-Standard with Simplex coach-built sidecar attached. The average speed of all ascents was 21 miles per hour. The gearing of the sidecar outfit was about 4¾ to 1. The photo is by H. A. King.

From PITTSBURG to ALBURQUERQUE

PART TWO by C. E. PARKER

IN the first instalment of my story I dealt with the experiences of my partner and myself in our trip from Washington, Pa., to Brazil, Ind., and in the article which follows I will tell of our experiences from that point to Albuquerque, New Mexico.

We had expected to obtain some oil and a few sundries while in Brazil but the store was closed. A motorcyclist whom we met there advised us not to follow the route we had mapped out to St. Louis, but to continue on the road we had been using. We took to the road again and soon passed Effingham and Altamount. The highways in this section were extremely rough, with plenty of dust and sand and we also encountered many steep hills. Riding along through such country as this we passed St. Elmo and Brownstown. Here the roads became slightly more level. After getting supper in a farmhouse, we went out to a hayfield and made a comfortable sleeping place.

In the morning we continued on to St. Jacobs, arriving there in time for breakfast. Collinsville and Caseyville were next on our route, and at the latter place we were forced to leave the road and make a detour through a cornfield, as the road was being repaired. The hills were very steep and some of them appeared to be almost unclimbable. After such a ride as this we were glad to regain the main highway, although we found this very poor into East St. Louis. We crossed to St. Louis over the great Eads bridge, paying five cents toll.

ON THE SANTA FE TRAIL.

We spent the best part of the next day making some adjustments on our machines and left about 3 p. m. for St. Charles. We crossed the Missouri to St. Charles and then rode on to Cottlesville. We had supper there and then started out of town to look for a camping place, but as it was very dark we left our machines along the roadside and came back to town. Up to this time we had been averaging about 115 miles a day, but the conditions we had to contend with after leaving St. Louis necessitated a reduction in our daily average. The road across Missouri is called the "Across-the-State Highway" and is well marked with red, white and blue bands on the telephone poles. The country through Missouri was a pleasant surprise to me. I had expected to find almost a desert, but many districts were quite hilly, well wooded and not unlike western Pennsylvania and eastern Ohio. Traveling over rough and rocky roads we passed a number of small towns and after a night in camp we proceeded to New Florence for breakfast.

Continuing from this point we passed through a number of villages and shortly after leaving the town of Rochport it started to rain. This so affected the road that we were unable to ride; in fact, working together we were unable to push one machine, so we left the mounts by the roadside and went to a nearby farmhouse for supper. In the morning the roads were somewhat drier and we were soon under way. Shortly after leaving we passed a large "Ocean to Ocean" sign, and knew that we were now on the Santa Fe trail. After leaving New Franklin we crossed the Missouri River to Booneville. We had not gone far when it began to rain again and we stopped at the Old Trails Road Tavern, at Arrow Rock, where we had dinner. As it continued to rain we decided to spend the afternoon overhauling our machines. It cleared up about 3 p. m. and we rode on to Marshall, where we stopped for the night.

DRY GEAR-BOX PROVES EXPENSIVE.

We made an early start the next morning, but owing to the rough roads our progress was not rapid. Rich farming land is found in this section and the layout was quite pleasing to the eye. Shortly after leaving Lexington, where we had our noon-day meal, I noticed that my clutch was not working properly and decided to return to Lexington and have the trouble attended to. We found that the gear box had run dry through lack of oil, which was merely carelessness on my part and for which I paid dearly. There was nothing to do but put some oil in it and proceed to Kansas City for further repairs. The road from Levasy to Kansas City was fine oiled macadam. In fact, it was so well oiled in one place that in passing a team I went down and rolled around in the mess before I could stop. At Kansas City I visited a mechanic, who upon looking at my clutch and gear-box informed me that I needed a new main shaft and a new dog clutch. This made a heavy inroad on my funds and I have since exercised more care.

M. M. BELDING, JR., president of Belding Bros. & Co., New York City, manufacturers of sewing silks. Mr. Belding recently became a motorcycle enthusiast, although he owns two big Peerless cars and is rated at over $1,000,000. The photo was taken at Palm Beach, Fla.

We left Kansas City the next morning at 11 a. m. and were soon in the State of Kansas; then we continued over good roads to Waldo and Martin City. From this place we used the American Automobile Association's "Trail to the Sunset" map, which is very complete. I would say, however, that this route should not be followed west of Albuquerque, New Mexico. Any tourist in this section will do well to seek advice from D. K. B. Sellers, Mayor of Albuquerque, and vice-president of the Ocean-to-Ocean Highway Commission in the State of New Mexico. He is well informed on the condition of the roads in his State and is always glad to give information to tourists.

Getting back to our troubles again, we had nothing but rough dirt roads all day and at night we arrived in Ottawa. Here we stayed with relatives of my partner. There was no improvement in the roads the next day. Houses and villages were getting further apart and the country was mostly prairie. We had lunch at Emporia, where we were told that the best route would be via Denver and Salt Lake City. Later in the afternoon, while riding in a leisurely manner I noticed that my front wheel was behaving very queerly. On dismounting I found that the axle nut was off and the axle nearly out. I had not gone far after fixing this when I felt a tug at the tail of my dust coat which nearly pulled me off the machine. My coat was caught in the drive chain and was torn off to the waist. We had better going to Cottonwood Falls where we had supper and remained overnight.

A JINX CUTS SOME CAPERS.

The roads through Missouri and Kansas have many sharp turns, some of them at right angles, and signposts are conspicuous by their absence, but the Santa Fe Trail, over which we were now traveling, was marked by white bands painted on the telephone poles. We slept in a haystack near Pawnee Rock that night and in the morning we rode to Larned for breakfast, and then over the rough prairie roads to Cimarron. While going over an unusually bad stretch of road Bill took a spill, and broke his throttle control rod, which he had fixed at the local blacksmith shop. We camped out that night and reached Garden City, Kansas, by noon on the following day.

We rode over some natural prairie road that was, without a doubt, the finest we had on the trip, but there was not much of it. We spent the night at Coolidge, which is just east of the Colorado line. The next day I had

Digitized by Google

some trouble with my machine which necessitated a short delay. Bill went ahead and when I arrived at Holly was informed that he had proceeded to La Junta. I spent half the next day trying to locate a compression leak and was not ready to leave until 2 p. m. I then found that one of my tires was flat and that there was a large nail in it. In removing the tube from the casing I tore a six-inch hole in the former. After leaving Holly and Prowers I took the wrong road which led into the prairie and I finally came to a river which was too deep to ford, so I turned back.

After this my jinx, being satisfied with his work decided to lay off until the next day, and I was soon on the right road and across the Arkansas River. I could not go very far, however, as it was quite dark, so I sought accommodations in a farmhouse. The next day was excellent for riding and I made good progress until I reached Las Animas, when a rather peculiar accident befell me. My riding coat was of the regular Norfolk jacket style with a belt, and as I was riding along at a good clip the rear wheel locked. I was not injured in the fall which followed and upon investigating found that my belt had dangled and caught in the transmission and had been carried into the clutch sprocket. On the road to La Junta I was bothered by a number of dogs and at one time took a spill, spraining the great toe on one foot and barking both knees.

WHERE FOOD WAS SCARCE.

Bill was waiting for me at La Junta and here we were joined by another rider who wanted to make the trip to Los Angeles. As three of the four leaves of my front fork spring were broken in my encounter with the dog we decided to go to Pueblo where we could get spare parts. We stayed over night at Rocky Ford. We had seriously considered riding on to Denver and Salt Lake City, but as newspaper reports were to the effect that the mountains were covered with snow we decided to follow the Southern route. We had a pilot lead us out of the city and on the road to Trinidad and we were soon in the wilderness. Here at the foot hills of the mountains, the scenery was fine and we obtained some good photographs. We had considerable trouble that night in procuring food and lodging. At a number of the ranches at which we stopped we were refused both. Later a woman let us have a few bread and butter sandwiches for ten cents each. It was beginning to look very much as though we would have to sleep out when a man who lived in a nearby ranchhouse invited us to room with him. We all assisted in preparing the supper and after a short chat we went to bed.

We made an early start in the morning and found rough prairie roads with many steep hills to climb. We had dinner in Walsenburg and in the afternoon the hills became more plentiful and much steeper, while the roads were a little better. We spent the night in Trinidad, which although only a small town has 45 saloons; in the morning we started the ascent of the famous Raton Pass. At the highest point of this pass the rider is at an elevation of almost ten thousand feet. We crossed the state line into New Mexico while at an elevation of 8,790 feet. At such a height as this the rider is afforded a wonderful view. To the east the country is level, while looking westward one sees the Rocky Mountain ranges. We had dinner at Raton and then headed for Las Vegas, via Colfax and Springer. We stayed over night at Colfax. We rode all the next day over rolling prairie roads, passing through very few towns. It was dark before we reached Las Vegas and as I took a nasty spill about a mile out I decided to walk the remaining distance.

THE ARRIVAL IN ALBUQUERQUE.

The next day we got into the red sand hills which were covered with small cedar trees. Our route lay alongside the Santa Fe railroad, with large mountains on either side, and the canyon-like scenery was very beautiful. We passed through the Mexican towns of Tecolote, Bernal and Pajarito, and on leaving Lescos we took the wrong road for about ten miles. We were unable to connect with the right route so had to return to Pecos. This town, like the other Mexican villages, is very quaint. The houses are built of adobe and so arranged that a square is left in the center of the village for the building of a church. From Pecos we rode on to Glorietta, where we stayed over night, sleeping on the floor of an old dance hall, as we could not get any other lodging.

It rained during the night and in the morning it was cold and clear. The roads were not bad and we were soon in Santa Fe, one of the oldest towns in America. This town was founded by the Spanish in 1540, and although it is very interesting we did not stop long as we wished to reach Albuquerque by evening. Leaving Santa Fe we rode for some time over a mesa or table-land and then up the La Bajada Hill, which affords a remarkably fine view of the surrounding country. Before reaching La Bajada, which is approached by a serpentine road in which there are thirty-six sharp curves, we passed through Algodones and Bernalillo. My knee had been growing steadily worse and so on reaching Albuquerque I decided to consult a physician, who ordered me to a hospital. As it was necessary to stay in bed for some time my companions continued on toward the coast. Except for the injured knee I was feeling fine, had gained considerable in weight and from every viewpoint I was glad I had made the trip.

DETROIT MOTORDROME

Construction Work Is Being Pushed on Big Bowl for Opening Races in May

MOTORCYCLE racing in Detroit on the new quarter-mile motordrome now in course of construction will start on May 14 or 21, the opening date depending upon the weather. Grading will start at once and architects are working upon the plans for the track and grandstand. Incorporation papers have been sent to Lansing for the Detroit Motordrome & Amusement Company, which will have a capital of $20,000. Those interested in this company are: E. H. White, A. J. Bath, E. R. Martin and John A. Wilson, all of Detroit.

Racing will be carried on Wednesday, Saturday and Sunday evenings, and occasionally on Saturday afternoons, during the entire season. It is the present plan to have the Detroit team composed entirely of Detroit men, provided the local riders show well in their training. The construction work is being pushed especially to give the boys an opportunity to train before the season opens. The Detroit team will ride in the circuit of the National Racing League.

A "NO-TROUBLE" JOURNEY

IRA J. STOCKWELL, of Lawrence, Kan., has just completed a 1,400-mile motorcycle trip through Kansas, Oklahoma and Texas. Despite the fact that most of the distance was over mud and sand, Stockwell made the trip without a serious mishap.

The LADY MOTORCYCLIST

By NORA HOUGH

MOTORCYCLING as a sport is rapidly gaining favor among ladies in England, and, judging by the way the manufacturers are turning out open-frame models, the number of feminine riders will be almost doubled during the current year. Prospective riders should have no trouble in choosing a mount for this season, as every well-known firm is making a dropped-frame machine, if not an open-frame type. These machines make provision for a lady's skirts and meet her requirements in general as nearly as they can be met with an ordinary motorcycle. Nor are we limited as to power, for both heavyweights and lightweights in the ladies' models are being shown by the makers.

After considerable experience I must say that I prefer the lightweight for solo riding, and until a motorcycle is constructed which automatically comes from the motor-house and jacks itself up on the stand I think my opinion will be endorsed by the majority of lady riders. The motorcycle of today is very reliable and the ordinary mishaps are easily put right by the roadside, but there comes a time when something serious happens and then the machine needs pushing—either to the nearest repair shop or home. This is where the lightweight scores with the lady motorcyclist, for it can be wheeled with little more exertion than an ordinary push bicycle.

A FRIEND OF THE DOUGLAS TWIN.

A little machine that has always appealed to me is the Douglas twin, an ideal ladies' mount, both in regard to appearance and power. The control is simple in the extreme, and the weight and steering are not much more difficult than with a bicycle. I have ridden my Douglas in competition over severe courses among riders of higher-powered machines, and have never failed to hold the road or climb any hill, freak or otherwise. In fact, on bad roads I can keep up the speed without fear of side-slip, while other heavier machines require careful manipulating. Then on test hills I have often passed heavyweights ignominiously "conking out."

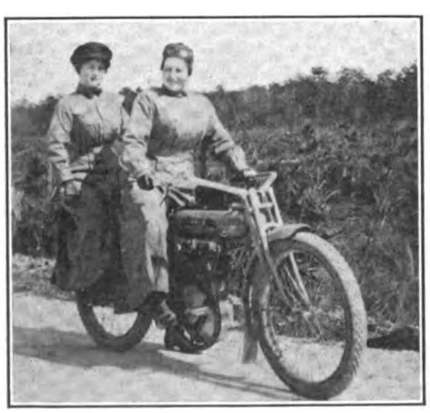
In the above paragraph I refer to solo riding, of course. For sidecar work one naturally requires a little more power. A machine I have used with good results as a combination mount is the popular two-stroke Scott. The latter has an open frame with an extremely comfortable riding position, and is therefore quite a lady's mount. The Scott has also proved an excellent hill climber, and I have never experienced any trouble in getting over the ground with it.

CLOTHING FOR THE LADY RIDER.

Dress, as we all know, is a very important item for any motorcyclist, and for the lady rider it is of the greatest interest. Many enthusiasts of the fair sex experience difficulty in obtaining clothing suitable for motoring trips; it either gives fair protection at a heavy sacrifice of appearance, or it looks well and fails to protect. The makers of men's motorcycling garments have been very slow in catering for the lady rider, and I have found it impossible to walk into any ordinary shop and purchase the riding togs I need. Every motoring garment I have yet worn I have had made especially for me, according to my own design.

Of course, regulation waterproofs and silk oilskins are always shown, but I have proved the former only showerproof, and the latter tear much too easily; therefore they are of no use for rough riding. The outfit I have found correct is here given: Plenty of warm woollen underwear for riding in cold weather (this is essential), a tweed sporting costume, covered by a windproof long coat held at the waist by a belt. It should be kept in mind that the belt is quite necessary. For wet weather I carry an ordinary fisherman's sou'-wester and oilskin (not silk). For headgear I have found a close-fitting woollen cap to be most comfortable. The wool clings to one's hair and a veil is not necessary.

Still, I must confess a pretty motor veil is very attractive, particularly if one chooses a short taffeta of soft shades. The latter wear extremely well and, what is more important, do not show dust or look shabby after a little use. In my opinion, the matter of dress should be carefully considered, for a lady attracts considerable attention on a motorcycle and the neater we look the more ladies we shall attract to the exhilarating sport.



Miss Frances Noel, of Houston, Texas, making a trip with a friend to the San Jacinto battleground. Miss Noel has piloted her own Yale for some time past, and states that she could not get along without it.

A SIDECAR RECRUIT

MISS LAPEARL E. WILLIS, an enthusiastic motorcyclist of Canal Dover, Ohio, recently purchased a sidecar and now takes her girl friends with her on her road trip.

WITH BALTIMORE RIDERS

THE four-state endurance run to be held by the Maryland club on May 30 will have classes for both amateurs and professionals. The private owner will therefore have an opportunity to show, especially as a separate list of prizes will be offered for this class. A large entry list is expected. One thing the club insists on in this run is that there shall be no speed contests, and those found violating this rule will be penalized heavily.

"Tommy" Dedge, District of Columbia champion, attended the last meeting of the club for the purpose of requesting William Wood, State F. A. M. commissioner, to include the district in the organization of a state convention. Wood was sorry to have to refuse, as his work in Maryland is arduous and he finds he has time only for the problems in this state. Dedge also took advantage of his visit to tell the boys about plans for the motordrome to be built at Glen Echo by the Washington club. The local riders are greatly interested, and besides entering in the races they will be excellent patrons of the big bowl.

The club went on a run to Ridgeville on Sunday, March 23, a big bunch of riders taking advantage of the beautiful weather.

George Gebhart performed a daring feat on his motorcycle last week when he ascended a winding path three feet wide and paved with cobbles, running from the lake drive up the slope to the observation tower. It is one of the steepest paths one could find anywhere, and more difficult than the most arduous hill climb.

Freddie Tiemeyer, the champion of Maryland, and "Boots" Reuschling have secretly signed up for a two-mile match on the road and it has aroused much interest.

Miss Georgia Bailey, of Miami, Fla., appears in the above photograph on her Harley-Davidson. She had just participated in a basketball game when the photo was taken. Hence the unusual riding costume.

PLANNING A WORLD TOUR

by MILTON · S · HOPKINS ·

BY way of introduction it should be stated that our proposed tour is not to be simply a 'round-the-world journey by motorcycle, but a trip of indefinite length the itinerary for which involves almost every country and all the most important islands. The main object of this extensive tour is to obtain first-hand data concerning the industrial, political, social, economical and educational conditions of all countries. The writer, as secretary of Carnegie College, in Rogers, Ohio, will find the information thus collected of great value, and in due time it will probably be embodied in a book.

My companions on the long journey will be Harry C. Vale and Lester Van Allen. The former will ride a 10 h. Michaelson and the latter a Crawford twin. My own mount will be 1913 Monarch, rated at 10 h. We have had such a trip in mind for a long time, but so many details have to be considered in laying plans for an itinerary that is to extend over years that we were forced to proceed slowly. We believe that we have now threshed out every phase of the project, and the coming summer will find us under way.

ROUTE THROUGH THE UNITED STATES.

It should be noted that we will make quite an extensive tour in our own country before sailing for Japan, as we do not intend to overlook any of the main points of interest simply because they happen to be close at hand. Our route through the United States will be as follows: Starting from Carnegie College, Rogers, Ohio, June 16, we will proceed to Pittsburgh, Pa., Washington, D. C., Baltimore, Philadelphia, Atlantic City, New York City, Owego, N. Y., Buffalo, Niagara, Erie, Cleveland, Toledo, South Bend, Chicago, Milwaukee, Green Bay, Menominee, and points in Northern Michigan. Thence we will go via Minneapolis and Yellowstone National Park to the western coast. Japan will be the first country to be toured after we leave San Francisco. No rigid itinerary is prepared beyond Japan, but each country will be taken up in its regular order, or as circumstances and climatic conditions would make advisable.

The motorcycles will be equipped with special luggage carriers and auxiliary tanks for oil and gasoline. According to the present plans for the luggage carriers, enough gasoline and oil can be carried to permit of a journey of 1,500 miles without replenishing supply. This will make possible extensive riding in countries where gasoline is scarce, and will permit of journeys through lands where no motor vehicles have ever penetrated. Each outfit will be so complete that should the members of the party separate for any reason no inconvenience will result from inadequate equipment.

THE INDIVIDUAL OUTFITS.

Each rider will have a tent 7½ by 15½ feet, made of a special quality of Somerset silk, which is waterproof but very light in weight. The entire tent with fitments weighs only four and one-half pounds. These tents may be put up separately in any one of ten different shapes, without a moment's delay, and may be changed from one shape to another should such action become necessary.

Two tents may be fastened together and set up, either suspended from a rope swung between trees, or supported on poles erected on the luggage carriers of the motorcycles, thus completely sheltering the motorcycles and entire outfits. Three tents may be attached in the same manner, making a large tent, which may either be open at the ends, or entirely closed. The shape of the tent can be varied at will to suit our fancy or to conform to the topography of the camping ground.

The sleeping-bags are roomy and comfortable, and were devised especially for this tour. The outer case is of waterproof Somerset silk fabric, and the inner parts are of paper blankets that defy the cold. The bags, although 30 inches wide and 78 inches long and composed of four thicknesses of paper blanket and two of Somerset silk, weigh only four and a quarter pounds. A rubber blanket below the sleeping bag will serve as a further protection on damp ground.

The cooking outfit nestles into a space just half an inch larger each way than a common brick, and contains a pail, cup, stew-pan, two frying pans and broiler, with handles for each, and a folding knife and fork. A small alcohol gas stove will furnish the necessary heat without blackening the utensils. Each member of the party will have a separate outfit including these items.

GUARDING AGAINST PUNCTURES.

Each detail of the equipment is the result of careful study and experimenting and is as nearly perfect as can be obtained. Note, for instance, our method of guarding against punctures: First we will use the Brictson detachable tread with steel studs, and under that the regular studded tire; then we will have inter-liners, and use in addition the Brown scientific self-sealing tube. As a final precaution we will carry in our tubes a puncture-closing fluid known as Rubberstone.

We do not expect many punctures or blowouts with this equipment, but we are prepared with all the latest blowout patches, sleeves and patches of all sizes, shapes and makes, and we will also carry a vulcanizer, vulcanizing fluids and compounds, tire gum and cement. In event of a puncture, we will be able to repair it readily and proceed upon our way.

The Monarch twin will be equipped with Trinity Chimes, a motorcycle horn which attaches to the exhaust pipe and gives a melodious warning which is a blending of four tones. A Genolite electric motorcycle lighting outfit will be mounted on the Monarch, and will be provided with extra storage batteries which will store up the current generated during the day and furnish light for the camp at night.

This will enable us to have the camp brilliantly lighted with electricity at all times without extra expense, in countries where no gas tanks are available. Most of our riding will be done in countries where the motorcycle will be a curiosity, and there will be no way of obtaining carbide or gas for the lighting systems. Further details of our plans will be given in an early issue.

[EDITOR'S NOTE.—Mr. Hopkins has entered into an agreement to write the story of the world tour for MOTORCYCLE ILLUSTRATED, and it goes without saying that his descriptions of motorcycle touring conditions in countries off the beaten track of sightseers will provide features of unfailing interest. The party will carry high-grade cameras, and the various instalments of the article will be illustrated with photographs taken along the route.]

WHY JAKE SMILED

AFTER a 200-mile tryout of the Brictson tread on his rear tire, through mud and over

frozen roads, the rider shown in the above photograph was still smiling, as will be noted, and he was ready to repeat the performance. The smiler is Jake Grama, of New Philadelphia, Ohio, who recently proved to his entire satisfaction that with a Brictson tread he could hold his machine upright under the most discouraging road conditions.

RIDERS IN TRAINING

TRY-OUTS and the training of riders who have applied for the privilege of competing in the Inter-City races planned by the American League of Professional Motorcycle Racing Clubs has begun. Late reports are to the effect that more than 100 riders have presented applications, and if the majority of applicants make good nearly every state in the Middle West will be represented on the circuit. If a proper location for a saucer can be obtained in Pittsburgh it is probable that the Smoky City will be included in the national circuit.

"WHY, Walter came home to be best man at my brother Bill's wedding, saw the work a North Side machinist was doing on a motor for Harley and me, was disgusted at the way the hole was being made in a valve stem guide and—well, he just got interested and went to work on that motor *himself*." Arthur Davidson is authority for this bit of history, which explains the way in which Walter Davidson, president and general manager of the Harley-Davidson Motor Company, made his start in the motorcycle industry.

From this statement it is easy to see that the marriage of William A. Davidson, now general superintendent of the company, really marked the entry of Walter into the big business of which he is the directing genius. Therefore it is necessary to chronicle the fact that the marriage was solemnized on April 3, 1903, and that prior to that date Walter Davidson knew little and cared less about motorcycles. But when he became interested—well, that's part of the story.

WORKING ON A NIGHT SCHEDULE.

For the preceding two years Arthur Davidson and William S. Harley had been building motor bicycles. They were having fair success, but were in need of a skilled machinist to supplement their abilities as draughtsman and pattern maker, respectively. Walter Davidson was working in the tool-room of the "Katy road" at Parsons, Kan., when he received a letter from his brother Arthur, containing the following sentence:

"When you come home for Bill's wedding we will have a motorcycle for you to ride." But Walter Davidson soon discovered that he would have to build the motorcycle himself if he wanted the promised ride. So he went to work on the motor in the little North Side shop. During the day he worked in the tool-room of the Chicago, Milwaukee & St. Paul Railway Company shops, and his work on motorcycles was all done at night throughout that first year.

Having seen how the company was given its start, we are now prepared to learn something of the man who played such an important part in those early operations—and who has maintained that position of importance in the company of today.

Walter Davidson was born in Milwaukee thirty-six years ago, and most of those years have been very busy ones. He attended the public schools until he passed through the eighth grade and then decided that he would take up the electrical business. He remained at this trade two years—long enough to discover that he needed a technical education in order to go higher—and then he became a machinist's apprentice. His first employment as a machinist was with the A. O. Smith Co., now among the largest manufacturers of automobile parts in the country.

THE BUSINESS BEGINS TO GROW.

With that company, and later with the Standard Pneumatic Tool Company, of Chicago, Mr. Davidson learned considerable about internal combustion engines. When he was in Chicago he made some sample parts for the Aurora Automatic Machinery Company. Immediately after that the Standard Pneumatic Tool Company moved to Aurora. Instead of going to Aurora, Mr. Davidson returned to Milwaukee. He was working for the International Harvester Works when the men went out on a strike in 1901. That resulted in Mr. Davidson landing in the tool-room of the "Katy road" at Parsons, Kan., where he received the letter from Arthur Davidson inviting him to enjoy a motorcycle ride when he came home for William Davidson's wedding.

In the fall of 1906 the first building was erected on the site of the present main Harley-Davidson factory. The first building was one story high and 28 x 80 feet in ground area. When it was completed the railroad company declared the surveyor had located the building too close to the railroad tracks. Eight men got hold of the building and shoved it over a foot off the railroad property.

HANDLING THE EARLY SHIPMENTS.

"Simple, wasn't it?" said Walter Davidson when asked about that incident. "And now we have over 224,000 square feet of floor area. Still, we were pretty busy in those days. We built 150 machines that season, shipping them to C. H. Lang, Chicago; Ward Fisher, Rochester; Alexander Klein, Philadelphia; Guy W. Webb, Minneapolis—all four of whom have been among our dealers ever since—and to Lee Richardson at Los Angeles. Mr. Richardson returned subsequently to Chicago to take his father's place in the manufacturing of roller skates."

Modesty is Walter Davidson's chief trait. There is no end to what he can accomplish and what he does accomplish in a day. Fortunately possessed of perfect health, he has a store of energy that seems unlimited and that is applied daily to scores of problems in as many departments of the Harley-Davidson organization.

Decisions involving large sums and affecting the entire policy of the company are snapped out with a rapidity that amazes even those who are most closely associated with him. Mr. Davidson has mastered in turn every department of the business. The designing and constructing of motorcycles is known to him in every detail. He is a mechanic, first, last and all the time.

A MAN OF MANY PARTS.

But added to his wonderful technical and practical knowledge of the mechanical points involved in motorcycle construction is a thorough knowledge of finance, of advertising, of salesmanship and of architecture. During the past few years the Harley-Davidson Motor Company has had a new factory addition under way most of the time. As soon as one addition is completed another has been started. Walter Davidson is the man who assumed the additional burden of supervising building operations.

Whatever the future of the motorcycle may be destined to become, Walter Davidson will be a dominating force in determining its destiny. His clearness of vision, his vitality, his highly developed intellect and his keen judgment, coupled with his modesty and capacity for hard work—he has not taken a vacation in seven years because his daily work is his recreation—have been potential in bringing the motorcycle to its present development and will have an important part in bringing it to ultimate perfection.

NORTHWEST CLUBS FOR ADJUSTMENT

(*Continued from page 25.*)

ships of all members present were turned in to State Commissioner Whiting at once. The necessary 75 per cent. of the club's membership for affiliation is expected within a fortnight. Secretary Bursans, of the Convention Association, was delegated by the club to attend the meeting of the F. A. M. directors in Chicago to present Denver's request for the 1913 convention.

Before leaving California for the Northwest, Director Sauer addressed several meetings, and was welcomed by a large number of motorcyclists in San Jose. The San Jose Club took advantage of the occasion to open its fine new headquarters at 128 East Santa Clara street. Nearly one hundred riders were in attendance, including about thirty ladies, and a successful program was presented.

On his arrival in San Francisco the F. A. M. representative learned that the San Francisco M. C. had adopted a resolution refusing him an opportunity to address the members. He then forwarded the following note to President H. G. Hodges, of the club:

"I learned today, much to my surprise, that the San Francisco Club had adopted a resolution refusing to afford me an opportunity to address your organization. Under the circumstances I will not attempt to force myself upon you. Should you reconsider your decision it will be possible to reach me at the Palace Hotel."

The club's action was not reconsidered and the F. A. M. official left California without being enabled to talk over the questions at issue with the riders of the San Francisco Club.

From Denver Director Sauer proceeded to St. Louis and his schedule calls for his arrival in Chicago on April 4. He will remain there at least two days, address a meeting of the Chicago motorcyclists and attend the session of the F. A. M. Board of Directors. He will then return to New York for a week before going out upon the last leg of his lecture tour through New England and into the Middle West. Owing to the recent floods, changes may be necessary in the latter schedule.

HOW "GRYNDYN" SAVES LABOR

WITH the season for motorcycle overhauling at hand nearly all riders are finding that the valves of their motors require some attention, and an unusually large number of the thoughtful ones are eliminating the troubles of past seasons by using "Gryndyn," the improved valve-grinding compound marketed by Stewart & Co., 5 Cortlandt street, New York City. Gryndyn is so compounded that it meets all the requirements of the grinding process without the necessity for using several grades; the single grade, ready for use at all times and supplied in a neat screw-cover box, does all the work. This arrangement permits of saving time and is also the most economical method of using a grinding compound. Gryndyn sells at 35 cents a box, and a leaflet telling how it works and why it is a money-saver will be sent on request.

The Stewart firm is also handling the Owen valve-grinder, a tool so weighted that no pressure need be exerted upon it in the grinding process.

TO ISSUE ACCESSORY CATALOG

ANNOUNCEMENT is made by the E. J. Willis Company, of 85 Chambers street, New York City, that the firm will issue a large motorcycle and bicycle catalog. For the last three or four years the company had featured its automobile supply and tire department, but it has now decided to give special attention to its motorcycle and bicycle supply line.

NEW TIRE-MAKING FIRM

ALLIANCE, Ohio.—The Alliance Rubber Company has been incorporated for $100.000 by George C. Russell, Milton B. Ejach, W. H. Purcell, M. S. Melbourne, Robert Auld, Sr., F. E. Dussell and H. F. Bobecker. The company will produce automobile and motorcycle tires.

MILWAUKEE, Wis.—The Feilbach Motor Co. has purchased a site of five and one-quarter acres upon which a new plant will be erected.

FRENCH COMPANY EXPANDS

BALTIMORE, MD.—Branching out with a view to becoming one of the largest motorcycle and sporting goods houses in the country, Howard A. French & Co., of this city, have just purchased the entire establishment of the National Sporting Goods and Auto Apparel Company, at 424 Ninth street, N. W., Washington, D. C. Two days after the deal was consummated, the branch house at 736 Fourteenth street, N. W., was vacated and all the effects moved into the new quarters.

The Ninth street building has a frontage of 22 feet with a depth of 132 feet, including a basement running its entire length with an entrance on the street level in the rear. Work has already started to transform this room into a motorcycle garage, capable of storing at least 200 machines and furnished with lockers for the benefit of tourists.

The branch house, which will be in charge of Casper French, will also make a specialty of the motorcycle van, which is becoming so popular in Washington. Fred Hippler has been appointed manager of the repair department. He celebrated his promotion by becoming a benedict on Sunday, March 23. He will not, however, ride tandem in the future, but will take his wife out in the demonstration sidecar.

ASH IS CONVALESCING

FRIENDS of W. J. Ash, the well-known Flying Merkelite, will welcome the announcement that he is now on the way to complete recovery after a serious attack of pneumonia. Mr. Ash contracted a heavy cold at the Chicago show and was too busy to give it proper attention. Later he went to Kansas City to attend the show there and the cold continued to bother him. His next jump was to Wichita, Kan., where he was as active as usual at the motor show, but at the close of this exhibition he found himself confined to his bed. For several days his life was despaired of, but a recent letter from him states that he is slowly getting back into working trim.

IN addition to the Pope line, P. E. Zimmerman, of Lindsborg, Kan., has taken the State agency for the Black Hawk motorcycle.

The Store Front and an Interior View of the New Store Recently Occupied by E. H. Kasten, at 253 Fourth Street, Milwaukee, Wis., Are Shown in the Accompanying Photographs.

The DEALER'S FRIEND

BY RODMAN BARRY

I HAD dropped in to buy a spark plug at the headquarters of a dealer with whom I am on friendly terms, and was just being informed by his mechanic that the veteran was out on the road when a sidecar outfit pulled up in front of the store, and—much to my surprise—the dealer hopped out of the big "basket" and dashed into his place of business, leaving his assistant still astride the machine. This dealer, be it known, had frequently proclaimed his lack of interest in sidecars, and it was for this reason that his new attitude impressed me. I buttonholed him as he was heading for the repair shop, and asked a few questions.

"Two weeks ago," I said, "you turned a cold shoulder to the sidecar, and now I find you not only riding in one, but working it into your business. How did you generate all this sidecar enthusiasm since I last saw you?"

"I'm in a hurry," replied the veteran, "but I don't mind wising you up a bit. It won't take long. My little daughter wanted to accompany me on Sunday trips and I bought the sidecar to please her. Now I've found so many uses for it that the poor youngster hardly gets a chance to look at it. That's all there is to it. I was letting a lot of business get past me before I had that sidecar and I never realized it; now I'm thinking of buying another, also for my own use. Incidentally, I have booked two sidecar orders since I have been driving my own outfit.

FINDING WORK FOR THE SIDECAR.

"Finding work for a sidecar is the easiest task in the world," continued the dealer, as he placed a new chain and a number of small parts in a box preparatory to depositing them in the sidecar. "For example, one of my patrons who lives about two miles outside the city had a spill a few days ago and it was impossible for him to get the machine into town for repairs without carting it. He notified me, and a little while ago I rode out to see what damage had been done. Now I am going out to make the repairs. When the rider returns home tonight he will find his mount in good shape again, and he will be a strong booster for me from this time forth. I'd have a hard time carrying tools and repair parts without the sidecar, and besides this is the kind of a job that two men can work on to good advantage. My assistant will help me on the work and then we will buzz back to town again.

"Speaking of buzzing reminds me of another engagement," panted the veteran as he bounded about the shop and finally came to rest beside the counter long enough to make a hurried note on a writing pad. "One of my latest sales prospects is a chap who goes into New York every day, and I am going to meet him at the station at 6 o'clock this evening with my sidecar outfit and whisk him out to his home. That will save him a twenty-minute trolley ride and give him a fine chance to look over my machine; he's as good as landed this minute. He is ready to buy, but he doesn't know it. Let me get him beside my motor for a few minutes and he'll be one of us." This sounded like real business.

HOW THE SIDECAR PAYS FOR ITSELF.

With that the veteran ran out to the sidecar outfit, his assistant had the motor purring in a jiffy, and before I reached the curb they were turning a corner a block away. Then I strolled back into the shop and engaged the mechanic in conversation.

"The boss appears to be making the most of his sidecar," I remarked. "I have never seen him as enthusiastic as——"

"Say," interrupted the doctor of motor troubles, "you haven't seen him at his best yet. He's been so busy for the last week that he hardly takes time to eat, and that sidecar is turning the whole trick. He's scaring up prospects all over the county, and the minute he gets a line on a 'maybe' buyer he's in that sidecar, with Tom driving the machine, and off they go to start something. He hasn't been trying to sell sidecars, but two of the boys have seen what he can do with his and they have forced orders on him. Two or three others are just about ready to follow suit. Oh, yes, that sidecar has paid for itself already, and it's put more steam into the boss than I ever saw him have before.

"At first he wouldn't allow us to carry anything in the sidecar that might scratch it," continued the mechanic, "but now I believe he would try to move a small house in it if the idea struck him. You see, he's going to keep the one he has for rough service and get another one for demonstrating and pleasure trips. No matter what kind of a problem comes up the boss thinks of his sidecar, and about seven times in ten he finds a way to make it help out."

AN ENTHUSIASM BREEDER.

In further conversation with the mechanic I learned that my friend the dealer had covered more miles on the road with his sidecar in two weeks than he had ridden during the whole of the 1912 season.. He had not been what you could call an enthusiastic rider in past seasons, and his road work was confined almost entirely to short Sunday and holiday trips into the country. It followed that his acquaintances among the riders of his district were comparatively few, and that a motorcyclist had to visit his place of business before coming in contact with him. This was a poor policy, for the wise dealer knows that much business can be talked over in an informal but result-getting way during a social jaunt.

EARL V. FRITTS, of Oneonta, N. Y., and his new Thomas "65" aeroplane, are shown in the accompanying photograph. Having completed his course at the Thomas school of aviation at Bath, N. Y., Fritts received his pilot's license on February 14. Fritts is also a motorcycle enthusiast and conducts the Indian agency in Oneonta. Walter E. Johnson, instructor at the Thomas school, under whom Fritts studied aviation, is also a full-fledged motorcyclist, having ridden nine years. When not flying he is usually on his motorcycle.

A. F. POST, Pope enthusiast and winner of the recent Portland (Ore.) hill climb, appears in the accompanying photograph. The contest was held under the auspices of the Portland Motorcycle Club, and the climb was over a course of 1,940 feet. Post's time was 41⅕ seconds; Brush, riding a Harley-Davidson, finished second in 48⅘ seconds; Carlson, Thor, third, in 50⅘ seconds; Harrington, Theim, fourth, 54⅖ seconds, and Farnum, Excelsior, fifth, his time being 54⅗ seconds.

ECLIPSE

The Brake You Can Trust

"In time of peace, prepare for war"

Dealers, now is the lull before the storm—of orders for the Eclipse Multiple Disc Brake and the Eclipse Free Engine Clutch. In this period of calm before the opening of the season you have an opportunity to take a careful inventory of your stock of Eclipse Brakes and Clutches.

Be prepared! Experienced dealers realize the poor impression conveyed by being "all out just now." The would-be purchaser may go to the other fellow—and you lose a customer.

We earnestly counsel all dealers to lay in a heavy stock of Eclipse Multiple Disc Brakes and Eclipse Multiple Disc Clutches NOW. Believe us when we say that the demand will justify the supply.

Take stock now of your requirements—and get your order in to us **at once.**

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:
HARRY G. JACOBS
1220 First National Bank Building, Chicago. Telephones 5908 Central and Randolph 1022.

CIRCULATION THIS ISSUE MORE THAN 14,000 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

EQUIPPING YOUR MOUNT

THIS is the season when every thoughtful motorcyclist is giving consideration to the equipment of his mount, and striving to select the accessories best adapted to his individual needs from the great variety of attractive products offered by the manufacturers, and for this reason recent numbers of MOTORCYCLE ILLUSTRATED *have given special attention to fittings and supplies. This policy will be continued in the April 17 number, which will deal at length with a standard article of equipment.*

It is the intention to treat these subjects so that the rider will be aided along practical lines in fitting out his machine, and to this end experienced motorcyclists will write of their experiences and discuss the subjects in their various phases. These articles will be fully illustrated, as usual. They imply no curtailment of the regular editorial and pictorial features of MOTORCYCLE ILLUSTRATED, *and are presented with a view of meeting the need, felt by all riders at this season, for information that will aid in placing the trusty mount and its equipment at their best for the coming summer's work on the roads.*

EDITORIAL VIEWPOINTS

SPEAKING of motorcycle progress, there is food for thought in the following statement from a well-known accessory house: "Four years ago a couple of truck-loads of our catalogs would have supplied every motorcyclist in the country; now our dealers' list alone is as large as the riders' list was then." Still growing, too.

A SEASON OF EXTENSIONS

"HAVE you completed your 1913 extension yet?" is a query that is becoming almost as common among motorcycle and accessory manufacturers these days as the conventional remarks anent weather conditions. On all sides factories are being enlarged and ground is being obtained for still further additions; in several cases plans are already well developed for new buildings to be erected early in 1914. All of which goes to show that we are setting a rapid pace—and that we are in a mood to maintain it.

THE DEBUT OF THE CYCLECAR

MODESTLY, as befits a newcomer, but with businesslike persistence, the cyclecar has been working itself into the good graces of American motorists for several months past, and now a Philadelphia firm comes forward with the first model to be presented formally for the consideration of enthusiasts in this country. That the cyclecar will find a field open to it here, as in England and several continental countries, is quite certain and in time we may find it a dangerous rival of the sidecar. Before it assumes this position, however, its claims to economy as well as comfort will have to be demonstrated in road service, and the manufacturers appear willing to make their bid for patronage on this basis. Under these conditions the unbiased motorist can do no less than welcome the cyclecar and withhold judgment until the newcomer has been given an opportunity to show its mettle.

DENVER'S DISPLAY OF HOSPITALITY

DENVER wants the 1913 F. A. M. convention and her boosters are embracing every opportunity to say so. When Director Sauer stepped off the train in the Mile-High City a few days ago, on his transcontinental lecture tour in behalf of the Federation, he found no less than three hundred motorcyclists on hand with their machines to welcome him, and the procession of riders that followed the official automobile through the streets was three-quarters of a mile long!

Such scenes are rare. It is far from a simple task to bring three hundred—or even one hundred—riders into line for a demonstration of this character, and that Denver succeeded in doing it is striking proof that the city harbors a wholesouled spirit of co-operation among its motorcyclists of which the riders and the F. A. M. may well be proud. Should the next national assembly go to the busy Colorado city it may be taken for granted that the program will not run short on hospitality.

THE AWAKENING OF THE SOUTH

IN past seasons reports from the southern states led to the conclusion that motorcycle dealers were not as plentiful throughout this section of the country as the opportunities for business appeared to warrant, but the last month has brought an entirely different story from the Sunny Southland. Nearly every city of note now has an agency or two and scores of the smaller towns, even in comparatively remote districts of the South, boast squads of enthusiastic riders. It is roughly estimated that 25,000 motorcycles will be sold in this district before the close of the present season, and already an excellent start has been made toward the fulfillment of this prediction.

In some sections of the South good roads are rare, but the riders are learning that 1913 motorcycles are designed to negotiate anything short of a morass and with this growing confidence in the serviceability of the machines has come an unprecedented demand for them. Heretofore dealers in many Southern cities have experienced difficulty in striking a fair average with their sales; now they are haunted by the fear that the manufacturers will not be able to ship machines fast enough. From now on the South may be depended upon to figure as it should in motorcycledom.

THE CANADIAN CUSTOMS PROBLEM

WITH the touring season almost at hand and all indications pointing to a closer bond of fellowship than has ever existed before between American and Canadian motorcyclists, attention is being called to the necessity for a more businesslike interpretation of the Canadian customs regulations as applying to riders who wish to take their mounts across the Dominion border from the States. Elsewhere in this issue is printed a letter from an American motorcyclist who states that a deposit equal to about 35 per cent. of the value of his machine was demanded when he attempted not long ago to cross into Canada, while a recent announcement from a semi-official source is to the effect that automobile customs regulations at the border apply also to motorcycles, except that the deposit to guarantee re-exportation of a single-tracker is $10, as against $25 for a motor car.

All in all, the American motorcyclist appears to be pretty much at the mercy of the Canadian customs officials, and by way of contrast several Dominion riders have written that they experience no difficulty with the American customs department when crossing from Canada to The States. A little co-operative investigating and a few suggestions by the F. A. M. and the C. M. A. would probably clear the horizon to some extent, and at least permit the American rider to learn the conditions he will be confronted with when he attempts to take his machine over the line.

ENGLISH NOTES BY "BRITISHER"

An English Model with Completely Enclosed Transmission; the Unique Stellar Two-Stroke with Shaft Drive; How the Ariel Foot-Starter Operates; a Typical English Non-skid Tire and Something New in the Way of a Spark Plug; a Combination Bracket so designed as to Carry Both Lamp and Generator.

THE three-speed hubs have been all the rage over here for the past twelve months, and the two-speed gear will soon be as dead as the dodo. But experience has elucidated two pretty obvious defects in the standard three-speeder. The extra weight (10 pounds or so), concentrated in the back hub, makes the tail of the machine more bounceable than ever over bad going, and, as your readers may know, there are hardly any spring frames over here, except the imported Indian. Furthermore, these three-speed hubs render the back wheel very awkward to take out and replace. The clutch and gears are operated by slender push rods, sliding in the bowels of hollow spindles, and actuated by bellcrank connections at their extremities.

All these wee flimsy details have to be carefully taken apart and set up again in exact adjustment when a tire has to be changed. As a consequence some makers are experimenting by mounting the three-speed hubs in a sleeve brazed into the frame amidships, so that they are transformed into countershaft gears. The favorite dodge is to use an enclosed chain as the primary item, and then to take a belt off a big pulley fixed to the driving spindle of the gear. This centralizes the extra weight, and permits the rear tire to be changed within ten minutes.

SOME ODDS AND ENDS.

Tiny oddments make a great difference to the comfort of a rider, and cute fitments are being marketed by Herbert Terry, of Redditch, England. Among these we have noted handy spanners of the multiple tool type, which are just the thing to fit those awkward nuts which are not quite standard size. Another is a vest-pocket screwdriver of unique design. It gives as strong a twist as any long-handled garage tool, and its four business ends are of different thicknesses and will provide a fit for the finest and broadest slots on any motorcycle screw. There is a 25-cent clip to hold the schedule route card in competition work; it is not so swanky as the mahogany frame with cut-glass window type, but it suits the businesslike pothunter. Another is a patch nipper; it holds a patch in position over a puncture, while you lean over the fence and make eyes at the farmer's pretty daughter.

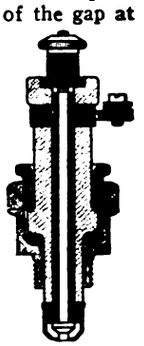
A GOOD NON-SKID TIRE.

I notice that your tire makers seem pretty faithful to the studded type of tread, which, of course, has a tremendous vogue in England as well. However, my favorite tread is the Kempshall non-skid, as illustrated herewith. The print shows a very heavy rubber tread, in which are sunk deep sucker holes. I find this tire most economical in use. A standard 26-inch x 2½-inch cover costs me $18, as against the $10 asked for a rubber-stud tread. But the $18 tread runs 4,000 miles, and the $10 about 1,500. Moreover, the wee rubber studs on the standard tire soon wear flat, and the tread then fails to serve as an anti-skid; whereas the vacuum suckers of the Kempshall are effective until the beads rip off the walls or the casing bursts.

This tire has two defects, which must in fairness be mentioned. It sucks up a lot of dust, and it rolls a trifle in fast corner work, owing to the breadth of its flat tread. But taking it all round, it is the best touring tire I ever rode; and it always goes through a six-days' trial without any attention whatsoever.

A DOUBLE POLE PLUG.

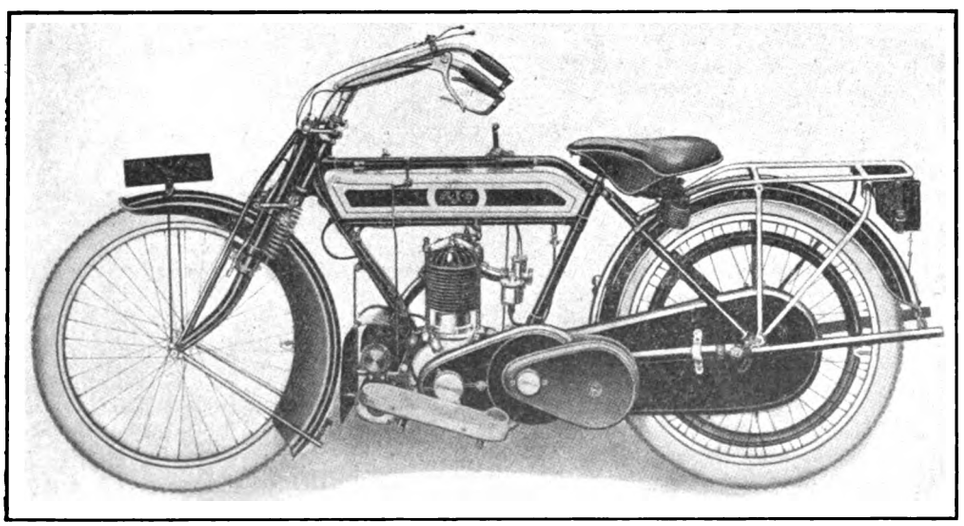
The fierce competition for short-distance records with small engines on our Brooklands track has led to a close study of minutiæ, and one very successful rider has paid particular attention to the sparking plug problem. His first discovery was to the effect that the best combustion at high speeds was obtained with the aid of a big gap between the points of a plug. Unfortunately it was almost impossible to start an engine with a gap suitable for tremendous speed. He made a few experimental plugs designed to admit of the gap at the points being varied in riding; but these plugs were complex and unreliable.



At last he hit on the idea of using two separate plugs, one over the valve chest, and the other over the centre of the piston. When tested, he found that this plan gave him as rapid and complete combustion as the variable gap. It was, however, a little difficult to get two practically simultaneous sparks from a single magneto, and at last Sir Oliver Lodge came to his rescue with a double pole plug as illustrated. The drawing shows how both poles are insulated, so that the current, after jumping the gap, can be led away to a second plug, and give a practically simultaneous spark thereat in series. Incidentally, one may add that no plug is more scientifically constructed than the Lodge. The metal body and its interior insulators are selected to possess as nearly as possible the same coefficient of expansion, and just sufficient freedom of movement is left to cover the difference. These plugs are made in myriads of sizes, so that the plugs may not project unduly, or be buried out of sight in the pockets of the valve caps. It is unfortunate that no two engine designers allow for the same "reach" of plug in designing their cylinders.

AN IDEAL LAMP BRACKET.

I append an illustration of the type of lamp bracket most popular on this side. As the drawing shows, the bracket consists of a double fork, designed to carry a headlamp at the forward end, and a generator at the rear extremity. The handlebar clips are constructed so as to be positively vibration-proof, all frictional surfaces being lightly milled, while the spring of the two clips encircling the bar acts as a lock on the nuts. By unscrewing the two large nuts at the top, the whole bracket, com-



A. J. S. Lightweight Two-Speed Model, Rated at 2¾ h.

Digitized by Google

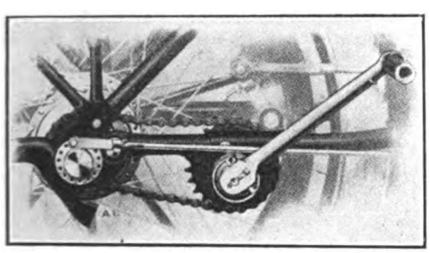
plete with lamp and generator, can be lifted bodily off in 60 seconds, and as swiftly replaced. Thanks to these ingenious holders, very few English riders bother to carry lamps unless they expect to be out after dark; and machines are thus easily stripped for speed work.

A HANDY TOURING MACHINE.

Light and medium-weight machines are becoming very popular in Great Britain, as the growth of variable gears combines with the excellence of our roads to render such machines efficient. The 2¾ h. p. A. J. S. could be guaranteed to climb any rideable grade in the United States, and yet the machine scales no more than 150 pounds, ready for the road, and has an engine of 74 mm. bore by 81 mm. stroke (equalling 348 cc. capacity). As the print shows, the machine is driven throughout by totally enclosed chains, and the light impulses of the small engine are softened by a clever crankshaft cushion. The small excrescence on the chaincase houses a kick starter.

THE ARIEL FOOT STARTER.

The Ariel machine adheres closely to standard practice, but I refer to certain refinements in its starting arrangements. A small pedal, mounted on the outside of the crankcase, controls a dummy exhaust cam, which operates an extra rocker in the valve gear and makes full compression impossible so long as the pedal is in the active position. After setting the "decompressor" to work, the driver kicks the long lever shown in the cut,

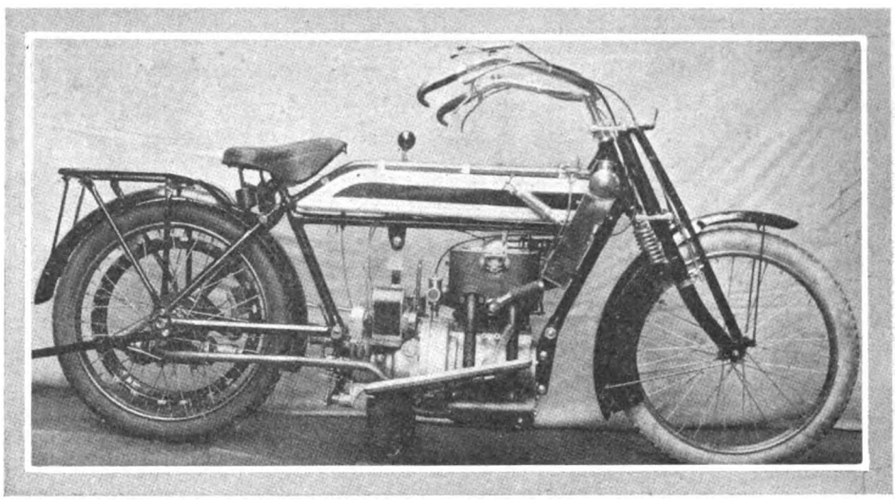


and the engine starts. He then releases the decompressor, lets in his clutch on the bottom ratio of his three-speed hub, and moves gracefully off.

THE WEAR OF THREE-SPEED HUBS.

I don't doubt that manufacturers on your side are interested in the durability of our three-speed hubs. It may seem impossible to enclose a strong three-speed epicyclic gear and 24-plate multiple disc clutch in a hub not exceeding 6 in. in diameter or 10 pounds in weight. I was very sceptical myself twelve months ago, and as soon as the hubs came on the market I got two 3½ h. Triumph motorbicycles and fitted an Armstrong hub to the one, and a Sturmey hub to the other. I did my best all last year to butcher them both, treating the gear shamefully; for instance, whenever I wanted a sudden braking effect I threw in the bottom gear, no matter what pace I was travelling; I used them with and without sidecars; I lent them to novices, and generally did my level best to chew them up. I never had a mite of trouble with either of them all last year.

Last Christmas I sold them both. One is still going great guns; the other chewed up last week, and when I got home I found the hub shell had burst. The makers repaired it gratis under their guarantee. The pinions, holders, pushrods, bearings, were all in new condition, and a slight inequality in the pressing of the shell out of the flat steel plate was responsible for what I believe is an uncommon mishap. I may add that I drove the machine home with the bowels of the hub all adrift by simply lashing the spokes of the belt rim to the spokes of the rear wheel, top gear only being obtainable. Of these two hubs I acquired a strong preference for the Sturmey, partly because it drove solid on the top ratio and so allowed me to get a bottom gear of 9 to 1 with a 4½ in. pulley, partly because it was absolutely free from backlash. The Armstrong drove solid on the intermediate ratio, so that my gears with a 4½ in. pulley were about 3¼, 4½ and 6½ to 1, whereof the top gear was far too high, and the bottom gear insufficiently low for freak hills, while this hub showed a distressing backlash when the engine was picking up. I am now using 1913 samples of both gears, and the new Armstrong is ideal. It has conquered its backlash. it drives solid on the top ratio and it shows an even bigger ratio drop between second and third speeds than the Sturmey, so that a very low gear is obtainable with quite a decent pulley diameter.



Stellar Two-Stroke, Two-Speed Twin with Shaft Drive.

THE SPRING TRIALS.

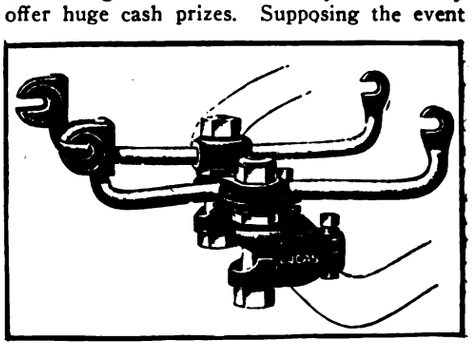
We have already held three or four important endurance runs, all of which secured record entries, and gave the officials immense trouble in the finding of a winner for the premier cup. In each event out of 150 or 200 riders, quite a large percentage tied for first place, by climbing all the very freakish hills non-stop in spite of awful weather, and by being dead on time at all the main checks. A winner was found by means of split second timing at secret checks—a rotten system, robbing the events of all fun and sport; but who can suggest a sound alternative? There is a plan to award the cups to the rider who, other things being equal, comes through on the highest gear ratio; but there are objections to the notion. The cyclecars have quite borne out the pessimistic opinions expressed by myself and other journalists. The majority of their makers shrank from submitting their cars to severe public tests; and only a small percentage of those that appeared covered themselves with even faint glory.

SOME 1913 FIXTURES.

The T. T. races are dated for June 2 and June 4. The Isle of Man authorities have made stringent conditions, as the islanders were disgusted with the rombustious conduct of certain "knuts" last year. The 500 cc. and 350 cc. machines will both race on both days, so as to give a longer distance for the medley. Complicated regulations are being drawn up for the second day, on which the senior and junior machines will be separated for the concluding laps of the race, and started in a fashion which will cause the first machine home to be the actual winner, so rendering the race intelligible to the lay spectator, without the aid of a comparative time card.

At least this is the idea, but if the first day does not weed out the entry very freely, the dodge may fail. At present the scheme is that all machines will be put under lock and key during the intermediate day; that the junior machines will race a further two or three laps alone on the second day, and that they will all be stopped at the beginning of the last lap (37 miles), and restarted at intervals depending on their net time gain on their rivals. The first home will then be the winner. The senior machines are to be similarly treated in the afternoon. What language will fly around if one of two men, finishing the penultimate lap on each other's heels, cannot get a start when the flag falls for the last lap?

The Irish Club proposes to celebrate the centenary of the Irish Gordon-Bennett Race by holding a gigantic road race for cyclecars on July 2. It should be great fun, but they will not get much of an entry unless they offer huge cash prizes. Supposing the event



Improved English Lamp Bracket.

materializes, I anticipate great fun in watching the tiny little 5 cwt. vehicles gradually shake themselves to pieces at 60 m. p. h. on the rough Irish roads. It should really be a case of the hare and tortoise; and if the race is over a long distance, the machine which averages a shade over legal limit may be the only one to finish!

QUESTIONS and ANSWERS

TWO-SPEED GEARS

W. E. WHITAKER.—In this country, the N. S. U. two-speed gear is adapted for V-belt machines. It is at present obtainable from some of the accessory manufacturers or fastors and Geo. P. Jenkins, 256 West 55th street, New York City, has two or three in stock. For either flat or V-belt drive a hub two-speed would be applicable, and the Miami Cycle & Manufacturing Company, 300 Hanover street, Middletown, Ohio, have such a gear fitted to their 1913 chain-drive machines. It might be possible for you to obtain one for your machine, so address Mr. Frank Valiant, care of that company.

The Armstrong three-speed gears and the Sturmey-Archer hub gears are not as yet handled in this country and are not guaranteed for motors above six horsepower. The makers are: The Armstrong Three-Speed Gear Works, Icknield street, Birmingham, England, and Sturmey-Archer Gears, Ltd., Nottinghom, England. The Rover motorcycle is made by Rover, Ltd., Coventry, England. There are no agents in this country.

BELT AND CHAIN-BELT

BELT DRIVE.—There are a variety of forms of the V-belt in use, the chief being the rubber and the multi-ply leather. The rubber belt is made up with a canvas core or "carcass" on which is deposited rubber in the form of the trapezoid which distinguishes the V-belt. An example of this form is the Shamrock-Gloria, used on the N. S. U. machines. The leather belt consists of two or more plies of leather to which are riveted thin blocks of leather at regular intervals. This form can be seen on most American V-belt machines. The Wata-wata belt consists of a series of sections made of leather strips; each strip is fastened between the corresponding strips of the preceding and succeeding sections, giving a very flexible construction.

A chain-belt is made up from a chain on which is mounted leather or rubber segments shaped to fit the pulleys, at regular intervals. The leather segments are often mounted on metal pieces forming the side links of the chain. This form of transmission is generally used over regular V-pulleys, but can be used with a sprocket in front and a pulley on the rear wheel if desired. It has not come into use as yet here. The makers of Renold chains have such a chain belt for sale. The United States agent is Peter Frasse & Company, Canal street, New York.

SHOCKING APPARATUS.

J. B. C., Canada.—The "shocking" apparatus referred to has one connection from the battery to ground and also one side of the coil. The other high-tension connection from the coil goes, apparently, to the frame, so that when the inquisitive bystander touches the frame he completes the high-tension circuit by grounding that end going to the frame, and receives a shock. The circuit is: coil, frame, man's body, ground, and return to coil.

COMPRESSION TROUBLES

RICHARD ATWILL.—If you will send us the name of your machine, we can tell better where the trouble lies. The methods of relieving compression are various: on the R-S machines, the exhaust valve tappets are raised by a cam piece which is rotated by a lever connected by Bowden wire to a latch under the right grip. The Emblem has a similar arrangement. The Eagle has the lifter operated by twisting the right grip, which also operates the throttle, and quite a number of other machines have the same arrangement. The Excelsior and Indian push on the lifter lever to raise the valves.

The *Motorcycle Manual* gives helpful information in practically all cases of troubles regarding compression, but we doubt if it would cover the case you mention. Let us hear from you as suggested before.

SHIPPING MACHINE ABROAD

F. ZIMMERMAN.—The rate from New York to Bremen, via American Express Co., the machine being taken along as personal baggage, would be between $4.50 and $6, according to the prevailing season rates. The machine would have to be crated, of course. Insurance is not included in the above figures. Apply to the American Express Company, stating at what time you will go abroad.

N. S. U. GEAR

MARTIN DREASHER.—See the answer to W. E. Whitaker in this issue, in reference to the N. S. U. two-speed gear. Geo. P. Jenkins, 256 West 55th street, New York City, has several in stock at present which can be fitted to your machine.

BREATHER ACTION

S. ANDREWS.—The breather should relieve any compression in the crankcase, and this should have no effect at all on the compression in the cylinder. If the valve relieves the crankcase compression, it is operating correctly. Heating the carbureter in summer might give a mixture more readily fired by the spark, but not when the weather is very warm.

AEROPLANE INFORMATION

AERO.—Communicate with *Aeronautics*, 250 West 54th street, New York, for answers to your inquiry. We cannot discuss biplane designs in this department.

F. N. MACHINES

"BELGIQUE."—The F. N. single 2½ h. and four-cylinder 5 h. machines as far as we know are represented in this country by the American F. N. Company, Newtonville Station, Mass.

USE OF CAMPHOR

H. C. GREENWOOD.—For the use of camphor see page 47, issue of March 20, in letter from Pearsol Sergent.

Members of the Pittsburg Press M. C. lined up before the Schickel and R-S Agency in Pittsburg, Pa., preparatory to a recent road trip.

Carlyle

MORE ABOUT TWO-SPEED GEARS

EDITOR.—F. W. V.'s letter has brought out a number of inquiries as to the hub-two-speed gear he mentions, but so far F. W. V. seems very modest about letting the rest of his fellow-riders in on his "find." There is a loud yell coming for two-speed gears, particularly for sidecar work, and only four or five motorcycles that fit them. But where a rider who wants to fit his favorite bus with a variable gear can get one is really the question, and if F. W. V.'s gear will fit any machine he has brought out the answer to the call from a large number of riders who do not own mounts of those makes supplying special two-speed models.

Why do not some of our big accessory manufacturers develop a variable-gear? They have the machinery and tools suitable for the purpose. Instead we see new brakes, horns, lamps, speedometers, exhaust-whistles and tandem-attachments every six months, and Lord knows, there are plenty of good ones already on the market. But the two-speed gear is, as far as the majority of riders are concerned, about as rare as a hen's tooth and as easy to procure as a dodo's egg. MORGAN DOUGLAS.

ADVICE FROM NORTH DAKOTA

EDITOR.—In your issue of March 6 you outline the plans of the National Highways Association, of Washington, D. C., and I notice that the main national highway (No. 1, or northern) follows the trunk line of the Northern Pacific railway through the state of North Dakota. I wish to state that from Bismarck to the western border of the state there are no roads at all suitable for a motorcyclist; in fact, the only practicable way of traversing this portion of the state at present is on horseback.

I would advise all tourists crossing the state to go via Grand Forks and Williston; this will afford good traveling across the entire state, and is the route the Twin Cities tourists followed to Helena, Mont., two years ago. I am enclosing a rough map which shows the proper route to follow in crossing North Dakota, and trust you will be able to print it, as it may save motorcycle tourists serious trouble. I am writing because of the fact that the announcement of the National Highways Association may lead riders to believe that there are ridable roads along the route shown in the map which is being circulated.

Wolford, N. D. W. C. WHARTON.

A FEMININE BOOSTER

EDITOR.—In your issue of March 20 I read with much regret that our English cousins think we have no girl riders in this country who pilot their own mounts, and I am writing to say that there are at least a few in the metropolitan district. It is true that there is no special motorcycle model for the American lady rider, and perhaps that explains why so many girls ride tandem, but those who do ride solo should, in my opinion, receive credit for the manner in which they handle their machines.

We are not very strong in numbers on this side as yet, but we have some lady riders who are not to be overlooked. For example, there is Miss Inez Patterson, the "Short Grass Girl," who has piloted her "four" over a lot of hard going, and Miss "Cy" Woodman, who is fighting her way across the country from New York to San Francisco on her little "four." As for myself, I have not gone in for transcontinentaling, but I have put many a mile behind me on my 7 Indian two-speed. My log-book contains accounts of long journeys, some hardships, arrests and other experiences equally interesting.

MISS FRANCES L. LOEB.
Bronx, New York City.

CROSSING THE BORDER

EDITOR.—I also had an annoying experience last summer when I tried to cross the Canadian border at Niagara Falls, as a deposit of $85 was demanded, and I did not have that amount with me, as I understood that a bonding company was prepared to send motorcycles through on bond for the sum of $5. The customs officials at Niagara Falls and at Toronto denied knowledge of a company for bonding motorcycles, although it is the general practice in regard to automobiles. This caused me a great deal of inconvenience, as I was compelled to ship my machine by boat to Toronto, where it was kept at the dock until I returned by train from Cobourg. The money was returned by mail to me several days after I reached home.

It would seem very desirable to secure a reciprocal understanding for American and Canadian riders similar to that prevailing between the different states, but this would probably require more common sense than the makers of international laws possess. Canada is too close to us to be regarded as a foreign country.

Allegheny, Pa. H. T.

EARLY ANNOUNCEMENTS

EDITOR.—One of the leading motorcycle journals published an article recently from a veteran dealer in which he referred to the dilatory methods of some factories in announcing their new models and the consequent delay in commencing shipment. He stated that the dealer whose factory began making shipments of the new models in the fall had an immense advantage over dealers whose factories did not ship in quantities until late the following spring or early summer. With the new rule, now put in force by most of the factories, which require the dealers to make deposits on a certain definite number of machines or go without, late announcements work a double hardship.

Not only is he forced to lose many sales, but he is compelled to accept a large number of machines at the end of the season, about August or September, when any riders still in the market have no desire to purchase before the announcement of the following year's models, which may feature radical improvements. The unfortunate dealer is then forced to sell his unsold balance at a sacrifice.

A DEALER.

BELTS AND LAGGING

EDITOR.—In the March 20 issue there is a letter from W. H. Kutscher about flat-belt-drive, in which he advises putting electricians' tape on the naked pulley before applying the lagging. This is an excellent idea, which I have seen put in practice here in New York on a number of mounts, but what I would like to ask is: If the design of a flat-belt machine is correct, why should any lagging be needed at all? Belts running under all kinds of conditions in factories and on machinery exposed to dirt and water are run successfully over naked pulleys with only a slight coating of belt dressing to act as a non-slipping medium and also a belt-preserver.

If the lagging is necessary to increase the "bite" of the belt on the pulleys, owing to dirt and water getting on them, as I have heard it stated, why not keep off the mud or dirt by efficient guards or protectors and abolish the lagging altogether? The manner in which I have seen most laggings put on makes the pulley humpy in sections and certainly doesn't make for easy running or reduce bearing wear to any extent. If the belts are not wide enough to transmit the power of the motor, the designers ought to look into the matter and remedy it. They could use a V-belt drive instead, and I fail to see the necessity of a flat belt and idler with the good free-engine clutches we have nowadays.

New York, March 29. V-BELT CRANK.

H. H. McDANIEL, Harley-Davidson agent in Madison, Wis., is a booster who never lets an opportunity go to waste, and his latest wrinkle for attracting attention to the machines he handles is a neat card in the corner of his business envelope reading as follows: "Return to the home of the '5-35,' 113 State street, Madison, Wis." Simple as this arrangement is, it has given McDaniel publicity returns. "Mac" has placed fourteen of the 1913 Harley-Davidsons so far.

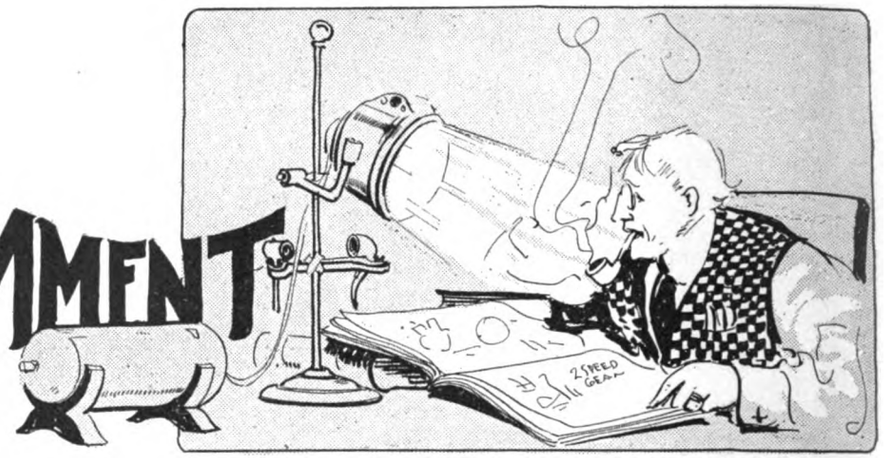
KINKS & KOMMENT

by "COURIER"



BROTHER riders have often smiled at the oblong camera case mounted between my handlebars just back of the fork head, and have made facetious remarks about lunch and portable bars. However, some of them have seen the inside of the case and have benefited by the view, for the eleven-by-six-inch box carries a spare inner tube, resting comfortably in French chalk. The folding of the tube to get it in that space is a wrinkle that I got from my automobiling days, and is one of the best ways of keeping tubes until ready for use. Here is the dope.

FOLDING A TUBE.

TO fold an inner tube, first remove the valve "insides" and then folded in two, with the valves at one end. Commencing at the other end, roll the tube in a spiral, driving the air out of it by so doing. Next fit the insides and cap; the tube will stay flat with no air in it. Unroll again and refold with the valve in the center and wrap the valve entirely with cloth or put a rubber finger on it to prevent the valve chafing the tube when the final fold is made. Turn the ends inward so that each half of the tube is folded toward the valve, and finally bring the ends together with the valve between. Fasten with broad rubber bands and put in the box. This method does not hurt the valve or its chaplet and gives natural folds to the tube. The box I carry was formerly used for a panoramic camera and is waterproof, making it desirable for tube-carrying. Wrapping the folded tube in oil-cloth will give it a fine protection, also guarding it against rubber's great enemies, moisture and light.

TWO-SPEED GEARS.

CONSIDERABLE comment has been made on a letter in the "Told Among Friends" section which treats of two-speed gears, or, rather, of hub-gears, and I have received quite a number of inquiries on the matter. I am not acquainted with "F. W. V." as far as I know, but cannot agree with him as to the hub being the ideal position for a variable gear. I think the countershaft location is superior; for one reason, that the gear, always a rather delicate device, needs the added insulation from road jars which the frame gives and which the hub-mounted gear does not get. Personally, I don't like a heavy rear wheel, especially as I have frequently to ride in grease and over knobby roads, and the wheel with the hub gear is certainly heavier than one with only the coaster brake fitted. In talking the hub location over with a friend who drives as well as rides, he mentioned that automobile designers put their gear-boxes on the rear axles, but the public is carefully kept from seeing the heavy repair bills on vehicles so fitted, and besides, a motorcycle is a different proposition. The best test would be a competitive ride between machines fitted, one with the hub gear and the other with a gear on the countershaft.

ALTERNATIVE BRAKES.

THE other day I was talking things over with a police official whose experience with motor vehicles in general has been considerable, and who mentioned some proposed legislation calling for two independent sets of brakes on all motorcycles used in a certain state. I agreed with him that there should be two on every bus, but pointed out that considerable redesigning of the rear hub would be needed to accommodate the two systems on the majority of machines. We read over the sections of the bill, and found no loophole for one brake operated in two different ways and then adjourned to a dealer's place nearby. The latter "pooh-poohed" the idea and suggested a demonstration on his own machine with a very small coaster, and, as it turned out, one in poor condition. Accordingly, he went back three squares and came on at a 30-mile clip up to the line where he was to set the brake. At that point, he stood up on the pedal, but the anchor-arm parted and he made a dive for a plate-glass window, machine and all. A catastrophe was averted by the high curb; the rider made a record slide adong the sidewalk and the machine leaped in the air and bounded backward into the street, where we both fell on it and shut off the motor. Much to the wrath of the dealer, who was only scratched and buttonless, the official insisted on measuring the distance the motorcycle had traveled, and this, counting curves and the bound into the air, was 36 feet. It was an official test, he said, before witnesses, and we almost got the dealer to say that two brakes were necessary. There was a lot of fun made over the affair, and the dealer has reaped the benefits of publicity in an increase in sales of machines fitted with another brake.

ALTERNATIVE BRAKES,

WHEN we come to think it over, there ought to be some emergency brake ready to apply when the service brake does not work properly. If all riders paid attention to their brakes, there would not be any such cavortings as our friend, the dealer, performed, but one look at the performances of lots of riders will show that they don't pay any attention to the mechanism until they have had a narrow squeak or the brake has failed them. The brake fitted to the front wheel will only act as a retarder, and if applied suddenly, may cause the whole machine to buck and heave the rider off. Belt machines can easily be fitted with a reliable pulley brake, but chain mounts will require an extra drum as part of the hub on one side or the other and a contracting band for the emergency brake, according to the present construction of hubs.

SIDECAR PASSENGER.

THE attitude of several riders toward their sidecar passengers reminds me of that of the drivers of the old flash-boiler steam carriage days. I remember in 1901 when one driver of a White steamer came in second in a hill-climb, he protested that the observer from the club holding the event had a weak heart and could not use the hand pump; therefore he lost enough time to make him come in second instead of first. Even at that early day, his protest was not allowed. So it is with the sidecar passenger; in city running, he gives the necessary signals for traffic, keeps an eye out for unusual occurrences and notifies the rider in time, and finally assists in pushing the rig, should the motor become stalled. These duties call for liveliness and endurance, not to mention quickness of perception, and it is a fine training, is sidecarring in traffic, but not for people who are timid.

In country running, or touring, there are additional duties. Picking the route, holding restless horses, "flagman" at railroad crossings, and helper in all mechanical and tire troubles go to make up these. The poor passenger may even have to do what I did once during a trip after a cloud-burst, assist in carrying the machine and detached sidecar across a nine-foot gap in the road, and assembling them again on the other side—a fifty-minute job, all told. Or his strength may be called upon to act as a drag on semi-precipices, otherwise called mountain roads. If there ever are to be sidecar events in cross-country work, the passenger ought to be awarded medals as well as the drivers.

LA VERNE M. C. MEET

MORE than 500 spectators witnessed the recent motorcycle races held under the auspices of the LaVerne Motorcycle Club, of Lordsburg, Cal. Harry Hixon, president of the club, took first place in five out of the eight events. The club has arrangements under way for races to be held July Fourth.

Digitized by Google

NEW CLUBS AND ELECTIONS

AMONG newly organized motorcycle clubs are the following: Bayonne Motorcycle Club, Bayonne, N. J.; Dave Goulden, president; A. G. Woodward, vice-president; M. W. Chadwick, secretary; Charles Jones, treasurer, and C. R. Geddis, captain.

The Owantonna (Minn.) M. C.; E. C. Zamboni, president; Owen Long, secretary-treasurer, and John Rypka, captain.

Mineral Point M. C., of Mineral Point, Wis.; Elmer Peters, president; William Priestly, vice-president; William Hack, treasurer; W. S. Pedley, secretary; William Kislingbury, captain; J. H. Dunn, first lieutenant, and Walter Groth, second lieutenant.

Newburg Motorcycle Club, Newburg, N. Y.; Thomas Hornbeck, president; William J. Pusey, vice-president; Louis Levy, secretary-treasurer and William Lahey, captain. Richard Loundsbury is first lieutenant and John Brennan, second lieutenant.

Broadway M. C., Northeast Baltimore, Md.; George W. Lowery, president; Harry Nickels, vice-president; William Johnson, secretary-treasurer, and Pop Allard, captain.

Other officers elected at annual meetings are: Salina Motorcycle Club, Salina, Kan.; C. A. Biggs, president; Kirk Van Cleef, vice-president; Edward Anderson, secretary and treasurer.

Springfield (Ohio) M. C.; G. W. Richeson, president; James H. McKaig, vice-president; C. T. Henderson, secretary-treasurer; N. G. Grove, captain. William H. Wall, J. E. Black and Glenn Horner are the directors.

Zanesville (Ohio) M. C.; E. H. Garrett, president; R. B. Williams, vice-president; J. S. Whitworth, treasurer; Frederick Rieman, Jr., secretary; Frank Pierce, captain, and Lawrence K. Cashbaugh, lieutenant.

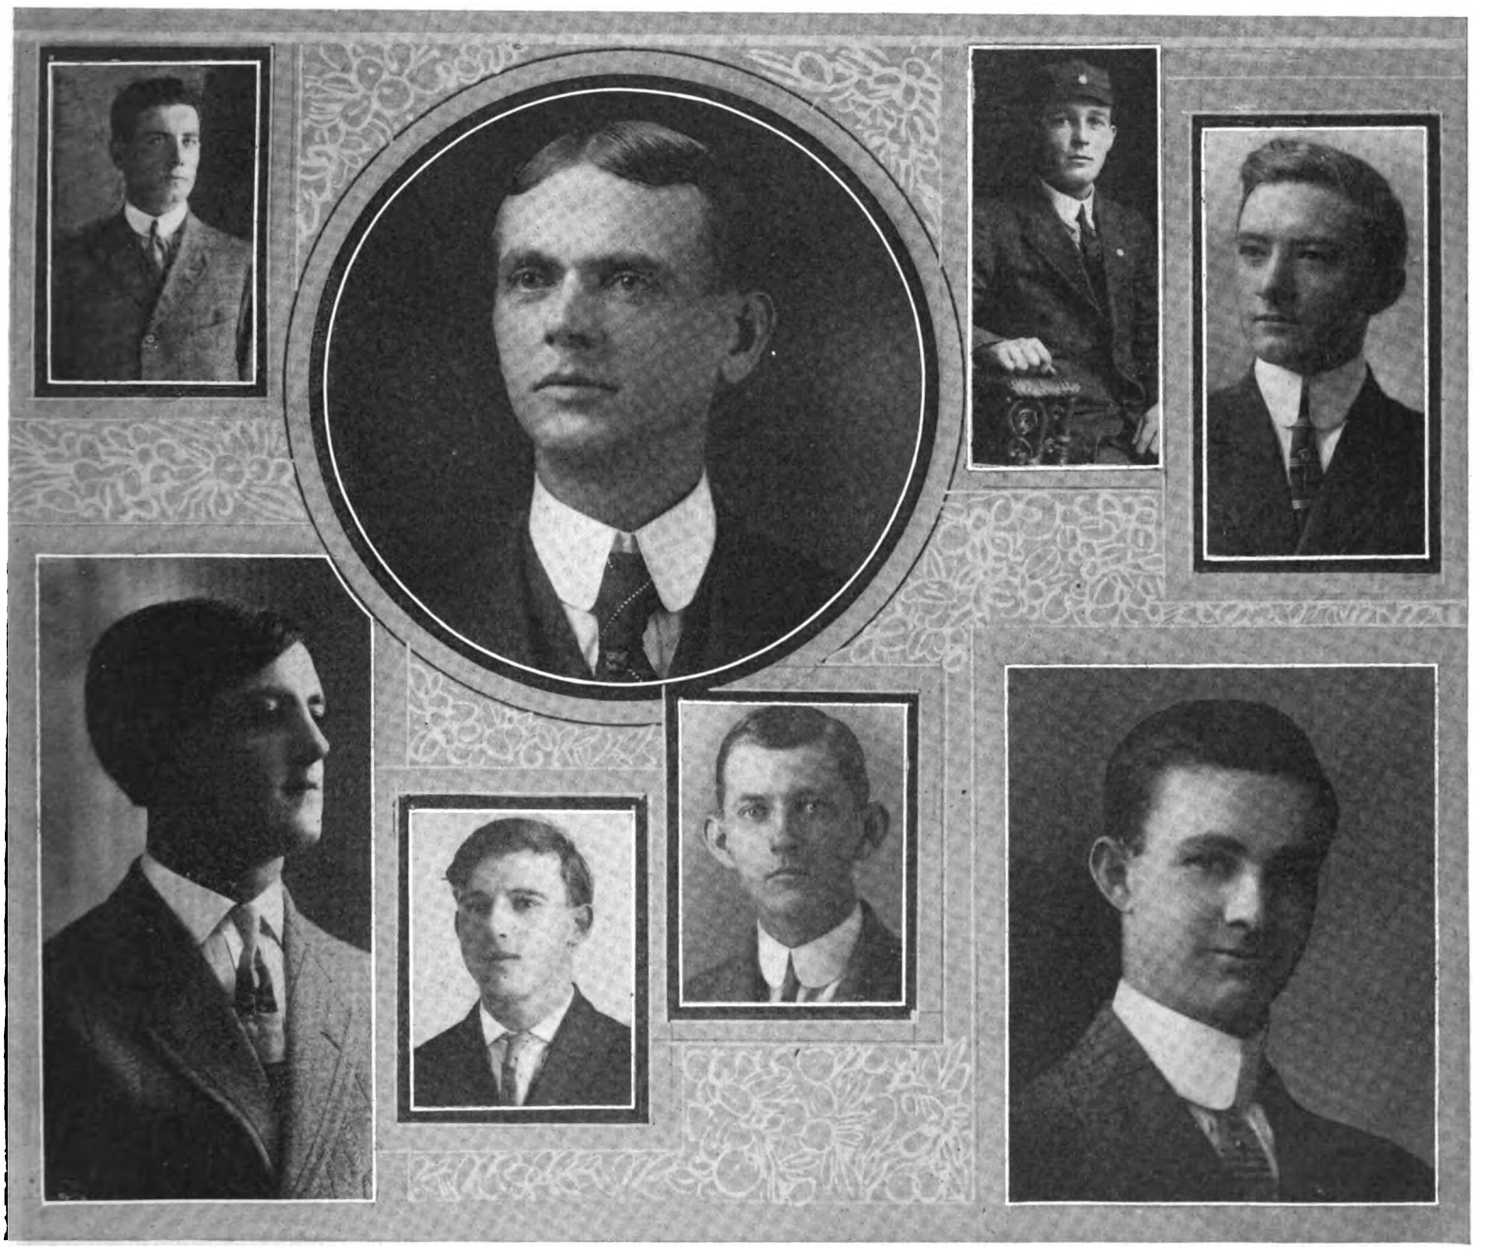
Union City Motorcycle Club, Union City, Ind.; Forest Turner, president; Milton Vaughan, vice-president; Hugh Reeves, secretary; H. Roe, treasurer, and Thurman Constable, road captain.

Washington M. C., Washington, D. C.; J. R. Padgett, president; W. J. Meyer, vice-president; John K. Willis, secretary and treasurer.

CLUB TO MANAGE SHOW

PLANS are already under way for an independent motorcycle show for Elmira, N. Y., to be held under the auspices of Elmira M. C.

HUSTLING NEW OFFICERS OF THE SAVANNAH CLUB



MEMBERS of the 1913 staff of officers of the Savannah (Ga.) Motorcycle Club appear in the accompanying photographic layout. William H. Williams, president, is shown in the circle, with R. J. Clark, treasurer, to his left. At his right are Frank Laird, first vice-president, and Martin Schroeder, second vice-president. J. S. Cafiero, secretary, appears in the lower left-hand corner, and O. A. Meyer, publicity manager, in the right hand corner. Dennis Downing, second lieutenant, and U. S. Ard, first lieutenant, are shown from left to right beneath the circle.

DURING the past month the Elmira (N. Y.) M. C. has enlisted 26 new members.

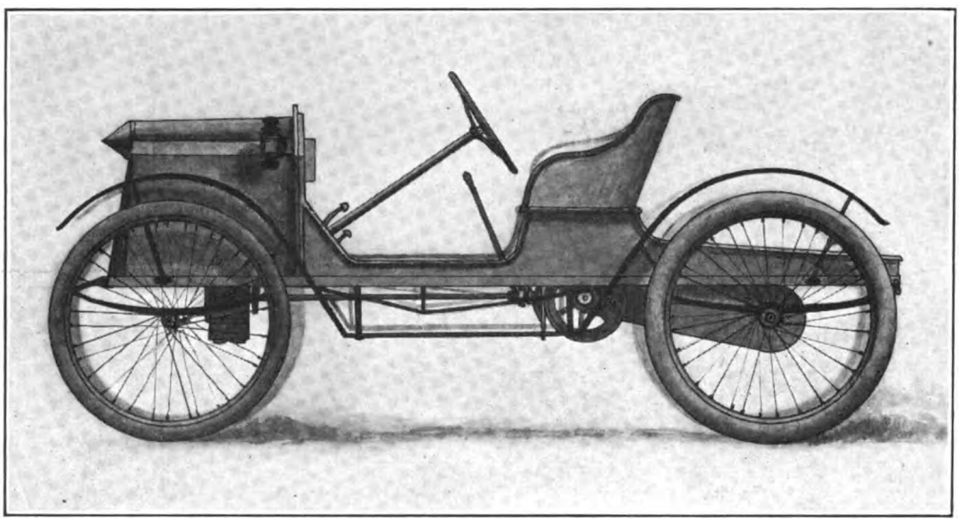
W-G CYCLECAR ENTERS THE FIELD



FROM Philadelphia, Pa., comes the first formal announcement of the production of an American cyclecar, the W-G, a neat and racy outfit which is being marketed by the Carlson-Wenstrom Mfg. Co. The company announces that in the manufacture of its cyclecar it has aimed to provide a vehicle having practically the same low upkeep as the motorcycle, with the additional space advantages of a light automobile. Special attention is called to the fact that the W-G is not an automobile, but a vehicle intended to fill the breach between the motor car and the motorcycle.

The motor is of the four-cycle, two-cylinder type with a bore of 3½ inches and a stroke of 4½ inches. The cylinders are of T-head construction, with 2-inch mechanically operated valves; the latter have nickel steel heads welded to carbon steel stems. They are adjustable and operated by specially designed lifters which permit of unusual silence in action. The crankshaft has ball bearings, and the upper and lower connecting rod bearings are of bronze. Ignition is by magneto and a carbureter of special design is fitted; the latter is automatic in action, has no springs and can be adjusted from the dashboard.

Lubrication is by the splash system and force feed. A plunger pump is driven by a cam on the cam-shaft, giving a positive feed to all parts of the motor. The clutch and transmission are of the friction type, the former combining flexibility and positiveness in action and being so designed that it requires little or no attention. The friction drive permits of almost any number of speeds, forward and reverse; the fiber disc can be removed by taking out four bolts. The drive is by chain to the rear axle, and the transmission agent is fully protected from dust and mud by a pan.

The frame of the W-G is 3/16-inch channel steel, reinforced and supported by truss rods. The springs are semi-elliptic and are fitted front and rear. Special care has been exercised to have them flexible and at the same time amply strong to stand hard usage. The spring leaves are broad and flat so that the body of the machine is brought close to the ground. The brakes are of the external type, 6 by 1¼ inches, and lined with a non-burning material. The friction drive may also be used as a brake by placing it in the reverse position. The wheels are of the standard wire type, and are fitted with 28 by 3 inch tires. The steering wheel is placed at the left side, double bell-crank steering gear being used with a 16-inch steering wheel. The speed lever is located in the center of the machine.

The body of the machine is of runabout design and the seats are of the bucket type with deep upholstering. Ample room is provided in the rear for extra tires and luggage. The weight of the outfit is said to be less than 300 pounds, and speeds from 3 to 40 miles an hour are possible with it. The W-G sells at $325 and $450, according to the style of body specified and the equipment. The Carlson-Wenstrom company also has a parcel delivery car ready, with a capacity of 500 pounds, of which details will be given in an early issue.

INVINCIBLE SPRING RUN

DETAILS are now being worked out for the second annual spring run to Southampton, L. I., of the Invincible Motorcycle Club, of Brooklyn, N. Y. The same entry fee of $2 will be charged this season as at the first run, but it has been proposed to charge 50 cents extra for post entries to avoid confusion and delay at the starting point—Bedford Rest. To encourage early entries, F. A. M. sanctions have been made to cover both May 4 and May 11, in case of rain on the former date.

The schedule for checking has been arranged as follows: Check out at Bedford Rest 6:30 to 7:00 a. m., Southampton 11:00 to 11:30 a. m., reaching Riverhead 12:00 to 12:30 noon. Dinner at Griffin House. Check out at Riverhead 1:00 to 1:30 p. m., Port Jefferson 2:30 to 3:00 p. m., Jericho 4:00 to 4:30 p. m., and check in at Bedford Rest 5:30 to 6:00 p. m. The total mileage will be about 200.

Time clocks will probably be used at all checking points to avoid disputes, and all entrants making perfect scores will receive handsome gold medals. Sidecar entrants making perfect scores will receive two medals, although only one entry fee will be charged. Cups will be awarded to the F. A. M. club having the most entries, and also to the club having the largest number of perfect scores. Entry blanks may be obtained from all motorcycle dealers in the vicinity of Greater New York, or upon application to J. C. Fawcett, 5 Willoughby street, Brooklyn, captain of the Invincible M. C.

MOTORCYCLE GARAGE AT WINSTEAD

W. S. FANCHER, Indian dealer at Winstead, Conn., has accepted plans for a modern motorcycle garage on which construction work will be started at once. The building, which will be located on the New Hartford Road, will be two stories high and 30 x 40 feet on the ground. A large assortment of accessories will be stocked, as well as standard replacements, including gas tanks. Mechanical service will be a feature of the business, with special regard for Indian riders.

A BUSY NORTHWEST FIRM

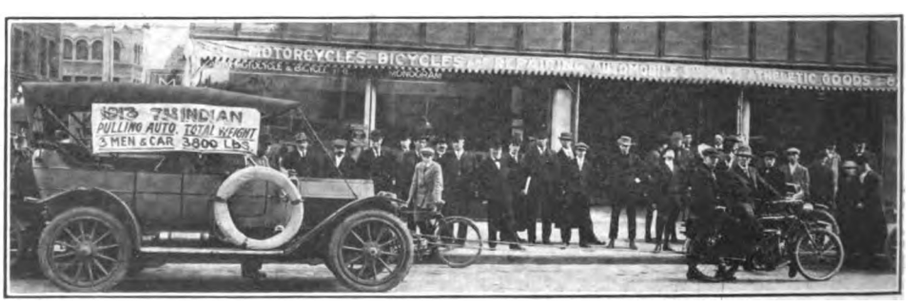
ONE of the most active firms in the motorcycle field in western Washington is the Ballou & Wright Company, of Seattle, which has contracted to handle the Indian and Emblem lines for 1913. The firm will make a service department a feature of its headquarters and Will H. Pielow, one of the best known motorcyclists of Tacoma, Wash., will be placed in charge of it.

The accompanying photograph shows a 1913 Indian in a test recently conducted by the company. The heavy automobile was towed through the streets and up some rather startling grades, to the amazement of spectators. It will be noted that the company has spacious quarters with excellent display facilities.

TRADE MEN IN HARMONY

CHICAGO, March 26.—A meeting of the Chicago Retail Cycle Dealers' Association, Inc., was held at the New Southern Hotel last Wednesday night when further steps were taken in the amalgamation of the motorcycle and bicycle trade interests of this city. The meeting took the form of a banquet and good fellowship was the order of the evening.

The motorcycle division of the association will hold a meeting next Friday evening when they will choose the three directors who will look after the affairs of the division. The executive committee of the whole association has already been selected. The straight motorcycle dealers will be represented by J. P. Garner, the Henderson distributor for Chicago, while the mixed motorcycle and bicycle tradesmen will have Mr. Brown, the Emblem representative for Chicago. The bicycle traders also have a representative.



Seattle Motorcycle Headquarters of Ballou & Wright.

WHAT SHOULD JONES DO?

IF John Jones, a dealer, learns that Sam Smith is in the market for a motorcycle—through seeing him ride a demonstrating machine belonging to a competitor—is Jones justified in striving to interest Smith in the make of motorcycle he is handling, or should he leave the coast clear for the agent who first had dealings with the prospective buyer? In other words, does a prospect "belong" to the dealer who "discovers" him, or should any other agent in the city feel free to seek his patronage regardless of who started the ball rolling?

THESE queries were embodied in a letter received a few days ago from a successful motorcycle dealer in an Ohio city, and owing to the fact that they raise an interesting question which has often confronted agents they are printed with a view of having trade workers express their opinions. At first thought it would seem that the dealer who "discovers" a prospect should not be interfered with until the prospective rider makes it known that he would like to have another make of machine demonstrated for him, but an unbiased analysis of this policy will show that it is sometimes subject to qualifications. For example, the buyer who negotiates with only one dealer and examines only one make of machine may not have his requirements filled as satisfactorily as if he had been acquainted with the mechanical details of several other makes.

THE FIRST DEALER'S CLAIM.

On the other hand, the agent who first gives his time to interesting a person in the possibilities of the motorcycle may with some justification feel that he has "made the prospect," and that he should be entitled to a greater claim on the ultimate business than the other dealers who had no direct part in breaking ground for the sale. How far this claim should carry, and under what conditions other agents may feel warranted in making a bid for the sale are knotty questions permitting of widely varying viewpoints. Assuming that Jones is a well-meaning dealer who aims to be perfectly fair, but who wants to take advantage of every legitimate opportunity in his field, what should his policy be with reference to Sam Smith?

The Ohio dealer who submitted the questions asked for a reply by mail and a letter has been forwarded to him expressing the personal opinion of the Editor. This opinion, however, was based more upon the ethical aspect of the problem than upon knowledge of the many intricate trade conditions which would have a practical bearing on such a question. Accordingly, other letters will be welcomed and will be given space in these columns. Names need not be signed.

ONE AGENT'S OPINION.

One well-known dealer in the metropolitan district to whom the question was submitted replied in part as follows:

"If I saw one of my competitors demonstrating a motorcycle for the benefit of a prospective purchaser I would not feel that this dealer was entitled to a monopoly of the prospect, but I would confine my efforts in his direction to sending a circular letter, merely stating that I was prepared to demonstrate my machines should he care to inspect them at any time. I believe that every prospective rider is entitled to all the information he can obtain concerning all makes of machines; this policy leaves him in the field for open competition and the rest depends upon the buyer's individual requirements and the salesmanship of the various agents.

"It goes a bit hard with a dealer to 'dig up' a prospect and then have him carried off by another agent, but it strikes me that competition is too keen these days for any dealer to expect to keep a prospective buyer to himself. I believe the dealer who is first on the scene should have a fair chance to make his sale, but I argue that the buyer is entitled to know that there are other machines on the market and that the men who handle them are willing to meet him halfway should he care to have them demonstrated for him."

DENVER CLUB ACTIVE AGAIN

DURING the winter months the Denver (Col.) Motorcycle Club has been lying dormant, but with the opening of the riding season activity has been renewed, and the club has been practically reorganized. In order to insure success and to stimulate interest the local dealers have guaranteed a certain sum, should the dues not be sufficient to cover the running expenses.

Officers were elected at the first meeting as follows: H. L. Beck, president; J. Johnson, vice-president; A. Sharp, secretary, and A. McElhenny, treasurer. A board of directors composed of the dealers who are financially backing the club was appointed as follows: W. W. Whiting, Ed Meade, Harry Ott, O. Daenitz, Fred Williams and W. Crocker. Mr. McElhenney, newly elected treasurer, immediately got busy and collected $50 in dues.

A number of members of the club, piloted by Walter Whiting, recently made a trip to the mountain town of Idaho Springs. They encountered plenty of sand, but got back without mishap.

NEW CATALOG READY

AN unusually attractive catalog is that of the Chicago Cycle Supply Company, of Chicago. This catalog has been in course of preparation for months past and is now being distributed. The publishers report a big demand for it.

Headquarters of McGraw Bros., in Jacksonville, Fla., where Thor, Harley-Davidson and Black Hawk machines are sold.

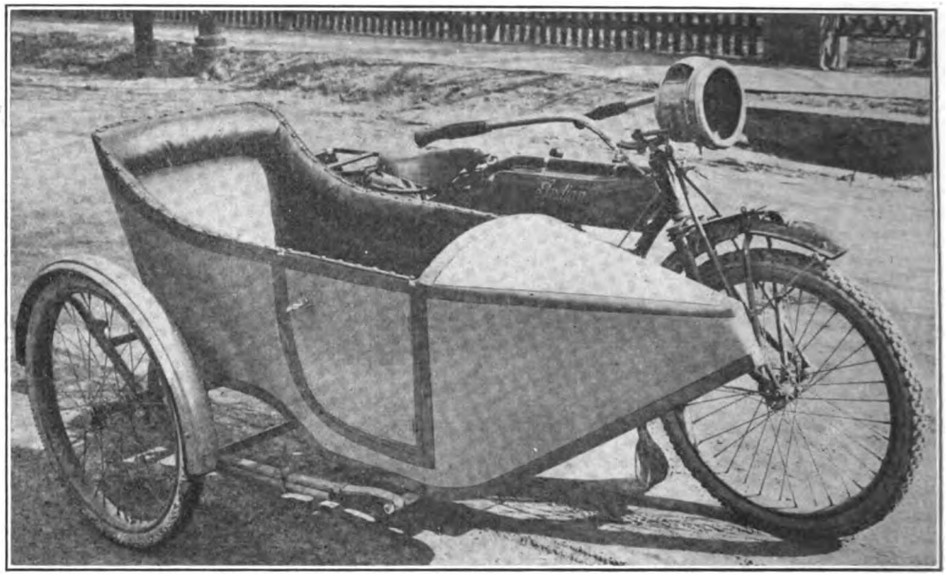
NEW BAXTER MODEL

FROM the headquarters of the Baxter Sidecar Company, Cambridge, Mass., comes the striking photograph shown herewith of a new sidecar model, a coach-built product which will be the headliner of the Baxter factory for the 1913 season. After much experimenting the designers have succeeded in embodying all their mechanical improvements without detracting from the appearance of the attachment, and they feel that they have turned out a worthy addition to the Baxter line. The body is made of automobile sheeting, laid on an oak frame, and special attention has been given to the upholstering. The seat has a well-upholstered spring cushion, and the back of the sidecar is 20 inches high from the top of the cushion, thus insuring maximum comfort. The total length of the body is 64 inches. The price, with either an underslung frame (as shown in the photograph), or with the Baxter spring wheel, is $90.



New Sidecar Model Being Produced by the Baxter Company.

F-N COMBINATION ATTACHMENT

REPORTS from the Fentress-Newton Mfg. Co., 429 Bagg street, Detroit, Mich., are to the effect that its combination spring carrying attachment is proving the most attractive seller in a long list of favorites. This attachment has a well-sprung carrying base, narrowed at the front to permit of comfortable use as a passenger seat and supplied with adjustable straight handlebars. The handlebars and special cushion may be quickly removed from the attachment, leaving it an admirable luggage carrier. Folding footrests are bolted to the upright braces so that they too may be removed when the attachment is not to be used for passenger service.

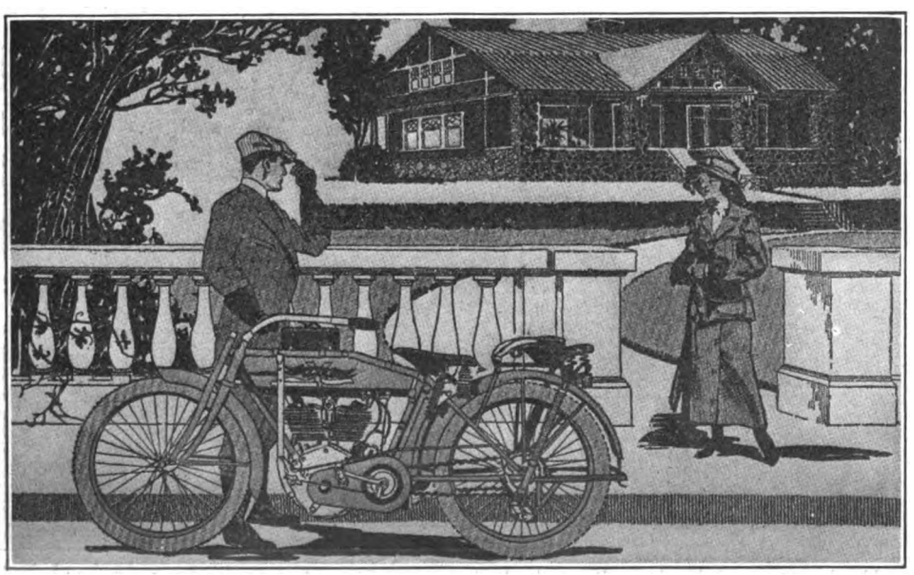
The Fentress-Newton firm also makes adjustable back-rests for motorcycle saddles, universal lamp brackets for motorcycle lamps and motorcycle extension nuts. The company's slogan is "One Good Thing After Another," and that this really means something is evident from the fact that orders are piling up at a record-breaking rate.

PITTSBURGH DEALERS

FROM Pittsburgh, Pa., comes the following lineup of motorcycle dealers and distributors for the 1913 season: Harley-Davidson, distributed by S. C. Hamilton, 131 Collins avenue; Indian, distributed in the county by the Motorcycle Exchange, Schmidt & Payne, proprietors, 5606 Penn avenue; Excelsior, J. A. Johnson, distributor, 639 Liberty avenue; Henderson and Excelsior, Harry D. Immel & Bro., 5645 Penn avenue; Emblem and Dayton, T. J. Everwine, 7000 Frankstown avenue; De Luxe, Kirkman & Boerstler, 10 Liberty avenue; Merkel, Thor and Yale, Harry L. Neff, 106 Federal street, North Side; Minneapolis and Michaelson, Earl Dean, Grant street; Jefferson, George Hepler, 7208 Bennett street.

UNIVERSAL BUSINESS SOLD

FROM Worcester, Mass., comes the statement that the business and stock of the Universal Mfg. Company, launched some time ago by W. E. Eccles, has been bought by C. A. Persons, of the Majestic Mfg. Company, and associates. The stock, machinery, fixtures and good will of the Universal company are included in the sale, and Mr. Eccles has agreed not to re-engage in this business within five years. The business will be divided between the Majestic Mfg. Company and the Standard Specialty Company, according to their special qualifications for handling the Universal material. All orders for Universal material will be filled promptly with goods of the high quality which has always been maintained by the Majestic and Standard firms.



Another Effective Cover Design, Featuring the 1913 Yale Catalog.

HEDSTROM STILL RESIGNING

AT a meeting of the directors of the Hendee Mfg. Company, held on March 25, the resignation of Oscar Hedstrom as vice-president of the company and as a director was accepted, and the well-known engineer has now entirely severed his connection with the firm except for holding some stock on which the company has an option. Mr. Hedstrom's retirement from the official positions supplements his resignation as mechanical engineer of the Hendee company which was announced about two weeks ago.

In a letter written a few days ago he states that it was his intention to include all his official positions in the original notice of resignation, and that not until after the first announcement was made did he discover that he was still occupying the offices of vice-president and director. As was recently stated, Mr. Hedstrom has laid no business plans for the future, and is entirely absorbed at present in arrangements for an extended recreation trip.

THOR SUB-AGENCY IN NEW YORK

ANNOUNCEMENT is made by the New York Motorcycle Company, of 318 West 48th street, New York City, distributors for the Thor, that a sub-agency has been placed with the Terminal Cycle & Sporting Goods Company, 42 Cortland street, New York, to cover that portion of the city south of Canal street.

BIG DEMAND FOR TWINS

A SIGN of the trend of the times was seen in the character of the forty-five machines which were on the floor of the show-room of the Motorcycle Sales & Supply Co., Chicago, local agents for the Excelsior, last week. Of the 45 models, only four were singles.

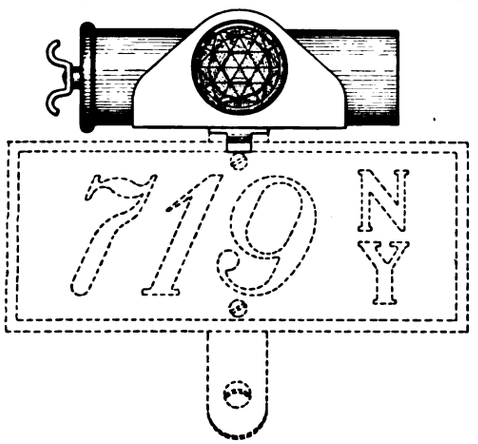
NEW YALE DISTRIBUTORS

H. M. BAIRD, formerly district sales manager for the Yale, and A. R. Horn, who has been in the motorcycle business for a number of years, have formed a new firm in Minneapolis, Minn., and will distribute the Yale machines in Minneapolis and vicinity. Their headquarters are at 725 Third avenue.

Digitized by Google

HAWTHORNE TAIL LAMP

IN the accompanying illustration is shown the improved electric tail lamp now being marketed by the Hawthorne Mfg. Company, of Bridgeport, Conn., and covered by a recently granted patent. The new lamp combines the qualities of compactness and lighting efficiency so admirably that it is already a top-notcher on the Hawthorne sales list. Despite the fact that the Bridgeport firm is two months behind in filling its orders for jobbers, it is working



systematically to keep abreast of the demands of individual riders for its products, and the new tail lamp is being produced in large quantities. The short tube attached to the lamp proper carries a battery, and it will be noted that the license plate is so disposed of that it meets legal requirements without being cumbersome or detracting from the pleasing effect of the lighting outfit.

WANT S. & M. FACTORY

AN effort is being made by the business men of Coshocton, Ohio, to bring the plant of the S. & M. Rubber Company to their town. The old plant of the Premium Stamp Company is looked upon as a likely location for the firm.

NEW FIRE EXTINGUISHER

TO meet the growing demand for a handy and efficient fire extinguisher which will give thoroughly satisfactory results in garage service, the H. M. Johns-Mansville Company, Madison avenue and Forty-first street, New York City, is placing on the market the "J-M Fyro," an apparatus especially adapted to fighting gasoline fires. The extinguisher is of the one-quart type, and is credited with being the first to use compressed air for the discharge of its extinguishing fluid. This fluid is a liquid gas, five times as heavy as air, and because of its weight it quickly envelops flames, displaces oxygen and puts out the fire. When thrown on the fire the liquid volatilizes and forms a dense combustion-arresting gas blanket. It is stated that one quart of J-M Fyro fluid will expand to 4,000 cubic feet of fire-annihilating gas, as compared with about 1,000 cubic feet of gas provided by an ordinary one-quart extinguisher. A noteworthy feature is that the new fluid will not injure fabrics or other materials with which it may come in contact.

KOKOMO PLANT IN FULL SWING

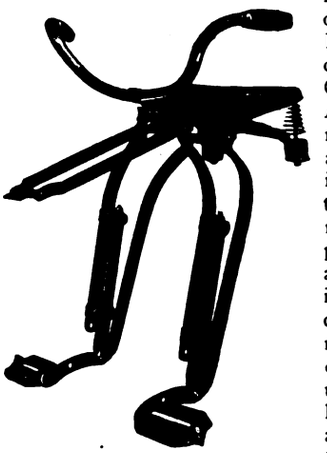
ANNOUNCEMENT is made by the Kokomo Rubber Company, of Kokomo, Ind., that work at its plant has not been interfered with in spite of the flood conditions. The only inconvenience experienced was lack of shipping facilities, which are now normal again. A number of other factories in the city were forced to shut down for a few days. For two days the city was shut off from railroad communication, and telegraph, telephone and mail service was crippled for the same period.

DeLUXE AGENTS BUSY

PUTZMAN & HOFFMAN, agents for the DeLuxe in Sacramento, Cal., report a rapidly growing demand for that machine in and about the Californian capital. Since taking the agency three months ago they have sold 30 machines and have many more prospects.

EMPIRE SPRING TANDEM

STURDINESS and easy riding are the qualities that make a strong appeal to motorcyclists in the improved spring tandem attachment that

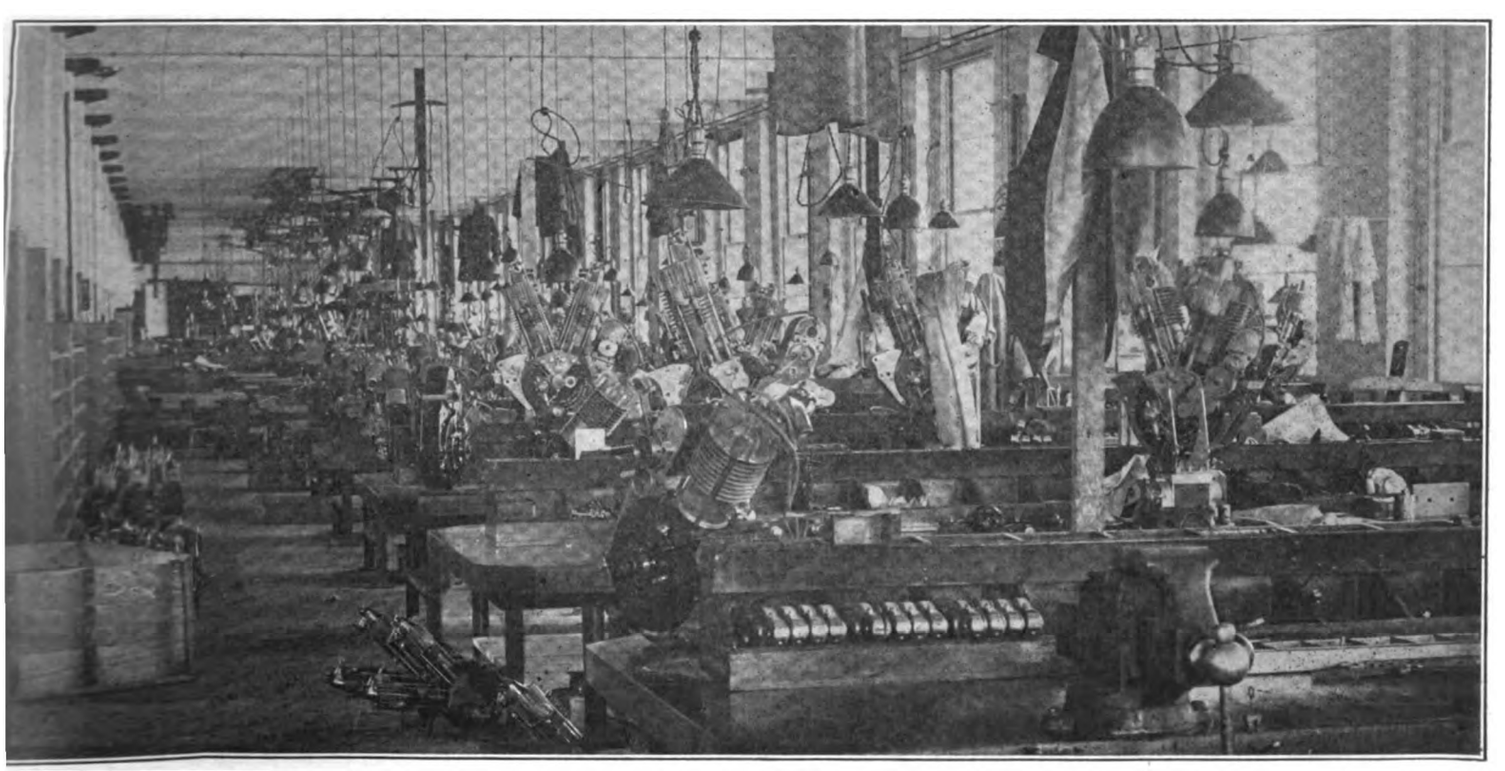


is being produced by the Empire Specialty Co., of Cleveland, O. As will be noted in the accompanying illustration, the attachment has pleasing lines and a springing system calculated to meet all the demands made upon it. The handlebars and pedals float with the saddle, thus insuring the utmost comfort in any kind of going. The saddle position is credited with being the lowest on the market for a tandem attachment, and the range of spring movement is greater than is usually found. The attachment is fitted with Kelly handlebars, Troxel saddle and rubber pedals.

The Empire company also manufactures an extensive line of high-grade detachable bicycle mudguards and is contemplating the addition of motorcycle guards of the same high quality to this line.

MERSHON PROMOTED

C. R. MERSHON, who has been traveling over the entire country in the capacity of service man for the Miami Cycle & Mfg. Co., of Middletown, Ohio, had been promoted to the position of final inspector and chief of the inspection department. Twenty-five road testers are under his supervision.



An Impressive View of the Assembling Department at the Plant of the Hendee Mfg. Company.

INDIANAPOLIS SHOW OPEN AGAIN

INDIANAPOLIS, IND., April 1.—The automobile and motorcycle show at the Fair Grounds Coliseum, reopened Sunday for the benefit of the flood relief fund. It had been closed all week on account of the flood, but will be in progress during the entire week ending April 5. The G. H. Westing Company is displaying a line of Indians and Indian sidecars; Gus Habich is showing a number of Excelsior models and the Rodger sidecar. DeLuxe and Yale machines are attractively arranged at the booth of the Merz Motor Company, while Harry Dipple is showing the Harley-Davidson. The Thompson Supply Company also has a booth in the motorcycle section and is displaying the Emblem. The motorcycle exhibits are well arranged in the balcony of the Coliseum.

W. J. Teubner, the Indian booster, saved many lives during the flood in the western part of the city last week. Teubner did heroic work with a motor boat donated by Westing. Westing also let the city have a carload of new canoes for rescue work. Mayor Shank of Indianapolis yesterday appealed to the Indianapolis M. C. to send ten riders at once to Dayton to aid in patrolling the city. President McClain and ten members of the club left immediately for that city. They shipped their machines part of the way and will work in Dayton as long as needed.

F. I. Willis, a director of the F. A. M., says that he will probably not be able to attend the directors' meeting in Chicago, on Friday, April 4, as his duties at the automobile show will not permit of his leaving.

ANOTHER FLOOR FOR NATHAN

AN unprecedented demand for its products has compelled the Nathan Novelty Mfg. Co., 84-90A Reade street, New York City, to embrace another floor in its already spacious factory, and the firm states that it is now prepared to keep abreast of orders. While the extension will not be devoted exclusively to any one product of the company, it is likely that a considerable part of it will be devoted to leggings. The latter are in greater demand than ever before and the company is finding it necessary to keep its legging department working at top speed in order to satisfy the market. All the other departments, however, will be given additional room because of the extension, and new machinery is being installed to facilitate the production and handling of the entire Nathan line.

TO DISPLAY MOTORCYCLES IN ITALY

THERE will be a large motorcycle section at the ninth annual automobile show to be held under the auspices of the Automobile Club of Turin, Italy. The show will be held between April 26 and May 11. Several European and British machines will be shown, while the Indian will be the sole American representative, it being exhibited by the Indian agent at Turin.

EXPRESSIONS OF SYMPATHY

THE many friends of Ralph D. Webster, of the Eclipse Machine Co., of Elmira, N. Y., will learn with profound regret of the death of Mrs. Webster. Mr. Webster is in receipt of many letters of condolence and he has the deepest sympathy of all who know him in his bereavement.

THE Stewart-Warner Speedometer Corporation of Chicago is planning to enlarge its works at Beloit, Wis., by the addition of a couple of wings.

Truck-Load of Motorcycle Equipment Company's 1913 Catalogs Leaving the Hammondsport Factory for Mailing.

WATERBURY MOTORCYCLE LOCK

MOTORCYCLE riders will welcome the announcement of the Waterbury Hardware Company, 414 Broadway, New York, that the firm is keeping abreast of orders for its Waterbury motorcycle lock. This lock consists of a long steel shackle which is designed to go through the spokes and around the forks of either the front or rear wheel of a motorcycle; the loose ends can be instantly snapped into a sturdy lock and the mount thus protected against theft or tampering. The lock lists at $1.

SWENSON'S LINE IN DEMAND

FROM Providence comes the announcement that the wigwam, of which B. A. Swenson is chief, is one of the busiest places in town. Already one hundred 1913 models have been turned out from the headquarters on Broad street and orders for many more are on hand. Swenson also reports a large number of sidecar sales. A short time ago he received a carload of Milford sidecars and now has only 15 left. Another live-wire motorcycle city in Rhode Island is Woonsocket and plans are now under way to form a motorcycle club there.

RAPID SALES

VINCENT BROTHERS, of Cleveland, county distributors for the Pope, report excellent sales of the twin machines. The demonstrator was recently received and on the following day 14 orders were taken. Since that time the company has been taking orders daily and the boys are kept busy demonstrating the quality of Pope machines.

OPEN INDIANAPOLIS BRANCH

IN order to keep abreast of its orders the Standard Roller Bearing Company, of Philadelphia, has found it necessary to divide the territory formerly covered by its Chicago branch and has opened a new office in Indianapolis. L. M. Watkins, Jr., is in charge of the new branch, which is located in Room 1,201, State Life Building.

RECORD OF A BUSY WEEK

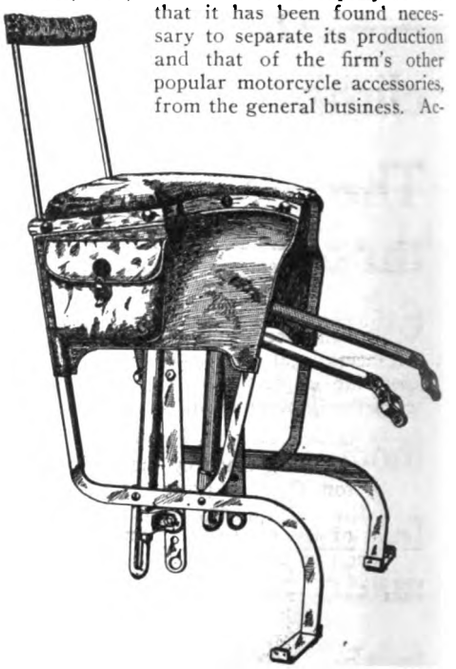
J. F. PTACEK & SON, agents for the Indian in St. Paul, Minn., report the following sales for one week: Frank Turek (two-speed), E. B. Holmberg, C. F. Smith, John J. Downs, American Home Co. (three), William Blosch, E. S. Randall, E. P. Boettcher, John Gorens, Marcel Cholquard, John Korlath, William Newmann, O. G. Tradewell and Peter Olson, of Terrill, Iowa.

READING STANDARD EXTENSION

FROM the busy plant of the Reading Standard Company, Reading, Pa., comes the announcement that its new addition, just acquired from the Remppis Iron Works, is now occupied and that more rapid progress than ever before is being made in handling orders for machines. The Remppis plant adjoins the Reading Standard factory and when it was added to the holdings of the latter it was possible to equip it and take possession without the slightest delay. The additional factory space affords the Reading Standard special facilities that have been needed for some time past, and the total floor area of the R-S plant is now about 150,000 square feet.

NEW COMPANY FORMED

THE demand for the Stoll Dream tandem, which has been manufactured in two models by the Queen City Iron and Wire Works, of Denver, Col., has increased so rapidly of late that it has been found necessary to separate its production and that of the firm's other popular motorcycle accessories, from the general business. Accordingly, the Stoll Manufacturing Company has been formed to take over the manufacture of the tandem attachments.



Stoll Dream Tandem.

The new company is already fully equipped with up-to-date machinery and is in a position to turn out the products most advantageously. It has been incorporated with Frank M. Stoll, originator of the Stoll Dream tandem, as president, and Albert F. Stoll as secretary and treasurer. A fine staff of mechanics is at work and the firm announces that it is fully prepared to uphold the excellent reputation that has been established by the tandem attachments.

NEW MERKEL AGENCIES

NEW agents for the Flying Merkel appointed during the past few weeks are as follows: B. B. Millison, Steubenville, Ohio; Standard Auto Co., Coshocton, Ohio; K. I. Konvalinka, Mason City, Iowa; W. E. Martin, Washington C. H., Ohio; A. Buckham, Edmonton, Alberta, Canada; Behrens & Bushnell, Ivoryton, Conn.; R. W. Snipes, Americus, Ga.; Heese Motor Co., Leavenworth, Kan.; Charles Sackett, Keene, N. H.; W. W. Cooper & Co., Ashland, Ohio; Miller & Co., Bradford, Ohio, and J. P. Wolf, York, Pa.

One—Two—Three

HARLEY-DAVIDSON singles won first, second and third in the 3-½ mile Riverside, California, hill climb, March 1st.

The Winning Harley-Davidson defeated the other three makes entered by an *average* of 3 minutes, 6-⅔ seconds.

The Harley-Davidson "5-35" is the liveliest, the fastest, and the most powerful single that has ever been produced.

In the Springfield Hill Climb the Harley-Davidson "5-35" single made faster time than any *twin* of other make.

In the recent California Endurance contest the officials publicly acknowledged the superiority of the "5-35" by compelling it to compete with the twins, and on the same time schedule as the twins.

We are the largest producers of single-cylinder motorcycles in the world, and are building for 1913 almost as many "5-35" singles as we manufactured 4 horse power singles in the past two years combined.

HELP AND SITUATIONS WANTED

MANUFACTURER, WHOLESALER, RETAILER—Do you need an employee who has practical working knowledge of cycle industry? One with fourteen years' actual experience—who successively has been designer and builder of special racing wheels, bicycle and motorcycle agent and repairer, traveling salesman and trade editorial writer. Sales or publicity work on bicycles and motorcycles preferred. Outline your proposition if interview is desired. W. R. Stroud, 65 West 11th street, New York City.

WANTED BY A LARGE MOTORCYCLE MANUFACTURER—A man of practical motorcycle training who understands the mechanics of the motorcycle from A to Z, and has consequently acquired the "knack" or mechanical "turn of mind" that will enable him to take a finished motorcycle and tune it up to concert pitch. One who is capable of suggesting mechanical improvements and working out refinements or expert adjustments that will secure the development of maximum power and speed in a given motorcycle. In short, an all-round motorcycle man, who has the motorcycle "sense" of the rider, the racing man, and the factory expert. Good opening for right man. Address "Manufacturer," care MOTORCYCLE ILLUSTRATED, stating fully qualifications, experience and give references.

WANTED.—Position in motorcycle repair shop. Three years' actual motorcycle experience; have taken gasoline engine and automobile engineering course; prefer Nebraska. J. C. J., MOTORCYCLE ILLUSTRATED.

WANTED.—Good all-round bicycle and motorcycle repair man; steady job. G. W. Campbell & Co., Waterloo, Iowa.

MISCELLANEOUS

DETECTIVES WANTED.—Young men to operate in own locality; secret service work. Experience unnecessary. Enclose stamp for particulars, Universal Detective Agency, Oklahoma City, Okla., 304 Colcord Building.

WANTED.—N. S. U. Two Speed Gear; cheap. Ed. Andres, Madison, Ind.

WANTED.—1912 Indian twin or single. Must be in excellent condition. State lowest price, etc. M. E. Dawson, Woodbury, Conn.

YOUNG MEN owning motorcycles to sell Lubricating Oils, Greases, Auto Oils, Motorcycle Oils, Auto Greases, Paints, Varnishes and Specialties. No experience necessary. Salary or commission. Central Petroleum Company, Cleveland, O.

SPLITDORF

"Always There"

Plugs may come and plugs may go, but SPLITDORF PLUGS go sparking on forever. There is nothing experimental about SPLITDORF PLUGS. There is nothing "just as good" about them, either. They are—have been and will be the standard plug for hard usage.

They'll outlast your motor—thousands are never touched once in the cylinder head. Gas-tight, soot-proof and unbreakable SPLITDORF PLUGS do not short-circuit or carbonize.

For the high-pressure engine and terrific motor speed to a throttled down and barely revolving motor—SPLITDORF PLUGS never fail.

Make a clean sweep—equip with SPLITDORF as SPLITDORF PLUGS need no cleaning.

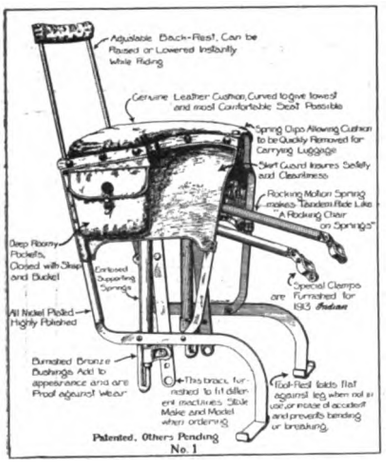
STOLL DREAM TANDEM

No. 1.



PRICE COMPLETE, $25.00.

Combination compression and rocking mo tion springs suspends the rider stationary. Machine takes all bumps. This system of springs make this the smoothest riding tandem on the market. Outclasses every other tandem for COMFORT, DURABILITY and appearance. Most complete. Greatest range of spring action of any tandem made. Attachments for Indian tool box included. Tandem completely suspended between springs. No side sway. Another advantage of this system of springs. Rear rider cannot raise front wheel by exerting pressure backwards. Try this on any other tandem, then note the advantage in sand, rough roads, etc.

For All Makes Of Motorcycles

Our No. 2 Stoll spring tandem like our "DREAM" seat, has met with a very enthusiastic reception from the motorcycle world. We make both our No. 1 and No. 2 to fit any make of motorcycle. The No. 2 spring tandem has a spring action of about FOUR INCHES, provided by long coil springs enclosed in steel tubes. Fore part of seat is curved to give the most comfortable position possible. Foot-rests placed well forward. Fitted with big, soft cushion. Note the nifty folding handle bars. They lock securely in either the raised or lowered position and will not rattle or become loose. Whole tandem is made to last practically a life time. Heavy phosphor bronze bushings on bearing parts. Finest materials and workmanship throughout. All joints solidly riveted. This is the most COMFORTABLE and DURABLE tandem on the market for the price, and surpasses many higher priced rear seats for easy riding. Has a very flexible action, and is the biggest value your money can buy. Comes complete for $11.50, with handle bars, cushion and enameled gray for all machines except 1913 Indians, which are enameled red. Tool box attachment included, for Indians. If your dealer does not handle these tandems send us a money order, $11.50 for No. 2, or $25.00 for No. 1, and we will ship your tandem at once, express prepaid. Be sure to state make and model of your machine.

Fine proposition to Dealers.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

MOTT Steel Rims

Mott Steel Rims are American Rims for American Roads. Strength, proven by extremely rigid tests; elasticity and perfectly flawless construction—these features of manufacture explain why Mott Steel Rims **always** stand the strain.

Exclusive steel rim manufacturing experience has taught us many fine points in rim manufacture, which no wise manufacturer can afford to overlook.

Details will be furnished upon request.

One Hundred Miles In 68 Minutes

and one mile in 36 seconds flat! On January 7th Lee Humiston made the record, using

J-D Motorcycle Standard Spark Plugs

the new porcelain type introduced by the Jeffery-Dewitt Company. Read the following:

$1.00

"It gives me pleasure to confirm my telegram to the effect that I used your J-D Motorcycle Spark Plugs on my recent record trial in Los Angeles, on January 7th, at which time I broke the records up to and including one hundred miles, at the Playa Del Rey Motordome, using your porcelain plugs. These plugs gave me absolutely no trouble and my engine never missed an explosion during the entire one hundred miles.

"I was somewhat skeptical about using a porcelain plug, but after making several tests I decided to try them and they 'made good.' I shall use them on my future trials. Yours very truly,

"(Signed) LEE I. HUMISTON.

"Witness:
"(Signed) E. L. MORSE.

"Subscribed and sworn to before me by the said Lee I. Humiston this 27th day of February, 1913.
"(Signed) J. F. KEEGAN,
"Notary Public."

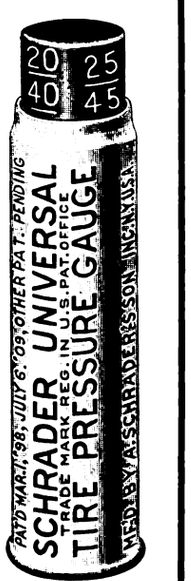
Keep Your Tire Pressure Up
and
Your Tire Expense Down

You cannot run your motorcycle with any old pressure in the tires AND EXPECT THE TIRES TO LAST. Tires are built to withstand a definite and specified air pressure. You can only get maximum service when you inflate them to the EXACT air pressure needed, and maintain that specific pressure at all times.

A SCHRADER Universal Tire Pressure Gauge



PRICE ONE DOLLAR

Will tell EXACTLY what pressure you carry in your tires.

Kicking the tire won't tell you and guessing won't do.

Nearly right isn't enough, the pressure must be EXACTLY right.

The ONLY plug guaranteed for 10,000 miles

Here's a guarantee that really means something. No *ifs* or *buts.* No special clauses. No strings of any kind. We guarantee 10,000 miles of service for every

J-M SPARK PLUG

If it fails to make good, you get another plug. This is the only plug sold with such a definite guarantee. It is also the only plug made with a ***double insulation***—a sheet of mica wound around the electrode, and a porcelain shell over the mica. If either of these insulations should be broken the other is sufficient to insure perfect sparking without short-circuit even when current is supplied by a magneto.

All sizes of J-M Plugs can be used for either battery or magneto ignition. Sold by most dealers or shipped prepaid from our nearest Branch. Price $1.00 each.

Write nearest Branch for booklet.

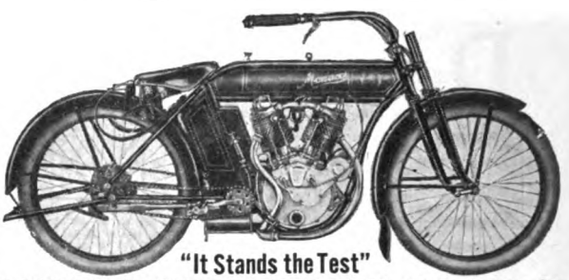
MONARCH

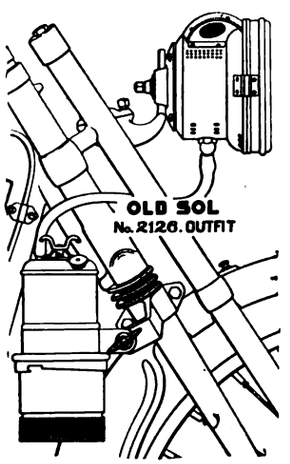


"It Stands the Test"

IVES MOTORCYCLE CORPORATION, 200 John Street

Owego, Tioga Co., New York

Distributed by Lowe Motor Supplies Co., 1727 Broadway, New York; Poulton & Hostetter, 20 S. 57th St., Philadelphia; John W. Grove Co., 604 Liberty Ave., Pittsburg; V. E. Yapp, Esbon, Kansas; Lincoln Holland, 1094 S. Main St., Los Angeles, Cal.



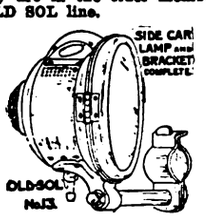
Price $4.00

Model No. 2126

Here is a lamp which bids fair to become tremendously popular. It is small, light, compact, remarkably durable and throws a light of about 400 candlepower strength. For Harley-Davidson order No. 2126 with H. D. Bracket, Price $5.00. For Indian, R-S, Merkel, Henderson, Schickel, the lamp fits spade bracket supplied on above motorcycles. Burns six hours on one charge carbide.

OLD SOL MOTORCYCLE LAMPS

The tremendous demand for a medium sized, low priced lamp has caused us to put out the new Models of the Old Sol Line described here. Needless to say, the famous quality features of OLD SOL construction are as predominant in these new models as they are in the older members of the OLD SOL line.

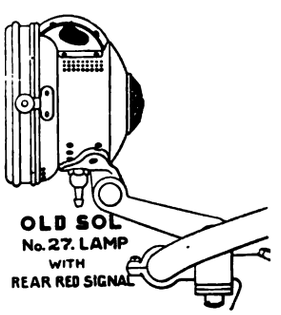


Old Sol No. 13

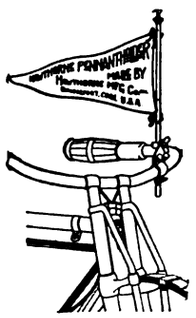
Here is a distinctly 1918 lamp. The growing popularity of the sidecar in America has caused a demand for a neat, compact sidecar lamp, which No. 13 meets. Projects a light of about 400 candlepower, consuming 1-6th cubic foot of gas. Supplied with red rear jewel and bracket to fasten to tubing of sidecar. Price $3.00.

Old Sol No. 27

Here is another model that is certain to create interest among riders. It has all the light throwing, durable, compact features of Old Sol No. 2126 with the added feature of a red rear jewel, thus eliminating the necessity of a rear lamp. The license laws in practically all states in the Union will thus be complied with without the extra cost of providing a rear red signal. A handsome, efficient little lamp with a sufficiency of light penetration.



Price $2.50



Old Sol Pennant Holder

The growing pride of motorcycle riders in their equipment has led thousands of them to complete the smartness of their turnout with an OLD SOL pennant holder. It is a handsome rod of brass, nickel-plated, and securely clamps to the handlebar, in no way interfering with rider's freedom of hand movement or his view ahead. Price $1.00.

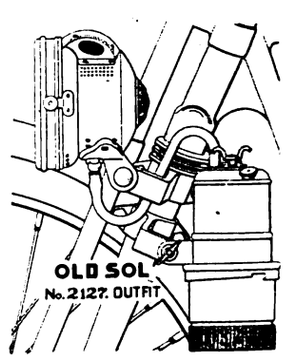
The dealer who desires more information about the most firmly established and best known lamp line on the market should write NOW.

Hawthorne Mfg. Co.

37 Spruce St., Bridgeport, Conn.

Model No. 2127

Supplied with "W" bracket. Fits any motorcycle. Easily attached to any front fork. Equipped with red rear jewel. 400 candlepower. Burns six to seven hours on one charge carbide.



Price $4.00

When writing to advertisers, please mention MOTORCYCLE ILLUSTRATED.

We Don't Have to Make Good— Our Belt Does It!

A motorcycle rider doesn't want to call on a manufacturer to make good on his belt guarantee with repairs or replacements.

You want the belt to make good without repairs and replacements. Wetprufe belts do this. They are water-proof—trouble-proof.

Cold weather, hot weather, rainy weather, dry weather—it's all the same to a Wetprufe belt.

And it will not bother you by stretching.

It's built that way. And we guarantee it to stay that way.

Protect yourself this year. Avoid all possibilities of belt trouble, by buying a Wetprufe now.

Your dealer can supply you with a Wetprufe belt. Ask us for new booklet "Wetprufe Specialties."

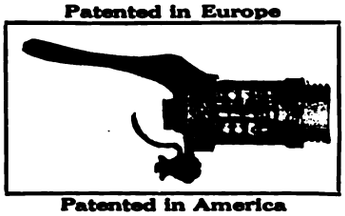
THIS IS WHAT THEY ALL SAY ABOUT THE M&M ECONOMIZER

We will have another motorist's letter next month

Patented in Europe



Patented in America

Los Animas, Colo.
Moller Bros., Phila., Penna.

Gentlemen: In reference to the M&M Economizer which I purchased from you sometime ago, will say that I would not be without it. I have installed it on a SEARS SINGLE. I have run seventy miles since I got it, on two quarts of gasoline, where formerly it would take a gallon to cover the same roads. It increases the speed and power every bit of 20%, and the carbon deposit is hardly noticeable.

Two more Economizers have been ordered in this vicinity since I got mine, and many more will be ordered when the motorists find what a saving can be made in gasoline with the increased efficiency of their motors, by using the M&M Economizer. (Signed) GILBERT MARTEUSON, March 14th, 1913.

THE M&M ECONOMIZER WILL POSITIVELY SAVE FROM 40 to 50% of gasoline. ELIMINATES all carbon, *and acts as an air-brake.* With the throttle set at twelve miles per hour, by opening the M&M, the mileage will be increased to EIGHTEEN OR TWENTY MILES with the SAME AMOUNT OF GASOLENE and LESS CARBON.

The M&M is nickel plated and highly polished. Requires a ¼" pipe tap to insert into manifold. Can also be reduced to ⅛". Can be applied to any motorcycle on the market with PERFECT SATISFACTION. It is very easy to apply to your motorcycle, and will not injure it in any possible way. THE LONGER YOU HESITATE TO PURCHASE, the MORE GASOLENE YOU ARE USING, and we assure you that there is not one individual that has applied the M&M but will tell you that IT IS WORTH MANY TIMES ITS COST, and HE WOULD NOT BE WITHOUT IT ON HIS MOTORCYCLE. The M&M is becoming THE RAGE in motorcyclists' Realm.

Price of the Motorcycle Attachment, $1.25 Prepaid.

Money positively refunded in 30 days if unsatisfactory. Send for our catalogue and information.

OUR GUARANTEE.—Money will positively be refunded in thirty days if the M&M should not do WHAT WE CLAIM. No dealer or jobber is authorized to sell without giving our guarantee. THEREFORE, you RUN NO RISK BY PURCHASING. Reference (Citizens National Bank, Lewistown, Pa.).

Beware of Infringements!

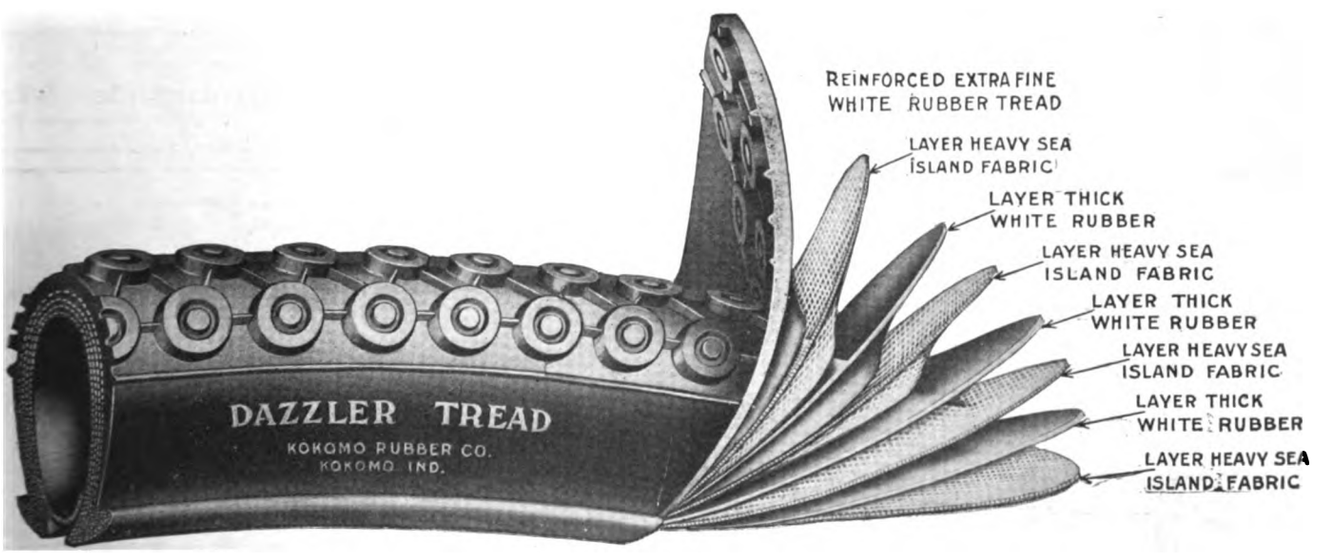
Style 4827



The Dazzler—A Real Non-Skid Tread

Dazzling indeed in its aggregation of service insuring features is this new arrival in the Kokomo group.

Note the distinctive studs. Your eyes give you the most convincing testimony as to their efficiency as skid and side-slip preventatives. Your common sense tells you that it would be impossible to find a more effective tread. And give your close attention to the seven alternating layers of thick white rubber and heavy Sea Island cotton. Can you find anywhere a more efficient, business-like tire? (Chorus) NO!

Send for our catalog. It tells the whole story.

KOKOMO RUBBER COMPANY, KOKOMO, IND.

Look Beneath the Surface

Why does a belt-drive machine at second-hand bring a higher price than a chain machine of the same make and given the same amount of wear?

One wise dealer says:

"A second-hand belt-drive motorcycle will bring a better price, as a rule, than a second-hand chain-drive machine ridden the same length of time and under similar conditions, because it is in a much better state of repair. It is hardly necessary to take the machine apart to be certain of this fact, but to prove my point 'Look beneath the surface'—investigate the difference in the wear of the two power plants and it will readily be seen how much more the motor mechanism of a chain-drive machine is worn than that of a belt-drive machine."

The flexible Belt transmission greatly reduces the wear and tear of your machine—its power plant; in fact is materially easier on all parts of your motorcycle than any other transmission.

A belt-driven machine, and that Spartan equipped, is all the assurance you need for the greatest possible degree of efficiency, economy and comfort.

Have you read the practical treatise on motorcycle transmission in our 1913 Spartan Catalog? If not, send for the catalog at once.

Perpetual Insurance Against Arrest —And the Cost is Only $15.00

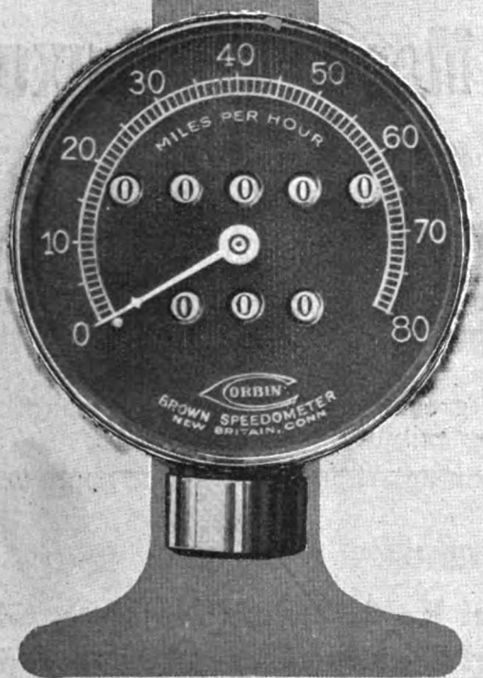
You are apt to pay much more than $15.00 in fines within a year unless you *always* know—and *positively*—the rate of speed at which you are traveling. The

CORBIN-BROWN SPEEDOMETER

For MOTORCYCLES

"The Speedometer of Absolute Accuracy"

will *always* keep you accurately informed as to your speed. Its presence on your machine will mean that you will never unknowingly exceed the speed limit.



The Corbin-Brown is built on the centrifugal principle of physics.

Science has proved that the accuracy of a mechanism so constructed cannot be affected by temperature changes.

Compound governors constitute practically the entire mechanism of the Corbin-Brown.

It is the acme of simplicity.

No delicate parts to become broken or out of order by the jarring of your machine.

POPE "TWIN"

The Highest Expression of Motorcycle Luxury

Comfort and Power. Isn't that what the up-to-date motorcyclist wants most?

The Pope "Twin" is comfortable at all speeds and has tremendous power. The faster you go the more you appreciate its riding qualities. It is a perfectly balanced machine. One rides without appreciable effort, so easily does it control and so beautifully does it balance.

With the POPE REAR SPRING SUSPENSION, riding comfort is inevitable. As a result of this and other exclusive comfort features, the Pope "Twin" has the easiest riding qualities yet obtained in a two-wheeler.

OVERHEAD VALVES—the big secret of the Pope's great power, speed and strength on the hills—produce a wonderfully smooth-running engine of great flexibility.

What other motorcycle provides such luxury in the running, riding, operation, appearance, and lasting qualities as the Pope "Twin"?

Send for catalog of complete Pope Line and Dealer's Proposition.

Model L, "Twin" 7-8 H. P., $250 **Model K, 4 H. P. (Belt Drive), $200**
Model M, 5 H. P. (Chain Drive), $215 **Model H, Lightweight - - $165**

POPE BICYCLES—Columbia, Rambler, Cleveland, Tribune, Fay Juvenile and other lines. For over 35 years we have been building bicycles of the highest quality. They are famous the world over. Send for catalog and dealers' prices.

You can now get Diamond Automobile Safety Tread Tires on your Motorcycle or Bicycle

You, as a motorcycle rider, have exactly the same tire problems as the automobilist. Realizing this, we have built for you a tire, made of the same Vitalized Rubber, the same fabric, the same principle of construction, built in exactly the same manner as our automobile tire.

Diamond Motorcycle Tires

with Safety or Studded Tread and Perfect 3-Point Rim Contact

and, in addition, the *More Mileage Strip* on the tread—an exclusive Diamond feature. All these distinctive Diamond advantages cost you no more—Vitalized Rubber—pure, young, lusty rubber, toughened by a special process, that gives it the necessary flint-like, road-resisting quality—Perfect 3-Point Rim Contact that holds with a vise-like rim grip—the now famous Diamond Safety Tread that "won't slip, won't slide, won't skid, *it grips!*"

So this time buy Diamond Vitalized Rubber Motorcycle Tires—you can get them to fit your rims from

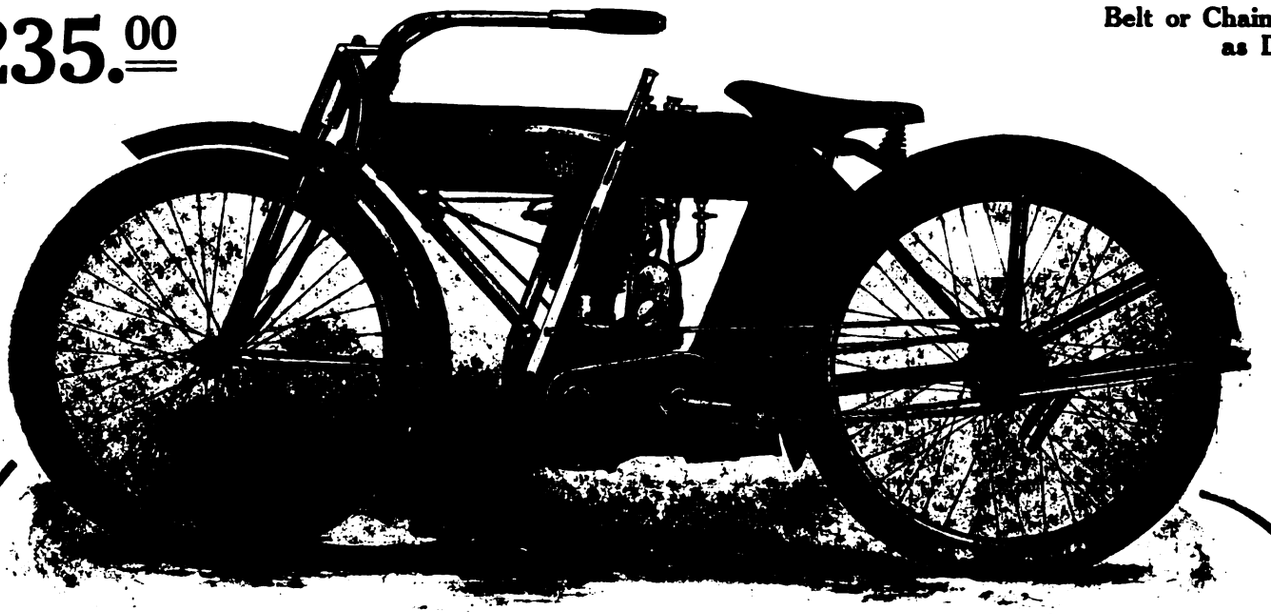
Belt or Chain Drive as Desired



2 Good Reasons Why You Should Handle the "Black Hawk"

1st—Because the "Black Hawk" is a **better looking, better acting** motorcycle than any other model on the market, regardless of price or motor power (single, twin or quad).

2nd—Because we will live up to our agreement on deliveries, neglecting no one, no matter how few or how many machines their contract may call for.

Our first claim of superiority we can prove right now. For if you haven't learned all about the "Black Hawk" and its real value—we will send you our catalog so you can read of the remarkable points of advantage and sterling worth of the "Black Hawk's" design and equipment which places it in a class far above the $235 asked for it.

Take our catalog. Read about the "Black Hawk." Compare it with any other motorcycle that you know of. You'll learn that this marvel of motorcycle construction excels not only in one or two features, but embodies so many good points, most of them exclusive, that competition cannot hope to rank with it.

For instance, take the Motor of the "Black Hawk." It is so flexible that it will take all speeds up to 50 to 60 miles per hour and down to 4 miles without using the clutch.

Then there's the Sight Feed Mechanical Oiler, so automatic in action that all that's necessary is to once adjust it and it regulates itself to speed at which machine is driven, the flow stopping when the motor stops.

Another feature is the Steel Tank Built Integral with Frame. A few of the advantages of this form of construction is that it adds greatly to the strength and stiffness of both tank and frame, positively prevents leakage, does away with a large number of objectionable small parts, eliminates pockets which gather dirt, makes possible large filler caps, which render funnels unnecessary and provides for Low Saddle Position.

This Low Saddle Position of the "Black Hawk" is a reality, the saddle rising only to a point of 29½ inches from the ground, allowing the rider to place both feet flat on the earth without straining.

There are a score of other good points about the "Black Hawk." Some of these are the **Spring Seat Post and Spring Fork** which cannot bottom.

Improved Eccentric.

Improved Belt Tightener.

Free Engine Clutch, in rear hub, which makes rider master of the machine at all times.

Either of these features add enough value to the "Black Hawk" to make it the preferred machine wherever motorcycles are used.

Another good point in the "Black Hawk's" favor is its handsome appearance. The long, straight lines of the "Black Hawk," its clean-cut design, its real beauty and symmetry are worthy of more than passing mention. If you compare the design of this motorcycle with the ordinary type machine or those of the loop-frame construction you'll surely admit that you've never seen anything to equal it.

BLACK HAWK

BH

RIDERS AND DEALERS

Don't fail to write for Our Catalog. It will aid you to a wise selection of motorcycle values. Book is the handsomest of its kind ever issued, as the "Black Hawk" is the best motorcycle ever built.

To back up all this, we will see that reasonable demands made upon us for orders are taken care of promptly. We want your business, because your interests are one with our own and because we are going to start the "Black Hawk" out right—

With Right Service Both to Rider and Dealer

We have the best of all motorcycles and a good seller for you. You ought to handle it. Ours is a good, straightforward money-making business proposition. You ought to be in on it.

May we not hear from you now asking for agency for your territory? It will pay you to write us to that effect.

Yours very truly,

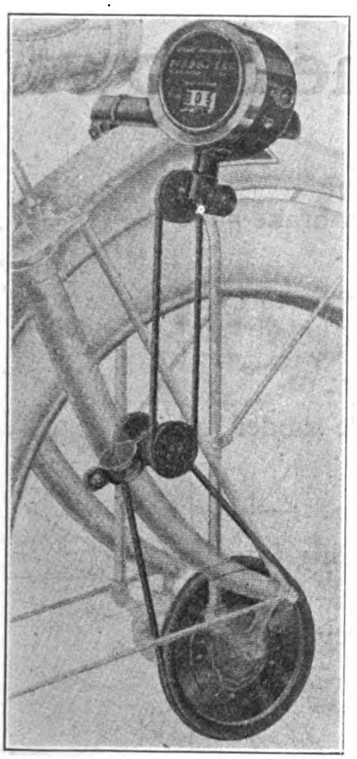
Complete
Model D

75-mile speedometer; 100,000 mile season odometer; 100 mile trip register, which can be readily reset to any tenth of a mile without disturbing total mileage of season register, front wheel two belt drive complete with pulleys and brackets.

The New Stewart Motorcycle Speedometer

Magnetic Type

Showing the new Two-Belt Front Wheel Drive



HERE is the only practical motorcycle speedometer made. Just as accurate, reliable and complete as our most expensive automobile speedometers. Our Front Wheel Two-Belt Drive and manner of installation render it impossible for the speedometer to get out of alignment with its driving equipment, this because both instrument and driving equipment are attached firmly to parts that move in unison.

Is installed upon your mudguard or extension spring. As it thus is within the range of your headlight you can read it as easily at night as during the day. This is an exclusive feature not to be had with any other make.

Indicates accurately miles per hour, miles per day or trip; miles per season.

This special instrument is made on the famous magnetic principle. Over 95% of all the speedometers manufactured (for either motorcycles or automobiles) are now built on this practical principle.

For sale by dealers all over the world. Price $12 complete.

Write us for a handsomely illustrated catalogue which explains in detail, the many advantages and fine construction of this improved motorcycle instrument. This book is free. Write today.

This Brake Was One of the Most Important Features of the Shows

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile—or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions;—

Fool-proof—a brake that will not wind, bind or lock;—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

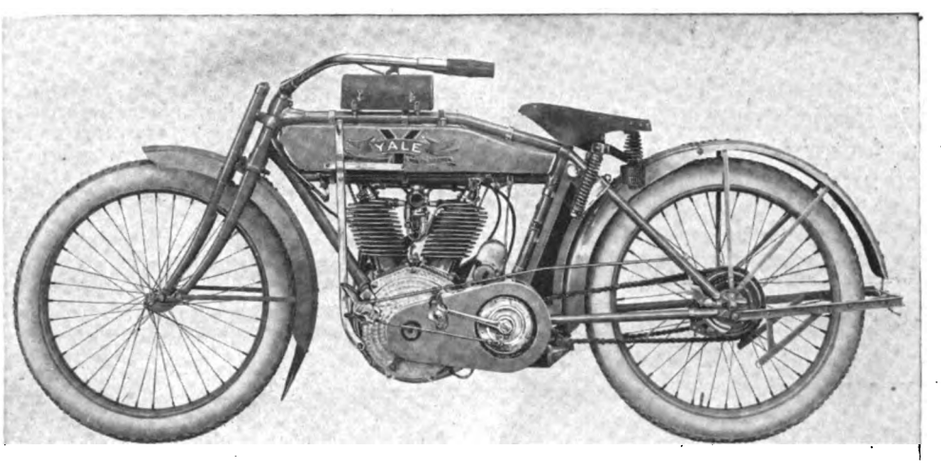
YALE

The Sad Tale of the Men Who Doubted

LAST Fall the Howard Cycle Co., of Trenton, N. J., contracted for 20 Yales. At that time Mr. Howard felt that there was no chance of selling more than that.

At the New York Show, however, he increased his contract to 50, for he had seen some of the wonderful effect caused by spreading the knowledge of Yale supremacy. That contract for 50 would surely take care of him, he believed, but—

On April 1st, every one of his 50 machines had been shipped to him to fill orders. Now what is Mr. Howard going to do?



BIG Yale twin. Powerful long-stroke motor. Bosch waterproof magneto. Mechanical oil pump. Three-inch tires (automobile size) with hinged rear mud-guard. Y-A shock absorber and Yale cushion fork insure comfort and perfect safety over all roads.

Then there is the case of Ray Bros., Louisville, Ky. Their limit was 25 machines when they contracted last fall—they couldn't expect to sell more than that, they said.

Now where do they find themselves? All of those 25 machines have been shipped right now. Where does that let Ray Bros. off for the balance of the season?

Likewise, there is the plight of John Kimpson, at Rochester, N. Y. All of the 25 machines on Kimpson's contract were shipped to him before April 1st. What will Kimpson do for machines to supply the demand now?

The moral of this tale is: Where do you stand?

Consolidated Manufacturing Co., 1730 Fernwood Avenue Toledo, Ohio

Continental Erie Tires

"The Tires of Greater Service"

The fundamental principles of good tire-making are, first, the use of the highest grade materials; second, careful, rigidly inspected construction and, third, the selection of the tread that will most adequately meet all requirements of every kind of road. Continental-Erie Tires are the nearest approach to tire perfection because in their construction are exemplified in the highest degree the three cardinal principles cited above.

Continental-Erie Tires are of the highest-grade fabric obtainable, the most resilient rubber in a factory whose watchword is "Care first, speed afterwards."

Another point—Continental-Erie Tires are made in one tread only—studded, which has consistently proven itself to be the most durable, the most effective tread from every standpoint. Hence, the money that would have otherwise gone in the manufacture of different molds goes into the quality of the tire itself, and the user benefits thereby. ASK THE JOBBER—HE KNOWS.

Continental Rubber Works
Erie, Pa.

Some Special R-S Features

R-S Cork Insert Cone Clutch, insuring perfect grip and very smooth engagement.

R-S Motor, with integral cams and gears of specially treated vanadium steel, large cooling flanges, long stroke, mechanically operated valves.

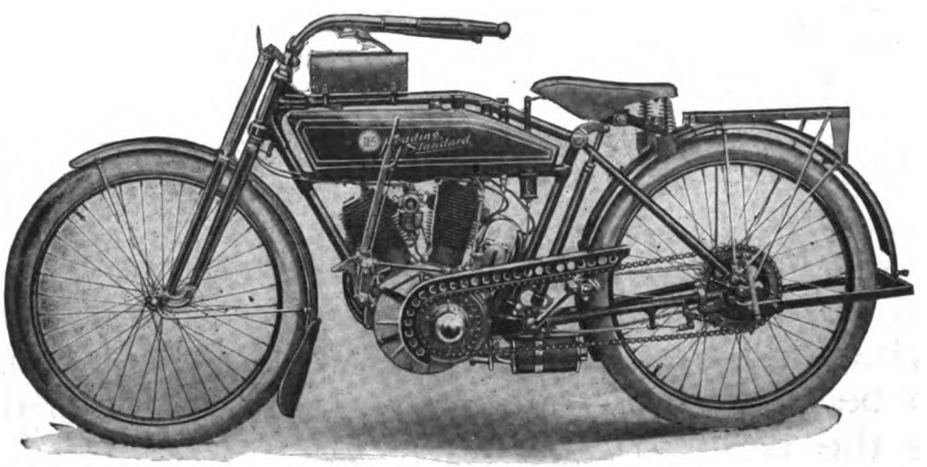
Double oiling system.

Foot rests, adjustable to various positions, shock absorbing spring seat posts, double brakes.

Grip control operated by *genuine* Bowden wire mechanism, entirely encased.

Undergeared transmission; single ⅝" pitch roller chain of the finest quality.

Price, $275



R-S Engineers are CREATORS not followers

Every detail of the R-S has been evolved by men who are confirmed "forward-thinkers"—men who are continually peering into the future and anticipating the rider's needs—not weakly following some one else's ideas. That is the main reason for the R-S's commanding position in the motorcycle field.

There are several strong reasons why the R-S should have every rider's consideration.

We are prepared to make prompt deliveries on all models.

The Most Perfectly Balanced Motorcycle in the World

The snapshot reproduced above shows two riders standing on the saddles of their 1913 Flying Merkel Motorcycles while traveling at a speed of **only** 16 miles per hour. Bear that fact in mind —**only** 16 miles an hour. There are very few motorcycles that will permit a rider taking his hands off the handlebars at such slow speed, to say nothing of standing on the saddle and riding in that fashion for a considerable distance. No, we emphatically disapprove of such riding, but the demonstration above shows that

THE FLYING MERKEL

is balanced like the movements of the highest jeweled watch. It means more than that to the rider. It denotes a motorcycle so perfectly balanced that there is no vibration whatsoever—a machine that one can ride through mud and over slippery streets without fear of it ever sliding from under him. It means SAFETY. Elimination of all vibration means that every 1913 Flying Merkel Motorcycle will more than outlive its liberal guarantee. Why fret and worry through 1913 with an expensive bone-shaker? For the same price you can purchase the world's most comfortable motorcycle and forget everything but the bright sunshine and the joy of living. Write today for our catalog and the name of the nearest Flying Merkel dealer—he will gladly give you a demonstration, for he knows—

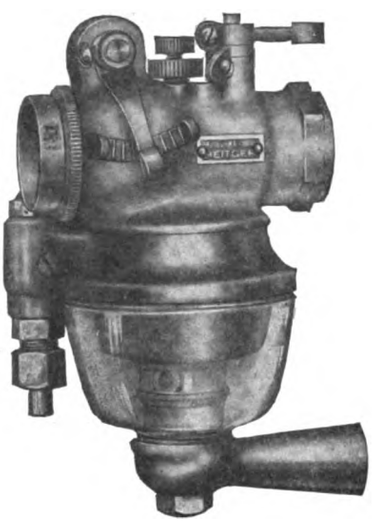
HEITGER MODEL K—1913

Made in ¾" and 1" pipe threads, and special threads for Spacke, Pope, H-D, Excelsior, Merkel, and Emblem, same list, ¾", $10.00; 1", $10.50. Where special fittings are needed, extra price. Has new air valve, no friction, or stems to wear, causing air leakage in low; air adjusted instantly from saddle, for starting, etc. Needs no priming in coldest weather. Furnished with glass or metal bowls, same price, the two being interchangeable.



HALF SIZE

Has new gasoline feed, two jets, one for low, one for high, with separate adjustments, giving minimum and maximum speeds. Owing to air valve action, etc., gives greatest possible speed to motor on minimum gasoline consumption. Light in weight, castings of aluminum, polished nickel plate.

Heitger Carbureter Co.

1129 Beecher St., INDIANAPOLIS, IND.

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

Thor

The World's Greatest Motorcycle

POSITIVE FACTS

Why is a THOR at its best after thousands of miles of hard usage on the road?
Why will a THOR run so long without mechanical attention?
Why can a THOR run 20,000 miles without overhauling?
Why may a THOR owner start on a thousand-mile tour at a moment's notice?
Why will a THOR bought this Spring have a higher relative cash value next Fall, next Spring or five years hence than any other motorcycle purchased at the same time?
Why does the particular buyer demand a THOR?
These questions are understood and answered by the rider who owns one and the dealer who sells them, while we can give our reasons direct. All you have to do is to drop a line.

Here are some of the features so noticeable, and which set a standard to make the WORLD'S GREATEST MOTORCYCLE.

THOR Motor and Bearings.
THOR Undergeared Internal gear direct chain drive.
THOR Mechanical Overhead Intake Valves.
THOR Carburetor.
THOR Mechanical Oiler.
THOR Design and Finish.
THOR Improved Spring front forks.
THOR Handle bar—Grip controls.
THOR Coaster Brake.
THOR Free Engine Clutch.
THOR positive two-speed.

Digitized by Google

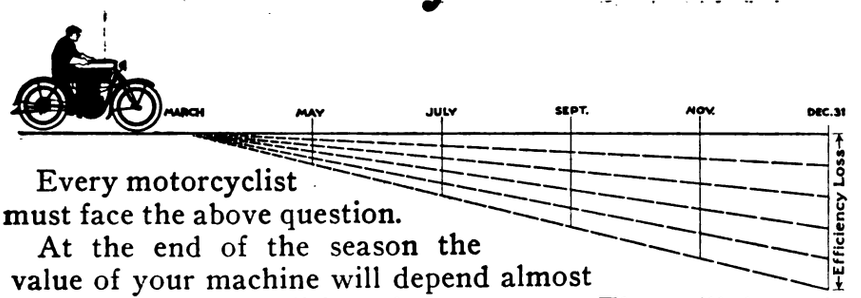
What will the year 1913 do to your motorcycle?



Every motorcyclist must face the above question.

At the end of the season the value of your machine will depend almost wholly upon the condition of your motor. That will depend mainly on the lubricating oil you have used.

Motor-wear is not accidental. It results from friction.

Excessive friction is bound to follow the use of an oil whose "body" is unsuited to your feed system, or whose lubricating qualities cannot properly withstand the demands of service.

Common results are:

(1) Undue loss of power.
(2) Unnecessary repair troubles.
(3) An excess consumption of fuel.
(4) An excess consumption of lubricating oil.

To avoid these losses, your motor must be supplied with:

(1) An oil that will retain efficient lubricating qualities *under the heat of service.*
(2) An oil that will *wear well* in use.
(3) Oil of a "body" that *will properly feed to the various friction points.*

Motors differ.

No short-cut method can determine the oil that best meets your feed requirements.

The construction of your motor *must* be analyzed and carefully considered.

The piston clearance must be known; the fit of the piston-rings into their recesses; the feed system; the length of the vacuum period while intake and exhaust valves are both closed.

We have undertaken this serious problem with the thoroughness that has established our standing in the general lubricating field.

To arrive at correct motorcycle lubrication we have done what *must* be done. Every year we carefully analyze the motor of each make of motorcycle.

Based on this motor-analysis, and on practical experience, we specify in a lubricating chart (printed on this page) the grade of Gargoyle Mobiloil best suited to your motor.

The superior efficiency of the oils specified has been thoroughly proven by practical tests. In sheer lubricating quality, we can safely say that they stand alone.

So far as correct lubrication can assure it, the grade of Gargoyle Mobiloil specified for your motorcycle assures:

(1) The greatest horse-power efficiency.
(2) The smoothest operation.
(3) The fewest repair troubles.
(4) The lowest operating cost per mile.
(5) The longest life to your motor.
(6) The greatest second-hand value.

Throughout the world you will find that the authoritative leadership of the Vacuum Oil Company in matters of lubrication is unquestioned.

The lubricating chart on this page represents our professional advice.

If you use an oil of less-correct "body" or of lower lubricating efficiency than that specified, your motor faces unnecessary friction and ultimate serious damage.

In buying Gargoyle Mobiloil from dealers it is safest to purchase a full barrel, half-barrel, or a sealed five-gallon or one-gallon can.

See that the proper name and the red Gargoyle, which is our mark of manufacture, appear on the container.

A booklet, containing our complete lubricating chart and points on lubrication, will be mailed you on request.

GARGOYLE

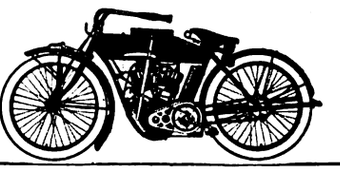
Mobiloil

A grade for each type of motor

The various grades of Gargoyle Mobiloil, refined and filtered to remove free carbon are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

They can be secured from all reliable garages, auto-supply stores and others who supply lubricants.



Correct Lubrication

SMOOTHEST OPERATION | MOST POWER | FEWEST REPAIRS | LONGEST LIFE

Explanation. In the schedule, the letter opposite the motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." The recommendations cover all types of the same make unless otherwise noted.

Ride at night with pleasure and safety

Ride when and where you please. Don't be tied down to the daylight limit, and don't judge night riding by experiences with oil or generator lamps.

Get a lamp big enough and a Prest-O-Lite for motorcycles. Then get out on the country roads. You'll have a brilliant, dependable light that turns on and off like a gas jet, at no greater expense—in all probability less cost—than carbide to feed a generator.

Regard this as an investment

$10 with gauge

Don't consider the price you pay for Prest-O-Lite as money spent. It isn't. A Prest-O-Lite can always be sold for about what you pay for it. It is the only part about your machine that doesn't become second-hand, because genuine Prest-O-Lite is in universal use and demand everywhere. And remember one spill caused by unreliable light might prove more costly than years of Prest-O-Lite service.

Test Prest-O-Lite, FREE

Let any dealer put Prest-O-Lite on your motorcycle. Use it for 30 days. Try it out over country roads and city streets. Prove to yourself that it's the best accident insurance you ever bought. We take all the risk. If you find that you can afford to be without Prest-O-Lite, take it back and your money will be refunded.

Write today for full particulars.

The Sign of Merkuality

On the road this summer **you** will often notice this trade-**mark** on the tanks of motorcycles **that** scoot past you on the road **and** run away from you on the hills. **Whenever** you see this "Yellow **Jacket" you will not be able to help** thinking: "There *goes* the only motorcycle in the world with a Self-Starter." You will envy the rider of that machine, for you will know that he rides the best motorcycle made. That little trade-mark of quality will indicate that he is a fortunate rider of

THE SELFSTARTING—TWO SPEED—SPRING FRAME
FLYING MERKEL
MOTORCYCLE

Why wait until the riding season to have it demonstrated to you that the Flying Merkel "Yellow Jacket" models are the snappiest, fastest and most powerful vehicles on two wheels? It may be too late then. Our season's output is entirely contracted for now, but your dealer may be able to supply you. Better see him today. There are just four things to remember: 1st—No more laborious, back-breaking pedaling to start your motor. The Merkel Self-Starter positively starts the motor every time with both wheels on the ground by simply depressing a small lever with the left foot. 2nd—The Two-Speed Gear will enable you to climb any hill that nature ever evolved. 3d—More than 300 inches of spring steel between you and the road absorbs every vibration and jolt and makes every rough spot seem like a parlor floor. 4th—Write today for our descriptive art catalog. It will be forthcoming in the next mail if you just address

To Prevent Confusion, Loss of Sales and Disappointment, Every Genuine Katzmann Tandem Seat Is Marked K-K-K

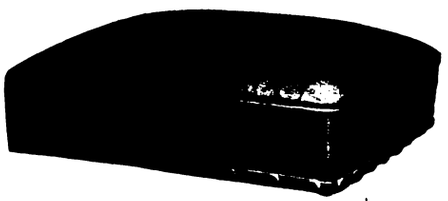
It is not enough for you as a jobber to know that you handle KATZMANN TANDEM SEATS. You want the genuine—the original. Therefore, for your own protection and that of your customers, you should know that the **original** KATZMANN TANDEM SEAT is stamped **K-K-K.** Other seats may be called "KATZMANN'S" —others may **claim** our **claims,** so it's up to you to avoid imitations.

Write us today for the facts. They are mighty interesting. The **K-K-K** proposition is a whirlwind. It's the greatest money maker on the market because it offers the greatest satisfaction to the rider. Here are a few facts about

KATZMANN'S KUMFORTABLE KUSHION

The Demand for the K-K-K Is Enormous

Every rider wants a combination tandem and luggage carrier. Let the dealer show him a *K-K-K* and he "sells himself" because it needs little argument to prove that the *K-K-K* offers the utmost in comfort and easy riding qualities; that it saves the cost of complicated and expensive attachments; that he is protected by our liberal and *real* guarantee; that he is getting the genuine *Katzmann Seat,* the seat that's easy to put on and easy to take off. The K-K-K and a durable luggage carrier is the ideal combination.



How the K-K-K Is Made

You will marvel at the steps we take to absolutely insure lasting comfort, service and satisfaction. The springs are important. We use extra long oil tempered steel springs. This takes away all jars and jolts. Each spring works separately but all hold the same alignment. We use five-inch upholstery to insure comfort. One big feature about the *K-K-K* is that it can't bulge or lose its shape. The bottoms of the K-K-K are made of one piece specially selected spruce.

The K-K-K filling is the result of countless tests and experiments. All in all, the K-K-K is pretty close to Perfection.

Now for Big Spring Sales

Jobbers and Dealers should get in touch with us today. Learn all about the K-K-K Protection Certificate.—This in itself is a sales maker.
Our prices and terms are *right.*
Get your share of K-K-K sales!

The Official Motorcycle of the Chicago Police

The Chicago Police Department is recognized as having the most efficient staff of motorcycle patrolmen in the world.

Efficient, because Excelsior Auto-Cycles are used exclusively.

The organization of the Department was necessarily an experiment, but the "X"—the first machine used—made good.

Even the first three machines purchased—in 1908—are still in service and are run on an average of 75 miles per day. Not only is the Excelsior used exclusively by the City Police for patrol duty, enforcement of speed laws, emergency calls and messenger service, but as well by the South, West and Lincoln Park Systems for their various services.

EXCELSIOR AUTO-CYCLE

Own a Machine Such as Chicago's Police Use

You can learn a valuable lesson from the fact that the Chicago Police use the Excelsior exclusively. For when you buy an "X" you buy reliability of the very highest degree. ALL the machines sold the Department are STILL in its service. Chicago's police take no chances—neither should you. Every day the "X" is made to perform the most gruelling tasks. And it "always makes good." Art catalog sent free.

SPLITDORF

"Always There"

Like a great conquering army the new SPLITDORF MAGNETOS are spreading throughout the land, making friends and loyal supporters wherever they go for service.

In appearance they are winners—in daily plugging use they are unbeatable champions and the combination is giving them the irresistible impulse to overcome prejudice and every other obstacle.

The shows East and West sent out their verdicts—"the SPLITDORF MAGNETOS are the one best bet of the new accessory offerings"—and the opinions of the wise-acres are being upheld in every section by equipment orders, dealers' demands and individuals' requests.

The newcomers are waterproof. No short circuiting troubles through rain and mud—no water, mud or waste oil can penetrate SPLITDORF MAGNETOS.

The best engineering skill has been devoted to the construction of these instruments to make them electrically efficient, aside from the all-important waterproof feature.

Windings have been made to insure the fat, live spark that, although retarded, makes the starting easy.

YOU **CAN'T** WANT ANYTHING BETTER.

"New ignition for old" is a special exchange proposition of great interest to every owner of a gasoline motor that is not equipped with SPLITDORF up-to-the-minute ignition. Save time and money and write or call for particulars today.

The Powerful, Sturdy, Comfortable, Beautiful

EMBLEM

The Mighty Motorcycle

A sense of joyous freedom, of delightful exhilaration, coupled with a serene confidence born of absolute control of his every motion—these are the sensations of the Emblem rider. The various features of Emblem construction are the result of years of experience and study. The invariable success which has met our efforts is ample testimony of the correctness of Emblem construction.

Every feature of the Emblem is indicative of its honest, conscientious manufacture. For instance, the frame of the Emblem is reinforced with our triangular reinforcement which has proven to be as strong as a solid bar of steel. An Emblem frame has yet to break. This same principle of conscientious value giving is shown in our fitting the 1913 Emblem throughout with Non-grain Bronze Bearings. This is a new metal, and bearings made from it have proven themselves superior to any other bearings. It adds considerably to the cost of manufacture, but it reduces considerably the cost of maintenance—and that is our paramount aim. Get our catalog. It goes further into detail.

United States Tires

They Cut Down Tire Bills

Here is the reason:

The average mileage yielded today by United States Tires is from 25 to 50 per cent greater than that given by any make of tires previous to the formation of the United States Tire Company two years ago.

Our own records prove this.

Every unprejudiced dealer in the country will admit it.

This radical increase in tire mileage comes as the logical result of combining into one tire all the best points of two famous makes.

51 CHAMBERS STREET NEW YORK CITY | THURSDAY, APRIL 17, 1913 | TEN CENTS A COPY ONE DOLLAR A YEAR

F. A. M. Official on Last Leg of Lecture Tour

Clubs in New Haven, Hartford and Boston Welcome Director Sauer and Agree to Launch State F. A. M. Organizations—Speaker Promises Action to Improve Sidecar Regulations—Trip Will Close with Meeting in Newark, N. J., April 29

FOR the last leg of his 10,000-mile railroad circuit of the United States in the interest of the F. A. M., Director J. Leo Sauer, chairman of the National Committee on Legal Action, left New York Sunday to address a meeting that night in New Haven, another in Hartford Monday, and the third, of the New England series, in Boston Tuesday. The New Haven meeting produced direct results in the inauguration of a spirited campaign to organize the State of Connecticut. State Commissioner Sturgis is now arranging for a conference to select the convention city and also to make plans for one or more State tours and a State race meet in connection with the convention. He expects to make a definite announcement relative to the assembly in the course of a few days.

Beginning in Buffalo Friday of this week Director Sauer will address a dozen F. A. M. meetings before closing his circuit in Newark on April 29. His schedule follows:

Friday, April 18	Buffalo
Saturday, April 19	Cleveland
Sunday, April 20	Toledo
Monday, April 21	Detroit
Tuesday, April 22	Milwaukee
Wednesday, April 23	Indianapolis
Thursday, April 24	Louisville
Friday, April 25	Cincinnati
Saturday, April 26	Pittsburg
Sunday, April 27	Elmira
Monday, April 28	Philadelphia
Tuesday, April 29	Newark, N. J.

CLEVELAND WANTS THE CUP

The Buffalo meeting will be held in the Calumet Building under the auspices of the Buffalo M. C., and the Cleveland meeting under the direction of the Cleveland Club in the Hollenden Hotel. Cleveland club members are determined to win the silver cup offered by the F. A. M. to the city handing to Mr. Sauer the largest number of paid new memberships. In this connection officers of clubs in cities already visited by the F. A. M. director are reminded that all memberships received by Mr. Sauer up to and including May 1 will be given credit for, so that the cities first visited will have an equal chance with those farther down the schedule. Batches of additonal memberships have been promised by a number of clubs, notably Norfolk, Savannah, Ft. Worth, Salt Lake City and Denver. The affiliation of the Salt Lake City and Denver clubs is expected at any time.

Toledo was not originally in Mr. Sauer's itinerary, but in reply to a request for a meeting in that city the F. A. M. director replied that he would be pleased to make use of his only open date to address a Toledo meeting on Sunday, April 20.

Arrangements for the four meetings next in order in Detroit, Milwaukee, Indianapolis and Louisville are all complete. Louisville is another city which has assured Mr. Sauer of its determination to win the membership cup. After Louisville, Cincinnati is scheduled and then Pittsburgh, where the club has arranged to entertain the F. A. M. representative at a banquet in the Ft. Pitt Hotel on Saturday evening, April 26. On the following day Mr. Sauer will address the riders of Elmira, N. Y. Meetings in Philadelphia and Newark, under the auspices respectively of the Harley-Davidson and New Jersey clubs, will bring the traveling director to the end of his long trip.

WILL REACH 5,000 RIDERS IN ALL

Since leaving New York the latter part of February Mr. Sauer has addressed about 3,000 riders and he expects to bring the total up to 5,000 with the meetings scheduled during the next ten days. He has answered hundreds of questions, and it has been demonstrated to him that the average motorcyclist is most interested and anxious to learn more about the Federation's touring bureau and its legislative work. He has tried to impress his listeners with the importance of individual and club co-operation with the national body. He has urged, for example, that every member make it a point to contribute at least one tour this year to the F. A. M. Touring Bureau, so that it may be possible for the bureau to issue next winter a list of several thousand tours and publish the same in book form for the benefit of the members of the organization. In connection with legal action he refers to the fact that adverse legislation has just been defeated in New York and Indiana; that lawyers appointed and acting under the instructions of the Legal Action chairman are prepared to act on their own initiative to protect the legal rights of motorcyclists in all parts of the United States. The cost of legal service, however, is rather high, and the organization must necessarily wait upon a reasonable increase in membership before perfecting the Federation's legal organization so as ultimately to include every city in which there are motorcycle riders.

HARTFORD CLUB FOR F. A. M.

HARTFORD, CONN.—At Harry Bond's, in Hartford, Monday night, April 14, thanks to arrangements made by Messrs. Maslen and Connell, about two-score members and friends of the Charter Oak Club enjoyed a supper after listening to Mr. Sauer's address. The discussion which followed had largely to do with the ungainly size of the license plates which Connecticut riders are compelled to affix to their

Digitized by Google

machines. Every one present attached his signature to a paper calling for the club's affiliation with the F. A. M., as soon as the necessary 75 per cent. of the club's total membership is lined up for the federation. Positive assurances were also given Mr. Sauer that the club would co-operate in organizing the State.

LIVELY MEETING IN BOSTON

BOSTON, MASS.—One of the most enthusiastic meetings addressed by the F. A. M. representative was that conducted Tuesday evening under the auspices of the Bay State Motorcycle Club in its headquarters at 325 Columbus avenue, Boston. Here again the licensing situation was discussed at length, particularly in regard to the practice of the State authorities in classifying a motorcycle, with sidecar attachemnt, as an automobile. Former State Commissioner and District Vice-President W. F. Maun and F. A. M. Secretary-Treasurer Gibson explained how through the efforts of the F. A. M. the Massachusetts law regulating the operation of motorcycles had been so amended as to make it reasonably satisfactory to riders, except that at the last moment a definition had been slipped in, by the law-makers, under which sidecars were being taxed as automobiles. Mr. James Baxter supplied some very interesting information in this connection, showing that the State authorities were not sure of their ground. Director Sauer pledged himself to look carefully into the situation as soon as possible.

The Bay State Club, which had already voted to affiliate with the F. A. M. on a 100 per cent. basis, also adopted a resolution that it would take the initiative to bring about the organization, under F. A. M. provisions, of the State of Massachusetts. The first move will be made in Worcester, Sunday, in connection with a run which will bring to Worcester riders from different ports of the State, and also from Providence. It is possible that the Rhode Island riders will join with those of Massachusetts in organizing the latter State. State Commissioner Luden asked for the co-operation of the Boston riders, and after the meeting announced the appointment, as local commissioner, of W. Fraser Holiday, of 178 Columbus avenue. Holiday is very popular with the boys, and an all-around booster and hustler. The interests of the federation in Boston will be well safeguarded by the new commissioner.

F. A. M. SPEAKER IN CHICAGO

CHAIRMAN J. LEO SAUER of the National F. A. M. Legal Action Committee wound up the western leg of his transcontinental missionary tour with a meeting at the Chicago Motorcycle Club's headquarters at 3518 Ellis avenue, Chicago, when he addressed one of the most representative audiences of his trip. The Federation directors who were in the city for their board meeting were on hand to hear the message, while officials of the Illinois state organization were also present.

Mr. Sauer pointed out that the greater portion of the Federation's income had been spent, so far, in the building up of the large membership, but that the time had arrived when more attention would be paid to the general protection of the riders.

It was brought out that the speaker had appointed lawyer-representatives in all the big centers which he had visited on the tour, to take up cases which would lead to the establishment of legal precedents. The F. A. M. is eager, declared Mr. Sauer, to fight good cases, in which a victory would tend to the betterment of conditions for all. Already it had, at a cost of $155, saved the riders of New York State an aggregate of $21,000, and the speaker stated that the Federation is anxious to help the riders of other states in the same manner.

Mr. Sauer asked for touring information contributions from the motorcyclists which the Touring Bureau was arranging for members all over the country. The official in charge of this department was, he said, receiving inquiries daily for routes and the best information available is being supplied. This information could be improved, however, and every member was urged to aid in the work of collecting reliable routings.

Mr. Sauer asked for suggestions from the members at large and urged upon them the advisability of forming a habit of co-operating with the national officers. He did not want them to believe that the officials were "merely running things" in the usual sense.

President B. J. Patterson supplemented the address of Director Sauer with a few impromptu remarks. He pointed out that some of his state commissioners had been very active in the securing of benefits for their particular charges, but that some had been "asleep on the job." He also showed that the trips of the directors to the various special meetings were costing the officers considerable sums, personally, and that sessions had not been mere joy-gatherings.

Dr. Patterson also extended a general invitation to the riders of Chicago to take part in the next Kansas Short Grass Club tour at the expense of the club. He assured those present that it would not cost them a penny for entrance fees, although the actual members of the Short Grass Club had to contribute a $30 fee. The chairman of the meeting was President Purdy of the Chicago Club.

FINE SHOWING IN ST. LOUIS

ONE of the most interesting meetings so far addressed by Director Sauer on his F. A. M. lecture circuit was that held in St. Louis under the auspices of the South Side M. C. on April 2. Although the program was presented in the headquarters of the South Side Club, the arrangements were made by a joint committee, representing the St. Louis M. C. and the Independent Motorcycle Association, as well as the South Side squad. The attendance was over 200, and there was no end of enthusiasm.

The automobile carrying the reception committee and Director Sauer was followed through the principal streets by a procession of one hundred motorcyclists on their machines, and an excellent impression was created all along the line. The official automobile was escorted by six motorcycle policemen.

There were strong indications during and after the meeting that the three clubs of the city will consolidate and form one big F. A. M. squad. Suggestions along this line by Mr. Sauer were greeted with cheers, and a spirit of whole-souled co-operation was evident throughout the program. The F. A. M. representative brought fifty Federation pins to the meeting and memberships were received so rapidly that the supply was soon exhausted. At the table with the speaker were A. F. Greenfield, president of the South Side M. C.; P. G. Kennett, president of the St. Louis M. C.; A. L. Voight, representing the Independent Motorcycle Association, and President Heinz, of the East St. Louis M. C.

On the following night Director Sauer spoke before the East St. Louis M. C. and twenty new memberships were turned over to him.

IT is figured that there are 150 motorcycles in use in Harrisburg, Pa.

Denver Will Be Scene of F. A. M. Convention

Federation Directors, Sitting As Competition Committee in Chicago Session, Choose Mile-High City for 1913 Assembly and Action Will Be Ratified At Another Meeting of Directorate

FOR the first time in the history of the Federation of American Motorcyclists, the 1913 National Meet and Assembly will be held in a city west of the Mississippi. At a meeting of the F. A. M. Board of Directors held at the Auditorium Annex in Chicago on Friday, April 4, the board, sitting as the Competition Committee, recommended that the meet be held in Denver during the week commencing Monday, July 28. In due time, this action will be approved by the directors. As a matter of fact, as the Board of Directors and the Competition Committee consist of the same individuals, the recommendation of the Competition Committee is practically final.

The selection would have been made by the directors as such, were it not for the fact that there is a peculiar provision in the F. A. M. Constitution and By-Laws to the effect that the convention city must be selected not more than ninety days or less than sixty days before the opening of the convention. As soon as the time limit is reached, however, President Patterson will place the recommendation of the Competition Committee before the directors and they will naturally approve of their own action. There is no question as to the selection of Denver, although it is possible that the date may be advanced one week, to Monday, July 21. That will be finally decided about the first of May, when the directors ratify the selection of the Mile-High City.

The Chicago meeting was attended by President B. J. Patterson and Directors Thornley, Johnson, Hamilton, Collins and Sauer. Director Sauer held the proxies of Directors Willis and Estabrook.

REPORT ON LECTURE TOUR.

Director Sauer reported at length regarding his trip through the South, up the Pacific Coast and back to Chicago. He stated that he had found, in nearly every city visited, a disposition to co-operate with the national organization, although in many cases officers and members were rather at a loss as to the proper means to adopt. He found that the movement on the Pacific Coast in opposition to the F. A.

Digitized by Google

M. was due largely to the fact that the members in the states of California, Washington and Oregon felt that they were not properly and adequately represented in the administration of affairs of the Federation.

In addition to pointing out how all the desired local autonomy could be secured by the organization of states, Director Sauer had promised to recommend to the directors and subsequently to the National Assembly their approval and adoption of an amendment to the Constitution providing for territorial distribution of the members of the National Directorate, together with an arrangement whereby each director would have control of a certain proportion of the national funds, on a percentage basis according to memberships. A proposition along these lines will soon be offered at the Seattle Club to the members of the W. F. M., and when approved by them will be presented to the National Assembly in Denver. There is no question but that it will be easy to make an adjustment on this basis, and it is more than probable that all who are now W. F. M. members will be members of the F. A. M. after the Denver meet.

Although the Board of Directors has no power to amend the Constitution at the meeting in Chicago, it was unanimously voted that it was the sentiment of the Board that means be devised looking toward such a distribution of the F. A. M. directorate, so as to insure to members in all parts of the United States equal representation.

In connection with the decision to stage the next F. A. M. convention in Denver it was stated special tours will be arranged to the assembly city. President Patterson will head a big division from the Kansas district.

President Patterson brought up the matter of increasing the fees of F. A. M. referees, and the Directors voted that inasmuch as the printed rules have been published for 1913 the Board has no power at present to change them. The Board interpreted Section 2, Article 2 of the competition rules, relative to referees' fees on board tracks as follows: $10, where one meet a week is held; $5 for each meet, including the first, where the schedule calls for more than one meet a week.

It was voted that the matter of the ocean-to-ocean relay race be laid on the table.

The Board voted that where three or more sanctions are issued in a week to any promoter the Chairman of the Competition Committee may, at his discretion, place all the sanctions for the week on one blank, and that under such conditions it will be considered that the races are not completed until Sunday night, at which time all prize money will be due.

W. M. Johnson, vice-president of the League of Racing Clubs, reported that the league will be governed by the rules and regulations of the F. A. M., and that it is desirous of co-operating with the Federation in every way possible. The Directors welcomed this statement and voiced the opinion that it will do much to maintain a high standard for board track racing.

The Directors decided that if F. A. M. members in the District of Columbia desired to come under the jurisdiction of the Maryland state F. A. M. organization it will be entirely satisfactory for them to take such action.

The Board adjourned at 2:30 a. m., after having been in continuous session for sixteen hours, excepting the time spent at the headquarters of the Chicago Motorcycle Club, where Director Sauer gave his lecture before a gathering of riders of the city.

Manufacturers Discuss 1914 Show Plans

M. M. A. in Buffalo Session Instructs Committee to Obtain Data for Full Report Relative to Next National Shows—10,000 Feet of Space for Motorcycle Display at Panama Exposition

BUFFALO, N. Y.—At a busy session of the Motorcycle Manufacturers' Association held in this city April 9 some time was devoted to a discussion of national show plans for 1914. It was decided to utilize about 10,000 square feet of space for a motorcycle display in the Motors Building at the Panama Exposition, the Traffic Committee submitted a report relative to the freight rates situation and the Association went on record as opposing the 650-mile road race proposed by the Short Grass Club, of Kansas, in connection with its annual tour.

After the 1914 show proposition had been pretty thoroughly threshed out it was decided that the matter should be left in the hands of the present Show Committee to permit of fuller investigation before definite action is taken. The committee, which is composed of President A. B. Coffman, Arthur Davidson and F. J. Weschler, was instructed to obtain all the data possible with a view of submitting a full report at the next meeting of the Association, which will be held at the Hotel Lafayette, in Buffalo, on June 10.

NO SEPARATE BUILDING AVAILABLE.

The committee in charge of plans for a motorcycle display at the Panama Exposition reported that it will not be possible to obtain a separate building for the exhibit, and recommended that advantage be taken of an opportunity to occupy 10,000 square feet in the Motors Building. This will permit of a suitable display, and the Association will be prepared to make the most of the occasion.

When a question was raised relative to the proposed road race of the Short Grass Club the Association opposed the idea on the ground that such a contest was hedged by too many obstacles and that it might create unfavorable sentiment in the cities and towns along the route. Finally the M. M. A. went on record as being opposed to contests of this character and as favoring only tours, hill-climbs and reliability events.

A letter from President Patterson of the F. A. M. requesting aid from the manufacturers toward making the 1913 assembly of the Federation a success was laid over, owing to the fact that no official information was at hand relative to the choice of the convention city by the F. A. M. Board of Directors.

FACTORY REPRESENTATIVES.

Among the manufacturers and factory representatives in attendance at the meeting were the following: President Coffman, Secretary L. D. Harden (Pope Mfg. Co.), Arthur Davidson (Harley-Davidson Motor Co.), A. J. Nusselman (Allied Motors Corporation), E. J. Knight (Aurora Automatic Machinery Co.), A. M. Mitchell (Black Hawk Motor Co.), W. G. Schack (Emblem Mfg. Co.), Peter O'Horo (Chicago Cycle & Supply Co.), H. N. Kirk (Excelsior Motor Mfg. & Supply Co.), W. P. Schamber (Minneapolis Motor Co.), Norbert H. Schickel (Schickel Motor Co.). F. J. Weschler, of the Hendee Mfg. Co., was reported as absent for the first time.

A number of representatievs of allied industries were to be seen at the meeting place, among them being S. A. Falor and W. J. Cameron, of the Goodyear staff; Bert A. Quayle, of the Standard Welding Co.; F. W. Pardee, vice-president of the Ericsson company, that is producing the new Berling magneto; Albert L. Pope, of the Pope Mfg. Co.; A. H. Harrop, of the Corbin staff; Horton, the New Departure booster; L. B. Lyman, of the Goodrich forces, and O. J. Oberwegner, of the Oberwegner Motor Co., of Toledo, O.

A report of Merle Sidener, of the National Dealers' Information Bureau, was to the effect that 1,700 dealers are now making use of the special advertising service provided for them, and that encouraging results are being obtained on all sides.

The Traffic Committee submitted a statement on freight rates, which is printed elsewhere in this issue, and the Show Committee reported a satisfactory surplus over the expenses of the independent Chicago Show.

After the meeting the M. M. A. members and press representatives were entertained at a luncheon at the Lafayette Hotel by W. G. Schack, of the Emblem Mfg. Co., and the occasion proved fully as enjoyable as other of a similar nature over which Mr. Schack has presided.

In the evening F. W. Pardee, of the Ericsson company, gave a theatre party at the Teck theatre, in which twenty-five of the motorcycle boosters figured.

A. H. Harrop settled part of Bert Quayle's expenses for the trip as the result of a pool game in which the latter demonstrated his ability to roll off the ivories in winning form.

OIL PRODUCTION

DURING the year 1911 it is estimated that the total production of crude oil was 220,000,000 barrels. Complete data for the 1912 production has not been gathered, but present reports indicate that it was somewhat less than for 1911. The total production for 1910 was approximately 200,000,000 barrels. The gasoline producing crudes in 1910 figured 126,000,000 barrels; in 1911 there were 127,000,000 barrels and in 1912 about 124,000,000.

TO BOOM GOOD ROADS

A CONFERENCE of the good road advocates of the Pacific Coast will be held in Eureka, Cal., on August 21 and 22. It is the object of this meeting to organize a Pacific Coast Good Road Association.

ALLEN DUNWIDDIE and William B. Conrad, of Janesville, Wis., are preparing to tour Europe by motorcycle during the summer.

The HEADLIGHT AS A PROTECTOR

by RODMAN BARRY

I HAVE always inclined toward the belief that a motorcyclist who goes in for night riding without carrying a dependable headlight is hardly entitled to the sympathy of his friends when he comes to grief—as he is quite certain to in time—and this opinion has been considerably strengthened by several first-hand lessons I have received during the last year. Feeling as I do about the importance of a good lamp, it is my policy to carry one whenever there is the slightest danger of my being caught on the road after nightfall, but I am only human and I have not always adhered strictly to my resolution. A cheap lamp, turned out by inexperienced hands, is ever a menace, and even a well-made lamp cannot operate successfully unless it receives proper attention. Failure to keep these facts in mind resulted in experiences that set my hair on end on two memorable occasions.

On one of these occasions I neglected to attend to a clogged burner, and on the other I was using a borrowed lamp that should never have found its way to the front of a motorcycle. This lamp was one of those nameless contraptions that get onto the market in some way, and through their cheapness enter into unfair competition with reputable products. They should be frowned upon by every rider, for in the end they may prove mighty costly. Luckily our best-known manufacturers are supplying such excellent lamps these days that no one has an excuse for using an inadequate lighting system.

ON A NEW JERSEY TRIP.

By way of getting back to my experience with the unreliable lamp, I will state that I was making a motorcycle trip through New Jersey late last autumn, my route leading southward through the state from Newark to Atlantic City. I did not intend to do any night riding on this outing, but was carrying my lamp as usual for emergency service. Between Elizabeth and a town called Rahway I turned a corner at a twenty-mile clip to find myself slithering all over a freshly sprinkled piece of macadam roadway. Before I could get my mount in hand I went down—hard. Then I scraped about a pound of mucky material from my new riding togs and inspected my machine. My final slide had ended against a curb and my lamp was out of commission, but otherwise the machine had escaped injury.

This was about three in the afternoon, and while I mourned the damage to my lamp I was not worried especially for I did not feel that I would need it. In a town called Woodbridge, not far from Rahway, I have a cousin, and I decided to pay him a visit. He was a motorcyclist—or had been. At any rate, he had an old relic of a machine and insisted upon my looking it over. Finally he suggested that I exchange lamps with him, taking the one fitted to his machine and leaving mine to be repaired, with the understanding that I would call for it on my return trip. I argued that I did not intend to ride at night, but finally allowed myself to be persuaded, and when I got under way again my cousin's lamp was on the front of my machine.

A HAIR-RAISING EXPERIENCE.

He assured me that his lamp was as dependable as death and taxes—and that's what started the trouble. I chugged on to Perth Amboy, a busy manufacturing city opposite the lower end of Staten Island, and decided to have supper there. After eating, I strolled about and reached the conclusion that the early evening would be ideal for riding. I spent an hour chatting with a young motorcycle agent, and having my tanks refilled, and was in no hurry to get under way. The agent helped me to tinker with the borrowed lamp, and we finally had it in what appeared to be good working condition. When I started it was dark. My old resolution against night riding over unfamiliar roads cropped up, but I consoled myself with the thought that I had a lamp and that I was going to travel slowly.

Over the Raritan River between Perth and South Amboy is a long wagon bridge of the revolving draw type, and approaching the draw from the Perth Amboy side is a considerable down grade. As I rode out on the bridge I noticed that my lamp was flickering feebly, but I decided to cross the bridge before getting down to doctor it. I chugged onward at about fifteen miles an hour, and was able to see only half a dozen yards ahead. Suddenly I noticed a mysterious gleam directly in my path, and at the same instant the hazy outlines of an iron gate presented themselves. The draw was open. The next few seconds have burned themselves into my memory for all time. I shut off the power, clapped on my brake and threw myself sidewise from the machine, all in an instant. I made a splintery slide along the bridge and my machine struck the gates and was stopped. Then I stood up and mopped cold perspiration from my brow; there was a lot more running down my spine that I couldn't reach.

HOW THE LAMP WAS TO BLAME.

It should be stated that this bridge is not ordinarily dangerous, and I am told that motor traffic over it is very heavy throughout the summer, but it was wholly unfamiliar to me. Had I known anything of what to expect I would have had no trouble, but being a stranger I had to depend on my light—and my light betrayed me. With my own lamp or any good headlight I would have seen the closed gates while still a score of yards from them, and would have stopped without difficulty. As it was, I had the closest kind of a shave from a plunge into the river. I did no more riding that night, but pushed my machine back off the bridge and stored it in an automobile garage until the next day. The garage owner was unable to understand how I had got into trouble. He argued that the lights on the bridge should have guided me—but they didn't. There weren't many of them, and besides I was looking directly ahead where the beam from my lamp should have been.

On another occasion I was touring in eastern Pennsylvania, and at nightfall I found myself in a hamlet which held out no inducements for an overnight stop. The hotel accommodations were negligible and there was no motorcycle dealer there. Accordingly I decided to ride on to the nearest large town, a distance estimated by one of my rural informants at about twelve miles. A twelve-mile jaunt, even at night, is nothing to worry about, so I lighted my lamp, made road inquiries and chugged on my way. I had been riding about twenty minutes and was enjoying the cool evening air to my heart's content when I struck a boulder, jarred my light out and took a mild spill. I was not injured and after lighting my lamp again I was ready to proceed—with more caution.

ANOTHER NARROW ESCAPE.

At this juncture my burner developed a cranky streak and the light was far from up to its usual effectiveness. I tinkered with it a bit, and finally decided that the next town could not be far distant and that I could make it without difficulty. I started. At the next turn in the road I came to quite a steep down grade. I entered upon it somewhat gingerly, but my machine picked up speed and in another minute I was bowling along at about twenty-five miles an hour. This did not bother me, as the road was fairly good, but the feeble beam from my lamp was of little or no value to me for lighting up the road, and I peered ahead a bit anxiously. While thus engaged I heard a faint rattle directly in front of me, and the next instant I discerned the back of a closed wagon. I was not over twenty yards from it and making twenty-five miles an hour on a down grade. I let out a yell that must have been heard in the next county, but realized that even if the driver of the wagon understood what it meant he could not pull off the road in time to save me. I had a horrible flash of thought that I had telescoped the wagon and that I was lying maimed beside the road while the frightened horse was plunging off into the night. It is strange how minutely gruesome details present themselves on such occasions.

Of course I didn't strike the wagon. If I had I probably would not be writing this to warn other riders. I swerved quickly to the left and went off the narrow road into a ditch. It was what you might call a bad spill, but I came out of it with only cuts and scratches and a broken pedal. The driver of the wagon either did not hear the crash or was not interested; at any rate, he did not stop. I finally reached my stopping place for the night, but it may be taken for granted that I traveled the rest of the distance at a snail's pace. I had learned my lesson. The moral is obvious—carry a good lamp and keep it in condition.

Advantages Claimed for the Silent Chain

Student of Transmission Conditions Argues That Silent Type Will Do Much to Advance Cause of the Motorcycle, by Simplifying Adjustments and Affording Greater Strength Than Roller Chain

By R. McV. C.

ALTHOUGH I am a constant reader of your magazine, I do not recall ever having read an article which advocated the use of a silent chain for a motorcycle, and I have at last decided to call attention to some of the advantages of this type of transmission. I have given the subject careful study and have done considerable experimenting, and I really believe that it will be only a matter of a year or two before the silent chain will be the standard motorcycle transmission.

The chief obstacle, of course, is that the silent chain cannot be used successfully without an efficient gaurd. While a roller chain does not absolutely need a guard, it is essential for a chain of the silent type to be equipped with one, not only to keep out dirt and water, but also to permit of thorough lubrication.

I have tried a silent chain in place of the roller chain used between the motor and the intermediate sprocket, and was so pleased with the result that before the present season is over I will have a motorcycle equipped throughout with silent chains.

CHAIN CAN BE PROPERLY GUARDED.

Of course, the pedaling chain does not need to be considered, for two reasons: In the first place, it is seldom used except for starting, and secondly, I believe only a short time will elapse before all motorcycles will be fitted with self-starters, and these will eliminate the pedaling chain. The development of the motorcycle is being closely watched these days by the public, and in my estimation self-starters, two-speed devices and silent chains are the features that will do most to bring the motor two-wheeler into the good graces of the skeptical outsider. I am convinced that next season will find practically all the leading models embodying two, or possibly all three of these details.

As for guarding the silent chain, that is not as difficult a proposition as might be supposed. Guards now being used on two of the leading makes of American machines could be made to answer the purpose very well. I now have a design drawn for a special guard and as soon as possible I intend to have it made and fitted to my machine. My idea is to have the guard of the telescoping type, which can be accomplished by running a bead along the edge and thus providing for adjustments.

The standard motorcycle chain is a ⅝-in. pitch, ¼-in. roll chain, and the distance over all (extreme width) is 9/16-in. The Whitney silent chain No. 1220 has a pitch of ½ in., is ¼-in. over the links, and ⅝-in. over all, so that by simply changing the sprockets to conform to the silent type and placing an efficient guard in position, a silent chain can be used on almost any motorcycle that is being marketed today.

RELATIVE MERITS OF CHAINS.

Very little space need be given to discussing the relative merits of the two types of chains, for I believe everybody is well aware of the better service given by the silent chain. A silent chain will stand 700 pounds more pressure per square inch than a roller chain of the same relative size, so that the danger of chain breakage is reduced to the minimum. Again, the silent chain requires only about half the adjusting that is necessary with the roller chain, for a silent chain adjusts itself to a great extent; "it's the nature of the beast."

Below I give the formula which is used on the S. A. E. data sheets pertaining to silent chains for the benefit of any fellow rider who may be interested. We are to keep in mind that the length of a chain should always be in multiples of twice the pitch, and that in the formula the length of the chain is found in pitches, not inches. To get the latter is a simple matter after solving the formula:

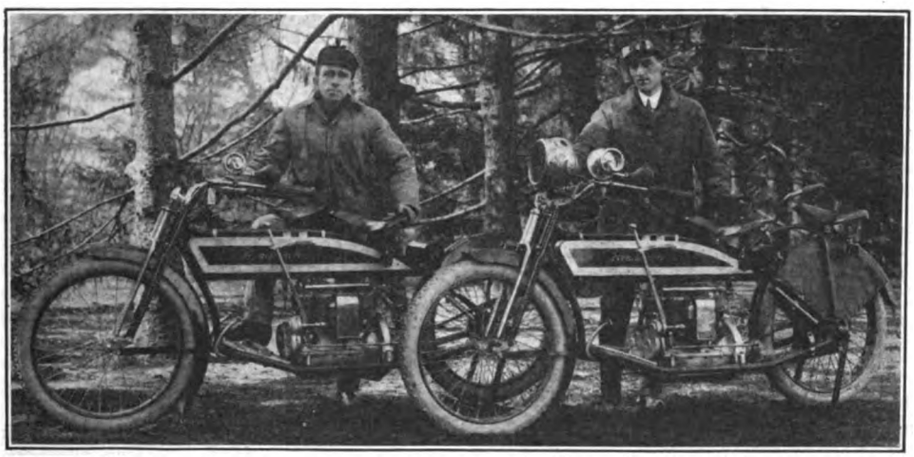
C = Distance between centers in pitches.
L = Length of chain in pitches.
N = Number of teeth in large sprocket.
n = Number of teeth in small sprocket.

$$L = 2C + \frac{N}{2} + \frac{n}{2} + \frac{\left(\frac{N-n}{6.2832}\right)^2}{C}$$

SILENCE A BIG ASSET.

The chief fault that the general public held against the motorcycle at one time was its noise. Now that machines have been perfected to the point where there is a vast improvement in silent running, the single-tracker is gaining recruits that could never be induced to ride the noisy contraptions of a few years ago. Greater silence in operation has helped the motorcycle in both pleasure and commercial circles in this country.

The automobile had to come to the shaft drive partly because the public objected to the noise of the chains, and it is only reasonable to believe that the motorcycle can and will be made to run as quietly as the best shaft-driven, poppet-valve automobile. I believe the silent chain will permit of a great step in that direction, and therefore hope to see manufacturers give it a fair tryout in the near future. How long will it be before we can straddle a two-speed, self-starting motorcycle fitted with a rotary valve or sleeve-valve motor, and with silent chain transmission? I'd like to wager that it won't be very long.



John P. Hooper and Fred Arend, Trenton Enthusiasts, on a run with their 1913 Hendersons Into the Pine-Tree Belt of New Jersey.

HUTTINGER AND GIBSON RETURN

FINN HUTTINGER and "Wild Cat" Gibson, both of whom starred at the St. Louis Motordrome last season, have just returned to St. Louis after a tour of the United States. At the close of the riding season the racers left St. Louis for Cleveland, from which point they rode to the Indian factory at Springfield. They next toured through New York and then rode southward to Florida. Going west from Florida they visited the Dallas (Tex.) motordrome and from there rode to Hot Springs, Ark., touring the Ozark Mountains. From Hot Springs they made their way to Denver, trying out the motordrome track in that city. They then proceeded to Los Angeles, stopping at Salt Lake City to ride on the Wandamere bowl. They reached Los Angeles in time to see Humiston in his ride against time. After touring along the coast they returned to St. Louis, where they will remain for the coming riding season.

ROAD INFORMATION

RIDERS from New York to Stamford, Conn., are advised to make a detour at New Rochelle, if going via the Boston Post Road. This detour begins at North street, turning left at the monument and following along to the White Plains Post Road. Take the latter road into White Plains where turn east on Westchester avenue. A detour will be necessary from Westchester avenue a short distance outside of White Plains on account of road construction, but the avenue is again resumed for Port Chester. The Post Road can be resumed thereafter to Stamford. The road is being repaired at Mamaroneck and Rye and the detour along Grace Church street in the latter place is vile beyond description. The Shore Route with Rye and Mamaroneck detours is available for sidecar work, but is very uncomfortable driving.

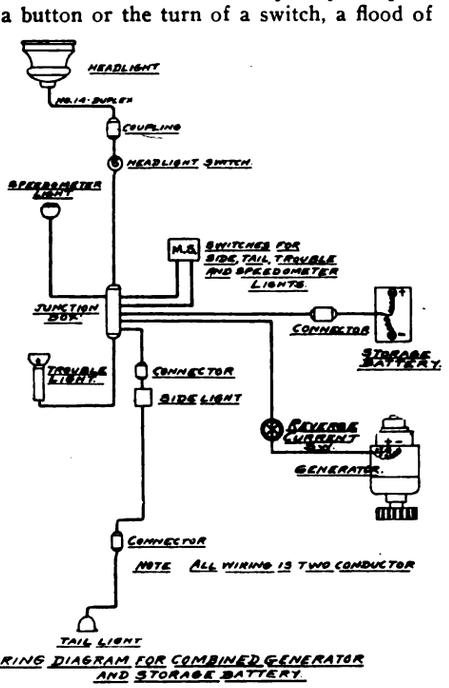
The ELECTRIC BEAM

· WILLIAM · HETHERINGTON · JR ·

LIGHTING systems for motorcycles have undergone radical changes within the last few years. Formerly the veteran rider was fortunate if he possessed simply an oil lamp of pocket-size dimensions to light his way home in the dark. As the motorcycle industry developed to its present high state the means of lighting for motorcycles developed also, until at the present time a rider can be supplied with modern lighting systems that will meet any reasonable demand.

A good light is a dividend-paying investment. One accident due to inefficient lighting will cost more than an up-to-date lighting system. Besides complying with the law, an efficient lighting system gives the rider a sense of security and makes night travel a real pleasure.

An electric lighting outfit on a motorcycle lends refinement and taste to the machine. It also possesses many advantages that are essential to comfort and luxury. By the push of a button or the turn of a switch, a flood of



WIRING DIAGRAM FOR COMBINED GENERATOR AND STORAGE BATTERY

light can be sent streaming down the road. The necessity of dismounting in order to light the lamp is done away with. By the use of adjustable reflectors, any form of light may be obtained, from a broad beam flooding the full width of the road to a narrow pencil of light penetrating hundreds of feet ahead.

FEATURES OF THE SYSTEMS.

Electric lighting gives the rider the choice of three distinct systems, namely: the generator and battery, the alternating current magneto and the straight storage battery system.

(1) The generator and battery system is the most efficient and satisfactory. It operates whether the motorcycle is running or standing still. When the engine is revolving above a certain rate, the battery is automatically charged. It is obvious, therefore, that there is practically no expense for charging the battery.

(2) There are specially-designed low-tension magnetos that furnish lighting current while the motorcycle engine is revolving. When the engine is stopped, current for lights must be obtained from a battery, or combination oil lamps must be used.

(3) The straight storage battery system requires that the battery be charged at intervals from an outside source. The time of charging depends, of course, upon the service demanded from the battery.

GENERATOR AND BATTERY SYSTEM.

The three elements in this system are generator, battery and reverse current switch. Two types of generators are in use, the permanent magneto type and shunt-wound dynamo. On account of the peculiar characteristics of the shunt-wound machine, it is preferred to other types of electric generators. The shunt-wound dynamo gives practically constant voltage over a wide range of speeds. The most essential thing that a dynamo should be is "fool-proof." Many a good dynamo has been put out of commission due to some inquisitive rider's desire to see what "made the wheels go 'round." It goes without saying that the generator should be watertight, impervious to dust and oil and of an enclosed type. At the present time, two types of dynamos for illumination are employed; one type is driven by shaft or belt from the engine-shaft, the other is driven by friction drive from the tire. In sketch "A" a method is shown for mounting and driving the dynamo by belt from the engine-shaft.

The generator should be rigidly mounted so that no possible amount of vibration can jar the generator loose. The belt used is a ⅛-inch round leather belt which should be reasonably tight to prevent slipping. The storage battery is shown mounted on the top of the tank of the machine, this being the most practicable place to store the battery.

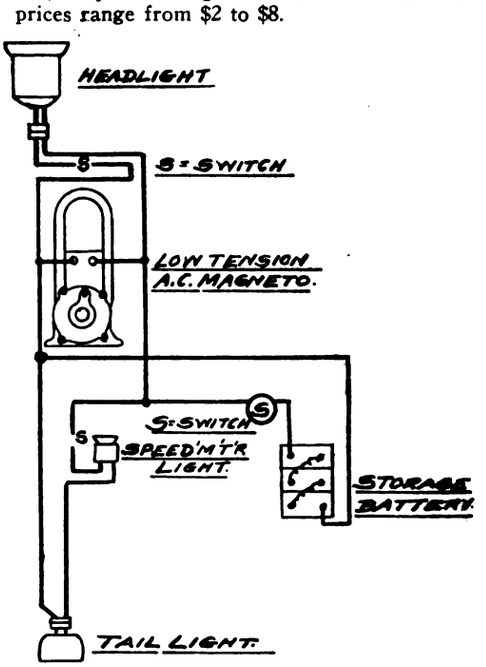
The regular rating of the dynamo is 6 volts at 6 amperes or 36 watts. Of course, there are types of dynamos that vary somewhat from this rating but for standard equipment, a generator of the type and capacity mentioned is recommended. A generator of this size is capable of furnishing current to light the head-light, tail-light, speedometer light and trouble light, also a side light, if a sidecar is employed.

MOUNTING FRICTION-DRIVE GENERATOR.

In sketch "B" two methods are shown for mounting the friction-drive type of generator. It is desirable on some machines to mount the generator on the front wheel, this being the best location. A minimum amount of wiring is thereby needed. This method has the disadvantage, however, of the "light being out" when needed, if the rider has stopped for any reason. The rear wheel drive is best, provided no storage battery is used as the stand can be put down and the engine kept running, thereby driving the dynamo which will furnish continuous light.

The initial cost of a generator and storage battery outfit complete varies from approximately $20 to $35. This includes the generator with governor, storage battery, head-light and tail-light, reverse current switch, necessary switches for controlling the lights, wiring and clips.

If it is desired to purchase the parts of the outfit separately, the generator cost varies from $15 to $25, depending upon the size; the battery about $6 and the prices of headlights, etc., vary according to the size desired. The prices range from $2 to $8.



WIRING-MAGNETO OR BATTERY.

This type of system has been installed to a limited degree. It has certain limitations which are undesirable. One of its biggest drawbacks is that the battery cannot be charged from this type of generator. When the engine is not running, it is necessary to use a hand-operated switch to throw over to the battery. Sometimes a relay is used which automatically cuts in the storage battery when the dynamo stops running. This system possesses an advantage over the straight battery system in that the battery current is only required when the dynamo shuts down.

Digitized by Google

Another desirable feature of this form of dynamo is its small cost. The design of the generator is much simpler than the direct current type and the cost is less, being about 80 per cent. of that of the D. C. generator. In sketch "D" is shown a wiring diagram for A. C. and D. C. lighting.

STRAIGHT STORAGE BATTERY SYSTEM.

In utilizing this system, the battery is the sole source of energy. If the battery is used in connection with a dynamo, it should have the same voltage rating as the generator. The system usually employed is 6 volts, the ampere hour rating of the storage battery depending upon the type used. Some batteries for motorcycle use are rated 10 ampere hour, others 15 ampere hour and still others 20 ampere hour. For the non-technical rider it may be well to state just what ampere hour rating of a battery means. If, when all the lights on the machine are burning, an ammeter indicates that they are taking 2.5 amperes, a 10-ampere hour battery will furnish sufficient current for 4 hours of steady light, a 15-ampere hour battery 6 hours of steady light and a 20-ampere hour battery 8 hours of steady light. It is obvious that when using a storage battery alone, it would be the most practicable scheme to get the battery which will give maximum service. The ordinary commercial storage battery has absolutely no place on a motorcycle. The requirements of a battery for motorcycle use are that the battery should be rugged, well-made and that the electrolyte be non-spillable. The jelly type of electrolyte is about the best for all-around use.

The best location for the battery for all practicable purposes is to clamp it on top of the gasoline tank. Other locations may appeal to some riders, but the inevitable "spill" which the most careful riders take, suggests that the safest place for the battery is the location mentioned.

POINTERS ON WIRING.

The success or failure of the lighting system depends upon a satisfactory scheme of wiring. As the voltage used is relatively low, the wires should be large enough to allow for a minimum drop.

The size of wire should be no less than No. 14. Flexible stranded wiring only should be used, so as to allow for vibration. The insulation of the wire should be heavy enough to resist wear and tear, due to abrasions, etc. If the wire used is of a poor quality trouble is sure to ensue, due to grounds, short circuits, etc.; therefore it will pay to wire the lamps in the best possible manner.

In sketch "E" a wiring method is shown which is applicable for a complete electric lighting system, utilizing a direct current generator and storage battery.

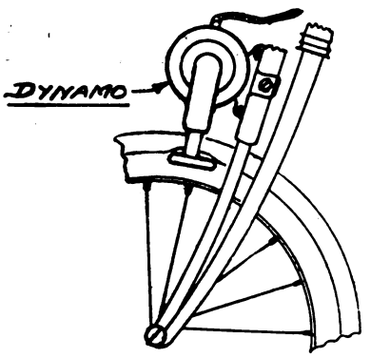
The tail-lamp and speedometer lamp are connected in series so that should either one or the other lights go out, it will be immediately indicated to the rider. Fig. "D" illustrates this. The battery is connected across the line, that is, across the positive and negative wires leading from the generator. Its function is to furnish current when the dynamo is running at slow speed or when the dynamo has stopped running. It is also a voltage regulation. The battery is kept automatically charged by the dynamo during the day or at night, when the output of the generator is not utilized.

The reverse current switch disconnects the generator from the storage battery when the speed of the motorcycle engine falls to such a value that the storage battery voltage exceeds that of the generator. The main function of the reverse current switch is to prevent the battery from running the dynamo as a motor, thereby short circuiting the battery.

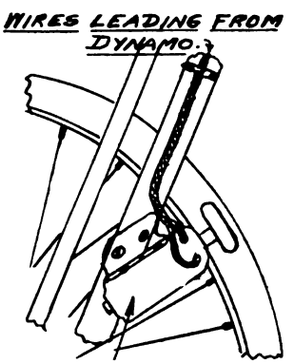
CAREFUL WIRING PAYS.

It is desirable that the headlight be controlled by a separate switch so that the light can be turned off when the machine is standing at the curb. Flangeless connectors are frequently used to advantage. All lamps should be fitted with detachable connectors so as to permit their ready removal for any reason. All splices of wiring should be well made, thoroughly twisted, soldered and then taped. This is a detail which many riders overlook with the ultimate trouble which always arises from poor installation of wiring. The wiring can best be installed by securing it with wire clips to the frame tubing, instead of by screws. In some cases it may be practicable to run the main wiring through the top truss bar of the frame, although this is not recommended. A detachable connector should be provided for the portable lamp which always comes in handy. The portable light can be conveniently carried in the toolbox until required. For convenience in installation and tracing trouble, etc., it is a good scheme to use different colored wires.

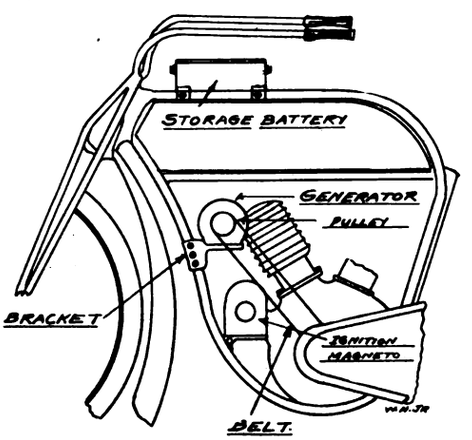
A very satisfactory wiring installation is to install one main splice box or junction box as it is sometimes called. This box can be bought or readily made out of a heavy metal tobacco box. All the wiring can be brought into this box and the necessary tops or splices made. The box can be easily secured to the under side of the gasoline tank where it is out of the way of moisture and most of the dust. The total cost of wiring, clips and connectors will amount to about three or four dollars.



METHOD "C" OF MOUNTING DYNAMO.



DYNAMO MOUNTED ON FRONT FORK.



METHOD OF INSTALLING GENERATOR AND BATTERY.

SIZE AND RATING OF REFLECTOR UNITS.

The head-light is of course the principal lamp, and it should be fitted with an electric bulb of sufficient power to give good light. A 6-volt 1½-ampere Mazda bulb will give sufficient light for almost any purpose. The tail-light and speedometer light should be of 3 volts each (when 6 volts is the source of supply), and the two are in series. The total current consumed by these two lamps connected in series will be .4 amperes. A 3-volt .4-ampere Mazda bulb will give highly satisfactory service used as a tail-light and speedometer light. The trouble-light and side-light should be of about the same rating as the tail-light. These bulbs can be inserted in any standard Edison candelabra or Edison candelabra socket which are fitted to a great extent to electric lamps.

Provided the proper equipment is secured and installed in a satisfactory manner, the electrical system of illumination leaves nothing to be desired. It is the very latest thing in motorcycle illumination and is now a practical proposition, one which warrants the earnest consideration of every rider, whether he be a "boulevardier" or long distance tourist.

WOLTERS TURNS INVENTOR

JOE WOLTERS, of motordrome fame, has turned inventor. He has perfected a machine for use in placing tires on rims, and two of the devices have already been installed at the Excelsior factory. With the advent of the new-style casings and the wide rims, it was found that tire fitting was a time consuming job. By the use of Wolters' apparatus, however, a "tight" casing can be placed on a wheel in thirty seconds.

The wheel is placed in a frame, and by means of a two armed lever which hooks on the axle, the tire is quickly shoved into place, without danger of pinching the inner tube. Wolters is planning to put his machine on the market, it is said, and already one of the tire companies has become interested in the device.

GARFIELD M. C. DANCE

THE first annual reception and dance of the Garfield Motorcycle Club of Chicago was held in Spaulding Hall, 3316 West North avenue, on Saturday evening, April 12.

Pointers On Maintainmg Electric Efficiency

Practical Hints for the Motorcyclist Who Demands Maximum Lighting Service from An Electric System With Minimum Tinkering—Electrical, Electro-Mechanical and Mechanical Regulating Systems Described

MANY riders who have no knowledge of the "inside" of the generator or battery which they have fitted on their machines for lighting service sometimes wonder why things go wrong and upon attempting to remedy them, make matters worse. A few suggestions for riders as to the method of keeping the efficiency of the electric lighting system up to the standard at which they received the outfit will save many a possible breakdown.

One of the former drawbacks to the use of a dynamo for illumination was the poor regulation of speed. As the motorcycle engine changed speed so did the dynamo, thus producing a fluctuating voltage which caused the lamps sometimes to burn brilliantly and at other times to go dim. This disadvantage has been practically overcome by the use of a regulator which is now furnished with the generator as part of the standard equipment. The rider is put to no inconvenience due to the necessity of having to cut in or out resistance on the lamp circuit, as this is accomplished by the governor.

The regulation of the speed of the dynamo —that is, its capacity to produce a uniform voltage over a wide range of speeds, is accomplished by various methods which may be classified under three groups, i. e., electrical, electro-mechanical and mechanical.

THREE REGULATING SYSTEMS.

The electrical method is to utilize electrically operated devices such as resistances which weaken or distort the field, thereby reducing the magnetic lines of force which in turn reduce the voltage. These comprise the electrical method.

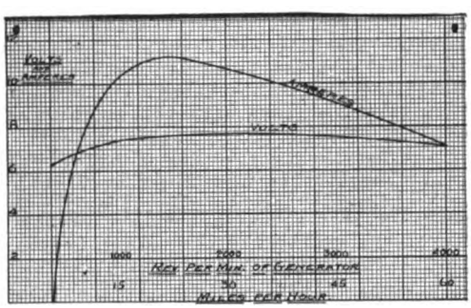
The electro-mechanical devices, as the name implies, employ the two schemes; load regulators in the form of a few turns of wire around the fields in series with the line, are sometimes used. As more lights are turned the field coils produce stronger magnetic flux, hence higher voltage which gives brighter illumination. Centrifugal devices are sometimes fitted which are used in combination with field resistance, thus regulating the dynamo voltage.

The mechanical method is utilized by throwing out the clutch or slipping the belt, thus keeping the speed of the motor at a prescribed minimum. When the generator is shipped from the factory, the governor of any one of the types mentioned, is adjusted so as to give the maximum watts output. Sketch "A" shows performance curves of a governor-regulated generator.

FEW ADJUSTMENTS NECESSARY.

Under no circumstances should the adjustment of the governor be changed, as the average rider has not the facilities for adjusting it. The bearings of the dynamo should be well lubricated with a good grade of oil, and occasionally the commutator of the dynamo should be wiped with a cloth slightly oiled.

If friction drive is used for driving the generator, the steel wheel which bears against the tire should be occasionally examined to see that it is not bearing with too much pressure against the tire. The contact should be only sufficient to drive the wheel. If greater pressure is used, it will not give any better



PERFORMANCE CURVES OF GENERATORS

results and has the disadvantage of rapidly wearing the bearings and tire.

When a generator is driven direct from the engine shaft, it pays to see that the generator has not become loose, due to vibration or because the bolt has stretched, thereby allowing slip in the generator speed.

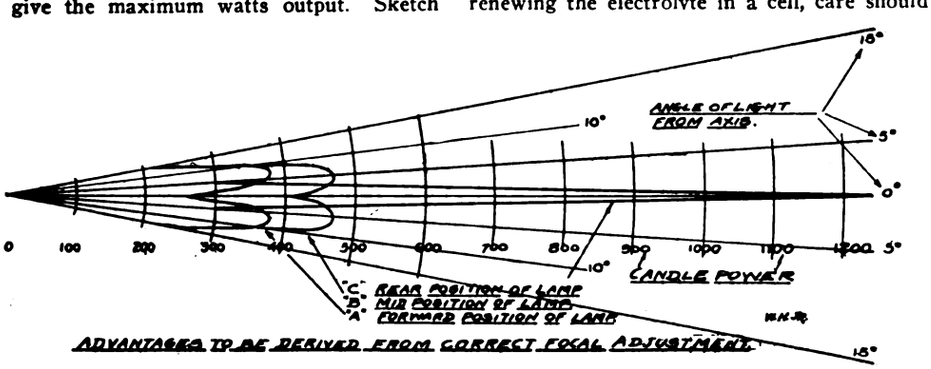
POINTERS ON THE BATTERY.

The efficiency of the storage battery depends upon the care and attention given it. When the electrolytic type of battery is used, the rider should occasionally note the level of the electrolyte in the storage cell. The electrolyte should at all times cover the plates in the cell. It is best to have the solution about one-quarter to one-half inch higher than the plates. There is always a certain amount of evaporation in the cell, and the electrolyte should be renewed from time to time. When renewing the electrolyte in a cell, care should be taken to add pure or distilled water first, and then the acid. The same kind of electrolyte should be put in the cell as originally came in it.

Screw drivers and monkey wrenches should not be placed on top of the cells if the cells have binding posts on top, as these tools, or any other metal, if placed on the battery may short circuit the cell and destroy its usefulness. Contacts will corrode and become tarnished with time. The life and efficiency of the battery depends to a very large degree upon clean contacts.

EFFICIENCY OF REFLECTOR UNITS.

The light obtainable from an electric headlight depends upon three factors; the correct focal position, the character of the radiating surface and the reflector. Maximum illumination is obtained when the electric bulb is at the geometrical focus. This is usually about ⅞ to 1⅛ in. from the reflector in a headlight fitted with a parabolic reflector. If the rider purposes using a headlight in which the electric light fits in a movable socket, the following scheme is suggested to determine the proper focal distance. The lamp should be tested at night and shifted in the socket so as to obtain a far-reaching beam, one which penetrates far along the road. When this adjustment is made the slide in which the lamp moves should be marked so that the same adjustment can be quickly made again. The same procedure should be followed out to obtain a broad beam of light and also a diffused beam. In Chart "B" is shown a set of typical curves of the illumination of a 6 in. electric headlight, fitted with a 6-volt Mazda lamp of approximately 18 candle-power.



ADVANTAGES TO BE DERIVED FROM CORRECT FOCAL ADJUSTMENT

HELPED FLOOD SUFFERERS

DURING the recent flood period in Dayton, Ohio, manufacturers of the city rallied nobly to the assistane of the relief squads and committees and nowhere were there more striking evidences of a fine organization than at the big plant of the Davis Sewing Machine Company, producer of Dayton motorcycles in addition to sewing machines, bicycles and screw machinery. The Davis company was among the first to offer aid to the authorities and in a short time its plant resembled an emergency hospital. Here flood sufferers were cared for in large numbers, and systematic arrangements were made to provide medical service and food. Many boats were built at the Davis plant while the flood was at its height and these were sent out in charge of rescue parties.

The Davis factory was not damaged in any way, but owing to the fact that it was impossible to obtain power for about a week after the water receded the company was unable to make any manufacturing progress worthy the name during that period. As soon as power was available the big organization took up its work where it had been dropped and broke records for activity. As a result the only serious delays are being occasioned by the railroads.

LIGHTING from the TANK

D·R·HOBART

FOR an ever-increasing number of riders, having the acetylene for the lamps obtainable merely by turning a valve is the ideal method. There certainly is nothing more agreeable than placing a key on the squared end of the valve on a gas-tank and knowing that when you turn it on the gas will come to the burner in a pure form, instantly ready to light. And further, that when you no longer need the light, a turn of the key shuts the gas off at once. There are no after effects, no waste and no care except to put the tank into place and substitute another when the first is exhausted.

The above are the points regarding the use of the acetylene tank or "gas-tank" which appeal most strongly to those who enjoy riding at night, and who make extensive tours. The acetylene obtained from the tank is free from moisture and therefore causes no flicker. With a minimum of care the proper opening of the valve for the best lighting will soon become definitely known to any rider. If the valve is opened too far, the pressure will cause the flame to "sing," and if not opened far enough, there will not be sufficient light for riding. There is no fixed position to which to open the valve; as the pressure is reduced, it will be necessary to give a slightly greater opening, until when the tank is nearly empty the valve will be opened quite wide.

THE TANK AND ITS CONTENTS.

The gas-tank is a strong steel cylinder containing a fibrous material into which is put acetylene dissolved in acetone or some like substance, so that the contents will be liquid, saturating the fibrous material. Acetylene is a *gas* in its natural form, and so emerges at the tips of the burner ready for use. The cylindrical tank needs to be strong, as the pressure is generally in the neighborhood of 250 pounds to the square inch in a newly-charged tank. They are perfectly safe; the writer has good proof of this, having recently seen a fresh tank dropped onto a stone curb without even denting it. The gauge at the opposite end to that carrying the valve indicates the pressure on the gas which remains in the tank, and thus shows when it is desirable to have the tank recharged or exchanged.

For a solo machine, there are a number of locations adopted for the cylinder; on the top tube, on the fork, on the front mudgard, across the handlebars or across the rear of the carrier. The writer favors the top tube location, just back of the steering-head, as the most convenient. It is easier to run the tubing to the headlight and tail-lamp along the top of the motorcycle tank when the cylinder is thus fitted, and in case of a fall the gas tank is protected from shock. The forkside position gives an overbalance on one side of the machine; the load on the front mudgard is rather too great to warrant the tank being placed there, and the luggage carrier location has the tank out of sight and projecting at each side rather too much. The handlebar position on some machines does not help the steering, and gives too much bend to the tubing. For sidecar work, the gas tank can conveniently be fitted under the body on the chassis, or on the rear tube when no luggage is carried. A position along the side-bar of the sidecar frame is out of the way for the rider has to look at the gauge upside down, which is not at all convenient at night.

SOME BURNER TIPS.

A great deal in satisfactory acetylene lighting depends on the care of the burner. The chief troubles with this light-giver are carbonizing and choking. Carbonizing is due to riding with the flame turned down too low so that carbon is deposited in the orifices, gradually reducing the size of the flame. Choking, due to moisture or dampness, is rare with a gas-tank, but may be met with where recharging has not been properly done. It is somewhat too common with generator lighting, unfortunately. Another trouble due to turning the gas down too low is the destruction of the burner tips. Turning the gas too high will eventually crack the reflector, and is thus an expensive practice. To moonlight can be charged quite a number of cases of cracked reflectors, as in such light no lamp seems to burn brightly. Giving the tubing a blowout with a bicycle pump or with the breath does no harm occasionally, nor does passing a lighted match along it to see if any leaks have developed.

Riding in fog is not desirable, but is occasionally necessary, and here is a lamp wrinkle for foggy weather. Tilt the lamp downward as far as possible without endangering the reflector, or diverge the light downward by means of a sheet of cardboard or paper, bent over the top of the front glass carrier. The rays from an ordinary lamp, rising upward interfere with the view to the front, and by cutting off these rays the road is illuminated in spite of fog. Probably most riders know that a handkerchief tied over the front of the lamp will replace temporarily a broken front lens, but this tip is here given for the benefit of those who have not as yet had much experience in riding by night.

Two Harley-Davidson Enthusiasts.

BALTIMORE BREVITIES

BALTIMORE, MD.—Bad weather put a crimp in the plans of the Maryland M. C. last Sunday, and the proposed run to Annapolis had to be called off. The attendance contest has been continued for this year, and gold, silver and bronze medals will be awarded to the winners. The membership campaign goes merrily on with 126 riders now in the fold. Local Commissioner W. E. Baker, of Westminster, is endeavoring to induce the motorcycle club there to affiliate with the Maryland M. C. and the F. A. M.

The Iroquois M. C. has just been organized here, taking its name from an old cycling organization. Its first run was to Hanover, Pa., and was made in record time. The officers are Sydney Goldenberg, captain; Joe Rosenblatt, first lieutenant; Sylvan Godman, second lieutenant; Sylvan Gusdorff, color bearer.

Since adopting the two-wheeler as a means of transacting his business, Charles Putts, chief inspector of plumbing in the Health Department, has made a fine record in his office.

A sprained ankle has prevented Casper French, head of the Washington branch of Howard A. French & Co., from enjoying his new Indian and he is far from pleased with his predicament.

Having retired as champion of Maryland, "Chic" Thomas has shown that he is a first rate motorcycle salesman, and since taking his pad in hand has pulled down many orders.

With 157 trial runs to his credit without an accident, "Happy" Mears has become the champion demonstrator in this city.

Determined to become the king of the road in this section, "Boots" Reuschling has been cleaning up everything in sight, and it is predicted that he will also seek honors on the track this season.

Owing to pressure of business Howard A. French found it unable to attend the directors' meeting of the F. A. M. at Chicago.

JOHNSON TO MANAGE STADIUM

AT a meeting of the Stadium Motordrome Company, of Riverview, Chicago, the following officers were named: William M. Johnson, vice-president and general manager; M. F. Bramley, president; J. F. Heade, secretary-treasurer, and J. H. Smith, secretary.

GETTING RESULTS from the GENERATOR

by STANLEY ROSEBERRY

RANGING from the 3-inch glorified bicycle lamp up to the huge searchlight originally intended for a light automobile, the acetylene lamp is to be found on all but a small number of motorcycles today. Most of the others are equipped with electric lighting or use the kerosene lamp for various reasons, but as at present constructed acetylene lamps give satisfactory light for riding at any speed over average roads, and resist vibrations that might destroy a lamp filament or extinguish a kerosene flame. It is the generator-fed lamp that the writer thinks the most desirable for use with either the solo machine or the sidecar outfit.

WHERE THE TYPE SCORES.

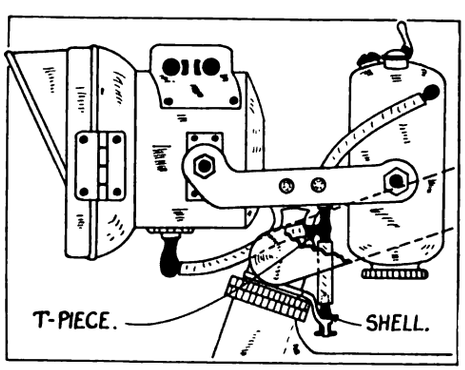
THE generator-fed lamp carries the two elements of acetylene (water and calcium carbide) separately in a relatively light casing which can be placed without inconvenience to the rider almost anywhere on the machine, when the generator is separate from the lamp. The production of acetylene begins as soon as the water is in contact with the carbide, and light can be obtained at the burners within a few seconds after the gas has passed through the tubes from the generating chamber. The necessary elements are obtainable anywhere, and material for an almost indefinite number of hours of light can be carried in small cylindrical sealed cans. There is no gas under pressure except when the apparatus is generating, and a proper-sized generator can be used for feeding the complete lighting system and even a sidecar, when a passenger outfit is driven.

The writer never has favored the combined generator and lamp. There usually is no trouble with the lamp portion of the outfit, but such has not been his experience with the generator portion. The first experience was with a set of Ducellier automobile headlights, which were corkers for light, but which needed two hours to the pair for cleaning out the lime-deposit with scrapers. Subsequent hard labor with motorcycle lamps of the combined types in lime scraping did not result in creating ardent affection for them, and it must be confessed that they were unsatisfactory, compared with the products of the present day. It always seemed that a combination lamp was fitted with only a compromise in the shape of a generator, and the latter usually acted badly, and might be lost on the road through an inefficient joint loosening or parting entirely.

THE SEPARATE GENERATOR.

With the separate generator the proportions are much more generous, and it can be easily cleaned. As mentioned above, it can be placed at any convenient part of the machine and connected to one pipe which is forked to lead to any number of lamps within the capacity of the generator. The main choices of position are: on the top tube back of the steering-head; either front forkside; and the right side of the rear stay. The writer prefers the first position for several reasons: when a fall occurs the generator is not affected; it is right under the hand for regulating when necessary, and the bottom cannot get away if it should happen not to be properly fastened on. The forkside position is good, but a flat fall may bring the apparatus off the clip and the rider will then be forced to make a "jury-rig" on the top tube for the generator. The stay position is good, too, but if the carbide is impure, the tarry water will run back into the chamber and when dry a cold chisel will often have to be used to cut the cake away.

A combination lamp and generator bracket can be made up from two lamp-brackets or by a blacksmith, and there is a little non-spluttering stunt that the writer has had fitted which is worth copying. Some kinds of carbide are pretty tarry, and carry a little dampness over into the burner pipe with the gas. This damp vapor causes sputtering, but being somewhat heavier than the acetylene, can be trapped off at a low point in the pipe. The wrinkle is to use a "cross" or "T" in the rubber tube line between the generator and lamps; the cross when a tail and head-light are used and the T when a headlamp only is fed. The lower arm has fitted to it a short piece of tubing whose other end fits over the mouth of an empty 22-calibre shot-cartridge. The latter is fastened to the steering-head and moves with the whole outfit. At the end of a week's use the cartridge shell is removed and cleaned, if necessary, but usually, the shell will go for nearly a season, after which it can be thrown away and another fitted. The arrangement is shown in the figure. Water collects in it and this can be emptied as often as desired



Simple Method of Fitting Drain System to Prevent Sputtering of Light.

by the rider. Some sort of a drain should be fitted to all acetylene outfits, anyhow, and the big lamp men specify such an arrangement for automobile and stationary acetylene work.

SOME GENERATOR TIPS.

An acetylene lamp that is used only occasionally really should have more attention than one which is used every night. Lots of riders look on a generator as trouble in a nickel case, but the fact is that they are the ones that bring the trouble on themselves. If the water in the tank is kept as high as possible when starting out and renewed for each trip, that part of the generator will be kept in good condition. This means opening the drip valve full and draining the old water off.

As regards the carbide chamber, after turning off the water before stopping for the night, remove it and let the waste carbide or lime get dry. Remove the basket and empty the chamber; scrape off the sides and then wipe everything dry. Sift the carbide in the basket, put in new carbide and reassemble the generator. Finally fill the tank with water. If the above is followed, the lamp is ready for use as soon as the water is turned on and will have a good flame. The whole operation in dry weather should not take five minutes, and the machine can be put away while the carbide is drying. If the lamp is not going to be used soon again, it is cheaper in the long run to throw away the old carbide and use a fresh charge.

REGISTERED REPAIR SHOPS

AMONG the latest repair shops registering with the F. A. M., as reported by Secretary Gibson, are: Ex Motorcycle & Supply Company (B. K. Bering), Houston, Texas; Syracuse Motorcycle Company (W. B. & C. B. Dounce), Syracuse, N. Y.; C. G. Odell, St. Johnsville, N. Y.; Phillips Brothers, Tonogany, Ohio; Harley-Davidson Sales Company (A. G. Wagner), Celina, Ohio; The Cyclery (C. S. Williams), Mason City, Iowa; A. N. Pierce (R. G. Pierce), Greenfield, Mass.; R. C. Smith, Burt, Iowa; C. B. Schnepfe, Havre de Grace, Md.; P. J. Maley & Co., New Haven, Conn.; Willock & Hord (E. W. W. & B. H.), Campbellsville, Ohio; G. W. Hunter, East Chicago, Ind.; J. D. Bingham, Greenville, Ohio; A. C. Englar, Westminster, Md.; Strant & Mangan (Ralph Mangan), Minneapolis, Minn.; J. W. Blackburn Garage Co., 15 East Main street, Salem, Ohio; C. B. Morgan, 143 Whitaker street, Savannah, Ga.; Mark J. McCann, 92 Gorham street, Lowell, Mass.; Gomer H. Jones, 220 South Front street, Mankato, Minn.; Wald Mfg. Co. (E. D. Pawsat), 317 North Eighth street, Sheboygan, Mich.; Riverside Motorcycle Garage (G. E. Wood), 533 West 110th street, New York, and Condra & Lindgren (John C.—Alfred H.), 609 Michigan avenue, LaPorte, Ind.

ELGIN REGULATIONS O. K.

WHILE he was in Chicago for the F. A. M. directors' meeting, Chairman Thornley, of the Competition Committee, went over the regulations which have been drawn up for the proposed national motorcycle races at Elgin next July 4, with Chairman Hill of the Chicago Motorcycle Club's Contest Committee. Dr. Thornley is said to have placed his stamp of approval upon the rules.

The Chicago Club will hold another popular stag party at the new clubhouse, 3518 Ellis avenue, on Saturday evening, April 26.

The basement of the new premises is being fitted up for a garage.

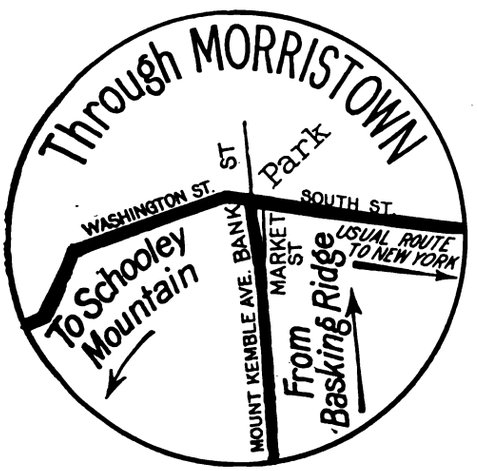
Mapping An All-Jersey Endurance Run

How a Few Rough and Hilly Stretches May Be Combined With Some Fine Roads and Others Fairly Good to Afford an Interesting Two-Day Trip That Will Satisfy Both Veteran and Novice

By Robert Bruce.

NEW JERSEY has such a widespread reputation for good roads (starting, of course, from the other side of the Meadows), that laying out a route for an "endurance run," wholly within the borders of that State, seemed at first more of a task than it finally turned out to be. Some skeptical ones said that it couldn't be done—that there wasn't a



Coming Up to Morristown From Basking Ridge, Turn Left on Washington Street for Schooley Mountain and Easton.

mile of really tough road in Jersey, suitable for any real test of reliability. But in the several years that I had traveled in and about the metropolitan district, I had sought out the worst as well as the best, and so had both kinds to draw upon in such an emergency.

After I had prepared this map, and several of my motorcycle friends had tried it, there were no further doubts or questions. The reader should bear in mind that this is not supposed to be an ordinary tour, but a combination of mostly good with some bad roads—fit for an endurance run, or other unusual trip. There is nothing dangerous about it, and anyone who likes to make occasional journey's "out of beaten paths" would be quite sure to enjoy it.

OVER SCHOOLEY'S MOUNTAIN.

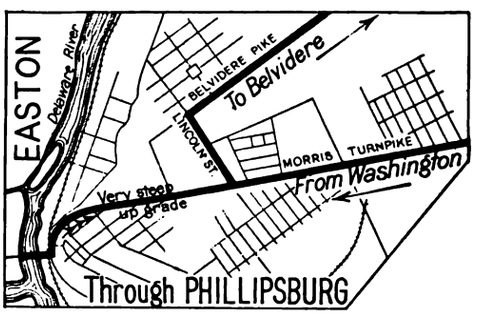
For variety and scenery, at least, it cannot be beaten in New Jersey, including—out-bound—a fair ride from Jersey City through the suburban district, and a short southward detour from the direct road between Chatham and Morristown to dip down into the picturesque Passaic River valley, and pass through historic Basking Ridge. Beyond Morristown there are many miles of gently rolling lands, with just one interruption across the western part of the state to Phillipsburg on the Delaware River. That one interruption is Schooley's Mountain, between German Valley and Washington; this requires a stiff climb and a corresponding descent—neither very bad, though there are a couple of curves which need to be taken with care.

Now a pleasant surprise awaits one who may be making this trip for the first time; by taking the first left-hand road beyond Schooley's Mountain, you travel exactly a mile to a connection with the Hackettstown-Phillipsburg state macadam. Turn left and—so far as the road is concerned you may "beat it" all the way through Washington to the Delaware River; only be careful of a steep winding descent through Phillipsburg, that is, presuming you ride across the fine strong bridge into Easton, Pa., a total distance of 83½ miles, to which the Passaic Valley detour has added about eleven miles to the standard short line.

So far is just about a good half day's run from Jersey City, and it is worth while to go across to Easton for lunch, where two good hotels will be found. That would be at most only a slight departure from the "all-Jersey" idea, as the trip would be resumed at any point determined upon in Phillipsburg, and a northward turn made a short distance east of that city on a surprisingly good country road that leads up through the small village of Harmony to Belvedere. Pass through this quaint old city onto the state road through Bridgeville and Buttzville.

A PICTURESQUE STRETCH.

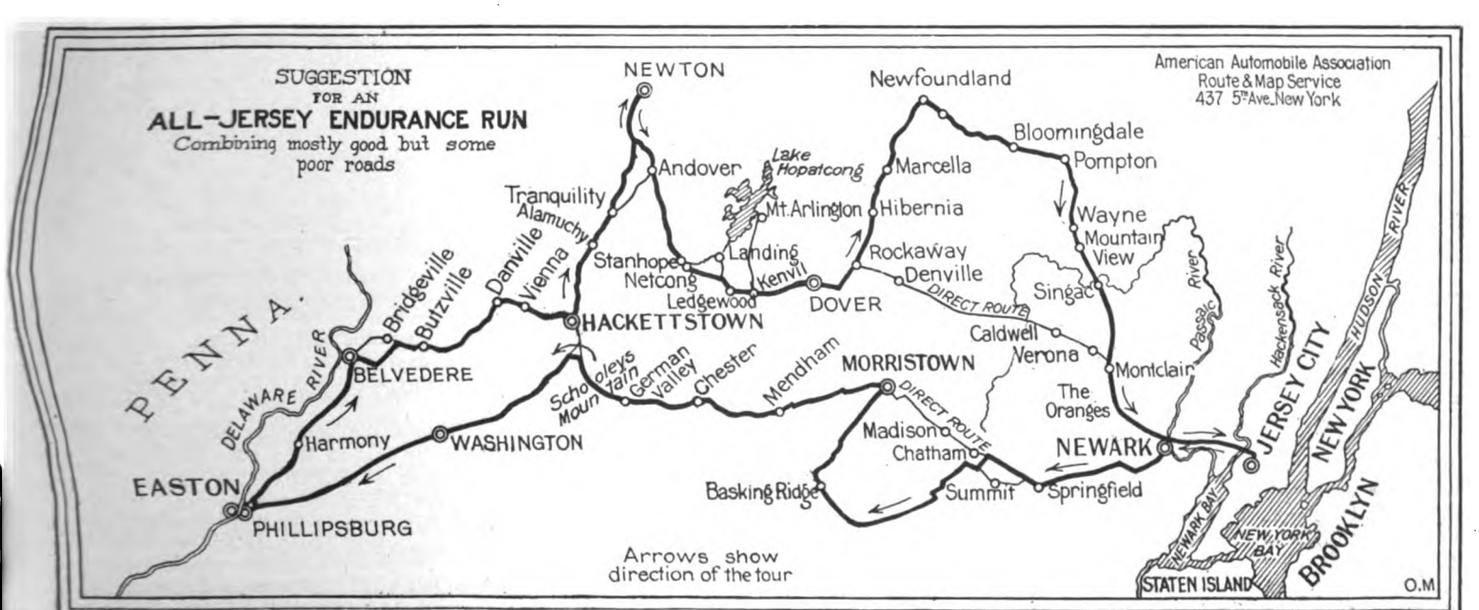
Now you ride for a few miles along the lowlands on the north side of the Pequest river, where in wet weather the roads are apt to be soft and sticky; then comes another



Showing the Way Into and Out of Phillipsburg and How to Negotiate the Important Turn for Belvidere.

improved stretch leading through Danville and Vienna into Hackettstown, 29 miles from Easton. Here, at the American House corner, a sharp left turn is made on one of the most picturesque but little traveled roads in New Jersey—through the hamlets of Allamuchy and Tranquility, and passing a trifle to the west of Andover into Newton. The road is good throughout, with now and then a stretch of gravel or macadam.

Newton is only 44-8/10 miles from the Delaware River—hardly enough for an afternoon's ride in an "endurance run"; so the way in is reversed out of Newton, but at a promi-



Digitized by Google

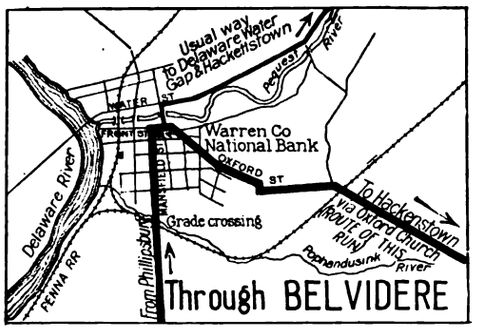
nent fork a short distance beyond keep to the left, passing the road used on the up-trip. The main highway continues past Cranberry Lake station into Stanhope, thence through Netcong, Ledgewood and Kenvil to Dover, 20-8/10 miles from Newton, or 75-6/10 miles from Phillipsburg. This is a fair afternoon's ride, and 159-1/10 miles for the day, from Jersey City; another reason for selecting Dover for the night stop is that while the hotels there are nothing to boast of, they can take care of a crowd better than any other places in that vicinity.

The one real tough stretch on the trip is reserved for the morrow, for after continuing on the good road to Rockaway, you leave the regular line back to New York by turning square left at the center of Rockaway, crossing the M. & E. Canal. This is the beginning of a trip that probably not one in a hundred tourists in the metropolitan district has ever made, for it strikes due north into the rough country. It passes through the settlements of Hibernia and Marcella, both of which look as if they had been lifted from the wilds of Nevada or Utah and set down in northern New Jersey.

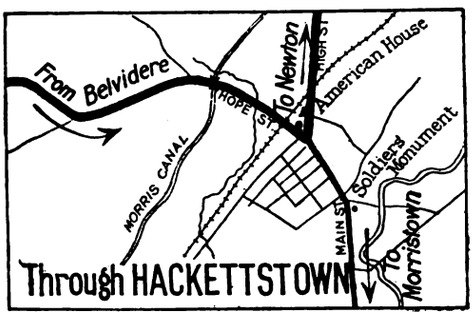
ANOTHER MOUNTAIN CLIMB.

Just beyond Hibernia the road passes extensive fields of stone on the right and left, apparently as they were left by a glacial movement of long ago. Farming seems impossible, which naturally accounts for the sparsely settled country. Gradually the road becomes rougher, and even more neglected; sometimes the trail is almost lost in the woods, though the way always opens up as you proceed. Now comes the long, gradual ascent of Copperas Mountain—on which there are enough waterbars to remind one of some old-time roads in western Pennsylvania. As if to help compensate for its roughness, there are more fine views than you could get on the better-known roads in that part of the State.

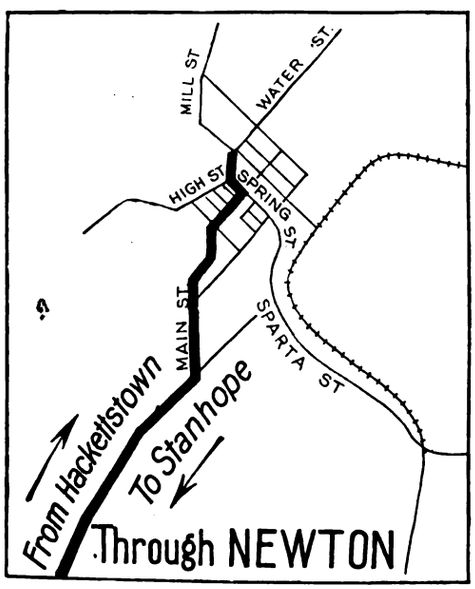
Five minutes more and the tourist is in Newfoundland, on the regular route from Milford or Dingmans Ferry to New York, and the poor roads are past. Turn right and follow the main-traveled highway through Bloomingdale to Pompton village, where the travel divides into two streams—one by Paterson and Hackensack, and the other through Wayne, Mountain View, Singac, Montclair and the Oranges back to Jersey City. Our "endurance run" route takes the latter alternative, which gives an excellent road practically all the way. The distance from Dover to Jersey City by this roundabout but interesting route is 53-9/10 miles, which under ordinary circumstances can be made in a short half day, including the rough road over Copperas Mountain.



Making the Turn at Belvidere for the Run to Hackettstown.



This Route Goes Through and Returns to Hackettstown, Using in All the Three Principal Streets of the Village.



Entering and Leaving Newton, the Turning Point on the Trip, Over the Same Streets.

Board Track Speedsters Are Plentiful

THE magnates in control of the "American League of Professional Motorcycle Racing Clubs" declare that practically every state in the Union is represented by the applicants for positions on the various teams which will represent the cities in the circuit this summer.

The fact is that so many applications have been received from state champions, would-be stars, etc., that preparations are being made for the establishment of a training camp in St. Louis as well as Cleveland, to take care of the army of recruits from the South and Southwest. Several of the riders have already started for the Cleveland camp on their machines from distant points. A rider named Good started out from Oklahoma about April 1 while Birnley, of Buffalo, S. D., also set out on his machine about the same date.

Announcement has been made that Joe Wolters, of Chicago, will be the probable choice for the captaincy of the Chicago team and other appointments will probably be made as follows: Captain of Detroit team, Wiley Gibson; Captain of Cincinnati team, Russel Smiley; Cleveland captain, Brownie Carslake; St. Louis captain, Farmer Standen, the Iowa record chaser.

The Milwaukee motordrome has been formally admitted to membership in the League. The promoters in that city have organized a $20,000 stock company and have been able to supply the best of references. The erection of the Cincinnati track has been delayed on account of the flood, and it is possible that the opening in that city will have to be postponed. The work of reconstructing that portion of the Chicago saucer which was blown away by the tail-end of the Nebraska cyclone is progressing, but the work is far from completed.

The League has decided to offer a $500 purse to be divided among the three best scorers during the season. An account of the winnings of all riders in the League will be carefully kept, and the trio of greatest point winners will split the purse. This will be in addition to the prizes offered during the season.

REPORTS FROM ABROAD

THERE was a large increase last year in the importation of motorcycles into Italy. The latest returns available are for the eleven months ending with November last, during which period no less than 1,402 motorcycles were imported, as against 699 in 1911.

From Belgium come reports of greatly increased exports in motorcycles as well as a notable advance in imports, particularly of British machines and parts.

Swiss importation of motorcycles for the first nine months of the last year showed a marked increase over the corresponding period in 1911, while, on the other hand, there was a falling off in the exports.

Late reports from Japan are to the effect that the motorcycle is rapidly coming into its own in the realm of the Mikado. The Japanese Automobile Club has launched a movement looking to the improvement of the roads of the country so that they will all be suitable for motoring, and as a result dealers in motorcycles as well as automobiles are feeling a trade impetus.

SOME INTERESTING FIGURES

IN a recent issue of *Southern Motoring and Good Roads* appeared the following paragraphs which drive home the road improvement argument with unusual force:

"Of our 2,300,000 mile of highways in the United States, less than 300,000 are improved, and these only partly so. It costs our farmers more to haul a load of wheat ten miles to the railroad than to ship it from New York to Liverpool.

"National highways 50,000 miles long at the high figure of $20,000 a mile would cost $1,000,000,000—a lot of money! But the annual saving would be over $50,000,000—or only twenty years for such savings to pay for them. But improved roads increase farm values within one mile by $5 an acre. Such a system of national highways would add not less than half their cost—or $500,000,000—to farm values.

"Should the remaining 2,000,000 miles of highways cost $5,000 a mile to improve, their total cost of $10,000,000,000 would be saved in seven years, and the increase in the farm land values would be $12,800,000,000, or more than enough to pay their cost."

A SOCIABILITY run to Sterling was recently held by the Hutchinson (Kan.) M. C.

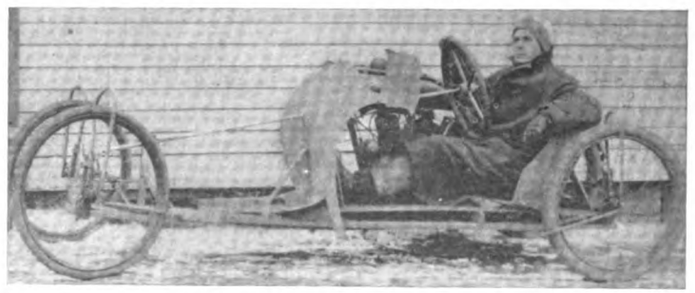
A $1.00 CYCLE CAR

By EARL · F · RUDIN



[F motorcyclists in general feel as I do about the sport and the inducements it holds out am quite sure that the low-priced cyclecar vill come in for some attention within the ıext year or two, and that this will be brought bout without detracting from public interest ı the motorcycle. The motorcycle will con-inue to forge into popularity regardless of all ıe four-wheelers that may be placed on the ıarket, so that there is no cause for worry in ıat direction. I own what my friends have een kind enough to call a cyclecar, and I am ill a full-fledged motorcycle enthusiast.

To begin with let me state that I spent just inety-five cents to transform an old motor-cle into a cyclecar; I had nearly all of the ıaterial of course, and the ninety-five cents is ıe money actually expended. I bought my st motorcycle about five years ago. The st wages I earned went to buy it, and I feel at I got my money out of it half a dozen mes over. In time I knew that machine so ell that I could almost take it apart in the ırk and put it together again. Soon loop ames came into style and I remodeled my ıs to keep abreast of the fashion. As time ent on I acquired other motorcycles, but I as never entirely satisfied and I spent most my spare time tinkering with the mounts.

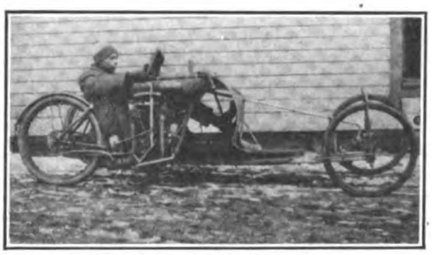
A YEARNING FOR DIVERSITY.

Last season I purchased a new Indian twin d found that it gave me no trouble. I was isfied with the machine, but I wanted some-ng to tinker with and when I saw pictures

Viewed from the rear.

1913 foreign cyclecars an idea began to take m in my mind. I had made an unsuccess-attempt to build one three years before, but I gathered more information about them I ame convinced that I could make one that ıld run. I laid my plans as much in detail possible and one memorable day I started -k on the new outfit. In a week it was shed, and the accompanying photographs show how it looked when I took it out on the road. I do not claim that it is a thing of beauty, for it is not, but it gets over the ground like a scared rabbit and that repays me for my trouble. My friends poke fun at me because of the appearance of the outfit, but they are glad to ride in it when they want to reach some point in a hurry. What's more it is quite comfortable.

The method of transforming the motorcycle into the cyclecar was very simple. The pic-



Note position of motorcycle frame.

tures will show that the outfit is nothing more than a roomy sidecar with two wheels in front to give additional stability and easy traveling. You will note that the frame of the motorcycle has been left intact, and with very little difficulty I can change it back to a single-tracker when the mood seizes me.

The steering wheel was obtained from an old toy express wagon and the front wheels were taken from a bicycle. They are fitted with clincher tires. The left rear wheel was originally the front wheel of the motorcycle, and the original rear wheel of the motorcycle is retained without change, to deliver the drive. The steering knuckles were made from gas and water pipes.

AN INGENIOUS CONTROL SYSTEM.

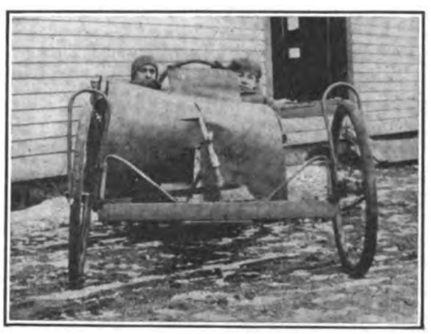
The brakes and the throttle are controlled by the feet, a magneto cut-out is fitted on the steering wheel and the clutch and change speed levers are operated by the right hand as shown in one of the photographs. The spark is always set and the motor is started with the Indian kick-starter so that the driver is not compelled to leave his seat. One of the pictures gives a good view of the rear braces and shows the method of attaching the motor and rear wheels to the frame of the machine. The frame is built as low as possible to assist in getting speed, and only about nine inches of clearance is allowed. A satisfactory springing effect is obtained by using two 3 by 1 inch boards and having a fulcrum which may be set to suit the rider. The spring-board and fulcrum may be discerned in the picture which shows a rear view of the outfit. The buck-board effect also helps in the springing and, all in all, I find that few shocks worthy of the name are transmitted to the driver's seat.

The machine weighs a trifle over 300 pounds and is capable of making over 50 m. p. h. It has carried two 150-pound riders up most of the hills in the vicinity of Dalton, Mass (my home town), on high speed (4½ to 1), and I have never yet struck a grade on which it would not make progress on low gear—as long as the driving wheel could find traction. My home town is in the heart of the Berkshires and we are well supplied with hills, so that the outfit has been pretty thoroughly tested.

A HANDY OUTFIT IN TRAFFIC.

The tread of my cyclecar is only 3 feet 8 inches, and I was surprised at the ease with which I could operate in traffic. I can turn across car tracks or get around a team with remarkable facility, and I am not in the least afraid of a spill. I sometimes whirl about in city streets with a good deal of power on. I have not found that the steering is seriously affected by driving with all the power applied on one side, but I would not advise anyone to copy this design for permanent service as the strain is too heavy on the driving wheel in turning corners, etc.

My experience with sidecars has been limited, but I must say that I cannot enjoy a



The crude but effective windshield.

motoring trip fully unless I have somebody beside me to talk with. My ideal outfit for passenger-carrying would be a quad, with a high-powered, two-speed twin motor set forward and connected with both rear wheels by shaft or chain drive. I would also have the body of fore-door design to keep out dust. If a machine along these lines can be manufactured at a motorcycle price and run with motorcycle efficiency I will buy one on sight, but I must admit that there are serious obstacles to be overcome before such a machine will be developed, suitable for our roads.

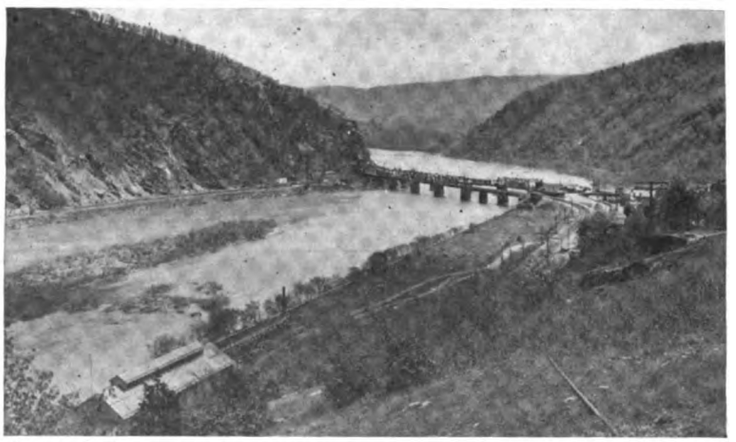
A TRIP to the NETHER WORLD

by C·H·CLAUDY

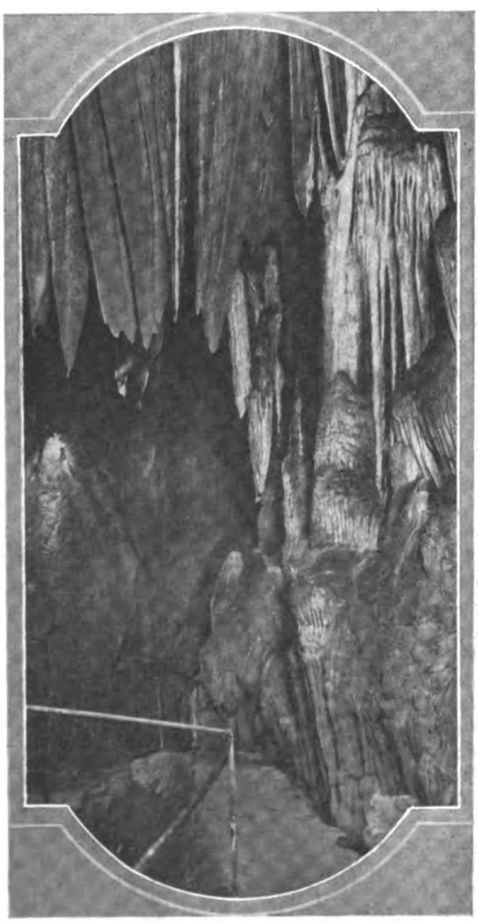


WHEN we speak of a tour by motorcycle to the nether world we may give the impression that an open-muffler fiend has had a spill or something of the kind and been called off to get what is coming to him in a region of brimstone, but this is not necessarily the correct idea; we may, for example, be speaking of the Caverns of Luray, in Virginia, and in this particular instance we are. The Caves of Luray are just about as wierd and mysterious as any section of the nether world can well be, and besides after visiting them you can come back. There's an advantage in that.

Seriously, though, the Caves of Luray are among the most remarkable of natural wonders, and they are so situated that the motorcyclist can reach them over good roads and through a section of the country that holds out many scenic inducements. With the exception of the last thirteen miles of the journey the roads are excellent, and these last miles are not so bad that they need cause a tourist serious trouble.

It matters not what caves and underworld caverns you may have visited—not to have seen the Luray Caves is to have missed some of the best the world has to offer. Nor is there much use in attempting to describe them in advance, for what you will see when you go was not intended to be described in any known language. You can say it is marvelous, stupendous, peculiar, strange, mysterious, beautiful, terrifying, magnificent, grand, awe-inspiring—and tell little more than if you had not spoken. You may talk at length of dimensions—of three miles of subterranean splendor, of huge columns sixty feet high or as many feet thick, of deep chasms and lofty vaulted roofs, and still convey only a faint idea of what you will really see. And, indeed, you can look at the photographs accompanying this article and still have no real idea of what is before you. For the photographs lack perspective and color—they lack the suggestion of vastness and the echoes, they lack the soft, scarcely heard drip—drip of water which is the Master Builder at work on his never finished temple beneath the sod; yet the photographs are good ones. So, since words cannot describe it, you will have to take it on faith that what you are to see at your journey's end is at least well worth seeing, and start with that understanding.

It matters but little from which point you start. All roads that go to Luray lead to the Shenandoah Valley Pike—or at least, all roads fit for the motorcycle. So to Harper's Ferry, West Virginia, you go first; and whether from Baltimore, Philadelphia, or Washington, you find the roads to that point, if not all that could be desired, at least sufficiently hard and smooth to enable you to make a comfortable fifteen to twenty miles per hour. My own trips have all started from Washington, D. C. Sometimes they have been out through Rockville and to White's Ferry, where the Potomac is crossed in an ancient, flat-bottomed ferry-boat, at the other end of which is but a mile or so before the Leesburg Pike is reached. Sometimes my runs have been out the Seventh Street Pike to Olney, then by way of Damascus and Laytonsville, to the old Baltimore Pike. These are good dirt roads in dry weather, but after rain; you know what rain does to dirt? Enough said! This is the shortest route—from my note book I copy the following:



Distances: From Washington to Rockville, 14 miles; to White's Ferry, 37 miles; to Leesburg, 45 miles; to Bluemont (Snickers Gap), 62.5 miles; to Berryville, 75.5 miles; to Winchester, 82.5 miles; to Woodstock, 112 miles; and to New Market, 131 miles. Luray is only 13 miles beyond, a total of 144 miles from Washington.

The Baltimore Pike leads on to Frederick, and here one can take a left turn and make quicker time to Harper's Ferry. But the temptation to follow the Pike over the mountains to Hagerstown has always been too strong to resist, and if a little longer, the journey is most pleasant and the scenery, particularly when the mountains (Braddock Heights) are beneath your feet, is beautiful in the extreme. Hagerstown is a good place to spend the night and make a two-day run of it, for from Hagerstown to Harper's Ferry, via Antietam, and down the Pike to New Market, is neither a long nor an arduous journey.

IN THE SHENANDOAH VALLEY.

You will find the famous Valley Pike a fine, hard, macadamized road. Although repaired at times by the barbarous practice of dumping new metal upon it for the wagons to grind up, the single tracker can usually find a path around such excrescences while the automobile, with its cursing driver, must drive straight through and take his chances with his tires. Toll gates are found about every five miles, but after you have become accustomed to the ceremony of signing the book and paying a few cents and having your number taken and a few other little things like that, the gates become mere flea bites of trouble. For the Shenandoah Pike is historic, and as you "phut-phut" down it you will see everywhere the ghosts of men in blue and men in grey who laid the valley waste and fought up and down every foot of it—at least, if you are at all romantic.

Digitized by Google

Town after town is left behind. Beware that the promise of a smooth road and no hills to speak of for a straight hundred miles, does not lure you past New Market and on to Staunton. For at New Market you turn sharp to the left and prepare for the climb of the Massanutten mountain, which has been looming for some time to your left.

Now—let there be no bones made of it—this is "some climb." The single-cylinder rider had better leave his machine at the hotel and drive over or prepare to help it up some of the steep places. The skillful rider of a twin should negotiate every rise without difficulty. You climb a fairly good-sized mountain over a tortuous road, and for four miles or more you and your machine are going to be more or less in misery.

Just one warning—don't try it at night. It's all right going up; you won't go fast enough while climbing to be in danger, but the descent on the other side is very steep, and while not at all dangerous in daylight, it is best not to attempt it after dark even with a powerful searchlight.

FORMATION OF THE CAVE.

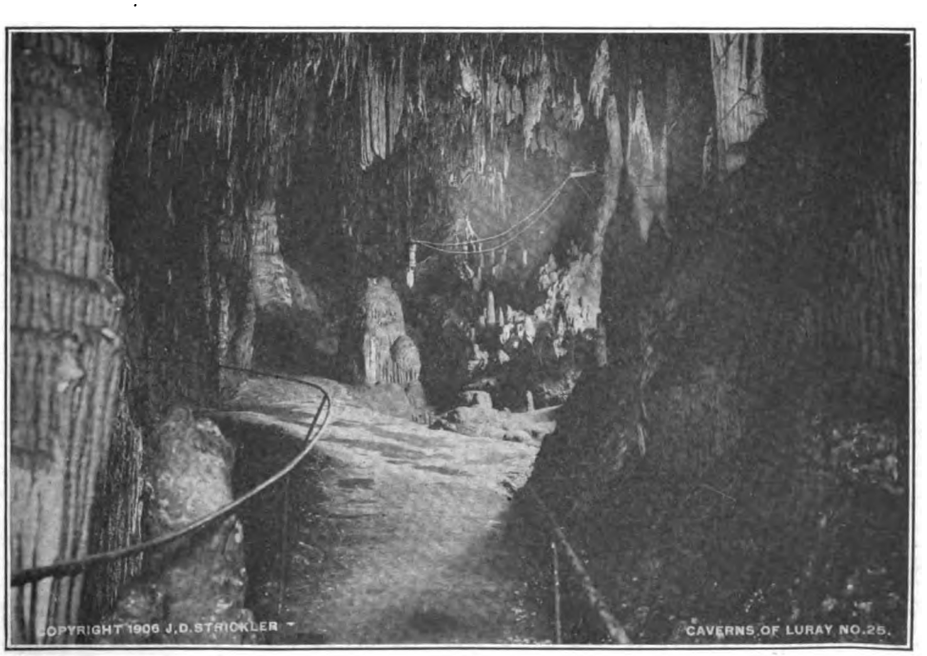
Once down on the other side you have a dirt and rock road, typical of Virginia, for a few miles, and then there is another ferry to cross. One mile before you come to the town of Luray, you see a sign: "Caverns of Luray," and here you make a sharp left turn, and draw up before a gateway beyond which is the modest whitewashed stone house that guards the entrance to the cave.

I have said that the cave cannot be described, so I shall not try to describe it except to speak of the wonderful way in which this natural wonder has been made. Although discovered for us moderns in 1878, the caves are old—so old that they probably were ancient when Rome fell, hoary when the pyramids were built, time-worn when man first walked the earth! Human bones in the mud at Skeleton Gorge show where some Indian entered and lost himself in the Stygian darkness, but even these old bones are modern to the cave.

Water, seeping through the roof from rainfall, dissolves minerals in its passage, and falling from the ceiling of the cave, the water evaporates on the floor, leaving its mineral deposit. If its flow is so slow that it hangs in drops on the ceiling, the evaporation takes place there, leaving the mineral on the roof. In this way, through centuries, stalactite has crept downward from the roof, stalagmite upward from the floor, often to meet and form a column. When you learn that one cubic inch of the mineral deposit forms in one hundred and twenty years, and that some of the columns are sixty feet thick, you can form some faint idea of the number of years needed to form these wonders; and you have come to visit them on a motorcycle!

Electrically-lighted throughout, with cement walks and hand-rails, the tour through the caves is without any physical discomfort. The temperature never varies the year round, save between fifty-four and fifty-six degrees F., and with the exception of "Fat Man's Misery" and "Tall Man's Misery," two places where one must squeeze and stoop for an instant, traveling through the caves is like walking through a spacious hall of statuary. Only no other hall in the world holds such strange carvings, such wierd formations, or such curious oddities as here greet the eyes on every side.

In the town of Luray, a mile beyond, are good accommodations at several hotels, for man and machine—gasoline and oil are plentiful all along the route. Bar the thirteen bad miles, and the roads are good. At the end of the tour is a natural wonder surpassed nowhere in the world. In all seriousness, then, can you think of a finer tour for a short vacation, a better way to make Mr. Two-Wheels justify his purchase? Frankly, having tried it, I cannot. If you will try it too you will agree with the thousands who have gone that way before. And if my story does not convince you, I can only say, as I have said to many others when words of description failed me—"Go and see!"



An Impressive Vista in the Cavern of Luray.

Motorcycle Routes Out of New York City

How Riders of the Metropolis May Find Their Way to Country Roads Without Losing Time in the Congested Districts

NEW YORK motorcyclists are a busy lot, as a rule, and when they find time for a Saturday afternoon or Sunday trip they cannot afford to lose a moment in getting into the country. In the following paragraphs some of their problems are solved for them, as information is given relative to leaving the metropolis by a number of routes:

Starting with the north, the road to Pelham, Rye, Larchmont, Cos Cob, Greenwich, and Connecticut towns, the rider who is seeking good running will do well to get into Fifth avenue as soon as possible and follow that thoroughfare to 110th street, the northern boundary of the park. There a turn to the left will carry him to Seventh avenue and another to the right at 145th street will take him across the bridge over the Harlem River into 149th street and Mott avenue, the Bronx.

Mott avenue, after 161st street is crossed, gives into the Grand Concourse, and a turn to the right will send the machine into Fordham road, across the railroad tracks, under the elevated railroad at Fordham station and into Pelham Parkway. A turn to the left out of Pelham Parkway, over the railroad tracks and a mile further on over a bridge, will start the rider on his road through Westchester and Connecticut towns. The trip can be continued, with good roads all the way, to Boston.

For a trip along the Hudson, the start to 110th street may be the same, but in 110th street you keep on to Broadway, and out Broadway you go to Yonkers. Trolley tracks will show the way almost the whole route, and from Yonkers you will reach Dobbs Ferry, Tarrytown, and villages further north along roads that have been laid since Washington Irving's time and are all the better for their age.

Into and from New Jersey various ferries may be used, but one which will take the rider over the best roads is the Twenty-third Street Ferry into Hoboken. There a turn to the left brings the motorcyclist into Fourteenth street and the viaduct. A turn to the right at Palisade avenue carries the motorist along to Bower street, where a turn to the left leads to the Hudson County Boulevard. A right turn from this gives on to the Newark Plank road across the meadows and into Newark, whence a fair start may be made for any except the northernmost towns of the State.

To the south, the ferry to St. George, S. I., starts the motorist on a trip through Tompkinsville and Stapleton to the Shore Road, which is to be followed for nearly a mile, when a right turn will take you into Vanderbilt avenue, and a left turn in Grant City will give into the Amboy road through New Dorp and straight on to Bentley avenue, which leads straight to the Perth Amboy Ferry in Tottenville.

C. J. MAIN, secretary of the Yale Motorcycle Club, of Chicago, announces that the club has now moved into its new quarters at 1444 Hudson avenue.

Along The Line Wi

Riders in Many Districts Enjoy Early Spring Ru
Scores of Outings and Reliability Events Ar
Clubs Will Hold 200-mile Runs and Tre

BALTIMORE, MD.—The proposed four-state run of the Maryland M. C. scheduled for Decoration Day has been called off. The members decided at a meeting last Wednesday to abandon the original course and shorten it so that only two States will be traversed. The action was the result of a trip over the course by Capt. Nelson Johnson, Clayton Sandruck and James Basilicata. Their report was such that the members decided not to take the longer run, so a course from Baltimore to Westminster, Gettysburg, Chambersburg, Hagerstown, Frederick and return to this city was adopted instead.

The trip through the Valley of Virginia would have necessitated a late stop at Gettysburg, and as there are innumerable parades and outings in the city on that day, it would be hard to obtain conveniences, so it was thought better to include Gettysburg in one of the first checking stations and then continue around the loop, cutting out the Virginia and West Virginia points.

The pathfinders covered the route of 178 miles in nine hours and two minutes actual riding time, so it was decided to allow ten hours for the competitors to go over it on May 30. A stop of three minutes will be granted at checking stations and controls, with a noonday stop of one hour at Hagerstown for dinner. Eighteen miles an hour will be the speed maintained, and under the new arrangements new riders will find it more advantageous to compete, with a better chance to run away with some of the prizes offered by the club.

CHESAPEAKE ENDURANCE RUNS

AT a recent meeting of the Chesapeake M. C., of Baltimore, Md., a schedule for the coming summer was outlined. It was decided to hold two endurance runs of 200 miles each. One will be held in June and the other in September. Members of the club are also looking forward to a run to Gettysburg July 4. This will be the fiftieth anniversary of the Battle of Gettysburg and it is hoped to have all the motorcyclists of Baltimore unite on the occasion for the run to the scene of the famous battle. Committees have also been appointed to inspect a number of proposed locations for a new club home. George W. Goggins, secretary, reported a balance of $191 in the treasury.

FIRST OFFICIAL RUN

MEMBERS of the newly organized motorcycle club of Schenectady, N. Y., recently made the first official club run, traveling to Johnstown. The club has a membership of 35, all of whom participated in the run.

ANNUAL SPRING RUN

AT a recent meeting of the North Jersey M. C., of Paterson, N. J., a committee was appointed to map out a route for the annual spring run, to be held May 11. The course will take in about 160 miles.

A RE-ORGANIZATION meeting of the Harlem M. C., of 120th street and Fifth avenue, New York City, was held April 11, and only the active members of the club were retained on the membership list, which was reduced to sixty. However, with the opening of the season it is expected that many members who have dropped out during the last few months, will again take part in the weekly runs held by the club. Three medals, gold, silver and bronze, are to be given to the members participating in the most runs during the season.

In addition to the weekly runs which the club will hold it was decided to have three endurance runs. The first of these, or the annual spring open endurance run, will be held on May 30, 31 and June 1. Stopping over night at Farmingdale, N. J., the riders will reach Atlantic City the following morning, where they will remain all day Saturday and over Saturday night. The return trip will be made Sunday. The second of the series will also be a three-day event and is scheduled for July 4-6. The destination for this, and also for the last of the runs, which will probably be held for three days, beginning with Labor Day, will be announced later. Entry blanks for the run to Atlantic City will be out in about two weeks, the entry fee being $2.

FREMONT M. C. RUN

MEMBERS of the Fremont (Ohio) Motorcycle Club recently held a run to Fostoria, Bowling Green, Woodville, Findlay and back to Fremont. This was the first run of the season and brought out a large percentage of the club's membership.

TWO SAVANNAH TRIALS

OWING to poor road conditions the Savannah (Ga.) M. C. has found it necessary to change the plans for its proposed 300-mile endurance run. Instead of having one 300-mile event there will be a two-day 300-mile run on April 26 and 27, and on the latter date there will also be a one-hundred-mile event.

BOSTON TO NEW YORK

A 248-MILE sidecar trip from Boston to New York was recently made by two motorcyclists of the former city. The run was made in one day, the boys arriving at the metropolis a little before nightfall. The combined weight of the riders was 288 pounds, and the sidecar weighed about 100 pounds.

NEWBURGH TO KINGSTON

A NUMBER of members of the Newburgh (N. Y.) M. C. recently made a run to Kingston. This was the first club run of the season and a number of the riders had their new machines out for the first time, while all of the riders wore new buff uniforms. Captain Thomas Hornbeck was in charge.

TWENTY members of the Sunville Motorcycle Club, of San Jose, Cal., recently participated in a run to Colorado Springs and Manitou over good roads. The squad included a number of tandemites.

Digitized by Google

Busy Club Roadsters

ite Uncertain Weather and Road Conditions, and Books for May—Newark and Chesapeake and Harlemites Frame Long Schedules.

PLANS for the 200-mile reliability run of the Newark M. C., of Newark, N. J., have been completed. The test is the first competitive event ever held by the club and is being staged as a means of enlivening interest among the club members. Two hills will be included in the run, that over Schooley's Mountain and one up Cushmaul Hill, the latter on the return trip.

Starting at 6 a. m. the riders will go through Irvington, Springfield and Chatham to Morristown; thence on to Chester, German Valley and over Schooley's Mountain to Washington, where the first checking station will be located. Then will follow a jaunt through New Village to Phillipsburg and over the Delaware River to Easton. At this point the contestants will be met by a delegation from the Allentown M. C. and escorted into Allentown. After a two-hour stop the return trip will be started. There will be a checking station at Washington at 2:45 p. m. and at Morris Plains at 4:15 p. m. The last leg of the run will be through Pine Brook, Singac, over Cushmaul into Caldwell, and thence into Newark, with the checking-in time set at 6 p. m.

TROUBLELESS 2,000-MILE TRIP

A MOTORCYCLE jaunt of 2,000 miles was recently completed by J. M., M. A. and Claybrook Jacoby, of Hutchinson, Ky. The trip was made in two weeks time and the riders passed through the following cities: Lexington, Ky., Cincinnati, Toledo, Dayton, Detroit, Lansing, Grand Rapids, Chicago, Indianapolis and Milwaukee. The return trip was made by way of Louisville, Ky. It rained so hard in Michigan that the best time the riders could make was 75 miles a day, while in Ohio they averaged 225 miles a day. One of the boys reports that the roads were the worst he had ever seen, sand and mud being a foot deep, but at no time during the trip did the engines cause trouble.

WORCESTER M. C. ENDURANCE RUN

IT has been announced that the second annual endurance run of the Worcester (Mass.) Motorcycle Club will be held June 21 and 22. A course has not yet been selected, as it is the intention of the club to get reports on a number of routes in the district.

TANDEMS IN FAVOR

NO less than 100 members of the Salt Lake City M. C. recently participated in a run to Garfield. About 35 machines carried tandem passengers. A run to Ogden was also made by the club on April 13.

TWENTY members of the Kerman (Cal.) M. C. recently made a Sunday run to Fresno. A number of the fair sex piloted their machines on this outing.

TWENTY-FIVE members of the Wilmington (Del.) M. C., recently made a Sunday run to Atlantic City, N. J. A run to West Chester was also held by the Wilmington club and fairly good roads are reported on this route.

DESTINATIONS and routes for bi-monthly runs of the Indian M. C. of Trenton, N. J., have been arranged by the touring committee as follows: April 20—Trenton to Burlington, to Camden, to Medford, to Mt. Holly, to Columbus and Trenton. May 4—From Trenton to Asbury Park via Highstown, Freehold, Farmingdale and Point Pleasant, returning via the same route. May 18—A run to Washington by way of Flemington, White House and Clinton. The same course will be followed on the return trip. On June 1 the riders will go to Ogontz and Willow Grove, passing through Oxford Valley, Hulmeville and Frankford and returning via same route. South Amboy will be the turning point of the June 15 run. The outward trip will be made by way of Hopewell, Blawnburg, Somerville and New Brunswick. Keyport, Redbank and Freehold are on the return route. The run of June 29 is the last included in the present schedule and will be to Philadelphia. Oxford Valley, Hulmeville and Ogontz will be passed on the outward trip and Camden on the return.

The first of the runs was held on April 6, at which time the riders went to Newark by way of Highstown, New Brunswick and Rahway. Elizabeth, Plainfield, Somerville and Princeton were included in the homeward jaunt.

HOUSTON M. C. RUNS

A 100-MILE run to Arcadia was recently made by members of the Houston (Tex.) M. C. The outward trip was made via Alvin, and returning the riders passed through Angleton, Columbia, Chenango and Sandy Point. A trip to Matamoros, Mexico, is planned by the club for May 5.

A BAD HILL CONQUERED

JOHN LIVINGSTON, a motorcyclist of Worcester, Mass., recently negotiated what is considered the worst grade in Worcester on his Excelsior 7. He piloted his machine up Forbes street, taking a 22 per cent. grade. Livingston is the third rider to climb the hill. Russell R. Coes was the first to go up, on a Henderson. William S. Bunker, riding a 7 h. Excelsior, was the second man to make it, and then Livingston made the ascent successfully.

A POPULAR RUN

UNDER the leadership of Captain Morgan, members of the Allegheny (Pa.) M. C. recently participated in a run to Bedford. Morgan reports that the roads are in excellent condition and says that this trip will be very popular with the riders in that section during the current season.

LA PORTE RIDERS PLAN RUNS

AT THE last monthly meeting of the La Porte (Ind.) M. C. plans were laid for a road race between La Porte and Michigan City on Decoration Day, and for a race meet to be held July Fourth. Other runs will be held at regular intervals. The first official run of the season was held April 10 to Gary, and a large number of the members were on hand.

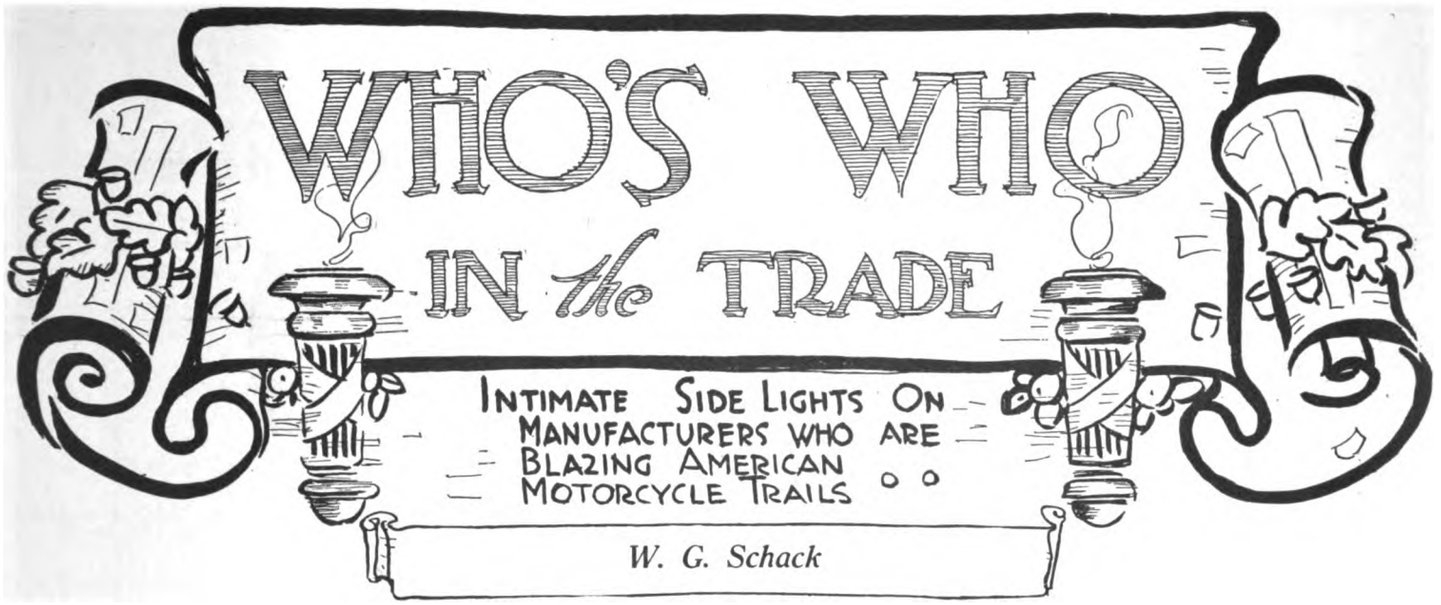
W. G. SCHACK

Digitized by Google



"HAVE not posed formally for a photograph in the last twenty-five years, and the best picture I can give you is a snap-shot taken of me at Peru, Ind., some ten years ago." This paragraph in a recent letter from General Manager W. G. Schack, of the Emblem Manufacturing Company, explained his inability to produce a large photograph of himself for the editor of the "Who's Who in the Trade" series, and it also gave an interesting insight into the character of the man who has placed the Emblem in the front rank of American motorcycles. In these days of advanced ideas in photography, when even the high-pressure business man finds the time and the inclination to be photographed in half a dozen characteristic poses, it is noteworthy that one snap-shot was Mr. Schack's pictorial limit for a quarter of a century.

There are several good reasons for this paucity of photographs of the well-known Emblemite. In the first place, he is innately modest; none of his friends could imagine him deliberately going to a studio to be photographed, and secondly, much of his success has come through making every move count. He has had no time for pictures of late. He has been too busy keeping abreast of his interests and in touch with his country-wide circle of trade friends. None of his progress has been left to chance. Hard work and the most rigid application to business are the principal articles in his business creed—and that is why his forty-eighth year finds him photographless, except for the snap-shot taken in Peru ten years ago. It was this picture from which the artist was obliged to work in preparing the portrait on the opposite page.

ENTERING THE CYCLE FIELD.

It was in 1880 that Mr. Schack first turned his attention to cycling. He had just left school, and finding that most of the young men of his acquaintance were going in for bicycling he decided to purchase a machine. His first mount was a Royal Mail, and his experiences with it would—as Kipling says—make another story. He covered many miles on it and became so imbued with bicycling enthusiasm that in the following year he became agent in Buffalo for the New Mail bicycle, made by William Read & Sons, of Boston. He made rapid progress in building up a business and continued to sell the New Mail for fifteen years, making extensions from time to time to keep up with developments in the industry. During the latter part of this period he also handled the Eagle, the American Humber and other makes.

He started the manufacture of Emblem bicycles in Buffalo in 1894, and found a ready sale for them. It was his policy to make a modest start and be prepared to back up all his ventures and this policy he has maintained to the present day. When he found that the Emblem line of bicycles was meeting the requirements of riders to his satisfaction he began to look about preparatory to expanding the business, and finally the Emblem Manufacturing Company was organized in 1904, with headquarters at Angola, N. Y., the present scene of the firm's activities. It was not until 1905 that the company entered upon the production of motorcycles, and not until 1906-7 that the firm built its own motors.

A FULL-FLEDGED ENTHUSIAST.

Mr. Schack has always been something of an athlete, and he still enjoys a spin on a bicycle or a road jaunt on one of the sturdy Emblem motorcycles. At one period in his cycling career he narrowly escaped becoming a full-fledged professional racer, for he romped off with a number of local championships and was recognized as a daring and hardy track man. From 1883 to 1896 he rode a great deal and figured in many bicycle meets. He held the Rambler championship and also captured a number of Buffalo trophies, and his friends were fully convinced that he would rank with the best if he decided to devote more of his time to speed work. About the same time he became interested in roller skating and polo, and from 1880 to 1887 he was one of the best known skaters and poloists in his section of the country. Newspapers of the period contain many references to his accomplishments in these branches of sport, and give him credit for going in to win on every occasion.

. Mr. Schack was for eleven years a member of Company D, Buffalo City Guard, in which he rose to be a first sergeant. It will be seen that his interests at this time were varied, but despite his inclination toward athletics he managed to put in a remarkable amount of hard work. He is of the opinion that his close application to business in later years would not have been possible but for the fine foundation of health and muscular development obtained in his early life.

LIKES BASEBALL AND BOWLING.

"I will be forty-eight years old on September 29 next," said Mr. Schack in a recent interview, "and I am just as much of an athletic enthusiast as I ever was. I enjoy a bicycle or motorcycle trip and ride whenever an opportunity presents itself. I enjoy bowling and think it is a first-class game for a business man who needs a little exercise now and then. I also enthuse over baseball and would travel some distance to witness a good game. What's more, I like to play a game myself when I can find some one in my own class to play with."

It is safe to say that Mr. Schack is one of the most versatile men in the motorcycle field today. In the capacity of general manager of the Emblem interests he attends to the buying, handles the financing of the firm's operations and takes a personal hand in the selling branch. Each year he travels from Boston to San Francisco and places the output of the Emblem plant. In this way he has maintained a grasp of the entire business that is remarkable. Since he organized the original company rapid progress has been made, and the factory is now five stories in height with ground dimensions 330 feet by 40 feet. Mr. Schack has been in the bicycle business as retailer, jobber and manufacturer for 33 years, and has always lived in Buffalo.

CALIFORNIA CONVENTION

L. OWEN, state F. A. M. Commissioner for California, with headquarters at 28 South Fair Oaks avenue, Pasadena, announces that plans are well under way for a state convention to be held in San Jose, June 21, and that indications point to a big turn-out of motorcyclists. All the F. A. M. members in the state will be invited to assist in making the convention successful, and it is believed that a number of tours will be conducted to the convention city. During the assembly a state commissioner and a state referee will be elected and district commissioners will be appointed.

About 300 riders of southern California have planned a vacation tour and they will arrive in San Jose for the convention.

ECLIPSE

The Brake You Can Trust

Terrific gripping power, tremendous strength, marvelous durability, unfailing reliability—these features are found in the Eclipse Perfection Multiple Disc Brake, and make it worthy in every way of the title, "The Brake You Can Trust."

One Hundred Square Inches of Braking Surface. Figuring at the rate of 350 pounds to a motorcycle and rider, that makes a square inch of braking surface for every three and a half pounds. Examine the specifications of the leading automobile manufacturers. No automobile brake is made large enough to distribute less than nine and a half pounds over each square inch of braking surface. Figure it out for yourself. That means the Eclipse Multiple Disc Brake is stronger—much stronger—proportionately, than the strongest automobile brake made. Do you need any further proof of Eclipse reliability?

Dealers—we again ask you to look ahead. Do not be caught napping. We positively predict the most sweeping, the most insistent demand from riders for Eclipse Free Engine Pulleys and Multiple Disc Brakes that has ever been experienced since their introduction to the motorcycle rider. Lay in a heavy stock. You will thank us for this sincere and earnest advice—if you follow it.

CIRCULATION THIS ISSUE MORE THAN 14,000 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

WHERE THE AD. WAS SEEN

NOT long ago the Kraft Appliance Company, of Akron, Ohio, received the following letter:

"Please send me two rolls of tape as per advertisement. I ride an Excelsior 6 T model, and the width of the belt is 2⅛ inches. Please send this by international parcel post as follows:

Via Japanese parcel post
A. C. Grimes
For A. B. De Haan, Tientsin, China.

"Your advertisement WAS SEEN IN MOTORCYCLE ILLUSTRATED."

"This speaks volumes for the length and breadth of your circulation and the value of your paper as an advertising medium for motorcycle accessories," writes the Kraft company, "and we thought the letter might interest you."

IT DOES INTEREST US, AND WE BELIEVE IT WILL INTEREST OTHERS.

DENVER TO PLAY HOST

FOR the first time in the history of the F. A. M. a city west of the Mississippi will play host to the Federation at the coming annual assembly, and that Denver will make the most of her opportunity to demonstrate the hospitality of the high-pressure West is a foregone conclusion. The qualifications of the Mile-High City as a convention center need not be dwelt upon, and that motorcyclists of the district are possessed of a result-getting brand of enthusiasm was strikingly shown not long ago when the musketry of over three hundred motors greeted Director Sauer at the Denver station.

In due time the F. A. M. directorate will ratify the action taken in Chicago and plans will be perfected for what promises to be the biggest Federation assembly so far on record. In the meantime State organizations and clubs may busy themselves with preliminary arrangements for tours to the convention city. A number of big touring divisions are already assured, and a commendable movement is being launched to hang up new figures for the number of motorcycles at the 1913 national assembly.

SOME QUEER REGULATIONS

ONE of the knottiest problems that the Legal Action Committee of the F. A. M. has had called to its attention in some time concerns the use of sidecars in New York City. On the ground that the addition of a third wheel brings the sidecar outfit within the provisions of the motor vehicle law, officials in certain precincts of the city are issuing licenses to users of the motorcycle passenger attachments at the usual automobile rate of five dollars. In some other sections of the city no license is insisted upon.

At present the interpretation of the law as applying to sidecars appears to rest with the police authorities in the various precincts; hence the varying conditions. To remedy this state of affairs the Legal Action Committee of the F. A. M. has taken steps to obtain an opinion from the Attorney General, and sidecars will either be exempted or placed upon an understandable basis where all users will be called upon to pay a recognized license fee. Why there should be an attempt at discrimination between the motorcycle—which does not require a license in New York State—and the sidecar outfit, is beyond the ken of even the officials who hold out for the fees. Some of them openly admit that the present licensing movement is absurd, but they argue that when a motorcycle ceases to be a two-wheeled vehicle it is subject to the regulations imposed upon motor cars.

One of the queer twists to the situation is that the sidecar user who carries a motor vehicle license is at liberty to disregard motorcycle speed limits and follow the pace set by the automobilists. In some districts of the city this permits the sidecarrist to speed up to eighteen miles an hour, while his brother motorcyclist who is without a sidecar must keep within an eight-mile limit. This feature almost offsets the hardship of the license fee for some of the riders who are inclined toward setting a clip, but it helps nevertheless to prove the general unreasonableness of the law as applied in some of the precincts. It is believed that when the existing conditions are brought to the attention of the State authorities sidecars will be exempted from licensing, or that a low fee will be specified to keep within the letter of the law pending a revision.

BOOMING STATE ORGANIZATIONS

THAT the state organization plan is calculated to solve satisfactorily most of the problems confronting F. A. M. members is evident from the alacrity with which clubs enter upon arrangements for launching state bodies once they are acquainted with the proposition in detail. Throughout his transcontinental lecture tour Director J. Leo Sauer has dwelt upon the necessity for state governmental units to promote Federation interests, and to afford affiliated riders in all parts of the country opportunities for active participation in the governing body's affairs, and he is preaching the same doctrine on his present trip into the Middle West.

Director Sauer's meetings in New England this week resulted in pledges of state organizations in Connecticut and Massachusetts, and the outlook is gratifying for continued progress along these lines.

STATEMENT OF OWNERSHIP AND MANAGEMENT

of MOTORCYCLE ILLUSTRATED, published Bi-weekly, at New York, N. Y., required by the Act of August 24, 1912.

Name of Editor, J. Leo Sauer; Post-Office Address, Westfield, N. J.

Managing Editor, J. Leo Sauer, Westfield, N. J.

Business Managers, J. Leo Sauer, Westfield, N. J., and H. N. Condict, East Orange, N. J.

Publishers, The Motorcycle Publishing Co., Incorporated, of New York, 51 Chambers St., New York, N. Y.

Owners, The Motorcycle Publishing Co., 51 Chambers St., New York, N. Y.

Owners: (If a corporation, give names and addresses of stockholders holding 1 per cent. or more of total amount of stock.)

J. Leo Sauer, Westfield, N. J..... 28 shares
H. N. Condict, East Orange, N. J. 21 shares
John J. Donovan, New York..... 1 share

Known bondholders, mortgagees, and other security holders, holding 1 per cent. or more of total amount of bonds, mortgages, or other securities: None.

THE MOTORCYCLE PUBLISHING CO.,
H. N. Condict, Secy.

Sworn to and subscribed before me this 15th day of April, 1913.

[Seal] FREDERICK L. CAMPBELL,
Notary Public, Kings County, No. 187.

Certificate filed in New York County No. 61, New York County Registers No. 5164, New York County. Registers No. 6178 Kings County.
(My commission expires March 30th, 1915.)

Average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to PAID subscribers during the six months preceding the date of this statement, 13,570.

The above figure only includes copies sent by mail to paid subscribers, and copies PAID FOR by the American News Company. Sample copies and American News Company's returns are not included.

The NET PAID circulation of the current issue of MOTORCYCLE ILLUSTRATED is 14,547 Copies.

Press Run, 15,000 Copies.

Distributed as follows:

Mailed	9,034
American News Co.	5,800
Office Use, etc.	166
Total	15,000

ENGLISH NOTES

"BRITISHER"

THE principal British motorcycling journal has just published its 520th consecutive issue, and its editor marked the occasion by holding a referendum of the leading designers and riders as to the probable specifications of the type of machine they expected to be dominant in 1923 A. D. As was only to be expected, opinions differed very widely, but the general trend of the opinions pointed to a lightweight, open-framed machine, sprung fore and aft. The engine favored was either a watercooled two-cycle multicylinder, or an aircooled multicylinder, operating on the Diesel principle; in either case, the experts were of opinion that a tremendous brake horsepower would be extracted from a very small bore and stroke. Doubtless they had the modern aeroplane engine in mind.

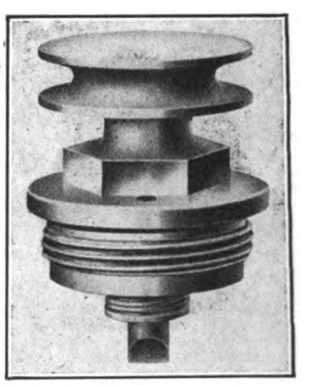
They were unanimous on the subject of variable gears, and nobody anticipated less than three ratios, while many favored four, or an infinitely variable gear. Opinion was more divided on the subject of the transmission, but the belt found very few votes. An enclosed shaft was the most popular, though a few leant towards enclosed chains. Such details as forced and automatic oiling, electric lighting dynamos and automatic or semi-automatic carbureters were generally indicated.

THE TYPE MOST LIKELY TO SURVIVE.

THE EDITOR in question then employed a well-known publicist to criticise the expert opinions. He pointed out that the general public are less enthusiastic about mechanical innovations than the professional engineer, and that amateur users put the highest value on lightweight, low price and ease of cleaning. Furthermore, the past history of the pedal-cycle and motorcar indicated that the forces of conservatism would have a strong retarding effect upon development. Thirdly, that ten years is no long period, and that it would be folly to ignore present-day tendencies so completely as the engineers and speedsters were inclined to do.

Applying these principles to the problem, he suggested that the survivor type of the present market was likely to be the 350cc. 150-pound machine, now selling at $225 or thereabouts. This is already the most popular machine amongst the "short-distance" public, who neither attempt protracted tours nor engage in competition work. It is almost the equal of heavier and costlier types for general touring purposes; and within ten years it will be further developed. In fact, there is no reason why the 1923 descendants of this type should not produce 8 b. h. p. from a 200cc. horizontally opposed high-speed engine, weigh no more than 90 pounds and, with the aid of standardized output methods, sell for $150.

This machine is already the dominant type; it will increase its grip on the public within the next three years; and it is hard to imagine a better selling proposition for British purposes. It can, of course, be improved in certain directions. It is not so durable as its bigger sisters, and metallurgy and better designed lubrication should increase its wearing powers. It bristles with small details, which harbor dirt; wherefore he foretold the re-designing of the power unit, consisting of engine, gearbox, primary drive, magneto and carbureter into a flushsided eggshaped unit, capable of being hosed down. Should the engine retain aircooling, the radiators would probably be detachable, spring on to the cylinder barrel and be detached and put in a bucket of water while the machine itself is being hosed down. Disc wheels are to be expected, for similar seasons, we believe.



Valve-grinder that is spun with a piece of cord.

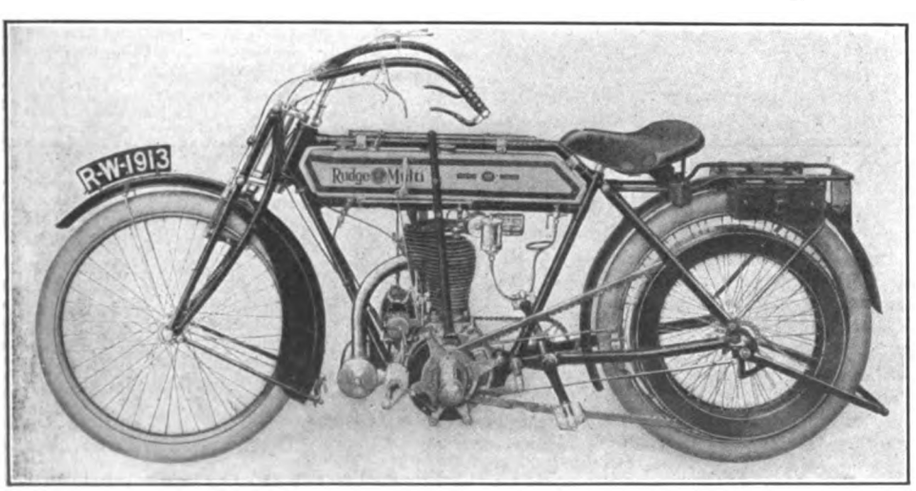
THE MOTORCYCLE DE LUXE.

THE further question arises whether any alternative type of machine is likely to hold its own against this small and economical roadster. Machines of this type have already touched 75 m. p. h. on Brooklands track, so the 1923 grandchild is likely to satisfy all speed lusts. But machines will be required to haul some type of passenger attachment, and the all-weather rider will demand better protection than the naked lightweight affords. So it is probable that a heavier type of motorcycle de luxe will gradually be evolved.

This, according to the critic, will be a millionaire's car on two wheels. It will have a silent and flexible engine, probably a watercooled two-stroke, with a range of revolutions from 120 to 3,000 or so; open sprung frame, chair seat, and enclosed shell canoe body, consisting of waterproof fabric on wire or aluminum stretchers, light windscreen, etc. Higher powered machines are expected to disappear from the excellent roads of Great Britain, as tiny engines continue to develop an increased efficiency output.

STERN JUDGING METHODS.

THE ENGLISH governing body, the Auto-Cycle Union, has at last established its position so firmly that it is able to dictate to the trade and the competition riders. Its first important

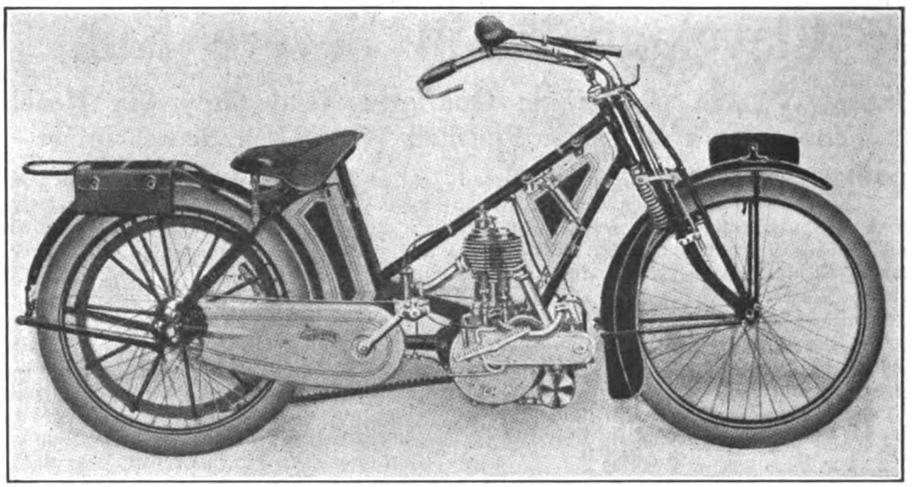


Rudge touring model referred to on the opposite page.

Digitized by Google

event of the season was a one-day nonstop trial, and the judges calmly disqualified over forty machines which climbed all the hills, were punctual to the second at all controls, and covered the required distance absolutely nonstop. Of these unfortunates, the majority were penalized for inefficient mufflers, no fewer than twenty-two motorbicycles being disqualified on this score alone.

The judges' hands were strengthened in this respect by the fact that the Government's new order against noisy exhausts went into force on March 31. In addition several sidecar and cyclecar owners were disqualified because their passengers assumed acrobatic attitudes on the test hills. The single driving wheel of a sidecar or tricar seldom provides sufficient tire adhesion on a greasy single figure gradient, and it has become common for the passenger to climb out on to the carrier and concentrate his weight over the back wheel when the steep knuckle looms ahead.



Open-frame model of the Brough, designed for English lady riders.

SPRING-FRAME SIDECARS.

ANYBODY who has ridden in a good sidecar knows that it is almost as comfortable as the limousine of an oil trust magnate, but some sidecars are literally more cosy than any car. I append cuts of the Montgomery spring-frame sidecar, which is perhaps the most popular fitting on this side. The cuts show that the main frame is sprung off the axle rod, and that a cross spring insulates the footwell, in addition to the normal pair of Cee springs, on which the chair is slung. The small print shows how quickly the seatpillar support can be unhooked.

THE TOURIST TROPHY RACES.

THE T. T. RACES are definitely dated for Wednesday, June 4, and Friday, June 6, and it is expected that there will be two classifications, for machines up to 350cc. and 500cc. single and twin-cylinders to race on level terms. In most other respects the races are completely reorganized. The distances will be vastly increased as follows: On Wednesday both senior and junior machines will race side by side all day long. At the conclusion of Wednesday's racing, all the machines will be taken away from their jockeys, and put under lock and key in official custody until Friday. On Friday morning the junior machines will start out for an extra three laps by themselves, and their starting times and order will be determined by their net racing times on Wednesday, so that the first machine past the tape on the concluding lap will be the actual winner, and spectators need only bother to keep a lap register, without working out actual net times.

On Friday afternoon the senior machines will fight out their last three laps in the same fashion. The increased distance will make the race exceedingly interesting, and it is probable that machines which have not won outright will now have a better chance. In particular it is freely prophesied that the single cylinders will have the pull. The delicate adjustments of the average twin, with overhead valve gear, are not expected to last out the increased distance. A record entry and some very exciting racing is confidently expected.

RUDGE MOTORBIKES.

I DO not remember having sent you up-to-date pictures of the Rudge, which runs a fine race with the Triumph for premier place on our market. I show a picture of it in its full heavy touring kit. Note the long black lever beside the tank which operates the twenty-speed "Multi" gear (don't be shocked at the 20 speeds—we have another machine—the Zenith—with 164 speeds). This gear consists of an expanding and contracting engine pulley, and the belt slack is taken up by a unique fitment—an expanding and contracting rear beltrim, obtained by mounting one flange of the beltrim on the rear wheel itself, and the other by separate spoking on a sliding inner hub flange; this beltrim is operated by the pulley lever, one control sufficing for the two jobs.

As the print shows, the Rudge engine is one of the few singles on this side designed with overhead inlet valve. The curious box projecting rearwards from the Senspray carbureter is the gauze air reservoir. The long barrel projecting from the engine-pulley, houses a 24-plate multiple clutch. The pedal gear shown has no connection with the rear wheel; it merely acts as an engine starter, driving on to a freewheel mounted on the halftime shaft and running in oil inside the crankcase. The left-hand pedal can be kicked down level with the other, to serve as a secondary footrest. The rear stand is spring operated, and is never touched by hand. The clutch is controlled by the little ratchet lever shown well up the left-hand side of the handlebar, and is much more sensitive than any pedal. This machine scales 242 pounds all on, ready for the road.

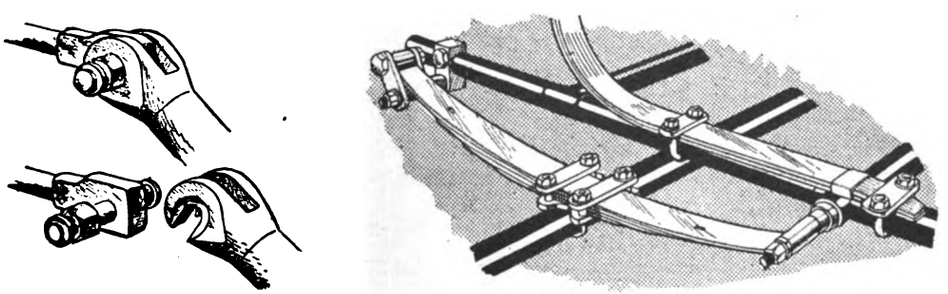
A CUTE VALVE GRINDER.

THIS is one of the little tips which make for convenience. The big hexagon nut is screwed into a valve-cap orifice, when a valve requires refacing. A concealed spring depresses the screwdriver until it finds the slot in the valve head. If a stout cord is run round the collar on the driver end, and pulled forwards and backwards vigorously, the valve is ground well in, and no time is wasted.

A LADIES' MACHINE.

VERY few British girls have taken to riding astraddle. The picture of a 3½ h. Brough shows that it is not easy to design a shapely open frame. Machines of this type, fitted with free-engine clutch and three-speed hub, sell to the fair sex in some quantities at $275; but probably the most popular ladies' machine of the year is the Scott two-stroke, which has a really graceful outline in spite of its open frame, while its smooth purring exhaust and mauve enamel win a damsel's susceptible heart every time. If a 120 pound girls' jigger could be turned out on Scott lines, it would have furious sales; but the existing genuine touring machines are too heavy for women, while the lightweights and mediumweights are still a shade below the general level in point of durability and reliability.

There are perhaps 500 women owning motorcycles in Great Britain at the present moment, and the cyclecar is winning fresh converts among them. But there will not be a tremendous boom in ladies' machines until they are a little lighter, cleaner, cheaper, and prettier. I quite anticipate that in ten years' time we shall have ten thousand girl owners, though I daresay few of them will ride except in summer.



Details of the Montgomery spring-frame sidecar.

HOW CYCLECARS ARE GOING.

THE LEADING makes of cyclecars are steadily making good. Of the hundred odd types on the market, not more than a dozen have achieved any considerable market, and the most popular are those who most closely follow automobile lines. In fact the successful types are about as costly as a Ford runabout, and are not so comfortable, though they may be a little faster. Apart from these complicated four-wheelers, the two types which do best are the Morgan and A. C. three-wheelers.

Clevelandites in Severe Run

Out of Twelve Starters in Quarterly Trial Only Six Reached Youngstown and Four Finished With Their Scores Intact

RIDERS who participated in the second Quarterly Trial of the Cleveland M. C., on April 6, to Youngstown and return, are unanimously of the opinion that the run was one of the most severe ever conducted in the Middle West. Out of twelve starters only five finished and four of these retained all their marks despite the terrible strain to which they were subjected. The 1000-point men were Raymond Ray, Edward Hawkins, H. H. Sill and H. Myers, and the fifth rider to finish was I. H. Silsby, who had a score of 993.

Ed. Hawkins, one of the perfect scorers.

Before the squad left Cleveland it was known that the test was to be a most severe one, but no one realized just how hard the going would be until half a dozen miles had been put behind. The route led through Bedford, Twinsburg, Streetsboro, Shalersville, Freedom, Windham, Braceville, Lavittsburg and Warren; the first checking station was located in the latter place. From this point the route led to Niles and through Girard to Youngstown, where Paul Sheridan, formerly of Cleveland, acted as official checker. Most of the roads were deeply rutted and frozen, so that no speed was possible and even the most gingerly travel was attended by danger.

Owing to the fact that he got off the route Silsby, the Merkel rider, was seven minutes late in checking in at Youngstown, and out of the twelve who started only six reached this point. Raymond Ray went through without using a tool, and was lucky in not being called upon to use them for his repair parts and tools were lost soon after he left Cleveland. Wallace Feisler met with the only mishap of the run. A short distance outside Cleveland he collided with a milk wagon and was removed to a hospital.

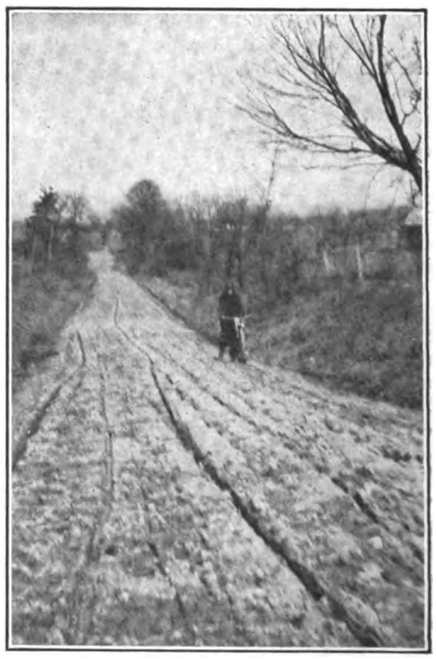
The scores are given as follows: Raymond Ray, 7 chain Merkel, Goodyear tires—1,000 points; Ed. Hawkins, 7 Thor two-speed, Empire tires—1,000 points; I. H. Silsby, 7 chain Merkel, Goodyear tires—993 points; H. H. Sill, 7 Thor two-speed, United States tires—1,000 points; F. C. Booth, 7 Jefferson, Goodyear tires—out at Warren; E. Farrell, 4 P. E. M., Goodyear tires—out at Youngstown; H. Myers, 7 Harley-Davidson, Goodyear tires 1,000 points; A. J. Hall, 7 De Luxe, Goodyear tires—out at Twinsburg (outbound); W. F. Marohn, 9 De Luxe, United States tires—out at Twinsburg (outbound); G. A. Sauer, 9 De Luxe, United States tires—out at Twinsburg (outbound); A. H. Knapp, 7 De Luxe, Empire tires—out at Twinsburg (outbound); W. D. Feisler, 6 Merkel, Goodyear tires—out following accident on outskirts of Cleveland.

APPORTION GOOD ROAD FUNDS

GOVERNOR AMMONS, of Colorado, has appointed five business men to form an advisory board to assist Highway Commissioner T. J. Ehrhart in the apportioning of the State good roads funds, which total more than $700,000. Improvement work will be begun at once and it is expected that before the F. A. M. convention in July the roads will be in fine condition. Maps are now being prepared of the roads to be improved and rapid progress is predicted.

ROAD RACE NOT APPROVED

BOTH the F. A. M. Board of Directors and the Motorcycle Manufacturers' Association have advised against the holding of the 650-mile road race proposed by the Kansas Short Grass M. C. as a feature of its annual tour, owing to the natural difficulties that would be encountered and because of the fact that the authorities in all towns and cities along the route would have to be called upon to lift speed limits for the event. The Short Grass tour for 1913 will be to Denver, and the squad will arrive there during the F. A. M. convention. It was planned to make the last 650 miles of the trip a road race into the Mile-High City. It is the intention now to dispense with the road race and simply have the big tour to the convention city.



Section of Route in C. M. C. Trial.

AMERICAN TEAM NEEDED

A LETTER received by the F. A. M. from W. H. Wells, of London, England, its representative in the Federation Internationale des Clubs Motorcyclistes, urges that a strong team be sent to represent the United States and the F. A. M. in the international team competition to be held in England in August.

Silsby and Ray, the Flying Merkel team, and Hall, Marohn, Sauer and Knapp, of the De Luxe squad, in Cleveland run.

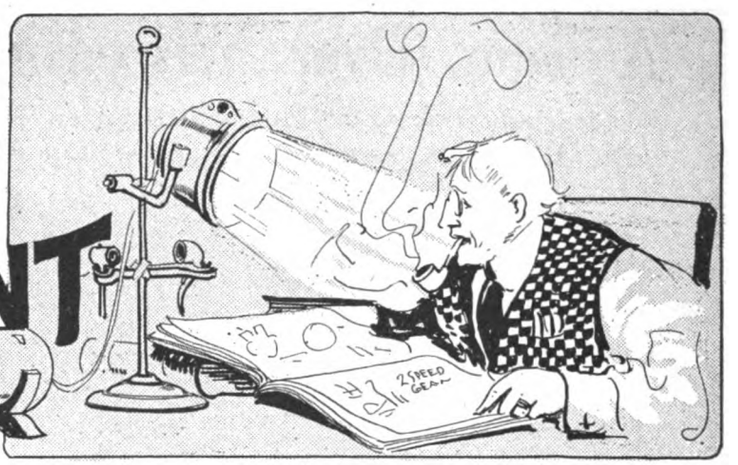
KINKS & KOMMENT

by "COURIER"



THE present capricious weather makes it pretty hard to start a cold motor, particularly a twin that is "oil-sensitive." I have been driving one such recently, and at first used only a quart at a time in the oil tank, drawing off the remaining oil each day and refilling with summer or winter grade as the weather called for. But this got to be too much of a job, so I left the oil in each night as usual, and used kerosene after every run to cut the oil.

Cutting the gummy oil with kerosene is a simple matter; it is merely necessary to inject some through the priming cocks and then turn the motor over a few times by the pedals to work the kerosene into the ring spaces and around the piston head. With a motor that has no priming cocks, but an auxiliary air valve in the manifold, use the valve and give plenty of the oil. If the motor has side-by-side valves, a removal of the exhaust valve cap will give the kerosene a fine chance at the gummed oil and carbon.

SCAVENGING ACTION.

SPEAKING of auxiliary air valves, they have another use affecting motor operation. When a motor has been running for some time and you do not want to lift the valve to stop it firing, open the auxiliary air. The mixture will be very much weakened and will not fire at all and a scavenging action by means of fresh air will be set up. If the machine is running on a level or upgrade, the motor will soon die down and stop. But the fresh air sucked into the cylinders will cool them nicely, sweeping any accumulated gases out through the exhaust and passing through the muffler will cool it also.

HOW THE SIDECAR SAVES FUEL.

THE SIDECAR as a fuel saver sounds like a pipe-dream, but not in hilly country. Take a machine that weighs about 189 pounds and couple up a 60-pound sidecar to it; then add 280 pounds of further weight of rider and passenger and the whole 520 pounds will roll down hill much faster than it can be driven on the level. On several of my recent trips the maximum hand on the speedometer rose to 56 miles and it needed both brakes to pull the outfit up near the bottom of the grades. Naturally there is no need to let the motor run while coasting, and this is where the fuel is saved in sidecar driving. Pull the clutch as soon as the crest of the hill is passed, and raise the valves, thus stopping the motor. Coast away and when near the bottom or when the outfit is going, per speedometer, about 10 miles an hour, lift the valves and let in the clutch gently and drop the valve, when the motor will take up its work again.

WHERE THE SEPARATE LIFTER SCORES.

IN THIS kind of riding, the separately-operated exhaust valve lifter has the linked-up one beaten to a whisper. When you reach the foot of such a grade as has just been referred to, the spark can be set fully advanced before the clutch is engaged and will not be affected when the valve is lifted. The transmission will "crank" the motor as soon as the clutch takes hold, and when the valve is released your little engine starts right along driving the outfit the same as before the hill was reached. Yes, and a trifle better, because it has had a rest and a chance to cool a bit.

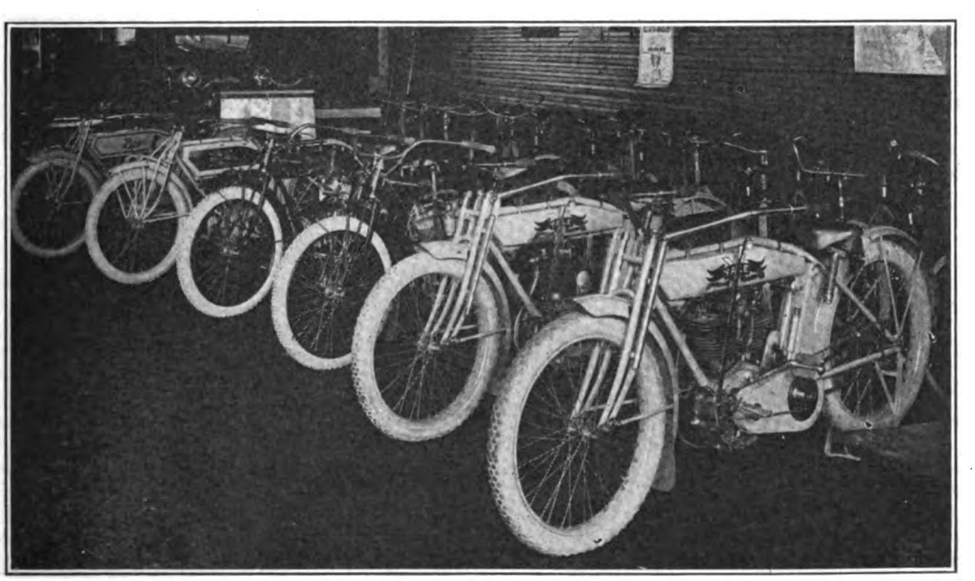
This makes for longer life of the motor as well as more miles to the gallon of gas. But, with the spark and lifter operated by the same control, there will be some nice work to get everything to move in the proper order until a little practice has been indulged in. The penalty of waiting too long before engaging the clutch and cranking over the motor is a "stall" or a snapped chain. The same thing may happen if the valves are not lifted and the clutch is engaged too soon, although the clutch may slip and save you at the expense of a severe wrench to the whole outfit.

SIDECAR TREADS.

RECENTLY I have been experimenting with various treads for the sidecar, and have come to the conclusion that about 42 inches is as good for the roads in this part of the country as any but a 56½-inch one. The latter is, naturally, much too wide and would result in a heavy sidecar, but it is the standard wagon tread. With an outfit tracking 56½ inches, any road could be negotiated, as all ruts could be dodged or ridden in. But, with a 42-inch tread, most ruts can be straddled on the ordinary road, and the corresponding width of frame allows of an amply-wide sidecar seat. One of the most comfortable cars was one with 36-inch tread; it was fine as long as the roads were not very rutty, but when we struck several rutty highways we entered the ruts with all three wheels and there was trouble. The "humps" were ground off by the nose of the sidecar body and the frame-tubes, and in two places on the road the rider and passenger had to lift the outfit out of the small gullies.

PRIVATE MOTORCYCLE SHOW

GILFILLAN BROTHERS, of 223 West Second street, Kewanee, Ill., recently held a motorcycle show of their own, and the accompanying photograph shows the line-up of machines displayed by them. They are agents for the Indian, Yale, Flying Merkel and Excelsior motorcycles.



SAUCER FOR MILWAUKEE

CONSTRUCTION work on a motordrome at Ravenna Park, Milwaukee, Wis., has been started. R. W. Hopkins, owner of the park, has applied to the F. A. M. for an exclusive franchise.

A Tour Over Wisconsin Roads

Chicagoans Encounter Mud and Sand on Trip to Ellison Bay But Scenic Features Offset the Road Annoyances

By Pathfinder.

NOT long ago I enjoyed a motorcycle trip into northern Wisconsin with two fellow riders, and I must say that the tourist who is seeking diversity will find it by traveling over the route we followed. He will pass through deep forests, over steep hills that are traversed by winding roads and through valleys where every turn affords the eye another scenic treat. The air is clear and bracing, and for the rider who does not mind a little discomfort now and then the region holds out many inducements.

We live in Chicago and our plans called for a journey to Ellison Bay, Wis., where we intended to go into camp for a week or two. We decided to go via Milwaukee, West Bend, Kewaskum, Campbellsport, Fond du Lac, Calumet Harbor, Brotherstown, Stockbridge, Wrightstown, Depere, Green Bay, Luxembourg, Algoma, Forestville, Maplewood, Sturgeon Bay, Egg Harbor, Ephraim and Sister Bay, and this route proved to be fairly good. North of Evanston we had our first trouble. I broke a leaf in the spring on my machine and one of my partners rode to Evanston to buy another. It was only after a great deal of persuasion that he managed to have a dealer take one off a demonstrator, but he finally returned and I made the repair.

POOR ADVICE FROM A FARMER.

As soon as my machine was in condition we started off at a good clip to make up lost time. At Fort Sheridan one of the other boys had tire trouble, and as no water was available we experienced difficulty in locating the leak. It proved to be one of those bothersome slow leaks, and the tire was removed five times before a repair was finally made. We found that the air was escaping from an old hole that had been covered with three patches.

Near Kenosha we made road inquiries, and a farmer directed us to a route which was supposed to be better than the one we were traveling. It wasn't. The roads over which we had been riding were quite muddy, but the one mentioned by the farmer proved to be worse. After covering three miles we decided that it would not be advisable to continue. It was then quite dark and we asked permission to sleep in a nearby barn. The owner did not refuse directly, but we could see that we were not wanted, and when he suggested that we cut through his pasture and ride three miles along a railroad to a tavern we agreed that this was about the only thing left to do. Without great difficulty we made the trip across the pasture and covered the three miles to the tavern, where we put up for the night.

ON GOOD MACADAM AT LAST.

Early the next morning we rode into Kenosha for breakfast. From this point to Milwaukee we found the roads quite sandy and there was some mud, but we managed to get through. It should be stated that this stretch, between Chicago and Milwaukee, was the worst of the trip. North of Milwaukee I lost the other boys through a misunderstanding and did not find them again that day. When I arrived at Campbellsville I managed to locate the other fellows by telephone, and we arranged to meet the next morning. When we met on the following day we rode into Fond du Lac, and from this point around the east side of Lake Winnebago and through Calumet Harbor, Brotherstown, Stockbridge and Wrightstown to Green Bay.

Then we headed directly eastward for Algoma, but owing to tire trouble we only managed to reach Luxembourg for the night. Here we obtained supper, lodging and breakfast for fifty-five cents apiece. From Luxembourg we rode to within three miles of Algoma and then turned northward through Forestville and Maplewood to Sturgeon Bay. Here a toll of three cents was charged for crossing the bridge into the city. Outside of Sturgeon Bay a perfect macadam road extends nineteen miles northward. This gave us fine going and we made the most of it, as will be seen from the fact that we covered the nineteen miles in twenty-five minutes.

Near Ephraim one of the other boys had a blowout while traveling at a good clip and was thrown over the handlebars. He escaped with a few bruises. The blowout was quickly repaired and we made fair time to Ellison Bay. We arrived there at 4 o'clock in the afternoon and soon had our camp in shape. That night we slept "like logs" and, all in all, our stay at the bay was a pleasant one, as was the trip for the most part.

Sales Are Booming in Washington

Despite Unfavorable Influence of City Regulations Motorcycle Dealers of the National Capital are Enjoying a Fine Season.

DESPITE drawbacks due to the continued arbitrary enforcement of the local passenger-carrying regulations, which are still being fought in the courts, dealers of Washington, D. C., report large sales. The principal demand is for high-powered machines, although there is some reaction on the part of riders who piloted twins last season, and now lean toward the 5 h. singles. The 4 and 5 h. lightweight machines are very popular in Washington for commercial purposes. Owing to the roughness of the roads just outside of the city the sidecar is not taking hold very rapidly.

Harry F. Seamark, Flying Merkel and Emblem agent, received his Merkel demonstrator only a few weeks ago and has already taken orders for 52 machines, out of which 46 orders called for twins.

Berryman & Williams, agents for the Harley-Davidson, have been giving particular attention to the commercial field and have disposed of a large number of machines of the 5 h. type. Late reports show that the firm had sold 78 of the 1913 models. Of this number 45 were twins and 33 singles.

Howard A. French & Co., under the management of Casper French, have succeeded in disposing of 68 Indians, 48 twins and 28 singles. This firm was rather seriously handicapped for lack of space until its recent removal to its new building.

Osborn & Leishear, have sold forty 1913 Excelsiors, of which only one was in the single class. About a month ago this firm added the Henderson agency to its line and has already disposed of twelve of these machines.

The local branch of the Haverford Cycle Company under the management of Charles H. Cross, has disposed of 30 machines, 25 twins and 5 singles. This firm has been doubly handicapped in that it has not had enough space and also being poorly located. The company is at present negotiating for a new location.

George W. Beal has been directing his efforts to booming the motorcycle as a business vehicle, and has succeeded in placing a number of Thors in some of Washington's leading commercial houses. The majority of his orders have called for singles of the 5 horsepower class.

T. N. Mudd, who recently moved to new quarters on Ninth street, has delivered 11 Reading-Standards of the 1913 type, 8 of which were singles. Lack of space in his present store prevents Mudd from carrying more than a few machines in stock at a time.

The majority of the orders taken by Harry W. Higham, Pope agent, have been for model H machines, but he also has orders for several machines of the other Pope models.

P. M. Corr has sold five De Luxe twins, since his recent acquisition of that agency. Four of these machines were 9 h., while the other was a seven.

BUCK DISTRIBUTORS

REPORTS from the Buck Sales Company, of 211 North Twelfth street, St. Louis, Mo., show that the Simplex sight gauge, for which it is sales agent, is enjoying the same popularity this year as during 1912. P. E. Zimmerman will represent the Buck company in Kansas and J. T. Plimley, of Los Angeles, will handle the product in lower California. Other distributors for the Buck accessory products are: The Motor Car Supply Co., Chicago; The Excelsior General Supplies Co., Chicago; Excelsior Automobile Co., Detroit; Bush & MacDougall, Newark, N. J., and Jenkins & Co., Des Moines, Iowa.

QUESTIONS and ANSWERS

A MATTER OF LESS FRICTION

CHARLES HYLAND—A single chain drive is used for racing to reduce the friction incident to the use of another chain and countershaft, not to mention the clutch, used on ordinary double chain machines. Racing machines can further be geared higher than touring mounts, hence a single chain with two fairly small sprockets will be satisfactory. If a touring machine was single-chain driven, the rear sprocket would have to have 60 teeth and the front 15, for a 4:1 gear. The chain would be bent very much over the little sprocket at the motor and the rear sprocket would be very large. So a double chain drive is used instead with sprockets of more nearly equal numbers of teeth. To find the gear ratio of a double-chain drive, count the number of teeth on the driving sprockets and multiply them together; then count the number of teeth on the driven sprocket and divide the product so obtained by the product of the teeth of the driving sprockets. Example: the motor shaft sprocket has 12 teeth, the clutch sprocket has 24 teeth, the countershaft sprocket has 20 teeth and the rear wheel sprocket has 32 teeth. Find the gear ratio.

Multiply the drivers together: 12 times 20 or 240. Then multiply the driven together: 24 times 32 or 768. Divide 768 by 240, obtaining the result: 3.2; then the gear ratio is 3.2:1.

CARRYING SPARE SHOE

V. L. NICHOLSON.—There have been as yet no special carriers or boxes for outer tubes or shoes on a motorcycle, and we think that the following will be seen to be a good method. After wrapping the shoe in a leather or fabric casing tie it by straps to the luggage carrier, and both the rear stay and fork on the right side by straps. To sustain the rear part of the tire, take a piece of ⅛ by ¼ in. flat stock and fit one end to the rear fork member so that the piece projects rearwards. Curve the end so that it will partially embrace the tire and slot the end for the insertion of a strap. Tie this strap round the tire and fasten it to the shank of the flat piece. This arrangement of carrier will not interfere with mounting or dismounting.

DOCTORING GASOLINE

QUARRY, N. D.—We hardly like to advise you on the subject of doctoring gasoline, as any addition to a fuel which will bring up its explosive power will injure the motor in the long run. However, if you are willing to stand the extra expense of the "dope" plus renewal of valves and fuel pipes in a rather short time, use the following: Picric acid (in crystals) dissolved in gasoline, taking four ounces by weight of the acid. Dissolve the acid in just sufficient gasoline to cause the dissolution. Of the resulting mixture, use one part by volume to fifteen parts of gasoline. This gives a relatively powerful fuel, with yellowish exhaust and much odor. In course of time it will eat the valve surfaces and render the fuel pipe very brittle. Can you not get naphtha or benzine, even if you have to pay a little more to have it shipped from a distance? It would be much better than the above though not so powerful. But if you should elect to use picric acid, be careful—it is very explosive, and you use it at your own risk.

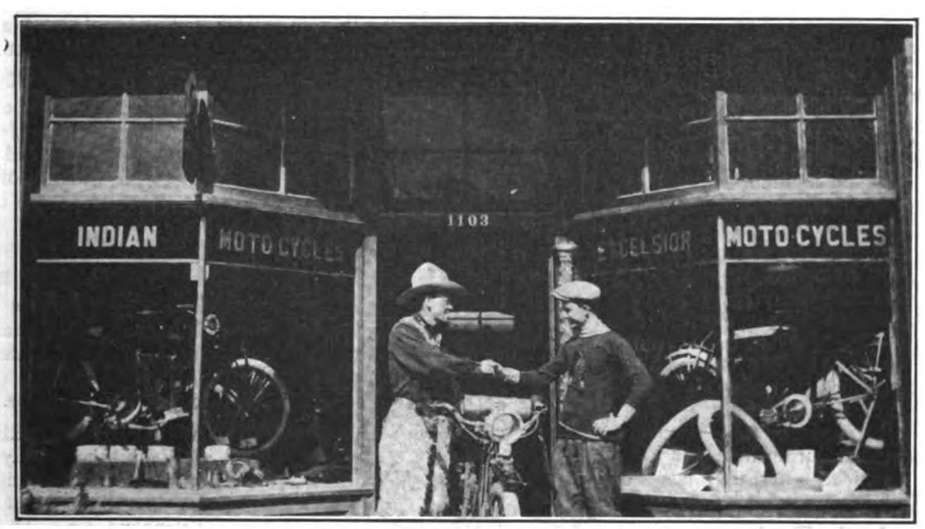
TAKE IT EASILY

A. DE HAART—Getting away quickly is all right in races, but it strains the machine, and is not a sign of good riding, but quite the reverse. The first-class rider takes care of his mount, and makes an easy start; he does not dump the throttle except in emergencies. We suggest that you have the right grip operate the throttle and fit a finger lever under the same grip for operating the valve lifter. You can easily do this yourself. To prevent pinching the arm between the left bar and tank when operating the clutch on a left hand turn, form the habit of reaching under the grip as you make the turn. This is where another position for the clutch lever is superior in the opinion of many riders. See the letter from Stanley Rosebery in the February 20 issue, page 36.

MAGNETO INQUIRIES

B. KROHN—The platinum points on the interrupter lever and contact piece become pitted and burnt and need occasional re-dressing with a smooth file. The fibre block that rides over the steel cams in the contact-maker casing wears also, as do any fibre parts of the mechanism. But the life of these parts is practically one season long at least, and there are magnetos that have never had anything done to them for years.

Magnets gradually lose their magnetism, but not for years, sometimes. They then have to be remagnetized, a job for the makers only. Your other questions had best be answered by reference to some work on ignition, such as that by Prof. Forrest R. Jones, which you can obtain at the public library. We cannot give the space to a discussion of magnetism and transformation of currents to a proper length in this Department. If you cannot get the desired information, write a personal letter to the Editor of Questions and Answers.



A Cowpuncher Leaving the Indian Headquarters of B. K. Bering, in Houston, Texas, for a Trial Trip on His New Gasoline "Bronc."

CYCLECAR ADDRESS

E. W. KING—The makers of the W-G cyclecar are Carlson-Wenstrom Mfg. Co., 2555 North Sydenham street, Philadelphia, Pa. For other makers, see our columns; we will describe such vehicles from time to time as they appear. The Simplex sidecar is made by the Simplex Machine Works, 45th street and Fifth avenue, Brooklyn, N. Y.

Encouraging Report on Freight Rates

Traffic Committee of M. M. A. Receives Assurance That Better Carload Rating on Motorcycles Will be Forthcoming

BELOW is given the full report of the Traffic Committee of the Motorcycle Manufacturers' Association relative to the freight rates situation, as submitted at the M. A. M. session in Buffalo. It was presented by Arthur Davidson, representing the committee, and holds out promise of early action that will prove satisfactory to the manufacturers. The report follows:

"Mr. Duggan, of the Hendee Mfg. Co., and myself, representing the Harley-Davidson Motor Co., and Motorcycle Manufacturers Association, appeared during the past week before the Western Classification Committee (which is being held at St. Louis, Mo.), for a carload rating on motorcycles of 'first-class' throughout Western Classification Territory. Carload classification at the present time is one and a half times first-class, or the same as is applied to less than a carload, except where commodity rates are in effect; namely, to California, Pacific Coast terminals and to Denver. The rate at the present time to California and Pacific Coast points is $4 per cwt. on a carload basis, and $4.50 per cwt. for less than a carload.

"We submitted to the Committee facts showing why we should have carload rating, giving the amount of business being done by members of the M. M. A., stating Interstate Commerce rulings, the amount of minimum we could stand, weights, sizes, dimensions of motorcycles, and various other points. Regarding the minimum, they asked if we would be satisfied with the 12,000-pound minimum and we answered in the affirmative.

"We have assurances from the majority of members of the committee that our petition will be acted upon favorably when they go into executive session, which will be just as soon as all petitioners are heard. It will probably be two or three weeks before we will hear their decision, as there are hundreds of petitioners still to be heard.

"Below we quote the saving that will be effected on shipments to various points, should our petition receive favorable consideration:

"The rate at the present time from eastern shipping points to California and Pacific Coast terminals is $4 per cwt., minimum 15,000 pounds; under the new rating it would be $3.70 per cwt. from Springfield, Mass., with a minimum of 12,000 pounds; from Chicago, Milwaukee and Jefferson, Wis., $3.40 per cwt.; Toledo, Dayton and Middletown, Ohio, $3.50 per cwt.; Minneapolis, $3 per cwt.; from Detroit, $3.50 per cwt.

"With a 12,000-pound minimum a carload will average between 35 to 45 machines. This will enable many manufacturers to offer shipments in carload lots. Should our petition be acted upon favorably, later on we will deal with the Transcontinental Lines for a still lower commodity rate on motorcycles. Commodity rates are always lower than the class rates. As soon as we hear word of the decision due notification will be sent to all members of the M. M. A."

BAKER ON FINAL LEG

ERWIN G. BAKER, the Indianapolis speedster, is now on the last leg of his 12,000-mile motorcycle trip, made for the purpose of testing United States tires. On reaching San Pedro, Cal., after touring south from Atlanta to Florida and thence shipping to Cuba, which island he crossed on his Indian before sailing to Jamaica and Panama, he had covered 9,300 miles, 4,800 of which were reeled off on his machine. He was using the same tires fitted to his machine when he left Indianapolis and he did not change them when leaving Los Angeles for the trip to the United States Tire Company's factory at Indianapolis. The trip from Los Angeles is being made by way of the old Santa Fe Trail.

SCHMIDT'S MILEAGE RECORD

SEVENTY THOUSAND miles on a motorcycle is the record of John M. Schmidt, of Wauwatosa, Wis. Schmidt has ridden his motorcycle since 1908, and says that the machine is still in good condition. According to his statement he never obtains less than 75 miles per gallon of gasoline.

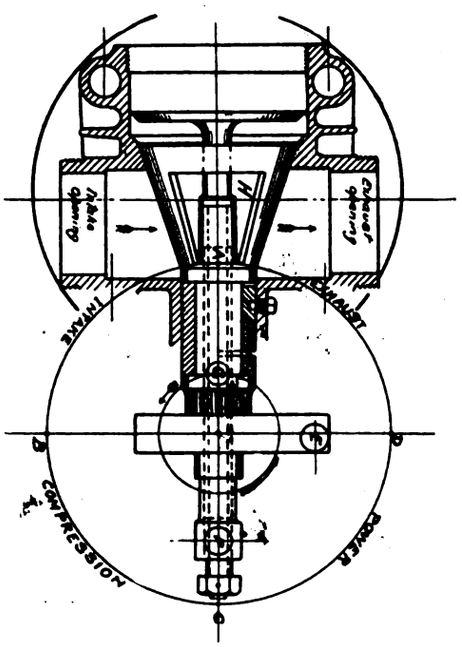
A REPORT FROM ST. LOUIS

BY way of showing the remarkable increase in the popularity of the motorcycle in St. Louis, one dealer who has been in the business for nine years makes the statement that during his first year he sold just three machines, whereas his sales for 1912 totaled 300.

H. C. FULLER, former agent for the Flanders machines, has taken the Tacoma (Wash.) agency for the Yale motorcycle.

PHANTOM VALVE MECHANISM

IN THE accompanying illustration is shown a top view of the valve mechanism that features the Phantom motor, produced by the North Chicago Machine Company, Chicago, Ill. Referring to the diagram E is a steel gear rack, meshed with a gear cut on the end of the oscillating sleeve cone valve H. F is a hardened steel bushing, bored to a sliding fit on the poppet value stem and with a lateral movement slightly greater than the lift of the poppet value. It is held in contact with the collar on the value stem at H for opening the poppet valve by a coil spring—encased and not shown in the drawing. G is connected to both rack E and bushing F by two connecting rods. The oscillating cone valve has only one port opening for both the intake and exhaust openings into the cylinder chamber; this valve oscillates at an arc of 180 degrees forward and backward. These moving parts are operated by a vertical shaft (not shown) which revolves at the center of the large and small circles at half the speed of the main shaft of the motor.



WARNING FOR BROOKLYNITES

SEVERAL speed traps have been set for Brooklyn (N. Y.) riders along Bedford, Bushwick and Hillside avenues. During the last few weeks several riders have been caught and riders in this district will do well to watch their speedometers.

A FLANDERS MISSING

A NEW Flanders motorcycle, motor number 3005, was recently stolen from the Werner Motorcycle Garage, of 532 Main street, Passaic, N. J. The machine was equipped with Old Sol lamp and a horn. Joseph B. Werner offers a reward for information leading to its recovery.

MOTORCYCLES TO REPLACE AUTOS

FOUR new motorcycles, of the twin class, are to be purchased by the Department of Safety, of Columbus, Ohio, for inspection work. The Municipal Department of the city will also equip the inspectors of the Building Department, now using automobiles, with motorcycles.

DEPUTY RIDES A POPE

T. A. HILL, deputy sheriff of Madison County, Tennessee, and collector of Jackson, Tenn., recently proved the value of his motorcycle by capturing Henry Burns, a negro fugitive. Hill rides a lightweight Pope, and in order to capture Burns he was called upon to cover some very rough roads and climb a number of steep grades.

PENNSYLVANIA ROAD BILLS

TWENTY-ONE separate bills for new main highway routes, in addition to those included in the act of 1911, have been introduced in the present Legislature in Pennsylvania and are in the hands of the Public Road Committees awaiting action.

BABB "COMES BACK"

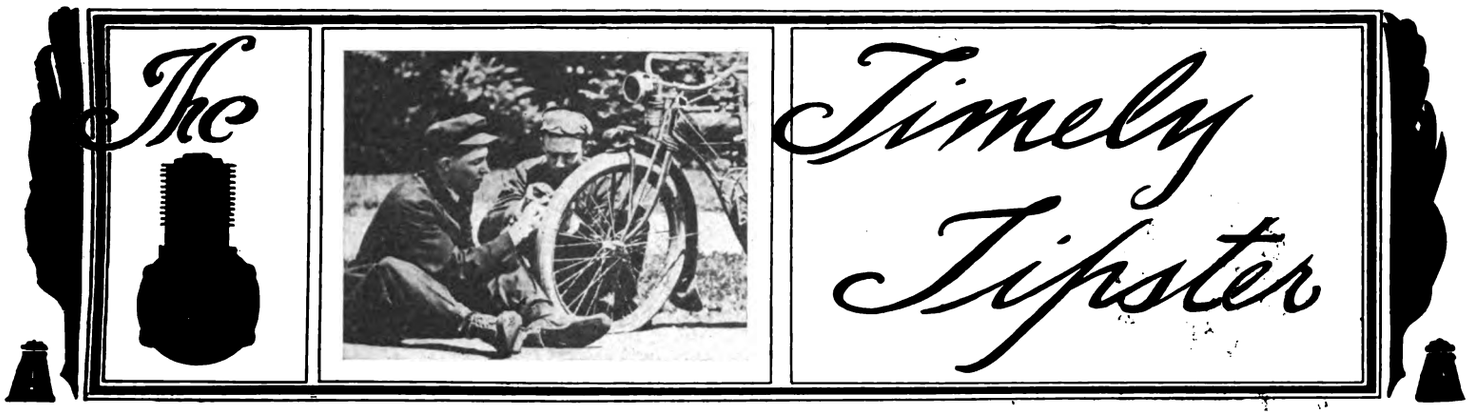
WALTER BABB, one-time bicycle champion of northern New Jersey, recently entered a motorcycle race held on the Parsippany turnpike, just outside of Paterson. He covered the 2½-mile course in 2 minutes and 55 seconds riding a Pope "Big 4." Harry Scott on a Thor 4 took second place.

YALE IN RHODE ISLAND

THE Combination Ladder Company, of Providence, has taken the Rhode Island agency for the Yale. This company already handles a number of lines aside from that implied by its name.

A. L. SPINDLER, 1330 Michigan avenue, Chicago, newly appointed Pope distributor for Cook county, has received an order for four lightweight Popes from the Chicago Telephone Co. The telephone company has been using twin machines but believe the single will answer its purpose.

Digitized by Google



A DAY or two ago Arthur Chapple dropped in for a chat about racing affairs in general, and the Brighton Beach motordrome in particular, and announced that he was preparing to open a training school for speedsters at Brighton. This scheme appears to have its good points. I am strong for it because of the fact that it will tend to keep incompetents from rushing blithely in where angels wouldn't think of treading. If it does this it will be well worth while, and Chap's work as schoolmaster will be fully justified. There are about thirty applicants for racing honors already on the Brighton list, every one of them long on enthusiasm but short on experience, and it will be up to Chap to see that the speedsters "know their lessons" or go without a diploma.

No Call for Short Runs

THE Debonair Chapple had just departed when Johnny Constant, the amateur champ, breezed in and draped himself over a corner of our desk. Constant is devoting a good deal of his time these days to boosting plans for the annual double-century run of the Invincible Club of Brooklyn, which is scheduled for May 4, with May 11 as a rain date. Accordingly he launched into a discussion of the club's arrangements and raised the question of whether average riders prefer single or double centuries on the road. He gave figures to prove that entries in the 100-mile division of the last Invincible run were very few, while the 200-mile squad was a big one, and accounted in this way for the fact that the single century division has been left out of the present arrangements. What's the answer? Does the average motorcyclist really yearn for a 200-mile run at the opening of the season, or does he simply object to being classed as a one-hundred-miler?

Muller Wants a Record

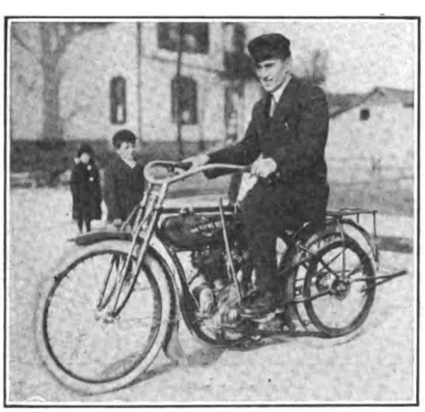
HAVING discussed this question and fourteen others, the Brooklyn meteor went his way, and a moment later W. J. Muller, a youngster who has been hounding old Father Time pretty consistently for several years, dropped in to remark that if some one doesn't give him a chance to work on a track very soon he is likely to trundle out his machine, run amuck on one of the New York boulevards, and be arrested with at least fifty overspeeding charges against him. Muller has been tinkering with an Excelsior motor for some time past, and now has it tuned to the pitch where he feels it is capable of a mile in thirty-nine. He is awaiting the arrival of a new carbureter, of which comparatively little is known in motorcycle circles, and is confident that it will work wonders. Muller's early training was obtained in automobile racing camps, and he has a damaged right arm and a silver plate over his floating ribs on the left side to prove that he really has been over the hurdles.

Newark Outlook Is Bright

SPEAKING of racing, it is worthy of note that followers of board track affairs in Newark, N. J., consider the outlook bright for early meets on the saucer at Electric Park, and a recent announcement was to the effect that Paul Derkum would again be in charge. The company which was incorporated some time ago to take over the track has expressed willingness to erect any additional safeguard that may be regarded as necessary by the authorities, and there is a growing conviction among those in power that the Electric Park saucer is safer than some in larger cities where no ban has been placed on racing. In other words, there is a feeling that motorcyclists of Newark and vicinity have been dealt with too harshly in the adoption of the ordinance prohibiting motorcycle racing and that some concessions should be granted, provided every possible precaution is taken to guard both racers and spectators. Try-outs are promised on the saucer within two weeks.

Individual Sidecar Designs

I HAVE been much interested of late in reports from enthusiasts who are designing their own sidecar bodies, and several rough sketches that have come to hand show ingenuity and a keen regard for the general attractiveness of the outfit. All in all, the designing fever is a good symptom. It does not in the least reflect discreditably upon standard sidecar models, for manufacturers certainly could not be expected to cater to all the ideas that suggest themselves to riders, and the fact that a machine owner wishes to embody a kink or two of his own in a sidecar body simply proves that he is genuinely interested. When he reaches this stage he is a full-fledged member of the brotherhood.



Arthur Andrews, a Full-fledged Flying Merkel Booster of Toronto, Ont.

As a rule, the amateur designer of a sidecar body simply works out a rough plan and submits it to a sidecar manufacturer, with instructions to have it followed as economically as possible, but now and then I encounter a chap who is determined to carry his individuality beyond this point. I was walking with such an enthusiast in Brooklyn a few days ago when he pointed to a pile of ash-can covers in front of a hardware store and exclaimed: "By jove, there's just what I've been looking for!" He whipped out a rule and found the diameter of the cover to be nineteen inches. "Just the size, too," he continued. Then he explained. He had a special sidecar body under way and was desirous of finishing the rear with some sort of a circular metal drum to give a bull's-eye effect. If he had not discovered the ash-can cover he would have been obliged to make this piece; it would have cost him three times the price of the ready-made cover and would not have served the purpose as well.

Trials for Mud-Guarding System

A SUGGESTION that trials of efficiency and wind resistance in mud-guarding be conducted under official supervision is meeting with approval in England, and while it promises to be a bit difficult to determine the relative value of the competing systems there is no doubting the timeliness of the idea. Even on this side, where we have an unenviable reputation for mudlarking, there is a growing tendency to protect the machine and the rider from mud and water splashes and it would seem that standard mud-guarding devices offer room for improvements. It is to ascertain how far protection may be carried without encumbering the mount unreasonably and inviting undue wind resistance that the Britishers contemplate the tests.

ON MASSACHUSETTS ROADS

REPORTS from Massachusetts are to the effect that roads in the Bay State are in excellent condition and that as a result motorcycling is at its best. W. F. Halliday, manager of the New England Motorcycle Company, 178 Columbus avenue, Boston, agent for Harley-Davidson and Pope machines, states that the highways were never better and that riders in general are taking advantage of this fact with unprecedented enthusiasm. Mr. Halliday was instrumental in organizing the Bay State M. C., which is arranging for a number of touring events.

Digitized by Google

COMBINED RUN TO LA PLATA

AT THE last meeting of the National Capitol M. C., of Washington, D. C., Charles Cross suggested that the club hold an open sidecar run in May. The plan met with approval as many of the members are contemplating purchasing sidecars. Captain W. F. Throop announced that a run will be held to Ridgeville, Md., the first Sunday in May. It will be an open event and riders should have their applications in by the first of May. The opening of the 1913 touring season for riders of the National Capitol was marked by a combined run to La Plata by the National Capitol and the Washington Motorcycle clubs on Sunday, April 6.

A JAR FOR MUELLER

NOT long ago Louie Mueller, the Indian chieftain in Cleveland, Ohio, sent a boy out for a cigar and gave him two of the new Indian-head nickels with which to pay for it. The boy received the cigar, threw the nickels down on the counter and started for the door.

"Hey," shouted the storekeeper, "come back here. You can't work off any of Louie Mueller's advertising stunts on me; I want regular nickels or you don't get the cigar."

In vain the lad tried to explain that the nickels were fresh from the mint and that the Indian head was an accepted design. He was obliged to trot back and break the news to Mueller. "Well, I'll be gum-swiggled," remarked the chieftain, as he gave the boy two old-style nickels and started him out again for the cigar.

EXCELSIOR IN OHIO

SUB-AGENCIES for the Excelsior, as placed by the Franklin Cycle & Supply Company, of Columbus, Ohio, are reported as follows: O. E. Neff & Son, Lancaster; W. J. Grube Machinery Co., Delaware; McCoy Bros., Circleville; Francis G. Cavandish, Logan; E. J. Chenoweth, London, and A. M. Grant, of Ashley. The Franklin company is distributor for the Excelsior in twenty counties in central and southern Ohio.

NEW BELT-DRESSING

SAM D. HANNA & CO., of Yorkshire, Ohio, call attention to the fact that they are now marketing Duncan's belt dressing, a compound that is making friends rapidly among riders of belt-driven motorcycles. The compound is a scientific preparation, invented and patented by an engineer of forty years' experience. It is being supplied to the motorcycle trade in two sizes, retailing at twenty-five and fifty cents. Either size is convenient for the toolbox, and as the compound is not a liquid it may be carried with safety. It is sold under a positive guarantee.

PITTSBURGH M. C. RUNS

SEVERAL members of the Pittsburgh (Pa.) M. C. recently made a Sunday run to Greensburg. Despite the fact that a heavy rain had fallen the roads were in fair condition. A run to Ligonier was also held by the club.

PROGRESSIVE ADVERTISING

THE PROGRESSIVE spirit of the Chicago motorcycle dealers is exemplified in the manner in which they advertise in the local newspapers. The number of agents who advertise in the Sunday editions runs to over twenty every week. Two of the dealers, Edwards & Crist Company, selling the Indian, and C. H. Lang, the Harley-Davidson distributor, have also been spending considerable money for bill-board posters of attractive design.

OPENING SALES CAMPAIGN

WITH the distributing rights for the Thor in fourteen counties surrounding Cincinnati, Ohio, the Motorcycle Service Company, of 1321 Race street, Cincinnati, has entered upon an elaborate sales campaign. The company carries a full line of Thor parts and accessories, and conducts a repair shop.

AN effort is being made by the Sedalia M. C., of Sedalia, Mo., to have an aeroplane exhibition in connection with the Decoration Day races to be held by the club.

SPLITDORF SERVICE STATIONS

O. J. ROHDE, treasurer and manager of the Splitdorf Electrical Company, of New York, has returned from a very successful trip abroad where he has established a European branch and service station with headquarters at 6 City Road, Finsbury Square, London, E. C. Mr. Rohde arranged for the installation of every device for testing and repairing ignition Splitdorf outfits, and the carrying of a full line of spare parts, magnetos, coils, spark plugs and other products of the Splitdorf company. The station is managed along the lines as the New York service department.

The company is to open a similar branch for the southern territory of this country, with headquarters in Atlanta, Ga. This branch will be opened within sixty days, and shortly afterward a branch for the Canadian trade will be established in Toronto.

NEW PURDY PRODUCT

THE PURDY BROS. COMPANY, of Chicago, makers of the Purdy exhaust horns and foot pumps, will bring out a new electric lighting outfit in a short time, it is announced. This firm also intends to experiment with a design of cyclecar which may, if it proves successful, be marketed in 1914.

The company has been incorporated with a capital amounting to $10,000, and has taken possession of new store premises at 939 West Fifty-fifth Boulevard, Chicago, where an agency of the Harley-Davidson will be conducted.

BERLING MAGNETO ON PIERCE

ANNOUNCEMENT is made by the Pierce Manufacturing Company, of Buffalo, N. Y., that all 1913 Pierce machines will be equipped with Berling magnetos, manufactured by the Ericsson Manufacturing Company, of Buffalo. After thorough tests the Pierce company reports excellent service from the Berling magneto and states that it meets all expectations.

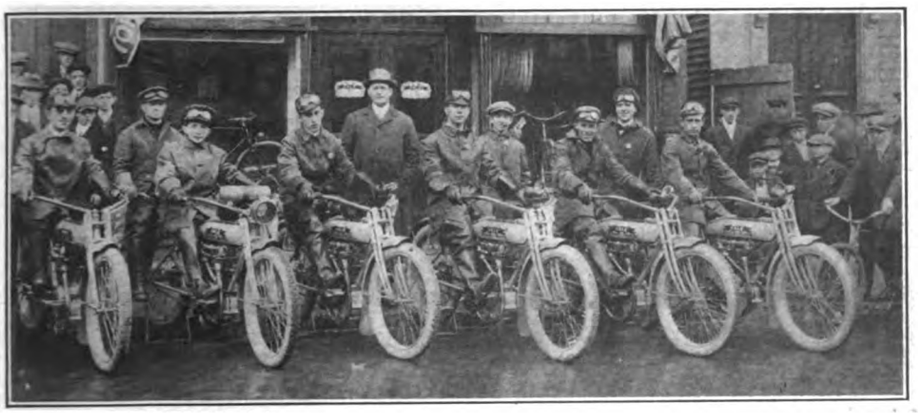
LISTERS LAND CITY ORDER

LISTER BROS., agents for the Harley-Davidson in Cleveland, have just filled an order for six machines for the Cleveland Water Works Department. Four were singles and the two twins were equipped with tandem attachments.

A TEST OF POWER

L. E. BEEMER, of the L. E. Beemer Repair Co., agent for the Indian in Sidney, Ohio, forwards the accompanying photograph showing a 1913 twin Indian pulling a load of 1,509 pounds. The machine pulled this weight up a considerable grade in Sidney, arousing much favorable comment.

Digitized by Google



MECO STAFF IS BUSY

FROM the busy headquarters of the Motorcycle Equipment Company, Hammondsport, N. Y., comes the report that the plant is being operated under heavy pressure to meet the demands for "Meco" accessories. It is stated that an unusual demand is being found for the Meco belt shackle and the Meco lamp. The former is a flat-belt connector of such compactness and simplicity that it may be carried in a repair kit and used without the slightest difficulty by even an inexperienced rider who encounters trouble on the road. Three of the shackles are sold for twenty-five cents.

The Meco lamp has a five-inch Mangin mirror lens. It is the product of a reliable manufacturer and was sold to the Motorcycle Equipment Company in 1,000 lots at a price so low the company can afford to place the price at $4.25, delivered anywhere in the United States. The Meco folks call attention to the fact that they prepay transportation and guarantee immediate shipments. They report a 100 per cent. increase in business for the present season.

PREST-O-LITE CHARGING PLANTS

USERS of Prest-O-Lite tanks in and about Des Moines, Iowa, will be interested in the announcement of the Prest-O-Lite Company that a new branch office and charging plant has been established in Des Moines. The location of this branch not only enables the company to handle its increased business more effectively, but affords greater shipping and exchange facilities to all dealers handling Prest-O-Lite tanks in Iowa and adjacent territory. The company has had a branch in Kansas City, Mo., for some time, and the establishment of a charging plant in that city, which will be an event of the near future, has been made necessary by increased sales and exchanges in surrounding territory.

MOTORCYCLE TIRE "JIMMY"

ONE of the newest motorcycle accessories to attract the attention of riders is a tool sold under the name of "Tire Jimmy," and marketed by the Motorcycle Tire Jimmy Co., of St. Marys, Ohio. As the name implies, this tool is designed to facilitate the placing or removal of a tire. Its value is four-fold: it may be used to loosen a tire when the bead is struck in the eye of the rim, it is used in the actual operation of removing the casing, as a tool with which to run on the tire and as a wrench to handle the valve stem nut. Realizing that too much time was lost in putting on tires and removing them, the organizers of the new company perfected the "Jimmy" and made it of such size that it can be carried conveniently in an ordinary toolbox.

Several encouraging orders have been received since the company was launched on April 1, H. D. Capron, the hustling manager of the Consolidated Manufacturing Company's store in Toledo, being among the first to place an order for a hundred. A money-back guarantee goes with each tool.

NEW CHICAGO AGENCIES

THE LAKE VIEW CYCLE COMPANY, 3255 North Clark street, Chicago, has taken a local agency for the Black Hawk.

Stauber & Leitner, Montrose and Evanston avenues, Chicago, have secured a subagency for the Dayton. Their initial order was for a carload of machines. Tegtmeir Bros., on the South Side, have also secured selling rights for the Dayton, in addition to their Yale agency.

J. P. Garner, the Chicago distributor for the Henderson, has moved into fine new premises at 1120 Michigan avenue, in the heart of Motorcycle Row, and is already working at top speed to handle his growing business.

A YALE SQUAD

LOWELL, MASS., is well supplied with motorcycle enthusiasm, and the riders who appear in the accompanying photograph do their part to keep things on the move. They are members of the local club who posed for the camera man prior to a recent Sunday run.

FINKLE IN PITTSFIELD

JAMES A. FINKLE, motorcycle and sporting goods dealer, formerly of Dalton, Mass., has moved his business to Pittsfield, where he has opened a spacious store at 136 Penn avenue. He has contracted for the Indian agency for Pittsfield, Dalton and Hinsdale, and will also carry a complete assortment of parts for the Indian and Emblem machines. Finkle has a completely equipped vulcanizing plant and is also prepared to do brazing and machine work of every description.

PRODUCTION RECORDS BROKEN

ALL records were smashed at the Hendee plant during the month of March when 5,348 Indians were built and shipped in 26 working days. This is an average of 205 machines a day and in order to turn out such a quantity the immense plant was worked at full speed with more than 2,700 employees in action.

CARLOAD OF MERKELS LOST

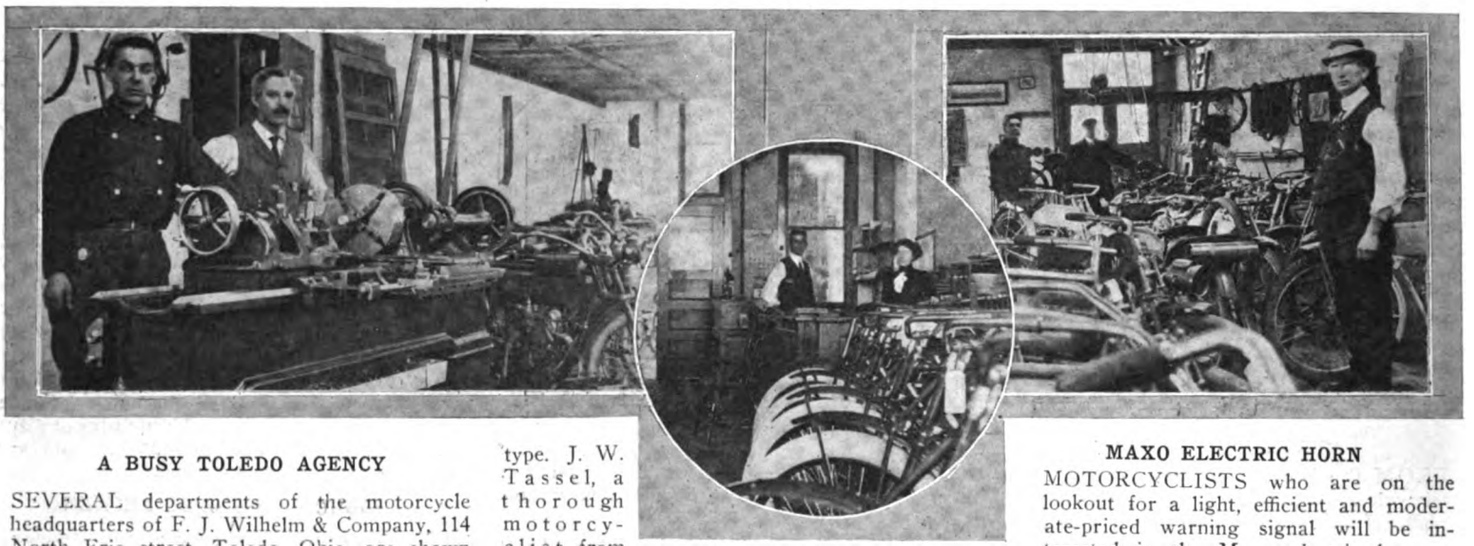
THE MOTOR SALES COMPANY, representing the Flying Merkel in Chicago, has not yet received a shipment of machines which left the Middletown factory on April 6, or the day before the deluge struck Ohio. The railroad can find no trace of the shipment and it is believed that the Yellow Jackets have been destroyed in transit.

TAKES R-S AGENCY

NICHOLAS ROSE, of 32 Main street, Flushing, N. Y., has taken the 1913 agency for Reading-Standard motorcycles for the cities of Flushing, Bayside, Corona, College Point and Whitestone.

IN the accompanying photograph is shown a scene at the junction of the Ohio and Muskingum Rivers at Marietta, Ohio. On the ground floor of the building indicated by the arrow the Yale and Emblem agency was located. The water, when at its highest, was within 18 inches of the third floor. The motorcycles were saved by being moved to the third floor of the agency. Meredith and Wilderman are the Yale and Emblem agents in Marietta. As soon as the water receded they resumed business.

Digitized by Google

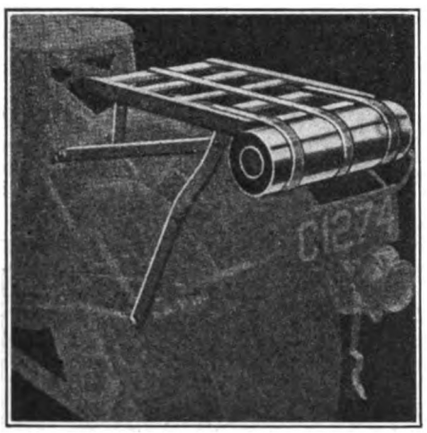


A BUSY TOLEDO AGENCY

SEVERAL departments of the motorcycle headquarters of F. J. Wilhelm & Company, 114 North Erie street, Toledo, Ohio, are shown in the accompanying illustrations. The office and salesroom is 25 by 65 feet and the repair shop, which is directly in the rear of the salesroom, is 25 by 75 feet. The repair shop is fully equipped with machinery of the latest type. J. W. Tassel, a thorough motorcyclist from every standpoint, is in charge of both sales and repair departments. The Wilhelm company has the distributing rights for Thor, Reading-Standard and Pope machines in the five counties surrounding Toledo.

DEMAND FOR "STURDY" LINE

STANLEY T. KELLOGG, of 615 State street, Bridgeport, Conn., reports that orders have been unusually brisk of late for his "Sturdy" specialties for the motorcycle, and that there is a rapidly growing demand



for his improved type of luggage carrier which makes provision for holding a Prest-O-Lite tank at the rear. Some motorcyclists experience difficulty in carrying the Presto tank to their satisfaction, and the Sturdy method, owing to its simplicity and reliability, is finding wide favor. The accompanying illustration shows how the tank is held conveniently on the luggage carrier by three metal straps.

ANOTHER GOODRICH BRANCH

NEW quarters of the B. F. Goodrich Company, Akron, Ohio, have recently been opened in Minneapolis, Minn., at the Glenwood-Inglewood building which has just been completed. The company is using two floors and basement, each 50 feet by 150 feet.

HUMISTON TESTING CARS

LEE HUMISTON, the new record holder, has gone to Indianapolis to become a car tester. It is reported that he has not yet made arrangements to race with any of the motordrome teams on the inter-city circuits.

STRICKLAND WITH ERIE

E. H. STRICKLAND, formerly connected with the Continental Rubber Works, of Erie, Pa., has accepted a position with the Erie Rubber Co., of Erie, as general manager. Previous to Mr. Strickland's taking a position with the Erie company, the firm confined its efforts to jobbing mechanical specialties, but is now branching out and handling a full line of automobile, motorcycle and bicycle tires, as well as accessories and sporting goods. The company has just issued an attractive and well-illustrated 130-page catalog.

VAN CLEEF-GLADSTONE

ANNOUNCEMENT is made that Noah Van Cleef, of Chicago, and Miss Frances G. Goldstone, of New York City, will be married on April 28. Mr. Van Cleef is a member of the well-known firm of Van Cleef Bros., of Chicago. The wedding will be solemnized in New York and will be followed by a honeymoon trip of four weeks to the Pacific Coast.

MERKELS FOR 'PHONE SERVICE

AN ORDER to equip the entire Bell Telephone System of Cincinnati with 7 h. 1913 Flying Merkel chain-drive motorcycles has been received by the Miami Cycle & Manufacturing Company, of Middletown, Ohio. The streets of Cincinnati are unusually rough and the machines will also be called upon to do considerable hill-climbing.

BIG CROSBY EXTENSION

A FOUR-STORY addition, 125 by 200 feet, is now nearing completion at the plant of the Crosby Company, in Buffalo, N. Y. The company will install $60,000 worth of new machinery in the near future to meet the heavy demands of its rapidly increasing business. The plant is now being worked night and day.

MOTORCYCLES FOR PRESS

TWO motorcycles have been purchased by the Cleveland (O.) *Press;* one to be used by the staff photographer and the other for a special reporter. A Harley-Davidson was bought from Lister Brothers, and an Indian from L. J. Mueller.

MAXO ELECTRIC HORN

MOTORCYCLISTS who are on the lookout for a light, efficient and moderate-priced warning signal will be interested in the Maxo electric horn, a product of the Dean Electric Co., of Elyria, Ohio. It is stated that this is the only electric horn made expressly for motorcycle service, and that it meets all the requirements of the experienced rider. The Maxo is designed to operate from three or four dry cells, connected in series, such as are used for battery ignition. It is actuated by a push button, is inexpensive to operate, may be conveniently mounted and is covered by a broad guarantee. The complete outfit, including baked black enamel horn and push-button, connecting cord and instructions for mounting, is listed at $6.50.

McGRAW TIRE & RUBBER CO.

EAST PALESTINE, OHIO.—The McGraw Tire & Rubber Company, of this city, has been incorporated with a capital stock of $1,000,000 to manufacture and deal in tires and other rubber goods, as well as automobile and motorcycle accessories. The incorporators are: James C. Chaplin, C. H. Bolton, John S. Wilson, George Flaccus, E. C. McGraw, Lenore H. McGraw, Robert McGraw, John Morgan, R. F. Taggart, R. B. Taggart, J. C. Chamberlin, H. C. Fraser and C. L. Merwin.

RECEPTION WELL ATTENDED

AN informal reception and entertainment was recently given by the South Shore M. C., of Chicago. Despite the fact that the weather was very bad the affair was well attended.

KENTUCKY ENTHUSIASTS

C. F. CHELF, of Bradfordsville, Ky., and his sister appear in the accompanying picture on their Pope single. This couple may be seen riding over the "none-too-good" Kentucky roads. Chelf states that the little Pope is very popular in his section.

The Toronto (Ont.) M. C. at a recent reception in its headquarters.

THE "SERVICE" POLICY

"THE WAY for a motorcycle accessory dealer to build up a tire business and to get a fair profit, is to render service," says H. S. Quine, manager of the advertising department of the Goodyear Tire & Rubber Co., Akron, Ohio. "That means, for one thing, to give advice on the care of tires; advise on proper inflation; tell buyers how tires become damaged; point out the need for prompt repairing of any little injury, and supply the means for such repairs.

"The dealer should tell how oil injures tires, and how moisture rots the fabric; show how an injured tire can be easily repaired; how tires which are supposed to be ready for the scrap heap can be made to render hundreds of miles of service.

"There is hardly a line where service counts for more than it does in the tire business. If you simply sell tires, you have plenty of competition. But if you help men cut their tire upkeep, you are going to set a hot pace for your rivals."

A SEVERE TRIAL.

UNUSUAL interest attaches to a letter received a few days ago by the Bosch Magneto Co., from P. I. Haynes, Harley-Davidson agent in Columbus, Ohio. Mr. Haynes states that several Harley-Davidson machines were completely submerged for forty-eight hours when the recent flood was at its height, and that when they were recovered the carbureters were placed in condition and the tanks filled with gasoline for a trial. On the first turn of the pedals the motors started as merrily as if they had never been wet, thus demonstrating beyond question that the Bosch magnetos, with which they were equipped, are in no way affected by water.

EXCELSIOR FIGURES

LATE figures from the Excelsior plant in Chicago show that 156 individual carloads of the "Big X's" have been sent out since January 1. This refers only to carloads and does not include separate consignments of small orders. Whitesell, the Excelsior agent in Los Angeles, is receiving a carload of machines every week, according to the latest bulletins from the plant. Machines are now being turned out at the rate of 135 a day from the Excelsior factory, and it is stated that the total output will break all records for the factory.

MERKEL SALES IN IOWA

FRED J. BARR, distributor for the Flying Merkel in Iowa, has already disposed of 300 of the 1913 models. His contract calls for 600 machines for the season.

POPE SOUVENIRS

IN ORDER that the many motorcyclists annually visiting the Pope Manufacturing Company's factory at Westfield, Mass., may have a souvenir of the trip, the company has decided to give all Pope riders visiting the plant a medal, of the design shown in the accompanying illustration. These medals are suspended on a two-color ribbon of blue and yellow and are very attractive.

MORAN MAKES A CHANGE

G. R. MORAN, formerly chief engineer for Barthel, Daly & Miller, and later executive engineer in charge of the Detroit (Mich.) branch of the New Departure Manufacturing Company, has taken a similar position with the suspension Roller Bearing Co., at its headquarters in Sandusky, Ohio.

MEMBERS of the Dixie M. C., of Roanoke, Va., recently attended the first banquet held at the new clubroom, 10 Salem avenue.

NEW GOODYEAR TUBE

S. A. FALOR, manager of the motorcycle department of the Goodyear Tire & Rubber Company, of Akron, Ohio, announces that a new Blue Streak tube will be added to the line of Goodyear motorcycle goods. Falor states that this tube will be made 20 per cent. stronger than any tube used in a motorcycle tire so far.

MILLER'S NEW CATALOG

ANNOUNCEMENT is made by Charles E. Miller, the well-known manufacturer, jobber and importer, that the company's new catalog is now ready for distribution. The cover design is very attractive and the book is featured by many illustrations.

ROYAL-PIONEER PARTS

FOR the benefit of riders of Royal-Pioneer machines who have been handicapped since the manufacturers discontinued operations, attention is being called to the fact that a large assortment of parts for this make of machine has been obtained by the New York Motorcycle Co., 318 West 48th street, New York.

MEYERS EXPANDS TERRITORY

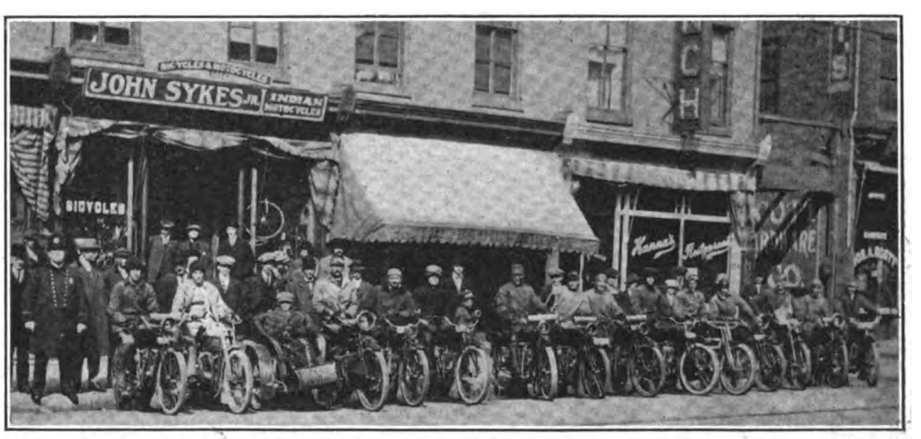
G. R. MEYERS, Indian dealer at Davenport, Iowa, recently invaded Illinois and has now established a branch at Moline. The new store is located at 1525 Library avenue, where a complete stock of standard accessories will be carried.

BARR'S SUB-AGENCIES

AMONG the latest sub-agencies placed by the Barr Motorcycle Company, of East Gay street, Columbus, Central Ohio distributor for the Indian, are the following: Mattox Motor Car Co., Lancaster; R. L. Brehmer, Circleville; George Atkins, Atlanta; S. J. Van Pelt, Washington C. H.; Walden Haffey, Canal Winchester; W. D. Hamilton, Hillard, and Arthur M. Grant, Ashley.

T. M. HART has been appointed manager of the Stewart-Warner branch in Portland, Ore., located at 57 North Broadway. Hart was formerly manager for the company in Los Angeles.

FELIX VAN CLEEF, of Van Cleef Bros., of Chicago, is now on an extended trip through the eastern territory in the interests of the firm, and reports excellent business. He states that the sales of the Van Cleef cements and patches are especially satisfying.



Indian M. C., of Trenton, N. J., starting on a recent run from the store of John Sykes, Indian agent in the Jersey Capital.

Digitized by Google

"ALL-IN-ONE" SPARK PLUG

A SIMPLE and compact priming cup is a feature of the "All-in-One" spark plug, marketed by the Frontier Specialty Company, of Buffalo, N. Y., and riders who are troubled at times with hard-starting motors are finding it unusually handy. As the primer is a part of the plug it is always ready for service, and owing to the method of injecting the gasoline the latter cleans the plug in addition to charging the cylinder. Besides providing the priming feature the All-in-One plug shows sturdy construction throughout, is heavily insulated and its users are coming to regard it as a "no-trouble" accessory. The All-in-One is made in eight types.

MORE NEW FEATURES COMING

AGENTS returning from the Harley-Davidson factory, at Milwaukee, are bringing reports of several new Harley-Davidson features which may be placed upon the market before long.

It is declared that a tri-car is being tested and perfected, while word is also given that a two-speed gear for the rear hub will also be brought out. The tri-car will have the two wheels in front supporting the van with the engine and driver's seat in the rear.

TO ITEMIZE EXPENSES

PAUL S. WARE and P. W. Schade, of Dayton, Ohio, are completing plans for a motorcycle trip from their home city to San Francisco. They intend to start as soon as the riding season is well under way and will keep an itemized account of their expenses with a view to ascertaining just how cheaply such a journey can be made on the single-trackers.

BOSCH PRODUCTION FIGURES

REPORTS from the Bosch Magneto Company, New York City, show that 12,428 Bosch motorcycle magnetos were shipped from the factory at Springfield between the first and thirty-first days of March. The Bosch company announces the appointment of a new distributor in Des Moines, Iowa, the Herring Motor Supply Company, of 106 West 10th street, having contracted to handle Bosch products.

NEW ADVERTISING AGENCY

E. J. HEMINGTON, formerly advertising manager of the Goodyear Tire & Rubber Company, of Akron, Ohio, has resigned his position with that company and has launched an advertising agency in Akron. Mr. Hemington has been advertising manager for the Goodyear company for a number of years, previous to which time he acted in the same capacity for the C. H. Yeager Company. His broad

training with these firms and his keen insight into the requirements of the American field qualify him admirably for his new enterprise. He will handle both local and national advertising with headquarters at 410 Hamilton Building, Akron.

SUB-AGENTS FOR THE DAYTON

THE BECKLEY-RALSTON COMPANY, of Chicago, Middle West distributors for the Dayton, have appointed seven sub-agents for that machine in different parts of Chicago, as well as a number of other agents throughout their outside territory.

BACK TO BUSINESS.

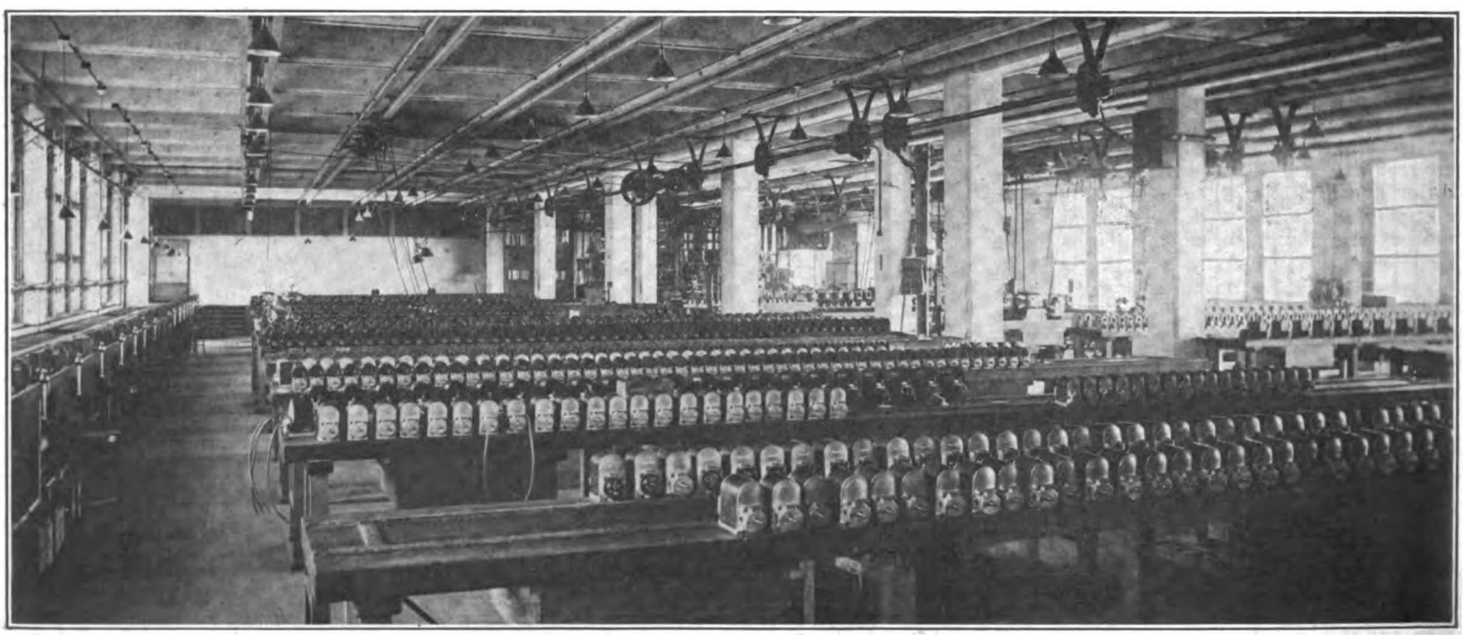
"WHEN the I. W. W. rubber strike was formally declared off by the imported leaders, the last bar to prevent Akron industrial institutions from returning to the normal was removed," said C. W. Seiberling, vice-president of the Goodyear Tire & Rubber Co., in an interview.

"Akron has passed through a time of considerable stress, and indications are that there will be no further labor disturbance for a good many years to come. Workmen in the Akron rubber factories who were temporarily carried away by the Socialistic agitation of the Industrial Workers of the World appear to have returned to a sensible view of the situation, and we firmly believe that conditions in Akron will be better than ever before, though the workmen and the manufacturers themselves have experienced some loss by reason of suspended operations. It now seems certain that the result is for the better of all concerned, though absolutely no concessions were granted by employers to bring about the declaration that the strike is off.

"Through the work in Akron of the State Arbitration Board, and later of the special Probe Committee appointed by the State the world was permitted to know that the Akron rubber factories pay higher wages for equal ability and experience than any other industry in the country; that Akron factories are modern and working conditions as pleasant and satisfactory as it is possible to make them. In our factory we have many men making from five to seven dollars daily who never earned two dollars a day in their lives before they came to the Goodyear plant. It is remarkable that in view of such conditions, the strike agitation could have prevailed so long as it did.

"Now that normal conditions have returned, we feel that we shall have little, if any difficulty in meeting all our orders promptly and in making the big increase in our business for the year that we predicted some months ago."

F. A. BAKER & CO., of 10 Warren street, New York, have lately instituted the plan for making free deliveries by parcel post on orders of motorcycle accessories.



A view of the assembling department at the Bosch factory; over 12,000 *motorcycle magnetos were sent out during March.*

5 Actual Horsepower

THE Harley-Davidson single cylinder "5-35" motor develops 5 actual horsepower at 2460 revolutions per minute. The power output of the "5-35" *averages* 62% more than that of the former 4 horsepower 1912 Harley-Davidson, which was the fastest and most powerful stock single of its day. One demonstration is enough to convince any intelligent buyer that the "5-35" single will outrun and outpull any other stock single on the market, regardless of the manufacturer's horsepower rating.

YALE AGENCY IN HAVANA

WHILE on his trip through the south in the interest of the Consolidated Mfg. Company, of Toledo, Ohio, Eastern Representative F. C. Cornish established a Yale agency in Cuba, with headquarters at Havana. The trip, which Cornish has just completed, took him through all the principal cities in Louisiana, Tennessee, Alabama, Florida and Texas. He embarked from the Southern Coast to Cuba, where he remained for several days. Mr. Cornish reports excellent conditions in the South and predicts a good Cuban bnsiness. He says the Islanders are just waking up to the possibilities of the motorcycle.

NEW ANTI-SKID CHAIN

JOHN HAUERWAS, of Milwaukee, has patented a new anti-skid chain for motorcycles. The new chain consists of individual cross chains which fasten to anchors secured to the rim. Both the chains and anchors are removable, although the rim fitting may be left in place without the chains. As many of the small chains may be placed on one wheel as desired, and they take up little space in the tool box when not in use. Samples of the chains were used at the Harley-Davidson factory last winter.

SIGNS FOR MIDLAND TRAIL

DURING the coming summer 800 metal sign-posts will be erected by the Goodrich Tire Company to mark the historical Midland Trail of Colorado, which extends from the Kansas border to Salt Lake City. These will be of material assistance in having the Midland Trail included in the Coast to Coast Highway. The signs, which will mark each mile, will give both distances and altitude.

JONES LETTERS

IN the April 3 number dealers were asked to express opinions as to what policy should be followed by an agent who sees a prospective buyer riding a demonstrating machine of a rival in business. The question was raised whether the second dealer should leave the prospect to the agent who had "discovered" him or go out and make an effort to land the sale himself. About a score of interesting letters have been received, but owing to pressure of other matter it has been found necessary to hold them over until the May 1 issue. In the meantime other letters will be welcomed for publication.

BOSCH RACING PRIZES

FOLLOWING out its broad-gauge policy the Bosch Magneto Company, 223 West Forty-sixth street, New York City, is offering its usual prizes for the winning drivers at the 500-mile International Sweepstakes automobile races to be held in Indianapolis May 30. The prizes are $500, $300 and $200 respectively for the winners driving Bosch-equipped cars.

NEW KENNY HEADQUARTERS

A UNIQUE display feature of the new store of the Kenny Motor Company, of Lafayette, Ind., is that it has four show windows, each 5 by 9 feet in size. R. L. Kenny, proprietor of the company, is a strong advocate of window publicity. The Kenny company handles the Harley-Davidson.

IT IS BRANDT'S VAN

IN a recent issue appeared a short item to the effect that the Troxel company had purchased a Yale machine with side van for delivery purposes, whereas the machine was really bought by "Jack" Brandt, of the Troxel company, for use in connection with a new boot and shoe business in which he has taken an interest.

NEW MICHELIN BRANCH

R. B. TRACY, western manager of the Michelin Tire Company, has opened a new branch at 1106 Hennepin street, Minneapolis, Minn. This branch will take care of the territory north of South Dakota and in Northern Wisconsin in addition to the Minneapolis district.

FREE USE OF REPAIR SHOP

MOTORCYCLISTS of Racine, Wis., are rejoicing over the latest announcement of Wadewitz & Sorenson, agents for the De Luxe, who have just opened a new repair shop where all local riders are free to do their own repairing.

GRABILL IN HIS OWN SHOP

SAMUEL B. GRABILL, of Washington, D. C., formerly motorcycle mechanic for P. M. Corr, has purchased the equipment and repair business of Mr. Corr. He will conduct the shop in the same location as heretofore, while Mr. Corr will continue to handle De-Luxe motorcycles and bicycles.

THE National Rubber Company, Alliance, Ohio, recently organized, has authorized the purchase of land and asked for bids for the construction of its new plant.

Bosch

Magnetos and Plugs

THE Patented features of Bosch Magnetos and Bosch Plugs make it impossible to imitate those mechanical arrangements that have satisfied over a million and a half motorists.

Insure Your Motorcycle

THERE is no question but that every time you buy, you endeavor to obtain best possible value, whether it is a suit of clothes for wear or a motorcycle for pleasure.

All the better motorcycles are equipped with Bosch Magnetos—the best value in ignition systems. No other is standard, no other would give as good service or as much efficiency as Bosch, even though similar in appearance.

What you desire is value. Don't think of buying a motorcycle, new or second-hand, that is not Bosch-Equipt. The brains and experience behind Bosch Magnetos and Bosch Plugs cannot be copied —cannot be equalled. Insist upon Bosch: only then will you enjoy the confidence that quality equipment affords.

Chipley, Greenwood, S. C.

Digitized by Google

The New Carburetion Method—

MONDEX-HELIX *in combination with any Carburetor*

REDUCES GASOLINE BILLS 25 TO 40%

Try it on your motor and be convinced! But *beware* of imitations! There is positively *nothing* like the Mondex-Helix for carburetting the air with liquid fuel and keeping the carburetting *constant*—thus *increasing* power and flexibility, with a minimum amount of fuel—almost *doubling* the efficiency of low-grade gasoline or kerosene, and at the same time insuring a *steadier* and *smoother* pull.

The Mondex-Helix is the *only* device of its kind that is scientifically perfect and automatic in its action, yet made without any revolving, moving or complicated parts—requiring no attention whatever, and which cannot get out of order. Also it is the *only* device of its kind that may be installed quickly and easily *without* cutting piping, drilling or making any alterations in your machine.

The Mondex-Helix is used and indorsed everywhere where efficiency and economy find consideration.

Simply insert it in the intake of manifold like a cartridge in a gun—that's all!—and the Mondex-Helix will accomplish all and more than we claim for it.

It is an insurance against back-firing. It eliminates carbonization troubles, because every particle of live gas, in passing through the Mondex-Helix, is so thoroughly disintegrated and mixed as to make *perfect combustion* an *absolute certainty*.

It allows quick starting. It makes a noisy or "knocking" motor *silent* and *smooth*. It reduces the tendency to over-heating and *prolongs* the life of a motor to an almost indefinite extent.

Send in your order at once if your dealer cannot supply you. Let us send you our Booklet R.

THE ARISTOS CO., DEPT. "R" 250-8 W. 54th St., N. Y.

When ordering, Address Dept. R. giving make, model of motor or inside diameter of intake manifold. Sent with full instructions, C. O. D. or by mail on receipt of price.

Sizes, 1 inch to 1½ inches $3

Sizes, 1⅝ inches to 2 inches $4

Riders! Here's the "Sturdy" Combination

Three High Grade Accessories for the Price of One!

Never before in the history of motorcycling has there been offered such an unexampled combination of quality features at the price.

The "Sturdy" Combination invariably "gets" the rider. From the dealer's standpoint it is a gilt-edged proposition, as certain of good returns as Standard Oil stock.

A Luggage Carrier, Tandem Attachment and Prest-O-Lite Tank Holder

The Sturdy Luggage carrier is the strongest attachment of its kind on the market, and is unconditionally guaranteed. For touring it is extremely adaptable, the 12 x 16 top affording a splendid support for suitcase or baggage.

By strapping on a Sturdy Cushion, the luggage carrier is instantly transformed into an extremely comfortable tandem attachment, with the added feature of tremendous strength and endurance.

The problem of attaching the Prest-O-Lite Tank in both a safe and convenient position is solved by the Sturdy Tank bands, which suspend the tank at rear of carrier, over the tail lamp, both a logical and graceful position, as will be noted from the illustration.

Then, last but by no means least, the price for the Sturdy Combination Luggage Carrier, Tandem Attachment and Tank Holder, including the Sturdy Cushion with patent straps..... **$6.00**

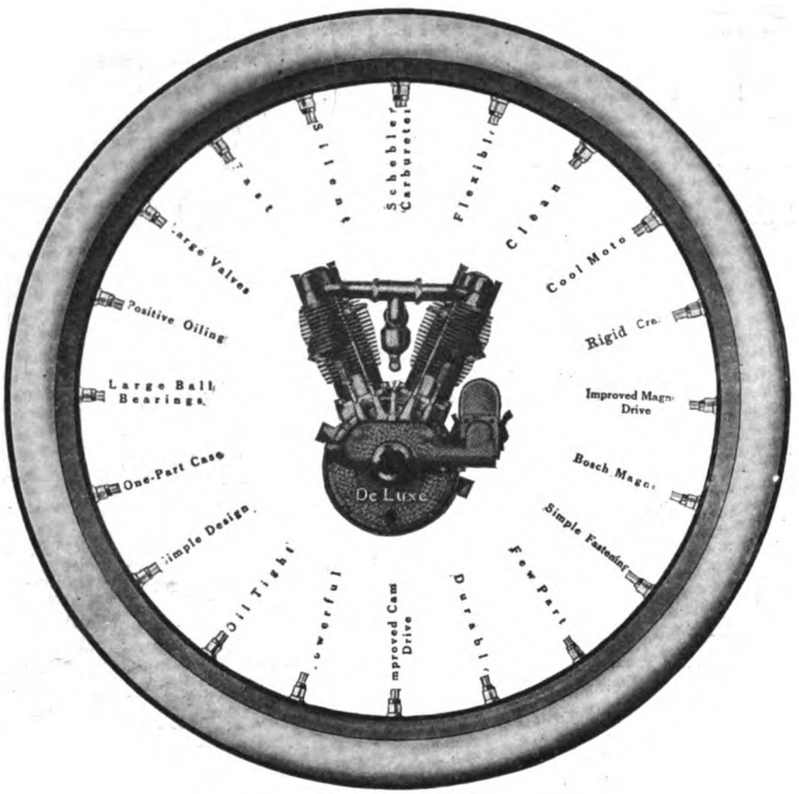
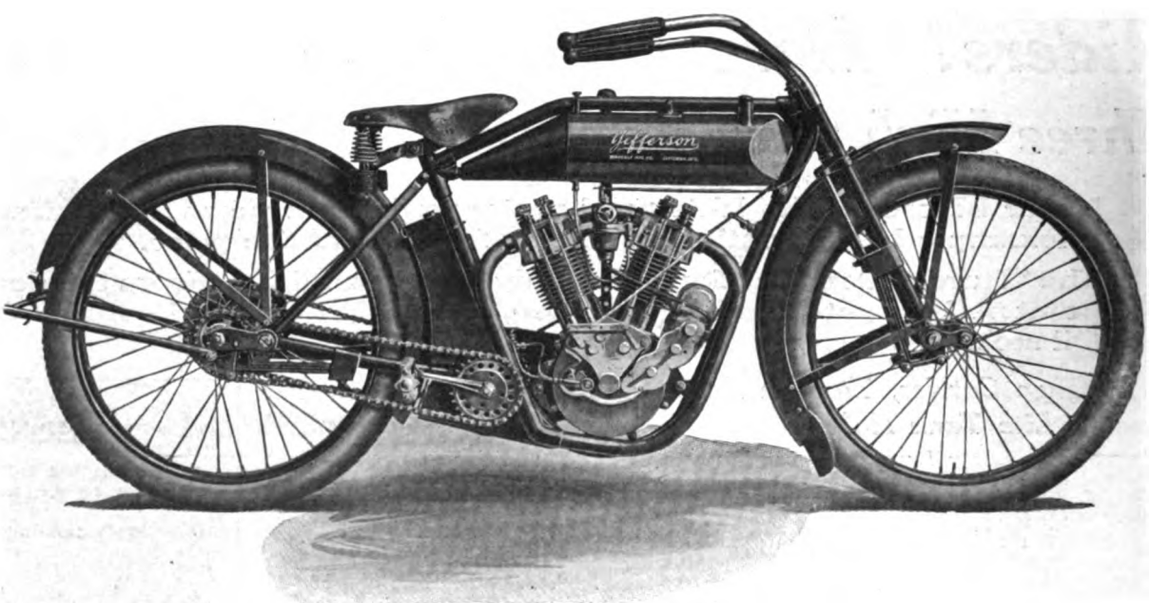
Like the Spokes in a Wheel, DeLuxe Motorcycle Motors Radiate Good Points.



THE F. W. SPACKE MACHINE COMPANY

Indianapolis, Indiana, U. S. A.

Boys, the Jefferson is There!



Just look at it! Note the automobile leaf springs, front and rear—the clean-cut powerful motor, with overhead valves, its perfect balancing. Note the absolute absence of superfluous parts, the simplicity of the grips, without clutch levers of any sort. Do you know what that stock motor can do, **without** special preparation or "tuning up" of any kind? Oh, only about 78 miles an hour! Don't you recognize the lines of the Jefferson? It's the old P.E.M. under a new name; that little single whizzer that beat twins in six races, winning 37 out of 47 races which it entered. Yep. That's the same machine, only doubled in speed and power.

Our catalog tells the rest. For the love of the Open Road, get it.

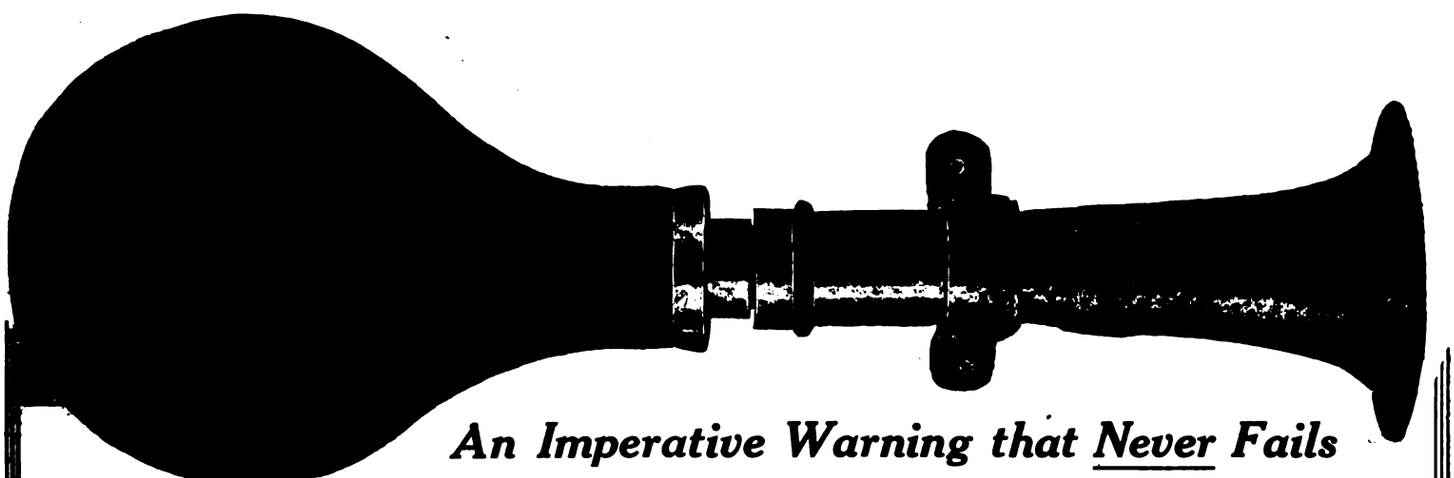
"It Stands the Test"

IVES MOTORCYCLE CORPORATION, 200 John Street
Owego, Tioga Co., New York

Distributed by Lowe Motor Supplies Co., 1727 Broadway, New York; Poulton & Hostetter, 20 S. 57th St., Philadelphia; John W. Grove Co., 634 Liberty Ave., Pittsburg; V. E. Yapp, Esbon, Kansas; Lincoln Holland, 1634 S. Main St., Los Angeles, Cal.



An Imperative Warning that Never Fails

SCENE—A lonely country road. A curve in the path. A young couple peacefully jogging along in a decrepit old buggy. Suddenly the man lifts his head. "Golly, what's that!" He turns the horse to the side of the road. He does it instinctively.

Another scene—a noisy, crowded city street. Children playing in the gutter. With one impulse, they rush to the sidewalk out of danger. What warns them? It's

"The Little Horn **The Acme Siren** with the Enormous Range"

A low, wailing moan, gradually increasing to a whining shriek. It is distinctive. It can be modulated from a low growl to a crashing note that means "Jump!" No wires to break, bend or rust. No batteries to get out of order. No delicate mechanism to fail at the critical moment. Just a horn, bulb and a revolving reed.

Special Offer—Good Until May 1st

The tremendous demand for Acme Sirens has depleted our stock to such an extent that we are making this special offer—good only until May 1st. Upon receipt of $5, the price of our Acme Siren No. 1, we will send one of our Acme Sirens No. 2, regular price $7.50. This has a larger bell, deeper tone, and is made of heavy gauge brass. Sign the coupon attached and send it to us *now*. Also send 10c. for one of our Tiger Color "Coventry Chain" pennants.

SARCO ENGINEERING CO., 112 Broad St., N. Y.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

NO "DOPE," GUM, PASTE OR OTHER STUFFING MATERIALS

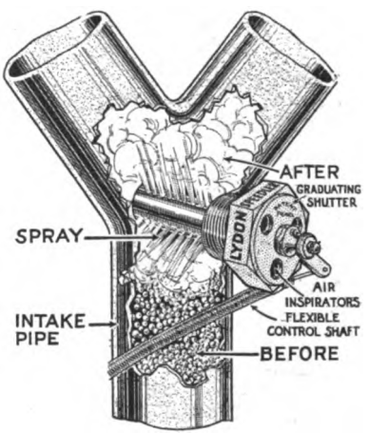
Speedler

With Handle Bar Control

Attach to handle bar in a few minutes. The marvelous speed spray for motorcycles. Lydon Speedler fits every motorcycle. For speed. For power. For cooling. For economy. Gives your motorcycle a marvelous increase in speed. Removes carbon. Keeps engine cooler. Positively guaranteed on 30 days' free trial. Your money back if it does not pay for itself in a month.

More Speed

A Lydon Speedler gives your motorcycle more speed when you want it. Control at your finger-tip always. A finger-tip touch and you have a marvelous increase of power, of speed and saving of gas. It's the spray that does it. The powerful cross-current air spray of the Lydon Speedler remixes the mixture to the highest degree of combustion. Speedler will give more life and value and higher speed in your motorcycle than any device ever perfected.



Increases Engine Power

Get more power and speed. Make every explosion sharp and snappy. Get greater power and quicker action in every piston stroke. Add 20 per cent to your present engine power by attaching a Lydon Speedler. Make your engine run smoother. Speedler is a perfect decarbonizer and handy primer. Pays for itself every month. It has our absolute money-back guarantee.

30 Days' Free Use

The Lydon Speedler is sold on thirty days' free trial. Use it for thirty days and get your money back if you are not entirely satisfied. Dealers everywhere are authorized to give thirty days' free trial. If your dealer is not supplied, write to us for full description of this marvelous money saving, power making speed device, postpaid free.

Price With Handle Bar Control $3 The price of motorcycle Speedler, complete with the additional handle bar control together with four feet of flexible cable conduit connection is only $3. If your dealer cannot supply you, send direct to us. Enclose only $3. Post Office money order, express money order, or draft. We will send the Speedler to you, all charges prepaid, upon receipt of price. When you send direct to factory kindly give us the name of your dealer.

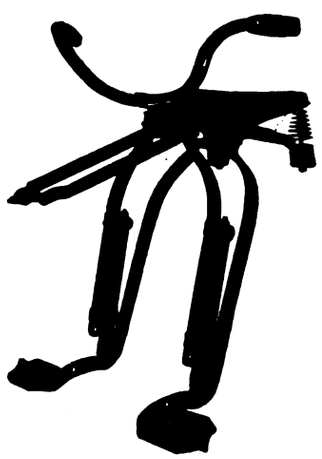
Simplicity—Comfort—Stability

The Empire Special

SPRING TANDEM



"IT FLOATS"

You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem

"IT FLOATS"

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

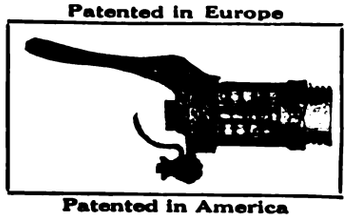
THIS IS WHAT THEY ALL SAY ABOUT THE M&M ECONOMIZER

We will have another motorist's letter next month

Patented in Europe



Patented in America

Los Animas, Colo.
Moller Bros., Phila., Penna.

Gentlemen: In reference to the M&M Economizer which I purchased from you sometime ago, will say that I would not be without it. I have installed it on a SEARS SINGLE. I have run seventy miles since I got it, on two quarts of gasoline, where formerly it would take a gallon to cover the same roads. It increases the speed and power every bit of 20%, and the carbon deposit is hardly noticeable.

Two more Economizers have been ordered in this vicinity since I got mine, and many more will be ordered when the motorists find what a saving can be made in gasoline with the increased efficiency of their motors, by using the M&M Economizer. (Signed) GILBERT MARTEUSON, March 14th, 1913.

THE M&M ECONOMIZER WILL POSITIVELY SAVE FROM 40 to 50% of gasoline. ELIMINATES all carbon, *and acts as an air-brake.* With the throttle set at twelve miles per hour, by opening the M&M, the mileage will be increased to EIGHTEEN OR TWENTY MILES with the SAME AMOUNT OF GASOLENE and LESS CARBON.

The M&M is nickel plated and highly polished. Requires a ¼" pipe tap to insert into manifold. Can also be reduced to ⅛". Can be applied to any motorcycle on the market with PERFECT SATISFACTION. It is very easy to apply to your motorcycle, and will not injure it in any possible way. THE LONGER YOU HESITATE TO PURCHASE, the MORE GASOLENE YOU ARE USING, and we assure you that there is not one individual that has applied the M&M but will tell you that IT IS WORTH MANY TIMES ITS COST, and HE WOULD NOT BE WITHOUT IT ON HIS MOTORCYCLE. The M&M is becoming THE RAGE in motorcyclists' Realm.

Price of the Motorcycle Attachment, $1.25 Prepaid.

Money positively refunded in 30 days if unsatisfactory. Send for our catalogue and information.

OUR GUARANTEE.—Money will positively be refunded in thirty days if the M&M should not do WHAT WE CLAIM. No dealer or jobber is authorized to sell without giving our guarantee. THEREFORE, you RUN NO RISK BY PURCHASING. Reference (Citizens National Bank, Lewistown, Pa.).

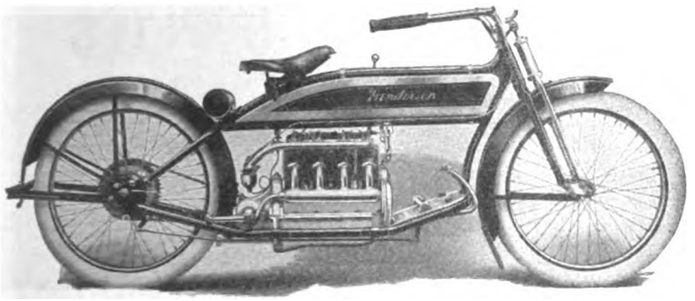
Henderson



8 H. P., 4 cylinders, free engine, chain drive, $325.

Why Four Cylinders?

Because the motorcyclist wants three things—power, flexibility of power and easy riding.

The Henderson's four cylinders develop 8 horsepower—enough and to spare to go over any road or climb any hill you will encounter, and far more speed than you will dare use.

This power is flexible. You can throttle to walking speed and still it pulls. You can jump to high speed without nursing the motor.

Four cylinders produce less vibration than one. They are placed low, so the center of gravity is low. The machine rides easier and holds the road better; and the wheelbase is longer.

These things have given the Henderson national popularity. Write for the literature.

Henderson Motorcycle Company

1158 Cass Avenue **Detroit, Mich.**

14,000 Miles on One Set of J-M SPARK PLUGS

This is the remarkable record established by Mr. A. L. Westgard on his recent 14,000-mile pathfinding trip across the continent. During the entire trip there wasn't a single miss—a single leak—or a single break in insulation.

Do you know of any other plug that could survive a service test like this? And do you wonder we feel safe in guaranteeing J-M Spark Plugs for 10,000 miles!

A. L. Westgard, Official Pathfinder of the A. A. A. and the U. S. Office of Public Roads.

This is the only plug on the market with a complete double insulation—mica and porcelain. It will spark perfectly with the outer insulation broken—even when current is supplied by a magneto. All parts are baked to prevent destructive expansion. Center electrode case-hardened to withstand highest engine temperatures. Any size can be used for either magneto or battery.

Price $1.00 each, prepaid. Shipped direct if your dealer can't supply you.

Write our nearest Branch for Booklet.

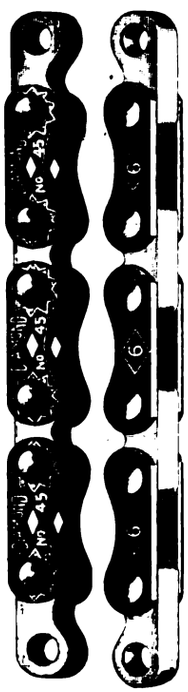
Replace your present magneto with a Berling—it's a guarantee of ***sure*** *and* ***satisfactory*** *ignition.*

"When we put out a Diamond Chain we never hear of it afterwards"



Years ago the Davis Sewing Machine Co. decided upon Diamond Chains. They have had no regrets since as evidenced by their testimony above.

It's the high grade material, accurate workmanship and our pioneer experience in chain making that make such lasting friends for Diamond Chains, and have made these the standard equipment for the past 21 years. When buying a new chain, know what you are getting. Look for the Diamond trade-mark on the connecting link.

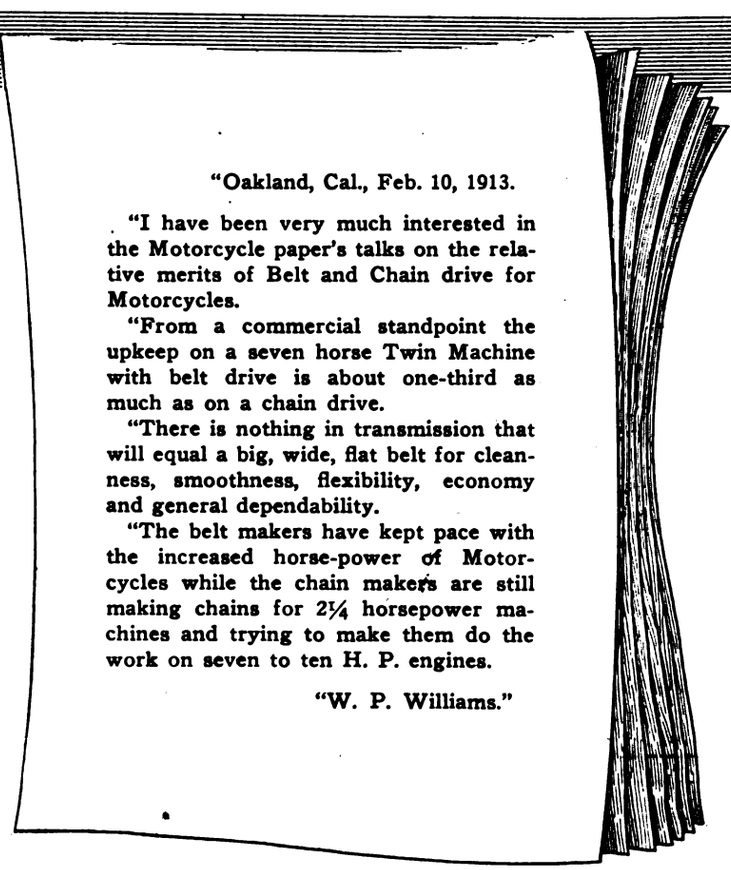
BELT Versus CHAIN

On A Seven Horsepower Twin

Read what the W. P. Williams Cycle Co., Oakland Cal., has to say on this subject

Letters Like These Back-Up Our Famous Belt Talks



"Oakland, Cal., Feb. 10, 1913.

"I have been very much interested in the Motorcycle paper's talks on the relative merits of Belt and Chain drive for Motorcycles.

"From a commercial standpoint the upkeep on a seven horse Twin Machine with belt drive is about one-third as much as on a chain drive.

"There is nothing in transmission that will equal a big, wide, flat belt for cleanness, smoothness, flexibility, economy and general dependability.

"The belt makers have kept pace with the increased horse-power of Motorcycles while the chain makers are still making chains for 2¼ horsepower machines and trying to make them do the work on seven to ten H. P. engines.

"W. P. Williams."

Write Today For The SPARTAN Catalogue For 1913

You don't have to read between the lines of this letter to determine which form of transmission Mr. Williams, from his experience, has found to be superior, both from an economical and efficient standpoint.

A belt-driven machine, and that Spartan equipped, is all the assurance you need for the greatest possible degree of comfort, economy and efficiency.

Spartan belts are on 90% of all 1913 belt-driven machines, therefore, the chances are nine to one that you will find a Spartan on your machine—but be sure to look for the name "Spartan." It is your protection and guarantee of perfect satisfaction.

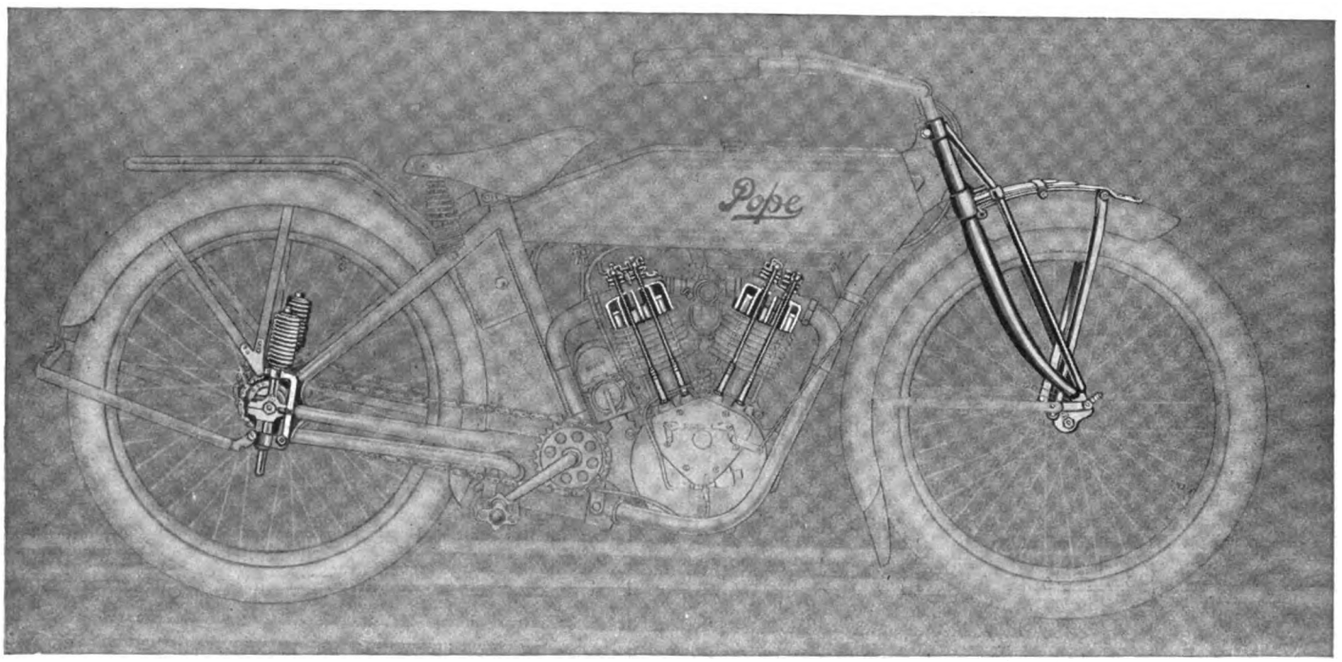
POPE
Rear Spring Suspension

POPE
Overhead Valves

POPE
Spring Fork



Riding Comfort All The Time

The POPE "TWIN" is notable for its balance. Everything works in perfect harmony to produce a perfectly comfortable motorcycle. The Pope "Twin" holds the road like a big 6-cylinder automobile, and wafts the rider along with a smooth, steady, gliding motion that gives him *riding comfort all the time*. The faster he goes, the more he appreciates its easy riding qualities. It balances beautifully and controls with perfect ease.

Three Great New Features Insure Rider's Comfort

POPE REAR SPRING SUSPENSION

Simple, compact and strong. Insures riding comfort without retarding speed. Freedom from sideplay and recoil shocks. Holds wheels in perfect alignment. When in action the helical springs expand, as the axle with its bearing blocks is forced upward, absorbing shocks. Note the ideal combination—Compression leaf spring fork in front and expansion springs at rear. As a result, the Pope holds the road perfectly at all speeds without pitching.

POPE OVERHEAD VALVE MOTOR

Gives the most power, the smoothest running, the greatest speed, the least need for attention, and the greatest accessibility. Entire explosion takes place directly over the piston. All energy is applied instantaneously straight downward with full force. Best cooling, most positive exhaust of spent gases. Valves of highest grade Chrome nickel steel, drop-forged, stems integral. Accurately ground and fitted.

POPE SPRING FORK

Simplified and with new features. The strongest made, the most flexible in riding, the most certain in steering. Ordinary shocks and jars do not reach the rider. They must pass through this compression spring and are absorbed by its perfect action. Other spring forks may look like it but none ride like it. Vibration practically eliminated.

Pope "Twin" Awarded First Prize at Third Insular Exposition, San Juan, Porto Rico, March, 1913

"Going to Work!"

"I've got Diamond Safety Tread Tires—and you can't beat them"

It's the *tire* on which you must depend for quick turns, speeding over slippery paving, crossing car tracks and to meet the unexpected emergencies that confront you daily as a motorcycle rider. So you cannot be too careful in the selection of the tires upon which your safety and easy-riding comfort depend.

That's why you should take advantage of the safety and more mileage features of

Diamond

Safety Tread (Squeegee) Motorcycle Tires

Made of Vitalized Rubber—with Perfect 3-Point Rim Contact

You can now get for your motorcycle the same identical tire that has solved the skid and "More Mileage" problem for automobilists.

The "More Mileage Strip" in the Safety Tread is built on top of and in addition to the regular tread—it assures you of more mileage and longer service at *no additional cost.*

Ask your nearest dealer for new Diamond Motorcycle Tire Catalog.

So this time buy Diamond Vitalized Rubber Motorcycle Tires—you can get them to fit your rims from

This Brake Was One of the Most Important Features of the Shows

It is exactly the same kind, type and design of a brake as is used in automobiles.

It is powerful enough to hold an automobile—or a motorcycle of several times the horse power of any now on the market.

It gives you everything the autoist has:—

Absolutely reliable control of your motorcycle under all conditions;—

Fool-proof—a brake that will not wind, bind or lock;—

A slight back pedaling pressure will exert a retarding force of a ton and a half.

You surely want to know about this newest motorcycle device.

Write for fully illustrated and descriptive literature.

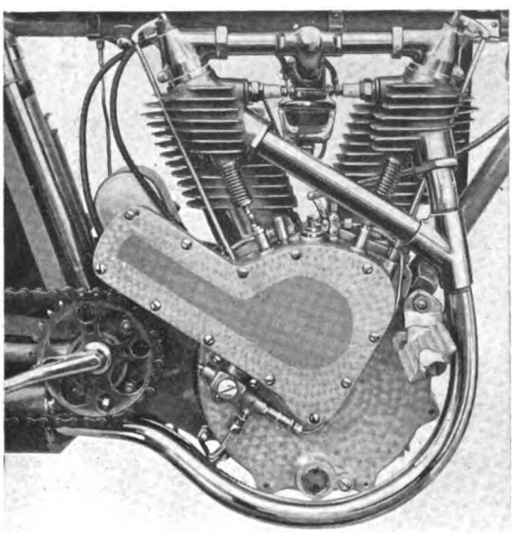
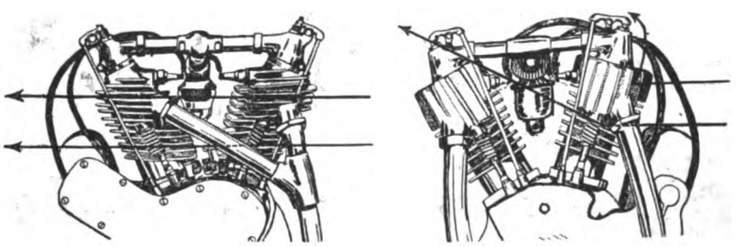
YALE

A Twin with Two Efficient Cylinders



IN designing the power plant of the Yale twin, the Yale engineers kept in mind that it was to be a two-cylinder motor and must meet conditions found only with two cylinders—they realized that merely adding another cylinder to a single would not make a **successful** twin.

Cooling the rear cylinder was one problem which was solved by making the flanges of both cylinders horizontal, so that the air sweeps freely through and carries away the heat from both cylinders instead of leaving the rear in a dead air pocket behind the front. Bearings of generous size—far larger and able to work under greater loads than had been dreamed of on other motors; exquisite balance that by eliminating vibration allows remarkable power and speed to be developed; large, free gas passages that let out the burnt charge and take in the fresh one most easily; efficient and unfailing lubrication of every bearing surface; these are some of the other points that make the Yale twin motor the most powerful engine of its size ever used in a road machine.



A Study in Air Cooling

Have this efficiency serve you this season

Continental-Erie Tires

"The Tires of Greater Service"

Continental-Erie Tires are not only the "EZiest" tires on the pocket book in point of upkeep, but they are EZ on the whole motorcycle organism.

Their great resiliency and service-giving qualities have proven to thousands of riders that they're indisputably "The Tires of Greater Service."

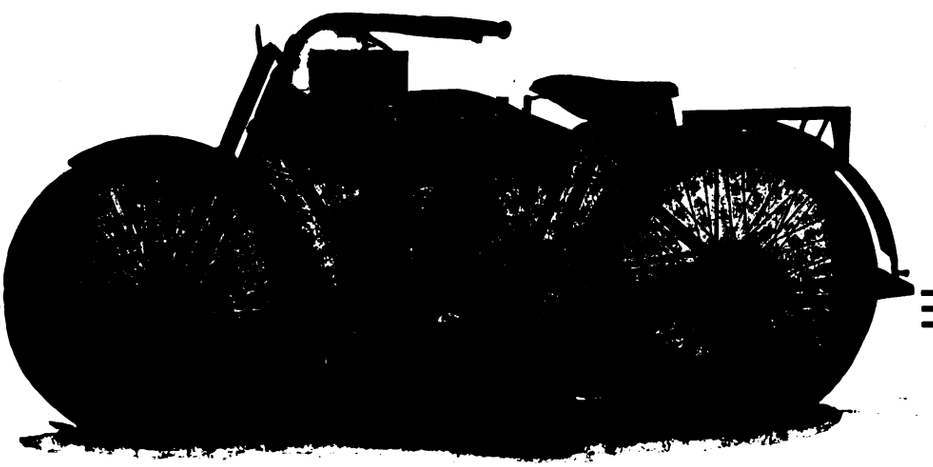
Continental-Erie Tires give greater service because "Quality" of output has been striven for instead of Quantity of output. In ONE and only ONE tread are these tires made—studded, which has proven the most efficient and durable from every standpoint.

Concentration of production effort is exemplified in Continental-Erie Tires.

Ask the Jobber, He Knows

CONTINENTIAL RUBBER WORKS, Erie, Pa.

PAUSE AN INSTANT



Before Signing That Deposit Check

The "R-S" costs more to make--but less to use

Can you as a dealer have a better argument for selling or you, Mr. Rider, a more practical reason for buying a motorcycle?

It is actually so, that the cost of upkeep of the R-S is less than any other motorcycle marketed. The R-S was singled out among the many motorcycles at the New York Show by three automobile engineers as representing the highest type of mechanical construction in a motorcycle. The more care we give in the building—the less care you will have in the repairing. Won't you take the first step to convince yourself? Send for our catalog and selling proposition.

SO. BEND RESIDENT WANTS NAME OF YOUNG'S MACHINE

Saw the Article in Regard to the Wonderful Record Made by Fay Young's Motorcycle and Writes and Asks for Name of Machine.

Deputy Sheriff Fay Young in opening his mail this morning found a letter from a resident of South Bend, Ind., the writer stating he had seen an article in regard to the record of the motorcycle ridden by Mr. Young, it traveling 18,000 miles without having a thing done to the motor, and he asked that the deputy forward him the name of the fachine and the year it was built. Depufy Young rides a twin cylinder Merkle, seven horsepower machine.

IN HYDRO-AEROPLANE

"The World's Best Motorcycle"

"Wonderful Economy," "Fastest machine on two wheels," "Lowest cost of upkeep," and similar phrases do not stand for much unless backed up by actual performance.

Read any of the motorcycle advertisements being published today. Nine-tenths of them are about as enlightening as the hieroglyphics on an obelisk of Pharaoh's time. Each machine is the best, but you must take the manufacturer's word for it. There is nothing to back up the cheerful statements and glowing typographical phrases.

"Made its name on Merkel Mileage"

What the rider should have is facts—indisputable incidents to prove the merits of the motorcycle being talked about. Every statement made by the makers of the Flying Merkel is substantiated by real performance. Sheriff Fay Young's experience is merely the experience of all Flying Merkel riders.

Have you seen our new art catalog, which fully describes the Self-Starting Two-Speed Flying Merkel Models for 1913? It's free for the asking.

Middletown, Ohio.

Gentlemen:- Having had occasion through my duties as Deputy Sheriff of Winnebago County, to put one of your Flying Markels through a most strenuous pace during the past eighteen months and with most satisfactory results, I thought you were entitled to a word or two of praise for the excellent service rendered.

I have averaged better than a thousand miles a month during the period mentioned, the exact figures being 18,500 miles for the eighteen months the machine has been kept on the go; have traveled in all kinds of weather and over every brand of roadway from the smoothest asphalt to the roughest roads of the rural regions, through the sun of summer and the snow of winter and the rain and mud of every season, and all this without so much as even seeing the inside of the motor; have not yet even had need to grind the valves or scrape the carbon out.

This looks like a record worth talking about to me and I doubt if there is any other machine which can equal the test I have made of your Flyer. The machine has been on the job day or night and is still doing business at the old stand apparently as reliable and trustworthy as the first day out. Every piece of mechanism is still working with precision and to say that I am satisfied with my investment in a Merkel is putting it mildly indeed.

Incidentally also I wish to congratulate you upon your frame construction, which a test of many months has convinced me is the best yet. When I used a solid frame I used to have a horror of encountering a piece of rough road and my health was seriously impaired by the joltings I experienced. But astride a Flying Merkel the roughest stretches of highway look like asphalt Boulevards to me. I can ride all day now without incurring the faintest symptom of that tired feeling and without any fear over the question of getting back at all as in days gone by.

Your ball bearing motor I regard as the finest of it's kind in the market and the Merkel in it's entirety the nearest, in my mind, to a motorcycle masterpiece there is to be had to-day. As a hill climber it has no equal; as traveler, a trial will convince the most skeptical.

Yours truly,

Fay H Young

Digitized by Google

YOUR PROFIT

be it figured in pleasure and comfort or cold dollars and cents, may be increased by reading the following analysis of our

Spring Touring Number

—the most valuable and practical issue of Motorcycle Illustrated ever published.

Appears May 15

ANALYSIS

What the Touring Number will Accomplish — It will inspire the spirit of touring and will make each tour productive of the greatest pleasure, comfort and ease.

How the Results Will be Obtained

Where to Tour — Shown by maps and well illustrated touring articles prepared especially for Motorcycle Illustrated by Robt. Bruce of the A. A. A. Route and Service, one of the foremost touring authorities in the country. These touring articles will incite even the timid motorcyclist to tour.

How to Tour — Shown by 12 service articles by authoritative writers on the following subjects: Magnetos and spark plugs; carbureters, brakes and clutches; speedometers; tires; lamps, etc.; transmission lubrication; clothing; tandems; sidecars; saddles; supplies and minor accessories.
Complete tabulation of 1913 motorcycles.

Treatment of Service Articles — A—These service articles, taken as a unit, will instruct the reader how to plan a tour; how to equip the motorcycle and saddle-bag for touring; what clothes to wear; how to prevent and overcome mechanical troubles; how to keep the equipment in the best possible condition.
Each individual service article will have 100% of value—there will be a punch on every page.
B—Each separate service article will show how that particular article of equipment plays an important part in a successful tour—the necessity for it and how to maintain it in the best condition.
C—Appearing right after each service article will be a tabulation of the manufacturers of that article. The object is to show the need and then to show what concerns manufacture the article.
No comparisons will be made.

Value to The Reader — Because it will be a valuable touring guide and trade reference book—a book that will be kept for reference purposes. It will be valuable for its service articles alone. It serves a fourfold purpose: Where to go; how to go; what to buy; where to buy it.

Value to The Advertiser

1—By reason of its fourfold service to the reader it will be constantly referred to, thus greatly increasing the life of the advertisement.
2—With its guaranteed circulation of 17,000 it will be read probably at least *once*, by 35,000 people vitally interested in motorcycling.
3—It will put an advertiser's proposition before a buying power of $22,000,000.
4—It will directly foster the sale of touring equipment by inspiring the desire to tour, and it will indirectly increase the sale of motorcycles by causing a greater and wider publicity for the motorcycle resulting from tour-taking tourists.

Thor

The Supreme Value of the THOR Motorcycle is shown in the wise selection of the prospective purchaser. He will demand a machine which embodies these four elements:

The vehicle itself, its construction, design, power, economy, accessibility.

Its adaptability for the special service in which it will be used.

The permanence and repute of the manufacturer.

The facilities of the manufacturer to give service after the vehicle is in commission.

If it's quality you want the THOR will please you. We have the facilities and the organization to manufacture motorcycles of the highest grade. Our products are always of the same high standard, the same high class of workmanship.

When you order the THOR you can always depend upon getting exactly what you order and the THOR factory is back of every order that leaves the factory. You get absolute satisfaction.

Service on deliveries, we are proud to say, is backed by all departments of our organization.

THREE MODELS—ALL LEADERS.

All Chain Drive and THOR Positive Free Engine Clutch.

Model 13-M 4 HP Single	**$225.00**
Model 13-W 5 HP Single	**240.00**
Model 13-U 7 HP Twin	**290.00**

Booklet, giving full particulars and complete specifications, mailed on request.

SPLITDORF

"Always There"

SPLITDORF MAGNETOS in appearance are about as attractive as it is possible to make a mechanical contrivance—they are the gems of the magneto ignition field.

SPLITDORF MAGNETOS in performance cannot be beaten—they give a hotter spark at slower speed than any other make of magneto.

And distinct features in SPLITDORF MAGNETOS are not wanting to place them in the front rank where rugged service is required—where the ignition can always be depended upon—where the fat spark is always obtainable.

In the detail of brush holder and cable connection—vital in the stress of road going under bad weather conditions—the SPLITDORF is supreme.

The cable is easily detachable and a skirted terminal plug makes a waterproof connection, the disassembling of which is simplicity itself. Here, there is no special screw driver required, the terminal plug being removable without touching the brush-holder, which, however, is itself easily detached yet thoroughly waterproof.

SPLITDORF MAGNETOS are proof against short circuits—their workmanship and service are guaranteed.

"New ignition for old" is a special exchange proposition of great interest to every owner of a gasoline motor that is not equipped with SPLITDORF up-to-the-minute ignition. Save time and money and write or call for particulars today.

Your oil must reach *all* friction points

The friction points in a steam engine are reached with lubricants through special mechanical appliances, and separate oil cups.

In the motorcycle motor, they are all reached through one lubricating system.

Your motor, therefore, requires:

An oil whose "body" or thickness is suited to your feed system —an oil that will properly feed to all the friction points.

If you use an oil whose "*body*" is unsuited to your feed requirements, or whose lubricating *qualities* will not properly withstand the demands of service, you will get one or more of the following results:

(1) Escape of the compression and explosion past the piston rings.

(2) Unlubricated cylinder walls at the upper end of the piston stroke.

(3) Imperfect lubrication of many of the bearings.

(4) Excess carbon deposit. (Due to the oil working too freely past the piston rings and burning in the combustion chamber.)

(5) Excessive oil and fuel consumption.

(6) Worn wrist pins.

(7) Unduly-rapid deterioration in your motor.

(8) Loose bearings.

(9) Noisy operation.

In different motors, the many parts differ both in measurement and construction. No one oil can possibly meet the feed requirements of all motors.

To establish a sound guide to correct lubrication we have therefore taken a step of the utmost importance to the motorcyclist.

Each season we carefully analyze the motor of each make of motorcycle.

Based on this analysis, and on practical experience, we specify in a lubricating chart, printed on the right, the grade of Gargoyle Mobiloil we have found best suited to each of the various models.

This chart represents the professional advice of a company whose authority on scientific lubrication is unquestioned the world over — the Vacuum Oil Company.

If you use oil of less-correct **"body"** *or of lower lubricating* **quality** *than that specified for your motorcycle, incomplete or inefficient lubrication is certain to follow. Unnecessary friction, and ultimate serious damage must result.*

We will mail on request a booklet containing our complete chart together with points on lubrication.

GARGOYLE

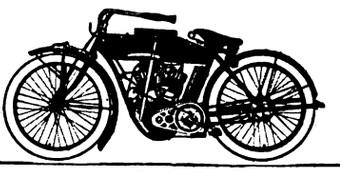
Mobiloil

A grade for each type of motor

The various grades, refined and filtered to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

They are put up in 1 and 5 gallon sealed cans, in half-barrels and barrels. All are branded with the Gargoyle, which is our mark of manufacture. They can be secured from all reliable garages, automobile supply stores, and others who supply lubricants.



Correct Lubrication

SMOOTHEST OPERATION | MOST POWER | FEWEST REPAIRS | LONGEST LIFE

Explanation. In the schedule, the letter opposite the motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." The recommendations cover all types of the same make unless otherwise noted.

THE DEPENDABLE DAYTON

The letter below is another confirmation of our claims of the Dayton superiority.

The Davis Sewing Machine Co., April 18, 1913.
Dayton, Ohio.

Gentlemen:—

Having ridden all standard makes of motorcycles for the past five years and feeling that I am in a position to express an opinion, I wish to say that the **DAYTON** Motorcycle which I have been using in Service of the Hospital Corps, O. N. G., during the flood period in Dayton, O., has given perfect satisfaction in every respect under most trying conditions of heavy mud and water, displaying wonderful power on the hills and a "never say die" spirit of taking you "there and back." The **DAYTON** is the most powerfully constructed and the smoothest running machine I ever had the pleasure of riding.

Very truly yours,
WM. S. WOODROW,
1560 Northington St., Columbus, Ohio,
2nd Field Hospital, O. N. G.

Excelsior Enjoyment

At last Spring is here. All the enjoyments you anticipated will be realized if—and this "if" is important—*you own an Excelsior Auto-Cycle.*

The "X" takes you and your friend wherever you want to go without the least bit of fatigue. And that's a big point.

There's no use in planning a picnic, fishing trip or outing and arriving on the scene all out of sorts.

Excelsior Comfort

One reason for the "X's" unequalled comfort is the Kumfort Kushion Seat Post. This suspends the rider's weight between two adjustable springs so designed that it eliminates the recoil as well as the shock of the bump.

Excelsior Control

The Excelsior is *always* under the control of the rider; absolutely. The clutch on the "X" is operated by means of positive steel rods and forged connections applied to the left hand grip and is firmly locked in or out of gear by a simple twist of the wrist.

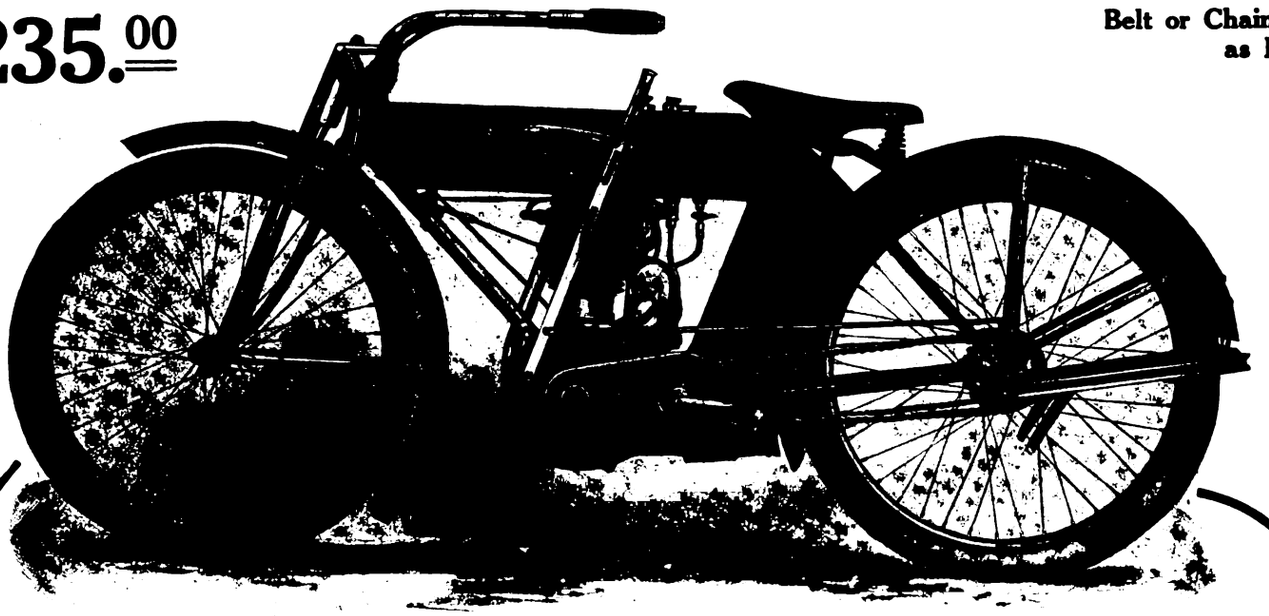
$235.00

Belt or Chain Drive as Desired



Be the Lucky Man in Your Territory

We have decided to establish a few new selling agencies for the "Black Hawk" in good territory which is still open.

Not many, though, because we will not force our factory capacity, nor fail to live up to delivery agreements.

If you as a dealer wish to give your customers good, sound, honest motorcycle value, you will write us for agency propositions. If we get together on this, you will be sure to be the lucky man in your territory, as

The BLACK HAWK

has all the features that riders demand—its worth to the rider is far above the $235.00 price set upon it—and its worth to you is unquestionable, as you can sell the "Black Hawk" with the absolute assurance of pleasing your patrons and with the knowledge that the machine will give good service, month after month for years.

Read the star features of the "Black Hawk" and you will learn why this marvel of motorcycle construction not only sells itself, but that every machine sold sells another, which means increased business, increased profits to you.

Booklet, terms, etc., upon request.

Write us while your territory is still open.

Trade Mark

BLACK HAWK

BH

Star Features That Sell the "Black Hawk"

In showing the "Black Hawk" to a customer, all that will be necessary to make a sale will be to point out that this motorcycle looks better, acts better—is better—and yet the price is only $235.00. For instance:

If the rider wants speed, the "Black Hawk" has it.

If the rider wants power, he gets enough to take him up the highest hills, over rocky roads, over sandy stretches—through mud or snow—or anywhere he wants to go—and then have some in reserve.

If the rider wants riding comfort, the "Black Hawk" beats them all with its Spring Seat Post and Spring Fork which cannot bottom. The low center of gravity adds greatly to its ease of handling. If the rider wants appearance, the "Black Hawk" stands way above the rest. Straighter, neater, more graceful lines, have never been seen even in the highest priced automobiles.

That's speed, power, comfort that can't be beat. And when you come to figure in the Mechanical Oiler, automatic in action—which answers the lubricating problem—the Simple Grip Control, Free Engine Clutch in rear hub—which makes the rider master of the machine at all times—you will admit that the "Black Hawk" has it on any other motorcycle that ever came out of a factory.

If you are looking for a motorcycle that won't disappoint you or the rider, get the agency for the "Black Hawk"—it will pay you.

Prest-O-Lite
For Motorcycles

Test It Out on Your Machine

Don't deprive yourself of the pleasure and safety of night riding with Prest-O-Lite.

You're missing a lot by trifling with troublesome, unreliable gas generators, when Prest-O-Lite Service costs you no more, usually less. Ask any experienced rider.

With Prest-O-Lite you have a brilliant, reliable light that turns on and off like a gas jet. The flame is always steady, no matter how rough the road.

Many times worth its price

Don't consider the price you pay for Prest-O-Lite as money spent—but as an investment. Remember that Prest-O-Lite never becomes second hand. It is in such universal use and demand that it can always be sold for about what you pay for it.

$10.
With gauge.

Trial costs you nothing

We are so sure that you will find Prest-O-Lite indispensable that we make you this proposition.

Put a motorcycle Prest-O-Lite on your machine. Use it for thirty days and nights. Test it out on every kind of road, for city driving and country road work. Then if you find that you can do without it, the test won't cost you a cent. Can you afford not to make this trial?

Ask your dealer or write us.

The Prest-O-Lite Co., 246 East South Street Indianapolis, Indiana

Canadian General Offices and Factory, Merritton, Ont.

Exchange Agencies Everywhere

To Dealers—There are five times as many motorcycle Prest-O-Lites in use today as there was one year ago. Are you getting your share of this business?

Every Fellow Who Rides A Motorcycle Should Have:

For Her Sake

The Rogers Side Car

What about Her this year? Is she going to enjoy to the fullest extent your motorcycling pleasures? Have you taken her comfort and convenience into consideration?

If you haven't—you should—now. Don't appear selfish.

Make this a season of greatest delight for Her by the purchase of a **Rogers Motorcycle Sidecar.** Thousands of motorcyclists this year are equipping their machines with this source of pleasure for another.

When she rides in a Rogers she will be seated by your side wtih a clear vision ahead. She will not be subjected to the embarrassments and discomforts of "back seat" riding.

The Rogers **looks** and **rides** like a high-priced automobile. Its beauty of design is attracting nation-wide attention. It is not a **box** or a **chair.** It is a miniature automobile body. Extremely roomy. Long, resilient springs, luxurious seat and trimmings insure perfect riding ease. Constructed to maintain perfect alignment and give continuous service. No upkeep. Write for further particulars at once.

Price $85.00

For His Sake

The Sabo Motorcycle Lock

Every motorcycling season great numbers report to the police authorities throughout the country the theft of their motorcycles.

It's going to be the same old story this year.

Are you going to leave yourself open to the **theft** of **your** motorcycle?

There is no reason why you should.

There is a way of insuring yourself against loss and the worry of possible theft for a nominal expenditure.

Buy a Sabo Motorcycle Lock and Be Safe

Thousands of motorcyclists endorse the Sabo. It's a **midget** in **size** but a **giant in strength.** Your equipment is not complete without it. You can carry it in your pocket or tool kit. Once the Sabo snaps on your motorcycle it is safe from thieves and joy-riders. It locks your machine securely to the stand. It cannot be **even wheeled away.**

Take this precautionary method at once. You never know when someone has singled out your machine. Don't wait.

Ask your dealer for the Sabo Lock. If he hasn't it, send your order to us and we will forward the Sabo at once.

Price $1.25

For Everybody's Sake

The Aermore Exhaust Horn

As a motorcyclist you have an obligation to the public on foot, to motorists and fellow motorcyclists.

You must give warning of your approach by a thoroughly effective signal. But remember that a signal that terrifies by its sound only increases the peril of those you are trying to warn. It drives them **into danger** instead of **away from it.**

There is one **courteous, friendly, musical way** to give notice of your approach—

The Aermore Exhaust Horn

The Aermore Warning is always distinct and musical. Four melodious notes blend in harmony. Only self-cleaning exhaust horn made. Cannot clog. Easily attached to any motorcycle.

Ask your dealer to demonstrate the Aermore to you. If he hasn't it, write direct to us, enclosing your order and we will send an Aermore Horn. If not satisfactory, we will refund your money.

8 inch size—especially constructed for motorcycles.

Price $7.50

Write For Free Literature Today

Let us tell you more about the Rogers Side Car, the Sabo Lock and the Aermore Exhaust Horn. Write to us today and we will send you instructive and interesting literature on these three leaders in their field.

If you are a dealer, write and inquire about our unusual plans for greatly increasing your business.

THE MESINGER SUPERBA

If the Name "Mesinger" Is On Your Saddle Your Riding Comfort Is Assured

It makes no difference which models of the Mesinger Family you ride, whether the Superba, the Standard or the Cavalry, you will find supreme comfort in each of the three.

Mesinger saddles are built for absolutely perfect service. This is no idle statement. When we say perfect service we we mean that Mesinger Saddles furnish the maximum of comfort, durability and strength.

The saddle that you should specify is the saddle that gives you the same unvarying, velvety riding ease whether on boulevards and well-paved roads or over chuck holes, deep ruts, "thank-you-marms," and other unpleasant touring features. That service is always afforded by the MESINGER saddle.

"Ask the Rider and Watch Him Riding."

Standard

In Name and Quality

Never has there been a truer saying than the time-worn old adage, "It's the little things that count." And it is the degree of attention paid to these "little things," that determines oftimes the success or failure of a machine to "get across."

Wise manufacturers are equipping with Diamond "E" Spokes and Standard Pedals because they are quality goods—because they reduce the number of repair shop trips for the rider—because farsighted manufacturers realize that a motorcycle's weakest points are its strongest—and it is that infinite attention to detail which bespeaks perfection.

The dealer who looks ahead will stock heavily with Standard Pedals and Diamond "E" Spokes and Nipples. The motorcycles that are not so equipped will inevitably come to his shop for replacements and it is up to him to sustain his reputation for high-grade repair work by fitting Standard parts.

Everyone knows the superiority of Standard No. 3 Pedals, their deep, soft rubber cushions, the interchangeability of the rubbers, and the thousand and one other good features that are not found in other pedals. The feet cannot slip no matter how rough the going. And the perfection of Diamond "E" Spokes is proverbial.

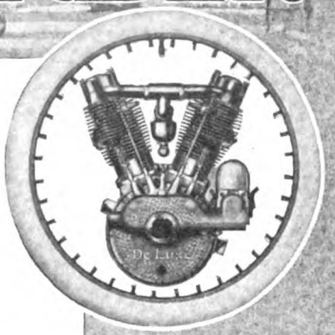
MR. MOTORCYCLE RIDER:



The joy of riding is enhanced when you ride a DE LUXE Motor equipped motorcycle.

Because there are four notable features of DE LUXE Motors:

SILENT CLEAN
FAST POWERFUL

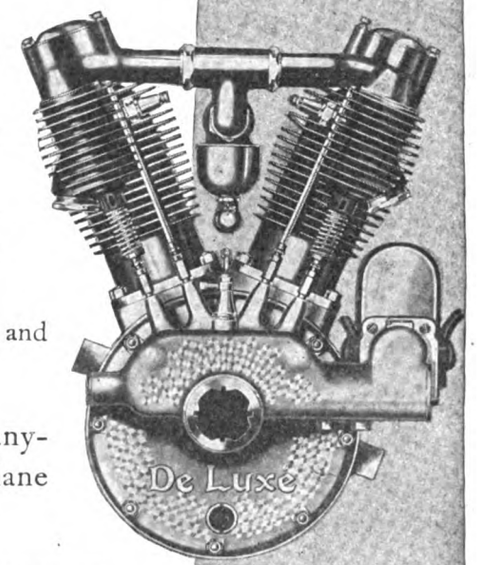
De Luxe Motors
The Heart of the
Motorcycle

SO SILENT—that you almost forget that you have a motor running under you. It is like riding in a Pullman.

SO FAST—that you can pull away in an instant from any of your companions, and stay ahead of them.

SO CLEAN—that when you return from a run, your motor may be covered with gray dust, but will not look as if it had not been cleaned for a month.

SO POWERFUL—that you can climb the steepest hills and pull through the deepest sand, where others walk.



DE LUXE Motors have done more than anything else to elevate motorcycling to the high plane where no apology is necessary for it.

You cannot afford to be without these advantages, so choose a DE LUXE Motor equipped motorcycle and be a year ahead of the others.

United States Tires

WHAT KIND OF A TIRE DO YOU WANT?

Pick out the features you want to find in the tire you buy. You want generous mileage, an effective non-skid tread, protection against rim cutting, ease of manipulation and security of fastening.

Measure up this ideal tire against every other tire on the market and then compare it with United States Tires.

You will find United States Tires combine all these identical features of your ideal tire in a way that no other tire on the market approaches.

United States Tires yield an average mileage from 25 to 50 per cent above the highest point ever reached by any tire maker previous to the organization of the United States Tire Company.

In the United States line you can find non-skid treads to suit every possible kind of service—Nobby and Chain treads are the most famous and widely used non-skid tires on the market today.

Rim cutting is a rarity with users of United States Tires.

United States Tires are accurately sized and are extremely flexible, insuring absolute security of fastening together with ease of manipulation.

In fact, if you were to have a tire built to your order it would be difficult for you to specify a single desirable feature that you won't find today in United States Tires.

Big Meetings Mark Close of F. A. M. Lecture Tour

On Final Leg of 13,000-Mile Circuit Director Sauer Finds Club Programs Featured by Parades, Banquets and Rousing Debates and More State Organization Booms are Launched—Addressed Clubs in Thirty-Eight Cities From Coast to Coast.

HAVING traveled nearly 13,000 miles and delivered his lecture on "The Motorcycle and The F. A. M." in thirty-eight cities, in all parts of the United States, Chairman J. Leo Sauer, of the F. A. M. Legal Action Committee, and one of the directors of the national body, concluded his long journey with a meeting under the auspices of the New Jersey M. C. in Newark, N. J., Tuesday night. Success even beyond his expectations has attended all of the meetings held during the past fortnight in the following cities: New Haven, Hartford, Boston, Rochester, Buffalo, Cleveland, Detroit, Toledo, Milwaukee, Indianapolis, Louisville, Cincinnati, Pittsburgh, Elmira, Philadelphia and Newark. Several hundred additional memberships were handed to the F. A. M. representative in these cities. Clubs were organized, affiliated or started towards affiliation in Hartford, Boston, Painesville, O., Milwaukee, Greencastle, Ind., Louisville and Corning. Steps have been taken having in view the holding of State conventions this spring or summer in Connecticut, Massachusetts, New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin and Kentucky, in addition to about a dozen other States in the South and West previously visited by Mr. Sauer. A better understanding of the objects and purposes of the F. A. M. has been obtained by scores of clubs and thousands of individual riders in every State where the motorcycle has achieved popularity.

Mr. Sauer reports that he was surprised to find many evidences of the fact that the Federation's work in behalf of its members and the sport in general was not as well known or as thoroughly understood as it should have been. On the other hand, he discovered practically everywhere a disposition to cooperate with the national organization and was pleased to note that his suggestion to organize the various states aroused enough enthusiasm to insure the carrying into effect, at once, in all of the big states and many of the small ones, this important provision of the F. A. M. constitution and by-laws. In this connection, Mr. Sauer suggested that the secretaries of the different clubs in each State get into touch with one another and have appointed a State Committee consisting of one member from each club, confer with the F. A. M. State Commissioner to select the date and place of the State Convention, and arrange for a State Tour or Endurance Run and a State Race Meet. Mr. Sauer suggested that these State Conventions be planned along the lines of the National Meet in order to afford to F. A. M. members in each State an opportunity to participate in the government of the Federation, to elect their State Commissioners, recommend their State Referees and generally conduct their State affairs to their own liking. He explained that State autonomy or self-government was already provided for, and it simply remained for the states to organize so as to be in position to exercise the privileges to which they are entitled under the F. A. M. Constitution. He added that the ultimate aim, when a sufficient number of states had been organized, was to have the National Assembly consist of State delegates chosen by a vote of club delegates at each State Convention. Mr. Sauer finally urged that arrangements be made, if possible, to hold the State Conventions not later than July 10, and that an effort be made to elect delegates who are not only capable and representative, but who, wherever possible, are willing and in position to attend the National Meet in Denver.

In this connection, it is more than probable that the date of the Denver meet will either be advanced one week so as to open July 21, instead of the 28th, or it may be put back to the third or fourth week in August. The matter is now before the directors, and their decision will be announced as soon as the question is finally determined. The present dates conflict with other programs due in July.

Herewith follow stories of Mr. Sauer's meetings, as sent in by MOTORCYCLE ILLUSTRATED correspondents in the cities visited by the F. A. M. representative during the past two weeks.

TO ORGANIZE STATE

ROCHESTER, N. Y., April 17.—In the handsome club rooms of the Rochester Motorcycle Club, Chairman Sauer, of the Legal Action Committee of the Federation of American Motorcyclists, delivered his lecture on "The Motorcycle and the F. A. M." to a large and attentive audience here tonight. The Rochester club has a membership of about two hundred and is one of the most thriving motorcycle organizations in the country. There is a good quarter-mile track here, and those of the club who have the speed bug are afforded plenty of opportunity to indulge in their inclination that way.

The Rochester boys took very kindly to Mr. Sauer's suggestion that they participate in the organization of New York State. Former District Vice-President Dr. La Salle was present at the meeting and assured the F. A. M. representative of his assistance to the end of arranging for a State Convention to be held in some central point selected by a committee representing the various clubs in the State.

Although there is no local licensing ordinance in Rochester, the club members here are almost unanimous in their opinion that the Federation should support a State licensing bill. Mr. Sauer explained that the F. A. M. had heretofore fought all the legislation proposed in this state because no satisfactory bill had as yet been introduced at Albany. He promised that he would arrange in the near future to take a vote of F. A. M. members in the State with a view to ascertaining the sentiment of the riders in this connection.

Although the Rochester club is affiliated the officers promised the F. A. M. representative that it would be their endeavor to make the organization a hundred per cent. club as soon as possible.

PARADE IN BUFFALO

BUFFALO, N. Y., April 18.—F. A. M. Legal Action Chairman Sauer was given a hearty reception upon his arrival in this city. At night, in a sidecar, followed by one hundred

Digitized by Google

and twenty-five riders, the F. A. M. representative was escorted through the principal streets of the city to Johnson Park Hall, where the meeting was held. The occasion brought together the largest number of motorcyclists ever seen in the streets of Buffalo at one time, with the exception of the motorcycle parade held in conjunction with the Buffalo F. A. M. National Meet. Rainy weather kept away several score riders who had arranged to come into the city from Batavia, Lockport and other neighboring towns. The meeting was presided over by President Otto Peters, of the Buffalo Club, and was featured by the presentation of a gold club pin to Mr. Sauer by former President Wm. G. Schack.

As in Rochester, Mr. Sauer's proposal to organize the State was enthusiastically received, while the members of the club also expressed themselves as being in favor of a licensing law covering the entire State. They called attention to the fact that in a little town outside of Buffalo an effort had been made to impose a $1.00 license and that the attempt to enforce it had caused a lot of annoyance to riders in Buffalo and other cities in the vicinity. The Buffalo Club has a membership of one hundred and twenty-five and is affiliated with the F. A. M. This organization will also be made a hundred per cent. club.

BANNER MEETING IN CLEVELAND

CLEVELAND, Ohio, April 19.—Thanks to the efforts put forth by Local F. A. M. Commissioner McConnell and the other hustling officials of the Cleveland Club, the meeting here tonight was one of the most successful which Chairman Sauer, representing the F. A. M., had the pleasure to address in his motorcycle educational circuit of the country. The Cleveland riders turned out over two hundred strong to attend the meeting, held in the Hollanden Hotel, and, which is even more to the point, through Commissioner McConnell, turned over a big batch of new memberships. Mr. Sauer expressed himself as more than pleased with the work which had been done and was being done in Cleveland, and also stated that unless the cities further on in his itinerary had a big surprise in store for him, Cleveland would win the membership cup "in a walk."

The meeting was presided over by Mr. M. F. Bramley, the first speaker being Harry Vail, one of the staunchest promoters of the good roads movement in Ohio. He spoke of the upkeep of the highways and explained how they could be kept in good repair. He suggested that motorcyclists report to the proper officials any cases coming to their attention of roads requiring repair, and also that the club could make itself a big factor by demonstrating its strength to the authorities. He was surprised at the attendance at the meeting and gave the assurance that with nearly five hundred motorcycle clubs distributed throughout the country, an organization like the F. A. M. was in position to do a lot of good work to the end of forwarding the good roads movement.

Mr. Vail was followed by Mr. Sauer, who delivered his address on "The Motorcycle and the F. A. M.," and afterwards opened the meeting for a general discussion. Mr. Sauer answered a number of questions having to do with the organization of the Middle Western board track circuit. He explained that it was his opinion that the arrangements regarding machines, as made by the board track owners, were such as to insure a fair deal to every rider. He stated that he knew of no other way in which the mechanical inequalities of motorcycle competition could be eliminated.

Loraine, Elyria and Painesville were well represented at the meeting. It is only fair to say that during his tour of the entire country, Mr. Sauer had found no more enthusiastic and energetic a worker than Local Commissioner McConnell. For months Mr. McConnell has been working like a beaver and achieved results which have made him very popular with the boys in this part of the country.

After the meeting Mr. Sauer was the guest of L. J. Mueller, representative of the local Indian Club. Those present in addition to Messrs. Mueller and Sauer were E. H. Tracy, F. Blackwood, Len Crandall, C. A. Schmitt, of the Indian Club; L. A. Deering, of the United States Tire Company; W. MacTammany, of the Goodyear Tire & Rubber Company; M. F. Bramley, of Luna Stadium, and Oron Entres, of the Cleveland *News*. The following morning the F. A. M. representative was taken out to Luna Stadium and had an opportunity to witness in actual operation the motordrome circuit plan of training new riders.

THE TOLEDO MEETING

TOLEDO, Ohio, April 20.—Owing to a misunderstanding as to the time of Chairman Sauer's arrival, a large number of local riders were disappointed here this afternoon. Plans had been made to escort the F. A. M. representative from the railroad station and about one hundred and fifty riders had gathered to participate in a motorcycle parade through the city streets. The Toledo meeting, not having been on the original schedule, had been hurriedly arranged and some of the correspondence of the club's officials had not reached the Legal Action Chairman, who did not arrive

President Otto Peters, of the Buffalo M. C.

in Toledo until 5 o'clock, being of the impression that an evening meeting had been scheduled. Although President Weiler and the other club officials as well as Mr. Sauer were sorry that the plans for a big meeting had gone astray, an evening session was hastily arranged. Although the attendance was not what it would have been had the original arrangements been carried out, the meeting was a good one and no little interest was evinced in the proposal to hold an Ohio State Convention. State Commissioner Campbell followed Mr. Sauer and urged cooperation to the end of making this convention a success. The indications were that the Toledo Club can be counted upon to help Cleveland and the other cities in Ohio to make and carry out arrangements for a very successful State Meet.

IN DETROIT

DETROIT, April 21.—In the headquarters of the Detroit Wheelmen, the old Detroit Club being practically extinct, a meeting attended by nearly one hundred riders was addressed by F. A. M. Representative Sauer this evening. Detroit has a live dealers' association, and those who sell motorcycles in this town were well represented.

Among the matters called to the attention of the F. A. M. representative was that of the difficulty attending touring in Canada by American riders. It was claimed that an American going into Canada was compelled not only to pay a Canadian license, but also to bond his machine with the customs officials. There was some question, however, on this score, as several of those present claimed that this was not necessary. Mr. Sauer urged that the club ascertain the facts in the premises, so that something could be done to simplify the situation.

ANOTHER AFFILIATED CLUB.

MILWAUKEE, April 22.—The chief result of the large and most enthusiastic meeting addressed by Chairman Sauer here tonight was the organization of a new club and the election of temporary officials and committees. After Sauer had delivered his address on "The Motorcycle and the F. A. M." he urged the organization of an affiliated club under conditions which would insure its success and interest practically all the riders in the city. It was accordingly voted to organize a club to be known as the Milwaukee M. C., to affiliate with the Federation of American Motorcyclists on a hundred per cent. basis, the initiation fee of $2.00 to include F. A. M. membership. More than seventy-five handed in their names and addresses as charter members of the club. It was decided to make the dues 50 cents a month. The following temporary officials were chosen: President, H. E. Baldwin, F. A. M. State Commissioner; Secretary-Treasurer, Emil Schoene; Organization Committee, G. H. Hamilton, C. A. Carpenter and Frank B. Rodgers; Tour Committee, S. Lacy Crolius, Chairman; "Peach" Snyder and Alfred Trupke. A tour is planned for Decoration Day, and the committee was instructed to rush arrangements.

There is already one club in Milwaukee known as the Cream City Motorcycle Club, with a membership of about thirty-five. Representatives of this club were present at the meeting and gave assurance that they would be glad to join with the newly organized Milwaukee M. C. as soon as the latter club had demonstrated that it was deserving of their support. There is hardly any question about this, as the Milwaukee Club has been organized under most favorable auspices and promises to become one of the leading clubs in the country.

The meeting was presided over by State Commissioner Baldwin. At Mr. Baldwin's right sat Director and former President G. H. Hamilton, who delivered an interesting talk and in particular pointed out the ways and means to the proper organization of a club. He assured the boys that the trade in Mil-

Digitized by Google

waukee would contribute to the success of the new venture.

Before and after the meeting, Sauer was entertained by the Harley-Davidson officials, including Walter Davidson, Bill Harley, Bill Davidson, Arthur Davidson, S. L. Crolius and Frank B. Rodgers.

LANTERN PARADE IN INDIANAPOLIS

INDIANAPOLIS, April 23.—A lantern parade, in which one hundred riders took part, featured Chairman Sauer's visit to Indianapolis. Before his lecture was delivered at Morrison Hall, the Indianapolis Motorcycle Club members and others made an impressive showing with a parade which trailed down the business streets and out through the residential section. Mr. Sauer and F. I. Willis, both F. A. M. directors, headed the procession in side cars, and when the parade ended at the Circle, they selected the three best-decorated motorcycles. First prize went to Arthur Klotz, riding an elaborately trimmed DeLuxe, second prize to F. S. Miller's Indian and sidecar, while Oscar Hammell took third prize with a twin Indian.

The meeting in Morrison Hall was opened by President O. F. McClain, of the Indianapolis Motorcycle Club, who introduced Mr. Willis, who in turn introduced Director Sauer.

The fact that there are 11,000 motorcyclists in Indiana, and of that number 1,100 F. A. M. members, was brought out by Mr. McClain This proportion, said Sauer, is about the same as in other states, although it should be much larger. During the meeting twenty-eight new members were enrolled.

An interesting story was told by the F. A. M. traveler, in consequence of some remarks made by F. I. Willis. "Mr. Sauer hails from New York," said Willis, "but he does not believe that the world ends at the Harlem river." Mr. Sauer said he had the realization of the vastness of this country thrown upon him some time ago when he was out in a jerkwater town in Washington, where paper currency is seldom used. "I stepped into a little store to make a purchase," said Sauer, "and I laid down a $5 bill. The clerk looked at me in wonder and at the bill with suspicion. He took the currency back to the boss of the establishment, and I overheard the latter say, 'Well, I reckon that bill is the same as money. They tell me they have a lot of them *back east* in Denver.'"

BANQUET IN LOUISVILLE

LOUISVILLE, April 24.—Chairman Sauer, of the F. A. M. Legal Action Committee, was tendered a banquet at the Old Inn here tonight, State Commissioner Dr. Horine acting as toastmaster. Practically all of the dealers were gathered about the speakers' table. In response to Mr. Sauer's suggestion, a new club to be known as the Louisville M. C. was organized and affiliated on the spot. The new organization enters the F. A. M. as a hundred per cent. club. Temporary officers were elected

After his address Mr. Sauer was asked and answered a number of questions. In this connection, as in many other cities, the F. A M. representative took occasion to remark that he was rather surprised to find so much trade feeling in many places. Most of the dealers in all parts of the country had grown out of their once narrow environment and, as a rule, regarded the situation from a liberal point of view. But even where the dealers are working together in harmony, Mr. Sauer stated that he sometimes found strong trade feeling to exist among the riders themselves. He said that he could not understand why this should be, as there was no reason in the world why the kind of a machine a man was riding should be considered in measuring the popularity of the rider. Although this should be self-evident, said the F. A. M. director, he was some times almost ashamed to find riders of different makes of machines unable and unwilling to cooperate. He expressed gratification over the fact that this

Director Sauer, Commissioner McConnell and Booster Rush, in Cleveland.

condition of affairs did not exist in Louisville and stated his belief that in a year or two hence, it would not be found in any other cities in the United States.

WITH THE CINCINNATIANS

CINCINNATI, April 25.—A rather unusual situation involving the attitude of two local clubs toward one another made it advisable for State Commissioner Jesse Campbell, in Mr. Sauer's behalf, to arrange for a special F. A. M. meeting in this city tonight. For some time Director Sauer had been in correspondence with the Queen City Motorcycle Club and also the Indian Club, both of which are affiliated with the Federation. In consequence of certain competition events, some bitterness between the two clubs had been engendered, so that it was impossible to arrange for a meeting under the auspices of either club that would be attended by the members of both clubs.

At Toledo Mr. Sauer met State Commissioner Campbell, who offered to go to Cincinnati in an endeavor to straighten out the situation here. Mr. Sauer had authorized Mr. Campbell to take any action he thought best and the latter came to the conclusion that the most politic thing to do would be to arrange for a meeting in a neutral place. Accordingly the Hotel Metropole was selected. Both clubs were very well represented, there being an attendance of nearly one hundred, and while the F. A. M. delegate did not attempt to dictate how the local clubs should adjust their differences, he strongly urged their burying the hatchet, as that would certainly be better for both clubs as well as the Federation. Mr. Sauer stated that under ordinary circumstances in a city of Cincinnati's size, one club would be sufficient. If, however, it seemed impossible to bring about an amalgamation there was no good reason why, in the interest of both local organizations and the sport in general, a better feeling could not be encouraged. As representative of the national body, he expressed the hope that every effort would be put forth to bring about a better understanding between the officers and the members of the two clubs, and he offered his services as well as those of the F. A. M. to that end.

The Cincinnati meeting, Mr. Sauer said, was one of the best of his itinerary. He added that it was unfortunate that such a fine lot of fellows could not come to an agreement in some sort of a proposition that would be beneficial to both organizations. While an adjustment of all the old differences cannot be expected immediately, there is every reason to believe that the situation has been at least somewhat improved. Having heard both sides of the story, the F. A. M. representative was satisfied that the responsibility was about equally shared and that an ultimate realization of this fact would in the end be productive of more peaceable relations.

THE PITTSBURGH BANQUET

PITTSBURGH, Pa., April 26.—In spite of the rainy, inclement weather, fifty-seven enthusiastic Pittsburgh motorcyclists (a characteristic Pittsburgh number made famous by the Heinz products) gathered at the Fort Pitt Hotel in the evening to greet J. Leo Sauer, Chairman of the Legal Action Committee of the F. A. M.

Kenneth Banks made an admirable toastmaster, and was responsible for some timely, as well as humorous, remarks. He briefly reviewed the evolution of the motorcycle from the crude motor-driven bicycle with the "seat sprouting out of the top of the engine" to the perfect machine of today.

It was necessary for Mr. Sauer to catch the 10:45 train to Elmira, by way of Buffalo, so he had to condense his remarks somewhat. He discussed in detail the newly formed Touring Bureau of the F. A. M., the work of the Legal Action Committee, and the attitude of the F. A. M. toward racing.

The Touring Bureau has been in existence but six months and already has many hundred routes and tours in various parts of the U. S. It is maintained for the benefit of F. A. M. members, and any rider contemplating a tour, should communicate with this Department of the Federation for information. Mr. Sauer requested local riders to send tours and routes to the Bureau, with landmarks and distances, conditions of roads, etc., for the benefit of other members

Mr. Sauer directed particular attention to the work of the Legal Action Committee. He told of the strenuous activities of the committee against drastic and unfair legislation in various portions of the country. He told of the efforts of certain legislators in various portions of the country to have the motorcycle placed in the same classification as the automobile, and taxed accordingly.

He brought up the question of a just tax for motorcycle, based on the relative damage wrought on the highways by the two wheelers and the autos, emphasizing the slight damage done by the motorcycle.

Mr. Sauer, in no uncertain terms, denounced the open muffler fiends and reckless speed maniacs—a minority class who bring the whole body of motorcyclists in disrepute. Incidentally, he told of being in a certain town on Easter Sunday, and said there was a "churchliness in the very air." The speaker frankly confessed to not attending church as often as he should, but said that everybody, no matter what his creed, certainly deserved to have their religious feelings respected. On this particular occasion, the streets were filled with apparently religious people, church-bound. According to Mr. Sauer, a "young person" on a motorcycle came tearing down the congested street, continually blowing his horn, his muffler wide open, manipulating the controls so as to produce an incessant cannonade of explosions in the muffler. "I observed with par-

Digitized by Google

ticular interest the faces of the church-goers and each and every one bore a look of extreme disgust. Ten or more motorcycles might have passed down the same street in a quiet and unobtrusive manner without attracting any particular attention, and it is hoodlums of this type who are in the main, responsible for drastic legislation."

Mr. Sauer said that the question of racing was somewhat out of his province, but that so long as there were different makes of machines and daring riders, there would always be rivalry and competition, and he believed in the sane regulation of such contests by a broad and fair governing body, to keep the sport clean, and to protect the riders against exploitation.

After Mr. Sauer's departure for the train, Toastmaster Banks made some further appropriate remarks. Among other things, he said that while riding to work the other morning, he became convinced of the fact that the Club needed a motto. Almost simultaneously, "F. A. M." came in his mind—"Fellowship Among Members." At present there is too much rivalry among members over the merits of their respective machines.

President Martin indorsed Mr. Banks' remarks, stating that it was all right to believe that your machine was better than the others, but to keep it to yourself.

Mr. Coulter, representing the Homestead M. C., voiced the belief that it would be much better to have a consolidation of all the clubs in the county, with a central location, to be known probably as the "Allegheny County M. C."

ELMIRA'S FINE SHOWING

ELMIRA, N. Y., April 27.—J. Leo Sauer, Chairman of the Legal Action Committee of the F. A. M., delivered his address on "The Motorcycle and the F. A. M." before the Elmira Motorcycle Club, several members of the Elmira Automobile Club and motorcyclists from nearby towns tonight.

President Harry D. Burgess presided over the meeting, and after Mr Sauer had completed his address called upon M. Doyle Marks, president of the Elmira Automobile Club, who maintained that the motorcyclists should devote more of their attention to good roads. He urged greater co-operation upon the part of the Elmira Motorcycle Club with the local Automobile Club, and extended an invitation to have the club participate in the coming run of the auto club.

Secretary Frank D. Pratt, of the Elmira Automobile Club, was the next speaker, and he dwelt upon what could be done in preventing pernicious legislation in the various State legislatures. Mr. Pratt has devoted much of his time to work at Albany, and has made two trips there within the last month to cooperate with autoists all over the State in preventing unreasonable legislation.

Dr. Frank W. Ross told of certain motor vehicle accidents in this city, and stated that he had thus far found no driver or rider guilty of carelessness. The fault is often with the pedestrian.

Ralph D. Webster, of the Eclipse Machine Company, one of the pioneers in the wheel business and formerly a prominent member of the League of American Wheelmen, was next called upon. Mr. Webster moved that a standing vote of thanks be extended Mr. Sauer, which was unanimously carried. Mr. Sauer acknowledged the vote in a few words of appreciation and stated that he would remember his visit to Elmira for many years to come.

During his stay in Elmira Mr. Sauer was entertained at dinner and supper at the home of Mr. and Mrs. Phay B. Rutan. The other supper guests were P. B. Rutan, Ralph Webster, J. C. Ferguson and F. S. Ellett, of the Eclipse Machine Company; President M. D. Marx, Secretary Pratt and Dr. W. F. Ross, of the Elmira Automobile Club, and L. V. Morse, secretary of the Elmira M. C.

After the meeting a big batch of F. A. M. memberships were turned over to Mr. Sauer, including the affiliation of the Corning M. C.

KEEN INTEREST IN PHILADELPHIA

PHILADELPHIA, April 28.—More than one hundred riders attended a most interesting meeting held under the auspices of the Harley-Davidson M. C. in their clubrooms at 1703 No. Thirty-third street this evening. The meeting was called to hear the lecture on "The Motorcycle and the F. A. M." as delivered by Chairman Sauer, of the Federation's Legal Action Committee. The opportunity was also used to introduce to the members of the club and numerous other riders, State Commissioner Marshall, recently appointed by President Patterson.

After having delivered his address, Mr. Sauer answered questions for nearly two hours, particularly bearing upon the classification of riders under the new rules. He explained that under the new classification, the mere fact that a man was connected with the trade did not make him a professional, but that if, being connected with the trade, he also rode on a track where the public was charged admission, professionalism would be the penalty. He explained that a private owner not connected with the trade could ride on any track and under any condition under the rules provided he did not compete for cash or ride against the professional. It seems that the new definitions of amateur and professional, respectively, had been misunderstood here as well as in other parts of the country, and Mr. Sauer said that he was glad to have been afforded an opportunity to explain the new classification.

More than fifty questions were asked during the evening, and they came from every possible angle. Among other things those present showed a keen interest in the F. A. M. representative's suggestion that the State of Pennsylvania be organized with a State Tour or Endurance Run and a State Convention and Race Meet.

The headquarters of the Harley-Davidson Club are situated in a good location opposite Fairmount Park, are prettily decorated and offer attractions to members in the way of a billiard table, bowling alleys, a fine piano, etc. The club has a goodly membership and is composed of boosters all the way through.

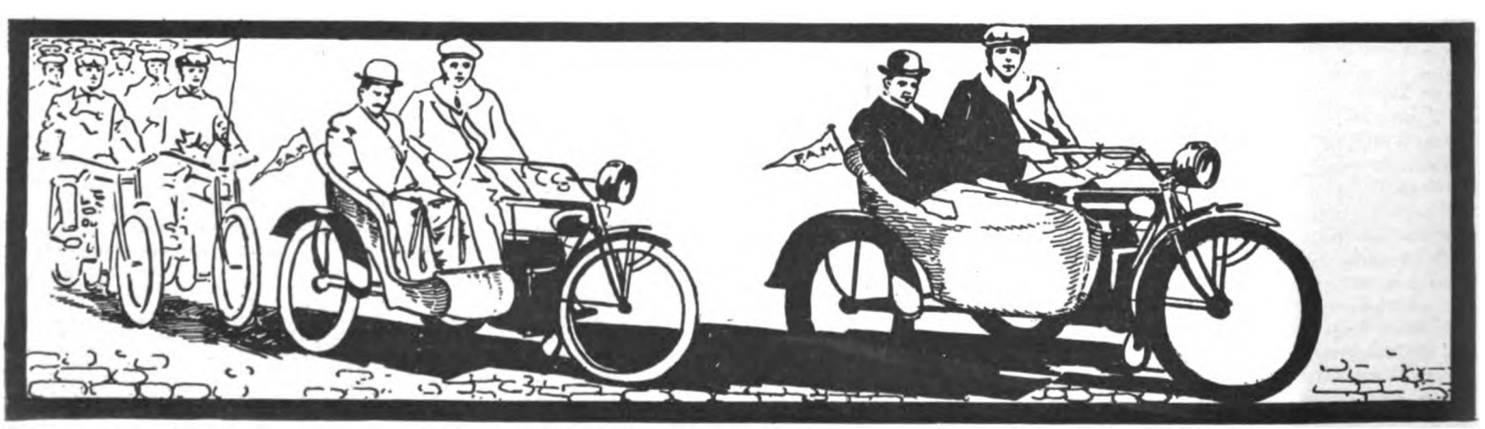
LAST MEETING IN NEWARK

NEWARK, April 29.—Before an audience of about fifty riders, Chairman Sauer addressed the last meeting on his F. A. M. lecture tour tonight. The meeting was held in the rooms of the Newark Board of Trade, and a number of visitors from the Oranges, Elizabeth and other cities were present. The friendliest of feeling towards the F. A. M. was shown, and the Legal Action Chairman was assured of the entire absence of even the slightest dissatisfaction with the Federation. The meeting was held under the auspices of the Affiliated New Jersey M. C., and was in charge of President Pascal.

At the request of several members, Mr. Sauer outlined in detail a plan for organizing the State of New Jersey. The New Jersey Club boys are anxious to take the initiative, and will take action at their next meeting to get in touch with the secretaries of the other clubs in the State to the end of selecting a convention city.

Although Mr. Sauer has completed his circuit of the country, he wishes it understood that he will be glad to address, at any time, any meeting of motorcyclists in or near New York City. In fact, he would appreciate being afforded opportunities to deliver his lecture under the auspices of any motorcycle club in Greater New York or, provided the distance is not too great, in New Jersey, Pennsylvania and lower New York State and New England.

The results of the membership and attendance contests, in both of which silver cups will be awarded by the F. A. M., will probably be announced in a few days.



Digitized by Google

LANDING the PROSPECT

DWIGHT · B · PANGBURN

LIKE all gall, which we are told is divided into three parts, brass, cheek and bluff; so all prospects are divided into three parts. Those who want a machine but haven't the money; those who have the money but don't want a machine, and those who have both the desire and the money but don't know what machine they want. Now I have belonged to the first and the last of these classes, and I have dealt with a good many dealers, and it is very clear to me that the action of the dealer has a great deal to do with whether a sale is made or not. Therefore I am going to tell about some of the experiences I have had with various dealers.

All prospects necessarily are not prospects at first. They belong to that class of people —which is growing smaller every day—who know nothing about motorcycles and consequently do not want one. I was in this class five years ago when a friend of mine bought a machine. Of course I took a ride and immediately moved up into the first class mentioned above. I wanted a machine but hadn't the price. Then, like the man who

. . . "went up and down
To seek a dinner in the town,
And looked the bill of fare quite through
To see what his six cents would do,"

I started going up and down and calling on all the dealers in the city (a place of 175,000).

WHY TACT IS A VALUABLE ASSET.

Right here let me say that the one thing a dealer needs more than any other is tact. The dealer who hasn't a good supply of it on tap may manage to make a living, but it will be pretty hard work; he had better start growing some at once, or get out of the business. A junk man in shirt sleeves and without a collar once entered a large metropolitan bank and walked up to the receiving teller's window.

"Is this where you start an account?" he asked.

"Yes," replied the man in the cage, with a smile of amusement, "but you see you have to have $100 to start one."

"I was minded to begin with $100,000," answered the junk man, and shoving his hand down into his pocket he produced a thick package of thousand dollar bills, which he showed to the teller and then took them to another bank.

The motorcycle dealer can turn away custom just as easily, and should always be ready to answer questions civilly and sensibly. I visited one dealer on my first round. He was in a rich neighborhood, and didn't seem to want to bother with me because I didn't have on a linen collar. However, I rather liked the looks of his machine so I stuck around and asked him a few questions. Finally I asked what kind of oil he recommended. He said that he had always found Eureka Sewing Machine oil an excellent one for bicycles, and that it would do for motors too. That was enough for me and I passed up all thought of his line. I found by inquiry that he had had the agency for that machine for over a year and hadn't sold a single one. Nobody would trust a company with such a man for its agent, yet in other localities that machine was one of the best sellers.

A DEALER WITH A BUSINESS HEAD.

Another way in which some dealers lose trade is by having their shops closed. I went five times to see one man before I found his place open. Every time there was a card in the corner of the door which said, "Back in fifteen minutes." Once I waited nearly half an hour but there was no sign of the dealer returning, so I left.

HUNT'S FAMILY OUTFIT

IN THE accompanying photograph appears Fred Hunt, the well-known Indian salesman, with Mrs. Hunt and the two bright youngsters who complete the family. Hunt is an ardent sidecarrist, and it is evident that he does not monopolize the family enthusiasm in this direction. He has made some long jaunts with his Indian and the Milford passenger attachment shown in the photograph, and has never had any road trouble worth speaking of.

The genial Hunt is now covering the states of New York and Pennsylvania for the Wigwam. He reports business brisk and states that there is a lively demand for sidecars. The Hendee Company announced some time ago that it would be ready to start sidecar deliveries April 1, and since that date shipments have been made regularly.

At length there was only one dealer in town that I hadn't called on. I went to his place. He acted as if he was glad to see me and asked what he could do for me.

"I am looking for a machine," said I.

"Are you ready to buy a new one right now?" he asked.

Now none of the others had taken the trouble to find out whether I was in line for a new machine or not. They simply showed the new models anyway, and the result in every case was that I went away without letting them know that a cheap second-hand machine was the best I could hope for, simply saying I would think it over. So I was struck by his sensible way of getting at the matter and said, "No, and I haven't even the price of a second-hand machine right now, but I certainly do want one."

"You look as if you could save up enough to get one," he said.

"I've tried," I answered, "but I go out with the fellows every time we get paid and there's never more than enough left to take me to the next pay day."

"I know what you want," he replied. "It's early in the season now, only the first of March. I have a man who is going to trade in a first-class machine about June first. You can save enough by that time to get it."

"But how?" I queried.

"This way," said he.

Then he brought out one of those little banks the savings institutions use.

"Take this," he said, "and put 50 cents in it every day from now to June first. If you do that faithfully from now until then, you'll have $45 and the saving habit, and I'll let you have the machine. You can pay the balance of the money in the same way."

So that was how I got my first machine, and the saving habit at the same time.

KEEP THE DEMONSTRATOR IN TRIM.

Now for the second class, those who have the money but don't want the motor. I have never been in that class, but I have seen several such folks landed and it was done in as many different ways. Such people can be reached by various kinds of advertisements, but the surest way is to get them to take a ride. Better results come if the dealer himself goes along to smooth out any little difficulties which might arise—and equally important, to pick out smooth roads for the first ride. Then, too, the demonstrator must be in good shape.

When looking about for a new machine I was once asked to ride a demonstrator.

"Guess I'll try Long Hill with it," I said.

"I'd rather you wouldn't today," said the dealer, "it isn't tuned up very well now. Wait till some day when it's running better."

Digitized by Google

Well, I took the ride, tried the hill and couldn't make it; do you think I bought that machine?

Another way to get those who think they don't want a machine is to have MOTORCYCLE ILLUSTRATED on file in the shop. Such scoffers usually come in with a man who wants something. While you are taking care of the one get the other to look at the advertising pages of MOTORCYCLE ILLUSTRATED. I have seen "those who came to scoff remain to pray" that their names be put on the order list as a result of such treatment, for next to taking a ride I know of no way of getting up enthusiasm more quickly than by looking at those pages. Anyone who looks them over gets the impression that motorcycles are a very live thing, that they have come to stay and are coming faster all the time, and that everybody is going to have one pretty soon. And about that time the reader finds that he wants one too.

THE DEALER'S PERSONALITY.

Another way of reaching such folks is to get others to talk them over. Sometimes this means splitting commissions, which should not be done, but more often it is cheerfully done by some enthusiastic rider. I firmly believe that the friend whose machine I first rode has been personally responsible for the sale of ten machines to five persons, and has never asked or expected any return for it. The last two of these machines were sold principally by his repeating in public—and emphatically—that a certain model had more improvements per square inch than anything else on the market.

After some time I graduated into the last class, above mentioned, those who have both the inclination and the money for a machine but are not sure what kind they want to buy. Again I began to go around to the dealers' places. I did as almost everyone else does, I looked in the windows first. And I judged a good deal by what I saw as to whether I wanted that machine or not, though I always went in and talked with the dealer too. Also I asked all my friends to tell me frankly what experience they had had with their machines. Finally the choice simmered down to two. As nearly as I could tell I would just as soon have one of them as the other. But there was a tremendous difference in the dealers. One was a clean-cut, straightforward man, always ready to answer questions civilly, no matter how foolish they might seem to him; a man who was willing to admit that there were other good machines on the market, but ready to prove to you that you got the most for your money in his. The other was the kind of a man who takes you off in a corner somewhere and talks in a very confidential way, even if there is no one else in the store. He holds on to one button of your vest the while and stands as close to you as he can. He concluded his first remark with the words,

"And that's the truth too, for I take after me father—I never tell a lie."

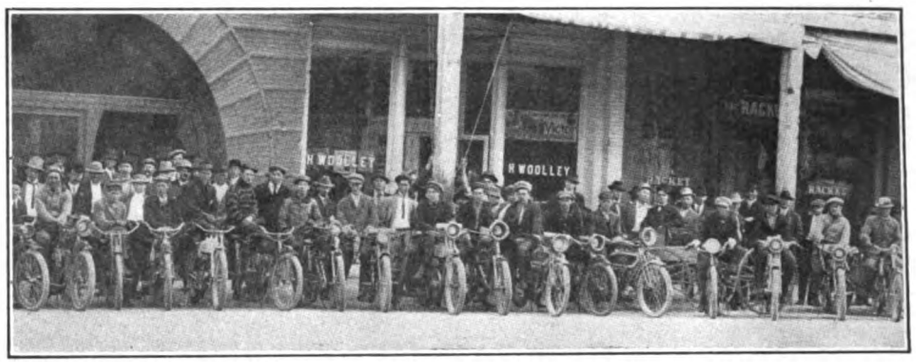
Do you wonder that I doubted him? Then the motorcycle fraternity of the place said that the first-mentioned man would give you a square deal, while the other would crook you if he could. Is it any wonder that I bought from the first man?

A BUSINESS BOOST IN DISGUISE.

One man who didn't know what machine he wanted was led to a choice in this way. The agent put a new machine in the front of the show window. During the night a heavy rain came up and beat through at the top of the window, spattering the new machine all over. The only thing to do was to take it apart and clean it thoroughly. When the dealer had it partly down he decided to go the rest of the way and spread the parts around in the window as a display. The prospect had been thinking of this machine but had decided against it because he was told it was not made well and would not stand up. He happened to pass by and saw the display. He went in and looked the parts over, and being a good mechanic he was struck with the fine workmanship to such an extent that he then and there purchased that very machine.

More dealers could use a card index system with profit. Many of them seem to have no particular way of keeping track of their business. When I was making my tours of the dealers only one ever followed me up, though all of them had my name. This particular man had a card index. He entered every prospect's name in it together with what he wanted, whether new or second-hand, twin or single, and about what price he was willing to pay. Also he listed every one to whom he sent literature, so that he could follow it up. When any one ordered supplies of any kind from him the order was forwarded at once and entered on the man's card. Thus he could tell at a glance just what kind of machine any one had, how long he had had it, what it cost, etc.; in short he could tell instantly just what any certain man's trade was worth to him.

VICTOR ROOS and Miss Grace Jones, of Omaha, Neb., devote a good deal of their time to making a Yale twin live up to its reputation, and the photograph herewith shows them on a recent jaunt. Miss Jones does not confine her road work to the tandem attachment and often makes trips on which she acts as her own pilot.



CLUB FOR YOLO COUNTY

AT a recent organization meeting of the Yolo County M. C., of Woodland, Cal., officers for the season were elected. J. A. Richter is president; R. W. Mullins, treasurer; E. H. Brendel, secretary; O. Fisher, captain; L. E. Hilderbrant, first lieutenant, and H. McGau, second lieutenant. The first club run was recently held to Guinda, where a dinner was served under the auspices of the Yolo County motorcycle dealers. After a short stay the riders returned to Woodland by way of Winters, making a total mileage for the day of 105. The riders shown in the accompanying photograph participated in this run.

ROAD PROGRESS IN COLORADO

MEMBERS of the new State Highway Commission of Colorado, which for the first time is composed entirely of business men, recently held their first meeting and elected J. M. Kuykendall chairman. The question of apportionment of the funds was discussed. In addition to $500,000 of the State's money the counties have made a special levy and have raised $1,000,000, and with this sum the board is planning to build 175 miles of roadway at a cost of $4,000 per mile, as connecting links in the present highway system. It is also planning to build 200 miles of additional roads, making a total of 375 miles during the year.

A vote of thanks was given the State Legislature, now in session, by the motorcycle and automobile clubs for passing the State Highway Bill. In addition to the work being done by the State, Denver will construct and improve the roads from the mouth of Mount Vernon Canyon to Genessee Park, while the city of Golden will improve the road from that city to Mt. Vernon. Colorado riders are also boosting for the proposed bill, presented in Congress by Representative Taylor, of Colorado, which proposed a Lincoln Memorial Highway, to extend from Boston to San Francisco, via Denver.

INDIAN IN ENGLISH EVENTS

THAT the Indian is maintaining its reputation in England is evinced by its showing in the Westmoreland hillclimb, held Easter Monday. The Indians scored as follows: First in 350 c. c. class for amateurs; second in 350 c. c. class free-for-all, on formula. In the 8½ mile open race C. B. Franklin, riding an Indian, finished fifth despite a bad start, he being the only scratch man starting. In the recent annual Jarrott Cup run of the Motorcycling Club of London to Land's End only 45 of the 95 starters finished. Two Indians had perfect scores. In the Dublin (Ireland) M. C. slow hillclimb Franklin tied for second place. The winner of this event rode a three-speed machine.

Wayside Pointers for a Puzzled Recruit

How a Sooted Spark Plug Caused a New Arrival in the Ranks to Blame His Magneto for a Sudden Stop—A Few Elementary Tips for the Beginner on Getting to the Bottom of Road Troubles.

By Alfred H. Bartsch.

NOT long ago while enjoying a short Sunday jaunt along the east bank of the Hudson I was moved to rest my motor and make a leisurely survey of the scenic features presented by the district, and I stopped at the crest of a hill. The day was one of the few mild ones we have had since Old Man Winter packed his grip and pretended to leave our midst, and I was making the most of the pleasing outlook when I heard the irregular "put-put" of a motor and saw a motorcyclist teetering up the grade with his machine very evidently in distress. Before he reached the top his motor stopped rather suddenly and he was compelled to push the remainder of the distance.

Quite naturally we fell into conversation, and I was a bit surprised to find that the rider was blaming his trouble on his ignition system. My ignition troubles are so few that I can hardly understand why any one else should be bothered, but I listened to the stranger's story. He was a new arrival in the motorcycle ranks and for that reason I was doubly anxious to help him. I believe this is the attitude we should all assume; a brotherly hand extended to the new rider in distress is the finest kind of a boost for motorcycling. Such a policy is not soon forgotten by the beneficiary.

LOCATING THE TROUBLE.

My new friend had a vague idea that nothing short of a complete overhauling of his magneto could put his mount in trim, but I inclined to the belief that his spark plugs were in some way to blame. He was using a twin of a standard make. We examined the plugs and found one of them about as badly coated with soot as any I have ever seen. In fact, I was surprised that it had given any service at all. Here was the secret of the whole trouble. I did not have an extra plug (having set out for only a short jaunt), and the stranger did not have one either. Therefore he was compelled to clean the one that was in use. This was not the simplest task imaginable on the road, but he made a fairly good job of it. When the plug was replaced the motor perked up surprisingly and I suggested that the rider try the hill once more. (It was not a very steep one.) He made the climb without difficulty and was overjoyed at his success.

Then we squatted by the roadside for a little heart-to-heart chat. I warned him against jumping to the conclusion that his magneto must be tinkered with, and suggested that he cultivate a habit of looking elsewhere for the seat of motor ailments before charging stoppages to his ignition machine. If the magneto has given good service previously it should not be suspected until all other conditions have been looked into.

INSPECTING PLUGS AND WIRING.

Presuming the motor to be of the twin-cylinder type, if a continued missing in one cylinder is being experienced (this was what had troubled my friend) it may be taken for granted that there is something wrong with either the spark plug or the wiring from the magneto to the plug. The rider should inspect the cable carefully and assure himself that there is no break in the insulation of the wire, and that there is positive connection at both the magneto and plug terminals. The condition of the plug should be noted with equal care, and it should be seen to that this feature of the ignition system is free from carbon. If it is a porcelain plug care should be taken to see that the porcelain is not cracked; if a mica construction it should be examined minutely with a view to determining whether the mica is porous. Attention must also be given to the gap between the points; these should be not less than one-fiftieth nor more than one thirty-second of an inch apart. An approximate gauge for the distance is the thickness of an ordinary visiting card.

One of the most frequent causes of ignition trouble is short-circuiting in the spark plugs, which, as pointed out above, is caused by soot or carbon forming in the portion of the plug that extends inside the cylinder. This condition can be corrected by thoroughly washing the electrodes and the inside walls of the plug, using gasoline and a stiff brush. It may be advisable to test the plug or plugs by laying them on the engine with the terminal end free from any metal—and the plug, of course, attached to the magneto terminal. When the motor is pedalled over briskly a good spark should appear passing across the gap.

MOST IGNITION TROUBLES EASILY LOCATED.

As a rule the rider will locate his trouble by following the above suggestions. Now and then it may develop that the motor is missing first in one cylinder and then in the other, and this may prove baffling to the inexperienced rider. Under such conditions it is quite likely that the magneto contact breaker points require adjustment, but this should not be taken for granted until the above mentioned system of trouble-eliminating is resorted to.

Strange as It May Seem, a Full Oil-Can Makes the Finest Kind of a Touring Companion.

After discussing elementary ignition conditions with my friend of the sooted spark plug I took occasion to "feel him out" concerning his knowledge of the carbureter, and found that he was almost wholly ignorant of the make-up of his mixing apparatus. I informed him that the success of his riding would depend to a great extent upon his handling of the carbureter, and incidentally warned him against promiscuous tinkering with it—just as I had admonished him to refrain from tampering with his magneto. With the excellent carbureters that are being supplied on standard motorcycles today, there is little that the amateur can do to improve their general operation, aside from using common sense in making the two or three adjustments according to varying conditions of weather and altitude.

Back-firing or "popping" in the carbureter indicates too weak a supply of gasoline, while a sluggish motor points to conditions just the reverse. Flooding may be caused by dirt finding its way under the needle-valve, or by improper adjustment of the needle. An indication of too rich a mixture is a blackish exhaust, and that condition should be remedied as soon as possible, as it will cause sooting and carbon will form on the spark plugs and walls of the combustion chamber; then pre-ignition and overheating may be expected.

All the pointers I have embodied in this little article may be regarded as elementary by the veteran, but my chat with the new arrival in the ranks on my recent trip convinced me that many recruits are in need of just such tips. That's why I have taken the time to put them on paper. I believe that many of the new riders will find them quite as timely as did my well-meaning friend of the sooted plug.

LOW SADDLE POSITION

THOMAS WEST, of 446 High street, Newark, N. J., known as "Shorty" to the motorcyclists of the city, has recently solved a mechanical problem that had him on the anxious seat for a time. Being supplied with legs only 24 inches long West could not reach the pedals on most standard machines, and when it came to steadying himself by placing his feet on the ground he was completely at sea. He bought an Excelsior twin and had all kinds of trouble because he could not make his legs go the required distance. Finally he threw himself on the mercy of W. E. MacDougall, of the Newark firm of Bush & MacDougall. "Mac" made a proposition and "Shorty" jumped at it. MacDougall ripped open the gas tank, took the frame apart and lowered it five inches. Then he sealed the tank again and turned the mount over to its owner. West found that it met his very requirement, and so elated was he over the success of the operation that he had the machine re-enameled. He is a member of the New Jersey M. C. and a regular attendant at club runs—now that he has found a way of reaching the pedals with his feet. The machine attracts much attention.

DOES PROFESSIONAL RACING PAY?

by ARTHUR G. CHAPPLE

AS might be expected, the first question that arises in the mind of the average spectator at a professional motorcycle race meet is: How much do these fellows get for risking their necks by spinning around board bowls at hurricane speed? In some instances the inquirer may find an answer in the program, but let me state at the outset that in nine cases out of ten that answer is wrong. In order to swell the gate receipts and create a favorable impression upon the patrons of the track, managers will often publish a prize list that looks like a pretty soft proposition for the riders, but when the races are over and the speedsters are assembled in the manager's private office the prizes begin to dwindle. It's a case of seeing the returns through the wrong end of the telescope then.

Some times this rule does not apply, for quite a few Class A riders have in the past managed to get their signatures and the manager's on an ironclad contract calling for a fair share of the promoter's profits, but no such protective contracts are within the reach of the rank and file of board track riders. I will refer to the Class A men later, and confine my arguments for the present to the speedsters in Class B. This class invariably includes the green rider, a chap who has held a minor position somewhere and who falls for the racing game because it seems to promise more money with less labor. Some of these fellows will ride for any amount—from $10 up; as a rule, they accept what the manager is in a mood to give them.

LOW EXPENSES FOR THE MANAGEMENT.

When the rider is to receive $10 per meet the money usually takes the form of a guarantee, incorporated in his contract. Figuring on a basis of three meets a week, the rider will receive $30 for risking his life during an actual period of about six hours of work on the track; this does not include the time and labor incident to keeping his machine in condition. To a fellow who has labored ten hours a day and six days a week, $30 looks like a big salary and easy money, but let him stop and consider that figure in connection with the returns obtained by the track management.

Assuming that we have ten riders at a race meet (this is a very liberal estimate, for I have ridden in many meets where there were only six speed-boys and both management and spectators were well satisfied), it will be found that eight of these are working on a $10 guarantee basis; this guarantee takes care of the rider in case of an accident to his machine or failure to finish for a "place" prize. Now let us say that the program is composed of two races of three heats each, and we will find that the entrant must actually ride three races in order to land one prize. In a 5-mile open event, for example, the rider covers fifteen miles—and the first prize never exceeds $25; the second is usually $15 and the third $10, with a possible $5 added for fourth place. The outlay in prize money under this system for the entire program, as far as the Class B riders are concerned, would be $110.

HOW THE CLASS A RIDER FIGURES.

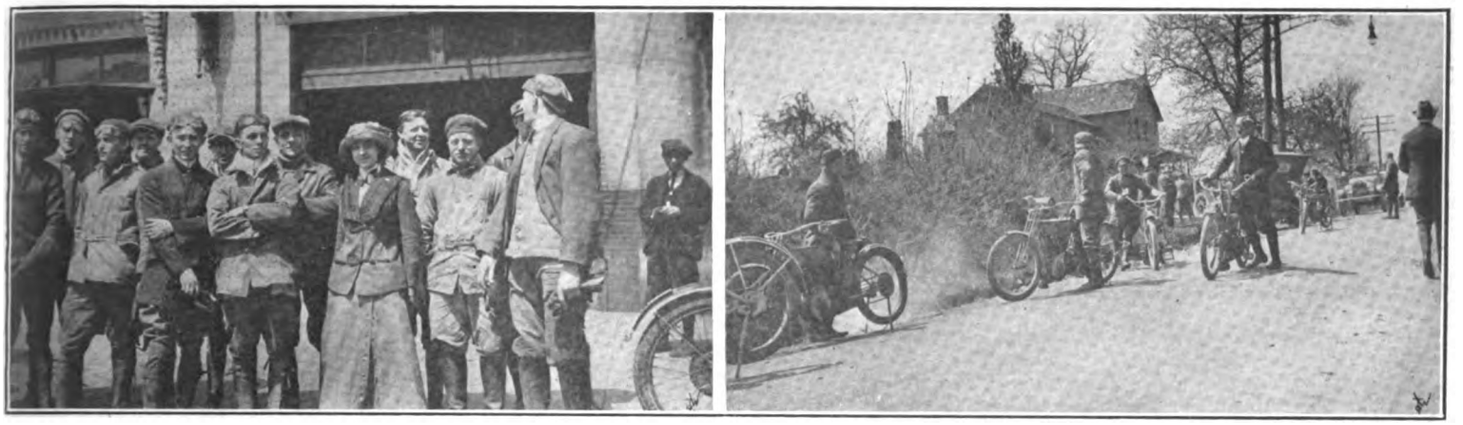
Assuming that the winners of the first event also capture the four prizes in the second race, this leaves the management to pay out $10 each in guarantees to the unplaced riders. In this case four of the boys would be unplaced, so that the track manager would be called upon to add $40 to his prize money.

Let us say now that the management has advertised a match race in three heats between two Class A riders as a drawing card; in this instance a $35 guarantee is called for with a prize of $100, to be split into $65 and $35 purses for the speedsters. With only two riders in the race the second prize covers the guarantee, and the latter is not regarded as an extra. This makes a grand total of $240 which the track manager is obliged to give in prize money and guarantees, and for this amount he has put on a race meet that brought in about $1,600 (for a four-lap track) and about $2,200 if the saucer is of the three-lap type. You will see that the management has a profit of $1,360 in one case, and $1,960 in the other.

Of course, there are other minor items of expense to be considered by the management, such as the wages of ticket sellers, ushers, etc., but there is also an additional income from

Arthur Chapple and Johnny Albright, Snapped at Brighton Motordrome.

Digitized by Google



Riders of the National Capital M. C., of Washington, On a Recent Sunday Outing to Baltimore.

various stands and concessions operated in connection with the track, which in actual practice very nearly covers the entire outlay for running a meet.

DEMANDS OF EXPERIENCED RIDERS.

If it rains the promoter loses only his advertising, for no contracts with riders contain a rain clause and the boys who were prepared to ride get nothing unless they actually perform. The same policy is applied to other employees of the track; they receive no pay unless they work. On this basis consider the returns for a season of racing and you will find that the track promoters have had a pretty soft thing of it. With the riders getting next to nothing and the track owners free to handle the boys about as they are inclined to, it is not strange that there has been a scramble for F. A. M. track franchises during the last few months.

Let us consider the Class A riders for a moment, for these are the ones who have a hard fight ahead of them for the coming summer. In this class we find nearly all the older and more experienced speedsters, men who have followed the game since it first attracted public attention. The Class A rider will very seldom sign a contract for less than a $50 guarantee for each race meet, with a possibility of winning $100 for a first place and $50 for second. The prizes usually are $50, $30, $20 and $10 in a Class A race. Under these conditions we have what is regarded as a substantial reward for the risks involved and a successful rider can clean up quite a tidy sum in a good season. This hardly jibes with the policy of the track managers.

The racing in this class is "for blood," as a rule, and fast time is assured. The reputation of the rider as well as the standing of his machine is at stake and he is bound to win if he can. The Class A rider usually straddles a machine that belongs to some manufacturer, so of course he does not worry about upkeep expenses. Because of these conditions the Class A rider has always been in a position to demand a fairly liberal contract from a promoter, and in return the track management is assured of clean racing and red-hot competition.

BLUE OUTLOOK FOR THE CLASS A MEN.

During the 1913 season the Class A rider will find very few of the managers looking for his services. He will be crowded to the wall by the Class B squad, made up of boys who are willing and anxious to risk their necks for one-fifth of what the Class A man demands. It will take some time to determine which class will survive. At present the outlook for the Class B men is bright, but I fear that hippodroming will become a habit and that the sport will suffer in consequence. We may see a reaction before the season is over, and it is to be hoped that this will come before serious harm is done.

Several suggestions have been offered by way of solving the problem that confronts board-track riders, and one plan calls for an organization of professional motorcycle racers, to be affiliated with the F. A. M. When this was talked over at a recent meeting of riders in Chairman Thornley's office the plan was given a hard bump by the Doctor himself, on the ground that it would conflict with his jurisdiction over the racers. Perhaps he was right about this; if so, there is still another suggestion worthy of consideration. Let the F. A. M. amend its competition rules at the Denver convention so that the professional rider will have some definite protection, as far as prize money is concerned, at each sanctioned race meet.

I am quite certain that the F. A. M. Directors would have taken some action in this direction at the last national convention if conditions at the time had warranted it. We have now developed to the point where such action seems to be necessary. Board track racing is a big proposition today and we must provide for it accordingly.

HOW THE RACING GAME HAS DEVELOPED.

It has not been my aim to criticise any particular set of motordrome operators, but merely to state conditions as I have found them in my professional racing career. In the early days of the sport we followed in the wake of Jack Prince, father of the speed game, and he must be given credit for keeping the prize list about where it belonged. He brought the best riders into competition and the patrons of his tracks always saw real racing.

Of the original riders to spin the big bowls few can now be found astride racing motors; accidents have retired thirty per cent. of them and the others have tired of the risks and the uncertain financial returns. Poor old Jake DeRosier was a notable exception to the retirement rule. As long as he was able to ride he insisted upon pitting himself against the best in the land. DeRosier and Hoyt, by the way, were the original professional riders in the F. A. M. Hoyt rode only a few match races against Jake and then retired to take up the automobile trade in Boston, Mass.

A short time later Paul Derkum, known to the boys as "P. D. Q." Derkum, joined the professional ranks. At that time, 1906, Derkum was the premier dirt track rider on the Pacific Coast. A year later Jack Prince built the Los Angeles motordrome and DeRosier and Derkum fought it out for first honors. Jake managed to go through the series without a defeat, and shortly afterward Derkum retired. The following season found two new professionals in the ranks, Eddie Lingenfelder and Fred Whittler, both of whom were defeated in match races by DeRosier. In open competition, however, Whittler had Jake somewhat worried and finally managed to win from him several times at the Salt Lake City track.

PROFESSIONALS ARE PLENTIFUL NOW.

During the period from 1906 to 1910 many of the amateurs developed to such an extent that the F. A. M., through its Competition Chairman, turned them into the professional ranks, and today, as is generally known, that is the only class in which a rider is permitted to compete on a factory machine. Last season brought in some new pro riders and 1913 will add to the list, and it remains for the new arrivals to keep the sport up to the standard set by the old-timers. It is hardly fair to expect experienced board-track riders to compete for the prizes that are accepted by the newcomers among the Class B men, or to sign contracts with managers on a basis that will allow the latter to pass out prize money as they please.

In fairness to the F. A. M. I must say that it has shown a willingness to consider the position of the riders, but up to the present time there has not been a demand for definite action along these lines. I believe that when the present conditions and the outlook for the coming season are called to the attention of the Federation's directorate they will receive reasonable attention. It is primarily with this end in view that I have written of professional racing conditions as I find them.

BOSTON-WORCESTER RUN

MEMBERS of the Bay State M. C. of Boston, Mass., as well as other riders of the city, participated in the first club run on April 19. More than one hundred riders, some of whom were members of the Lynn, Beverly, Revere, Brockton and Boston clubs, were lined up at Park Square for the start. Ernest Johnson, captain of the Bay State club, was in charge and the boys covered the 45-mile course to Worcester in less than two and a half hours. A dinner was served at the Franklin House, Worcester, and the return trip was started at 3:30 p. m.

The Bay State M. C. is a new organization and already has more than 100 members. The club has arranged a very attractive program of summer events.

SIGHT SEEING in LONDON & PARIS

by F. W. BAUM

MY first desire after reaching London was to procure a new rear tire. I believed this would be easy and it was comparatively so, but it was through sheer luck that I was accommodated, as there was no Diamond tire branch in London, I went to the Goodrich branch and was informed that there were no 28-inch tires in stock. Knowing what this meant to me I was sorely disappointed, but when I impressed my need upon the branch manager, a further search was made which revealed a 28 x 2½-inch studded tire. I had hoped to obtain a 2¾-inch tire, but was obliged to take what was available. It didn't take me long to catch a Clerkenwell Road 'bus for Russell Square. I had previously taken out the rear wheel of my mount, and I quickly fitted on the new tire and replaced the wheel, so that I might get some use out of the machine while in the city. It was while making this repair that I conceived of the idea of placing my Presto tank on the forward part of my luggage carrier instead of hanging it on the rear, where I had been carrying it since starting my tour. I found that this alleviated the vibration and strain on the clamps of the carrier.

I left my luggage at the hotel, thereby eliminating another source of worry. I say worry, because one must be careful what he leaves loose around London, for he is likely to have most anything stolen before he returns. This can be avoided by tipping a boy to watch the machine while you are absent. At one time I had the pleasure of tipping a boy in advance and when I returned he was gone, but he had been considerate enough not to adopt any of my accessories.

Sightseeing in London.

Rainy weather on the day of my arrival in London, made it disagreeable for sight-seeing; but even with this handicap I visited many points of interest. It was only a minute's ride from the hotel to the British Museum. Among the countless objects of interest seen there were the orginal Magna Charta, which, as almost everyone knows, was the great charter obtained by the English barons from King John in 1215 A. D. The originals of many other history-making documents were also inspected. From this point I followed the Charing Cross Road to Trafalgar Square, which seems to be the nucleus of the interesting points of London. The National portrait galleries are here and if one goes on Monday, Tuesday, Wednesday or Saturday he need pay no admission, but on Thursday and Friday the fee is sixpence.

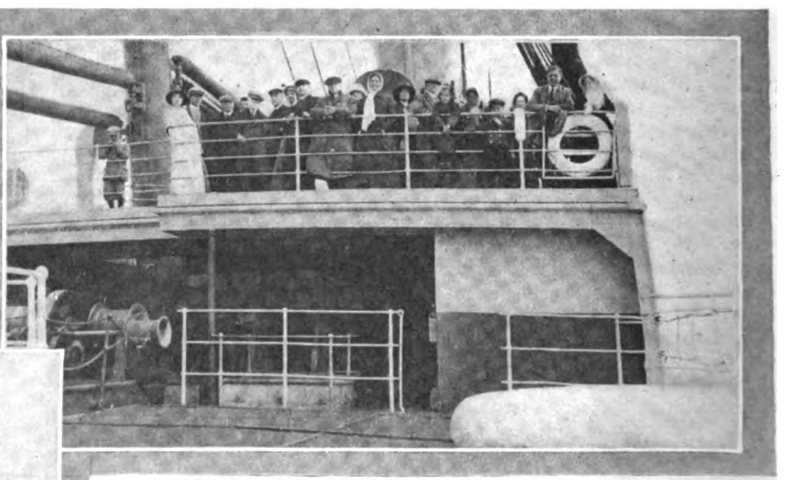
The Mall leads to Buckingham Palace, the present home of the king. Hydé Park is on one side of the Palace and Westminster Abbey and the House of Parliament are on the other. Among other points of interest in and about the great metropolis are Kew Gardens, London Tower, London Bridge, St. Paul's Cathedral and the various parks. I also visited the London branch of the American Motor Company, which is located on Portland street, near the heart of the motorcycle district. Mr. Lyle, the manager, treated me very cordially and allowed me to use his shop for cleaning up my machine. My side trips included, among other interesting places, Epping Forest, Brooklands track and the Latin-British-Exhibition at Shepard's Bush.

Meeting Old Friends.

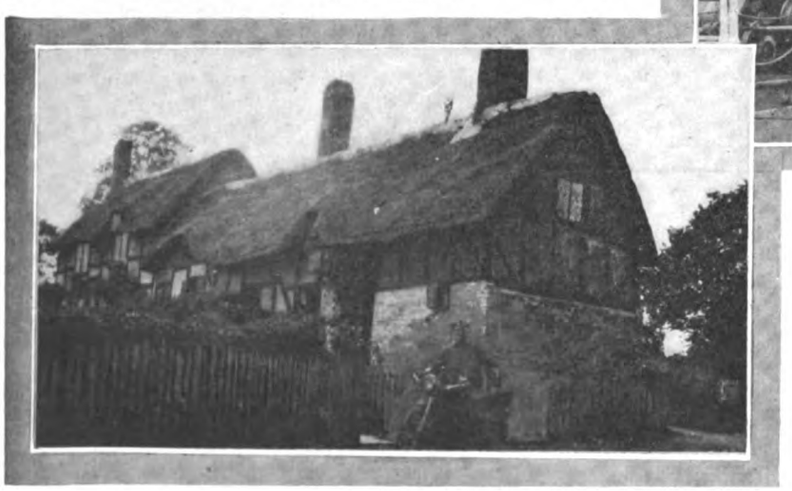
During my sojourn in London, I met a few former acquaintances, Mr. Baxter, of the University of Illinois, Mr. Teigh, a former United States Consul, from my home town, and Mr. and Mrs. Hanger, who went over on the same steamer with me. I had previously joined the A. C. U. of the Royal Automobile Club, and I desired to visit the headquarters at Pall Mall. There I was given all the necessary maps, routes, hotel guides and other data that I would need while on the continent. I left my itinerary and they advised me that they would route me the most logical way and send all details to me at Paris. It may be of interest to the reader to know that his machine registration will cost $2.40; drivers license, $1.20 and International Pass, $2.52, plus about 60 cents for photographs used on the pass.

I was just leaving the R. A. C. offices when I overheard a decidedly Yankee voice asking about motorcycling conditions on the continent. I investigated and met the Rev. Backus, of La Grange, Ind. It developed that he had planned to take practically the same route I had mapped to the south of Italy and return, so we agreed to go together. He had intended to make the trip on a 1910 single Excelsior and had had the machine shipped to him. The next morning we went down to look at his mount and found that it had been disabled in shipping. I knew it would take considerable time to repair it and so decided not to wait for him.

I was unable to get many pictures while in London, due to the unfavorable weather conditions. I left the city about 11 a. m. for Folkestone. It was rather difficult to get out of London, as the route was not clearly marked and there were many turns that I had to make inquiries before I struck the open country. I was then about twelve miles from Piccadilly Circus. About 30 miles out I came to Maidstone, or Midestun, as the English pronounce it. Going down a descent into Ashford, I met a chap on an 8 h. "Bat" with a J. A. P. engine. As he was headed for Folkestone, also we rode together, dis-



Crossing the English Channel to France.



In a Picturesque English District.

Digitized by Google

cussing the differences between Yankee and English machines. He had a fast machine and I could see that he was anxious for a race. He gradually let in his throttle, thinking to tease a race out of me. He didn't need to tease me for I was always ready to try conclusions with another machine. I had made a vow back in Brockton that if under fair conditions, any stock machine could give me its dust, I would sell my machine at the first opportunity and buy one of the other make. Well, we had our speed test and by the time I got to Hyde, twelve miles distant, I had lost my friend.

Across the English Channel.

From this point I followed the coast road for five miles, going through Sandgate and then into Folkestone. I think this city has some of the steepest business streets I have ever encountered. I had dinner here as I had plenty of time before the steamer sailed at 4:10 p. m. While waiting I did a foolish thing in the way of money exchange. I had only a little English money left and so cashed a check, and in doing so I called for French gold. This was a very thoughtless thing to do. As I was on English soil, there was a little discount to be figured, and when I bought my ticket with the French money there was another discount; when I paid for the transportation of the machine; there was still another. My fare was about $1.80 and the charge for the machine was $2.50. As soon as I reached the dock I was met by one of the patrols of the Royal Automobile Club, who asked politely if he could be of any assistance. I not only met these uniformed men all through the British Isles but at times on the continent.

The passage across the channel lasts only an hour and a half, but it is about as disagreeable a trip as one would care to make. Arriving at Boulogne, the R. A. C. patrol superintended the landing of my machine, and the purchase of gasoline. I paid sixty cents for five litres of gasoline, which is equivalent to five quarts. The advantage of having an International Pass became evident immediately upon landing, as it facilitated matters in every way. Boulogne is certainly a roughly paved city, but I soon struck Paris road, on National Route Number 1, through Montrevil and as far as Abbeville; from here to Paris, Route Number 3 is used. The first thing to learn is to keep to the right, which is rather awkward after riding at the left in the British Isles. It was rather dark when I left the city, so I put up for the night at a pension, about nine miles out.

A Busy Stay in Paris.

I did not deem it necessary to get a very early start for Paris, as it was only 160 miles distant, and over very fair roads, most of the way. There is a very long and tedious hill at Nouvion, that would tax the climbing powers of many twins. The main road is quite easily followed as it is very straight and wide, and has four rows of trees, two on each side. The government is doing much to beautify its national routes. Abbeville will prove to be of much interest and is worth a stop, although the scenery is not out of the ordinary. I stopped at Beauiras for gasoline and received another five litre can for two francs and 60 centimes. This city is quite large and has a beautiful public square. About two miles out I found a nail in my rear tire. From here to Pontoise-Eparney the road is ordinary, and from there on to Paris much cobblestone paving is encountered.

When I reached the gates of Paris I was asked how much gasoline I had in my tank. I made a guess at one and a half litres and was accordingly taxed twenty centimes. The officials sometimes empty your tank and measure your supply, but I was lucky and did not have to tarry long. Leaving the Porte de Llichy I made my way to the Place de l'Opera, where I was certain that I could get my bearings, as I had made this point the nucleus of my trip about Paris two years before. I located the Hotel St. Petersburg and then started to see the city. I employed a guide to show me about, and although this is somewhat expensive, it is worth the price. The next day while photographing Effel Tower, I met an Englishman and we saw most of Paris together by motorcycle, he being seated on my luggage-carrier with no springs or cushion to absorb the jolts of the pavements. He knew it was a quick way of seeing the city and was satisfied.

Leaving Paris Behind.

It is surprising how few motorcycles are seen in Paris in comparison with others European cities. I rode to the Goodrich tire branch to make arrangements to have an extra tire shipped to me in case I telegraphed from some point on the continent. I was almost out of gasoline and was looking for supply station when I noticed an American type automobile. I rode alongside the car, which was a Stutz and driven by a fellow from Philadelphia; he directed me to a garage where I obtained five litres for 75 cents.

I followed the best route from Paris to Melun. Leaving the Champs-Elysees I went through the Place de la Eoncorde to Boul, St. Germain and past the Zoological gardens to Boul de L'Hospital, Place D'Italie and thence along Left avenue and through D'Irving through the gates of Paris to Melun. always keeping near the Seine. This route will help any prospective traveler over this section, as it will save much time and trouble. I had just enough gasoline left in my tank to carry me out of Paris and once out of the gates I stocked up at a lower price. About twelve miles from my starting point on the road to Melun, I encountered the worst combination of wind and rain I have experienced. It was useless to huddle up under the heavy roadside trees, so I sought shelter in a gardener's shed.

When I rode on again the road was hard, and except for the water splashes the going was very good to Fontainebleu. The road lies very close to the Seine, giving the rider a good view of this famous river. The scenery is commonplace, to Joigny. Many railroad subways pass through this section and the railroad gates encountered are an unusual sight to the American and Britisher. The gates are very numerous and seem to be down about half an hour before the train passes. The tenders, either man, woman or child are reluctant about letting a traveler pass without some delay, but will upon receiving a small tip raise the gates.

Fine Roads to Lyons.

I stopped at Sens for lunch and got a good meal for 21 cents, although the coffee was abominable. It was raining again so I was unable to obtain a picture of an old cathedral located here. I was much impressed by the treatment accorded me by the French people, who seem friendly toward Americans. The road is somewhat hilly through this district which is known as "The Morvan," but it is much preferred to the route through Dijon.

The rider must use caution on the descent from Blanzy to a point near Cluny, as it is very steep and has dangerous and abrupt turns, although the road surface is excellent. Macon is one of the old walled cities, with large stone gates. There is a fine boulevard from here to Villefranche. The road is wide and the double row of trees on each side, give it a tropical aspect. Many gypsies are seen along the road and for a franc they will tell you more about yourself than could possibly happen in a lifetime. The road into Lyons is well kept and like a long beautiful park drive, but Lyons is approached by a tedious hill; then you gradually drop into the city through the Place de Pyramids.

A FULL-FLEDGED BOOSTER

PRESIDENT O. F. McCLAIN, of the Indianapolis M. C., and State F. A. M. Commissioner of Indiana is shown in the accompanying photograph. McClain was recently called upon to take charge of the band of motorcycle volunteers that patrolled Dayton during the flood period. President McClain is a whole-souled F. A. M. booster and by way of proving this he personally invited 700 riders of Indianapolis to attend the lecture which was given by Director J. Leo Sauer in Indianapolis on April 23. He also wrote to all the local F. A. M. Commissioners in Indiana inviting them to attend the lecture meeting. He is now boosting convention plans.

ANNUAL SPRING TOUR

BALTIMORE, MD., April 27.—The Maryland M. C. has just sent out entry blanks for the annual spring tour to be held May 30, over a course of 178 miles from Baltimore to Westminster, Gettysburg, Chambersburg, Hagerstown and Frederick to this city. There will be two classes of riders, professional and amateur. The former entrants will leave city at 6:30 a. m. and return by 5:30 p. m. The amateurs will depart half an hour later and arrive at 6 p. m. Both will be compelled to lay over at Hagerstown an hour for luncheon.

The average speed maintained will be 18 miles an hour and those who exceed this will be heavily penalized. A strict adherence to the laws of Maryland and Pennsylvania will be enforced by the officials. The contestants will be sent away two at a time at one-minute intervals. The start and finish will be at Mt. Royal and North avenues. The course is over fine pikes with some stretches of macadam.

BUYING a SECOND HAND MOUNT

DONALD · L · JOHNSTON

AS the number of motorcycles in use each year is augmented by the tremendous production of our modern factories, the second-hand problem becomes more and more important for the dealer. But for these very reasons a rider may often obtain a serviceable mount at a fraction of its original price. If a systematic method of examination is followed the prospective purchaser can readily ascertain the amount of use the machine has seen and determine the repairs, if any, which will be needed to put it in good running condition.

The motor, which is "the heart of the motorcycle," will naturally be the unit to be first considered. Exhaust valve tappets after much use will frequently leak oil in some quantity, and if this condition is observed, ascertain whether it is from wear or over lubrication. Valve stems should be examined for leaks. Rocker arms, if present, readily show wear, though it must be borne in mind that some makers purposely fit these parts rather loosely. If the half-time gears have an easily removable cover it is well to inspect the tooth profile for wear, and it may be possible to lift out and reverse a gear, observing its performance in its new relation. This reversal will remedy half of the existing back lash.

In case inspection of these important parts is difficult, about the only way to gain an idea of their condition is by running the motor and listening to see if their action is smooth and reasonably free from noise. The magneto train should be noticed in the same way. Compression leaks can be found by standing on the pedals for some time with the piston on up-stroke. Poor compression should be studied to find if it results from a worn or scored cylinder, imperfectly fitting piston rings, or merely leaky valves or gaskets. Bearings are next in order, and the long bearing on the transmission side will show by its condition both the use and care the motor has had. For if the lubrication has been neglected, wear may be looked for here. This bearing also is one of the hardest-worked components of the motorcycle and is naturally subjected to much use and abuse on all machines.

INSPECTING TRANSMISSION AGENTS.

If the magneto is fitted the cover of the breaker box can be unclamped and the condition of the contact points noted, while on a battery system the timer and its shaft, bushing and contacts are to be examined for wear and side-play. Finally the ignition system can be tested by running the motor, bearing in mind meanwhile that it is as great a virtue to run slowly as it is to turn at abnormal speed. In fact, racing the motor may cover up leaks of current or compression and poor carburetion which will show up at a lower rate of rotation.

The transmission is easier to examine intelligently than the engine, as most of its elements are more readily accessible or entirely exposed. The first step would be to raise the machine on its stand and start the motor. Allow the rear wheel to run freely with clutch engaged, and by light applications of the brake determine the respective conditions of both clutch and brake. This is a good way to ascertain whether the chain has any bent links, if it is stretched or the frame out of alignment. On belt-drive models the belt should ride the pulleys smoothly and show no tendency to climb to one side. A torn belt may have its life prolonged by removing the leather lagging and screws from the small pulley and substituting a fabric pulley covering. Too much should not be applied, however, as it will unravel at the edges if more than one or two thicknesses are put on. Electric tape also makes a serviceable covering, though not so durable. The rear pulley should not be dented or bent much, or trouble is sure to result.

Clutches on either chain or belt-drive machines need cause little apprehension, for they are made very perfectly. But should replacements be necessary they would probably consist simply of a few discs which are inexpensive. It is suggested in this connection that the buyer would be wise, if the motorcycle is not already equipped with a clutch, to find out if one can be fitted, for eventually he will want one. As a rule, clutches can be easily applied to all belt machines, while the prominent chain drive companies have fitted them for quite a number of years past. Countershafts ordinarily stand up well, so the rider need not worry much about this element.

APPEARANCE OF SECONDARY INTEREST.

In looking over the tires do not expect too much. For even to a new machine bad luck may come in the form of punctures, cuts, etc., and a rider is lucky if he buys no more than one casing in a season of considerable road work. Cuts, if they do not enter the fabric, are not serious and can be repaired by first cleaning the fabric and rubber well with gasoline and applying some of the rubber gum preparations made for the purpose.

In a second-hand motorcycle tank, handlebars, mudguards, rims, tool-boxes, etc., are frequently disfigured by dents and lack of paint, but these things are easily remedied. A machine that has had good mechanical care but is somewhat scratched should always be chosen in preference to one of superior finish, but in poorer mechanical condition. It might be well to give here some of the ways in which a mount may be spruced up and relieved of the troubles above mentioned.

A dented tank is the hardest proposition one has to contend with, but if the filler hole is of large size, wonders can sometimes be accomplished. In the case of a copper tank, insert a smooth, round-ended bar, and by working back and forth planish out the dent. Another effectual method is by introducing a bar or other implement into the tank and using it as an anvil on which to carefully hammer out the depressions.

A good way to remove dents from mudguards and rims is by hammering on a suitable-sized "U" pipe connection clamped in a vise. The right degree of curvature will likely be found somewhere on its surface for both rim and guard. Such small repairs, supplemented by the handy air-drying enamel now available, and some ingenuity on the part of the cyclist will usually serve to make the used machine a good investment.

In short, the exercise of a little care and good judgment will solve, for the man who must limit his outlay, the problem of transportation, and unfold to him all the joys of the open road and wealth of the open air. Let me add a final warning, however: Look the machine over carefully before buying it, no matter how low a price the owner may be placing upon it.

MOTORCYCLES are barred from the Florida road shown in the accompanying photograph, but that fact did not deter President Thomas Malone, of the Harlem (N. Y.) M. C. from enjoying a run over it on a recent visit to the Peninsula State. Malone is enthusiastic over the possibilities of the motorcycle in Florida and other southern states, and reports that there is rapidly growing interest in the progress of road improvements.

JARROTT CUP TRIAL

IN THE recent Jarrott Cup Trial of the Motorcycling Club of London, two 7 h. T. T. Indians won gold medals. The contest lasted three days and covered a distance of 567½ miles. Blizzards and semi-cyclones prevailed during the run. The weather conditions are said to have been the worst ever known during a British motorcycle event.

Pleasant One-Day Circuit Out of Manhattan

Veteran Tourist Maps Attractive 95-Mile Route Over Good Roads of Westchester County and Includes Some Scenic Inducements that will Spice a Sunday or Holiday Outing.

By Arthur C. Bergenstein.

BEING a motorcyclist of eight years' experience and well acquainted with the roads in the vicinity of New York City, I decided a short time ago to pass some of my information along for the benefit of brother riders who may be contemplating short spring trips, and accordingly I am submitting a map and some incidental data. The route I refer to in this article is intended for a one-day run, and in my opinion it approaches the ideal. The rider who follows it will cover about 95 miles through Westchester County, for the most part over good State roads.

The route leads up Broadway to Yonkers and to Getty square. The rider crosses the square and proceeds straight ahead one block, then turns to the right into North Broadway and ascends a short, steep hill. The route then leads straight on through Hastings to Dobbs Ferry. At the fork, which is marked by a fountain, take the right turn and follow this road about a mile to Ardsley, crossing the railroad tracks. Immediately beyond turn left into the Sawmill river road, which will be followed for about two miles. The rider will note a large sign relative to a cemetery, and about an eighth of a mile beyond a road will be found leading to the right, up a hill. This road is followed to the end, where it strikes a road on which there is a trolley line.

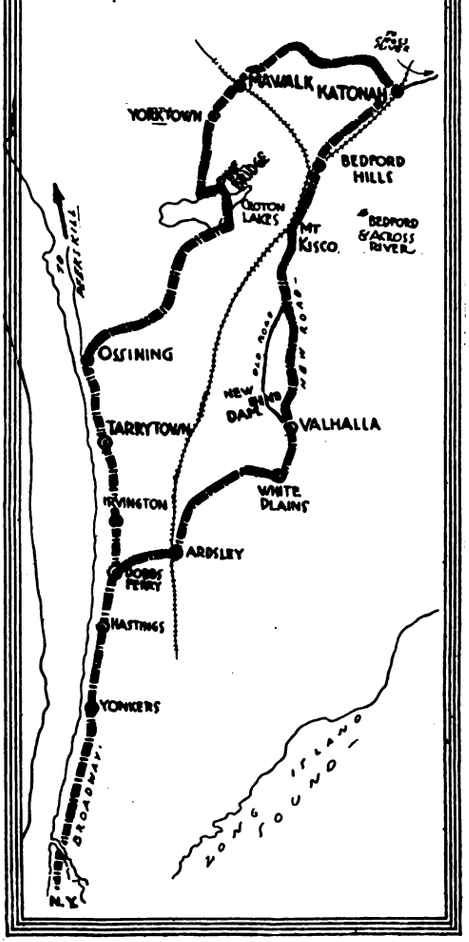
A VIEW OF THE NEW DAM.

The tourist will turn right and follow the trolley tracks into White Plains, over a railroad crossing and straight through the town to the end of the street, where a left turn will be made. At the fork, which will be found about 1½ miles beyond, the rider will turn right and reach Valhalla, when the right fork of the road will be followed again. The left fork is the old road, which will soon be flooded by the new reservoir just beyond. The new road extends along the hillside, from which can be seen the huge new dam under construction. Two fine stone bridges are crossed, and immediately after passing over the second bridge the tourist will turn right and continue on a winding but fine-surfaced road to Mt. Kisco. Proceed straight through the village and up to the railroad—*but do not cross it.* Instead, take the last turn to the right just before arriving at the tracks.

This road leads direct to Bedford Hills. Caution is necessary on approaching the latter village, as the road ends suddenly. At the end of the road, turn left and go down a short, steep hill, over railroad tracks and past a garage on the left. Then the route lies straight ahead for Katonah. Follow the straight road through Katonah and pass the lake on the left. A short distance beyond the traveler will skirt the foot of the big Croton dam, and he will then proceed to the end of the road, where it joins the route from Mahopac. The course is still straight ahead, over the tracks and through Amawalk to Yorktown Heights. Here a left turn is made and then the next right turn is taken.

About a quarter of a mile beyond the tourist will make a right turn, and another quarter of a mile will bring a left turn; the rider will then find himself on the main road. The road soon plunges into thick woods and is down grade, so that this part of the ride is especially pleasant. At the end of the road turn sharply to the left on the shore of Croton Lake and follow the shore road. This affords fine going. It will carry the rider over a large bridge (Pines bridge), and just beyond a turn is made along the shore to the foot of the lake, where another bridge will be seen to the right.

A turn is made off the road and over the bridge, and then comes another turn immediately to the right. This road, about 8 miles long, is winding but in perfect condition. It leads direct to Ossining and joins the Albany Post road there. The rider who follows this road down through Tarrytown and Irvington will find himself in Dobbs Ferry, at the point from which he turned off at the beginning of his trip. The run is then made back to New York City. It may be of interest to state that a good meal can be obtained at the Newcastle Inn, in Mt. Kisco, and that this hostelry welcomes motorcyclists. The little hotel over the corner store (opposite the railroad station) at Katonah will also be found to give satisfactory service. I am fully convinced that any rider of the metropolitan district who makes this trip will be as well pleased with it as I am.



PATERSON HILL-CLIMB

MUCH interest was displayed in connection with a hill-climb held at Paterson, N. J., on Sunday, April 20, hundreds of motorcyclists and automobilists being on hand when the program was opened. C. Brahs, mounting a Reading-Standard 7, hung up the best time of the day when he scaled the hill in 26⅘ seconds. This time was made from a standing start and was regarded as exceptionally good, in view of the fact that the Schumann-Heink hill on which the tests were held is 2,500 feet long and a hard climb.

The scores of the other contestants were as follows:

S. B. Thorpe, Reading-Standard 7, 29⅕; P. Brahs, Reading-Standard 7, 33; M. Ferraro, Flying Merkel 7, 32; E. Young, Indian 7, didn't finish; John Steel, Indian 7, 30; B. Rochelle, Reading-Standard 7, 33; F. Burgess, Thor 7, 31⅗; T. N. Lee, Thor 7, 28⅕; H. Scott, Thor 7, 31⅗; Norman E. Heil, Reading-Standard 7, 32⅗; H. Fishelsteen, Reading-Standard 7, 30⅖; Egan Hogland, Reading-Standard 7, 32⅖; Walter Babb, Pope 7, 32⅖; P. Klapmust, Excelsior 7, 28⅕; P. Drummond, Indian 7, 28⅗; E. Eckel, Indian 7, 28⅗; Frank Hart, Indian 7, 29; Lester Lippincot, Indian 7, 27⅘; A. Dresser, Indian 7, 29; Walter Babb, Pope 3½, 41; Tintle, Indian 2¾, 50⅕.

ACCIDENT AT OPENING MEET

L. I. SILVER, one of six riders who were closely bunched at the start of the opening race at the Tuileries Motordrome, in Denver, recently, lost control of his machine and shot to the top of the track. He rode the uprights for a short distance and his machine then came down on the track again, but only for a second. Again it shot up the incline and Silver's head came in contact with one of the supports of the wire netting. He was killed instantly. As the other riders were a trifle in the lead Silver's machine came down without causing further trouble. Spectators, riders and judges were of the opinion that Silver had just taken an ordinary spill and was not seriously hurt and the race progressed, with a warm fight between Stokes, Fleckstein and Bowen for first place. In the final lap Stokes worked in some clever jockeying and crossed the tape slightly in the lead. On learning the fate of Silver the management immediately closed the program.

THREE TRANS-CONTINENTALISTS

A MOTORCYCLE jaunt from Tampa, Fla., to the Pacific Coast, by way of New York and Chicago is being made by three riders of Tampa. C. W. DeLong and L. W. Whitehurst, two of the party, are students of the University of Florida, and J. C. Kinney, the third rider is a member of the Plant City (Fla.) militia. The boys left Tampa on April 7.

Over the Border to Goderich, Ont.

by Robert Bruce

ONE of the most interesting places visited in the course of several years' traveling over the roads of the United States and Canada is the picturesque small city of Goderich, Huron County, Ontario, which is located, as the accompanying map shows, on the eastern side of Lake Huron, somewhat less than 60 airline miles from where it flows into the St. Clair River. Though within a relatively short distance from the main-traveled roads between the east and the west via Hamilton, London and Detroit (or Port Huron), it is far enough north of them to escape the notice of most tourists.

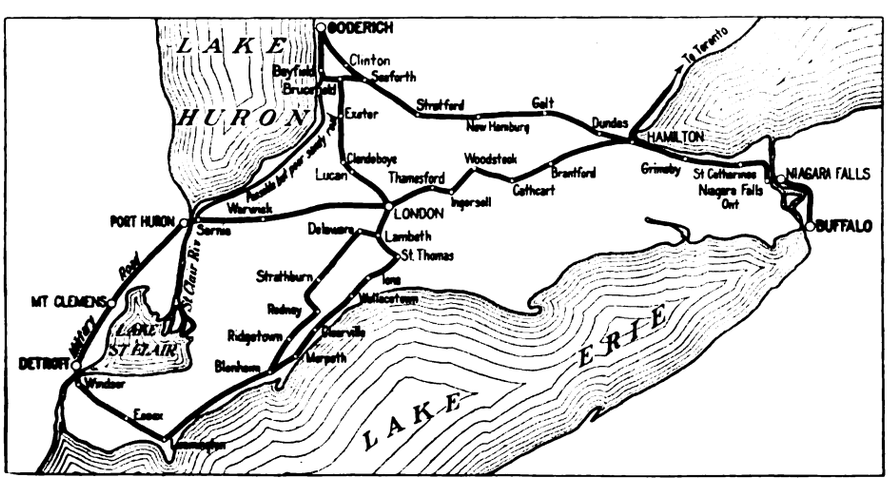
As a matter of fact, Goderich is not as much out of the way as might at first appear, the northward detour being partly offset, in any comparison between the two, by the southward bend of the regular route between London and Windsor. The distance from Hamilton to Detroit via Woodstock, London, Delaware, Blenheim and Essex is about 223 miles, or via Galt, Stratford, Goderich, London, Sarnia, Port Huron and Mt. Clemens, approximately 301 miles, a difference of only about 78 miles in favor of the lower line. But the upper route is much the more interesting to the leisurely traveler, having good smooth, well-drained and better-kept gravel roads; despite the greater distance, it probably has fewer turns—certainly not as many on one stretch on the lower route between Delaware and Blenheim.

The two principal gateways to the Goderich district are Hamilton from the east, or London from the south or west; it is possible to work one's way closer along the lake between Sarnia and Bayfield-on-the-Lake, but the roads that way are poor and better time can invariably be made around by London. Or, leaving Goderich out altogether, the Detroit-Mt. Clemens-Sarnia-London route is a pleasant alternative to the one via Windsor, Essex, Blenheim and Delaware; and in fact the former would be a few miles shorter than the latter.

ROUTE IS EASILY FOLLOWED.

Being in Detroit, traveling east after having twice covered the conventional trunk line through lower Ontario, I decided to start up from Detroit over the Old Military Road through Mt. Clemens to Port Huron, Mich., where the St. Clair river is crossed by steam ferry to Sarnia, Ont. Here it was necessary to take out an Ontario license and make a cash deposit, to be refunded on re-entering the United States at Niagara Falls.

The road direct east from Sarnia through Warwick to London, a distance of 64 miles, was a pleasant surprise—straighter and better than the lower line from Detroit through Essex and Blenheim. It runs through a fine and almost level but thinly settled farming country; though no running directions were available at that time, I came upon only one fork where the stranger might be likely to go astray. This is fortunate, as very few sign-boards have yet been put up in that locality, and the residents are not expert in giving directions.



Small-Scale Map of Routes Between Buffalo and Detroit, with Principal Options, Especially the Upper One via Goderich, which Affords Many Features of Interest.

There is undoubtedly a short-cut from some point east of Warwick to Clandeboye, saving materially on the mileage through London; but most tourists go into that city for the ample hotel accommodations there, which are very scarce on the entire route from Detroit to Goderich. Immediately after starting north from London, the tourist begins to feel like being in the real northern country; and surprise grows as the excellent gravel road continues up through Lucan, Clandeboye and Exeter to Brucefield.

At Brucefield a left turn is made onto the route west from Seaforth, and at the next town, Bayfield, is had one's first view of Lake Huron; then it is a direct, unmistakable run to the end of the "Bayfield Road" at the Britannia Road in Goderich. A left turn on the latter road is followed by a right turn on Victoria street and a diagonal left turn on Kingston street to the Square, the first view of which is approximately that shown on the accompanying photograph.

The tourist quickly notices that this little resort city is built upon a unique plan, additional details of which will be seen by reference to the town map. At the center is the County Court House, a handsome stone structure, surrounded by a beautiful park, in which flowers of every hue, shrubs of many kinds and handsome shade trees abound. Surrounding the park, or octagon, on all sides are the hotels and principal places of business, said to have a frontage of more than a third of a mile.

Starting from the common center are eight streets, four straight ones named from the points of the compass—East, West, North and South—and the other four diagonal ones named after important cities in the Province of Ontario—Montreal, Kingston, Hamilton and Colborne. The diagonal streets cross the regular streets and avenues at many angles, in a fashion to suggest a spider's web.

Other names of streets, not all shown on the map, suggest names of important events in British or Canadian history—Britannia Road and Victoria street (used in coming into Goderich from the south or west), Trafalgar street, Caledonia Terrace, Gloucester Terrace, St. Georges Court, Nelson street, Arthur street, Montcalm, Wolfe, Bruce and Brock streets, Palmerston, McDonald, Elizabeth, William, Quebec, Toronto, Stanley, St. David, St. Patrick and other streets of the same general nature, too many to repeat here. Of course, no attempt is made to name these in any logical order. The streets and ave-

Digitized by Google

nues of Goderich are much wider than the ordinary, and their sides are lined with choice shade trees, of which the maple and horse chestnut are perhaps the most plentiful.

A REGION OF FINE VIEWS.

Long years ago, before the paddles of the first voyagers broke the primeval stillness of the places, or perhaps drew a few curious Indians to the edge of the lake, near what is now the mouth of the Maitland River, the site of the town was a strategic and attractive one. In fact, it requires no great stretch of imagination to see in the mind's eye the daring French explorers stopping at what is now Goderich, on their way from the early settlements along the St. Lawrence to the Mississippi through the Great Lakes.

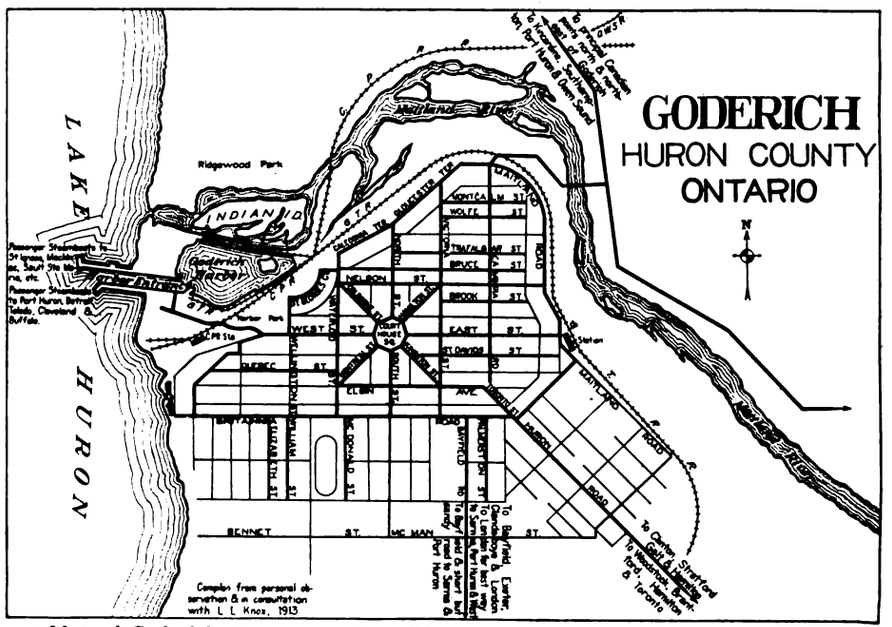
In summer the port is as busy as it is interesting, for in addition to considerable shipping there are frequent calls from passenger steamers going up the lakes to St. Ignace, Mackinaw, Sault Ste. Marie, Duluth, Milwaukee, Chicago, etc., or down the Lakes to Port Huron, Detroit, Toledo, Cleveland and Buffalo.

What is known as the Harbor Park is several acres in extent, planted with shade and fruit trees, commanding a fine view of the harbor and of the great lake stretching beyond. At the foot of the hill, within easy distance of the harbor docks, are two mineral springs gushing from the earth at a great depth, and flowing freely winter and summer, defying alike the heat and the cold.

Goderich stands about 120 feet above the level of Lake Huron, its two sides falling abruptly toward the lake and the Maitland River. Probably most visitors will share the writer's regret if they are obliged to confine their trips to one way in and another way out, for the local motorcyclists informed me that most of the other roads around the city are good smooth gravel. It is also stated that they are well drained and have no mud, which is readily believed, as high-built roads with good drainage are characteristic of that part of Ontario.

CAREFUL DRIVING IS ESSENTIAL.

It is the easiest of all places to get into, as all roads lead to the octagon-shaped park, but going out the way you have been planning is an entirely different matter, as you must then pick out the particular one needed from the maze of streets leading in the one general direction. Though priding myself somewhat on being able to search out and follow directions, I started out wrong toward Galt and Hamilton, making it necessary to go back to the business center and ask a new set of questions.



Street Map of Goderich, One of the Most Picturesque and Interesting Cities in the Province of Ontario. This Diagram Will Save the Tourist Delay and Confusion.

The route referred to leaves the "Square" by Kingston street, jogging left on Elgin avenue and then right through Toronto street into the Huron Road, now direct through Clinton to Seaforth. This is most of the way a good limestone and gravel road; it is hilly in some parts but not a really steep grade on the whole line—just enough undulations to give interest and variety to the trip, which can be made in good time throughout. While the road is not quite as good from Seaforth through Stratford and New Hamburg to Galt as from Clandeboye to Goderich, it will average better than from London to Windsor, on the usual Niagara Falls-Detroit through line.

In northern Canada the horses must still be passed with care and at slow speed, not only because they are not yet thoroughly broken to power-driven vehicles, but especially because the high roads, frequently with long deep ditches on either side, make any mishap more than ordinarily dangerous. Many people in that district still fear to pass an automobile or motorcycle in the usual way, and if given half a chance they will turn the horse and wagon around so that you pass them from behind rather than head on. On the way from Seaforth to Stratford, we met two young ladies coming from town; they, too, foolishly attempted to turn around. They succeeded in overturning the wagon in which they were riding, with some incidental damage. I lifted the wagon back into the road and found that they were more scared than the horse.

After a fair trip from Goderich to Galt, the tourist runs over a really excellent stretch from that small city all the way into Hamilton—so good in fact that a true description of its condition would seem to include superlatives.

At Hamilton, connection is made, as the map shows, with the lower route from Detroit through London to either Niagara Falls and Buffalo, or Toronto and Kingston, both already fairly well known to tourists. Motor travel across the Ontario peninsula is rapidly increasing, as it should, for the distance between the important cities of Buffalo and Detroit is less this way than via Erie, Cleveland and Toledo; in fact, the Canadian route, including the Goderich detour, scarcely exceeds the distance on the American side of Lake Erie. The latter also necessitates either going over the poor direct route from Toledo to Detroit, or a considerable detour to the left to reach Michigan's chief city through Dundee and Ypsilanti.

Niagara Falls is also directly on the route from Buffalo to Detroit across Canada, whereas it is a detour of 23 miles each way on the route to the same destination along the American side. The customs hold one up for a few minutes only, for examination of machine and to arrange the report; but this delay is balanced by the other features of the trip.

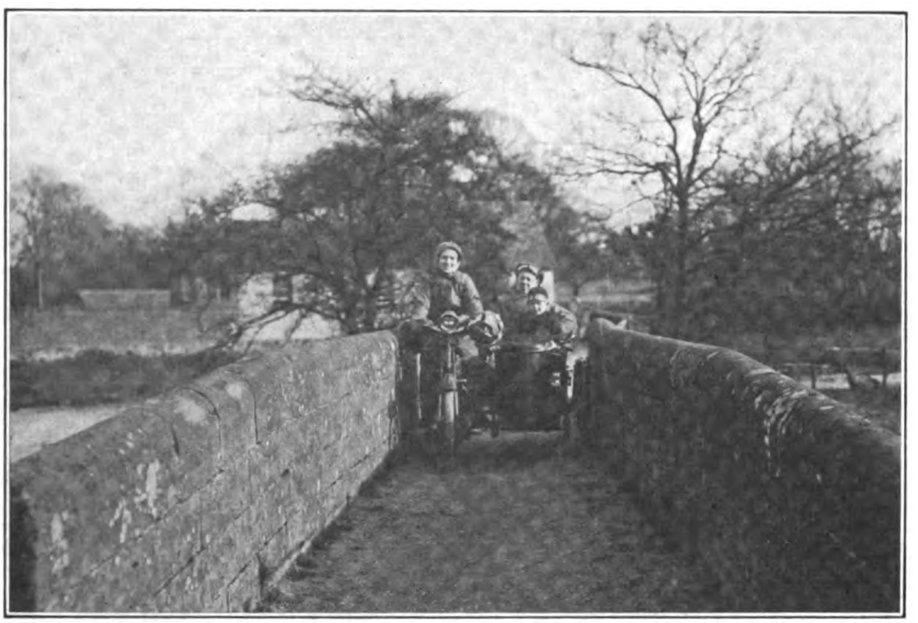
The LADY MOTORCYCLIST

By NORA HOUGH

WITH the promise of fine weather from now on, our thoughts naturally turn to outdoor sports, and I take it for granted that lady motorcyclists in America are just about getting their riding togs in shape for a season of healthful road work. While I have been informed that feminine motorcycle enthusiasts are comparatively few in your country as yet, I am inclined to believe that their number is underestimated; that there are many more ladies piloting their own machines throughout the States than your statisticians know anything about. This must be the case, for in the American motorcycle journals group pictures including ladies are quite common.



Mrs. Mary Riley, Driving Royal Enfield with Sidecar on a Picturesque English Road.

I must give these ladies credit for considerable riding ability, by the way, for it is not the simplest task in the world for a feminine rider to handle a motorcycle primarily designed for the use of men. The lady rider should have an open-frame machine, and when she is not thus equipped it is impossible for her to realize all the satisfaction and enjoyment that the pastime can afford. I hope soon to see an open-frame model on your market, and I believe that the manufacturer who produces it will be amply repaid.

HINTS ABOUT SELECTING A MOUNT.

It has occurred to me that a few hints about the purchase of a machine, and about the initial ride in particular, will be interesting for ladies who are about to enter the ranks, and as I may safely say that I have passed the novice stage my observations may also have some instructive value. Of course, most prospective buyers have some particular machine that they fancy; probably a friend has a mount that he or she describes in glowing colors. Still, unless the latter is a motorcycle of good repute it is well to go slowly. As I understand it, you are fortunate in having about twenty makes, any one of which is a safe buying proposition. On this side we have more manufacturers and therefore greater discrimination is called for.

The new rider, especially a lady, should make it a point to purchase from a reliable dealer. She is bound to have little mechanical problems to solve from time to time, and if her dealer is of the right sort he can save her time, money and worry. Then there is the question of horsepower to be considered. I have ridden both heavyweights and lightweights, and I am firmly convinced that for real pleasure a motorcycle of from 2 to 2¼ horsepower is about right. Above the latter power I must admit that a lady finds the accompanying weight rather troublesome, unless, of course, a sidecar is attached; then one needs the extra power.

STUDY OF THE CONTROL SYSTEM.

My first machine was a 2½ h. open-frame Matchless with two-speed gear. This mount I did not attempt to take out on the road until I thoroughly understood the different levers. This acquaintance with the control system may be obtained by placing the machine on the stand and working the levers (or grips—as I believe would be the case with most machines in your country). In this way the lady novice can memorize the whole system without endangering herself, and with full confidence. Then when the machine is taken onto the road it is only necessary to accustom oneself to the unusual weight and the problem is solved.

Miss May Walker.

Once the motor is mastered in the way I have suggested I would advise the owner to take the machine to the nearest incline—minus belt or driving chain, as the case may be—and then coast down the grade. The latter should be just steep enough to make the machine run of its own volition. This will acquaint the rider with the steering and will give her needed confidence. Then let the driving agent be replaced so that the machine may be driven up the hill with the motor firing. It is safer to ride up a slight hill at the start than down a hill, or even on the level, and one trial of this kind will usually demonstrate the simplicity of the entire control system. In my opinion motorcycling is much simpler than, say, taking a high dive for the first time, or even donning a pair of skates.

HOW ENTHUSIASM GROWS.

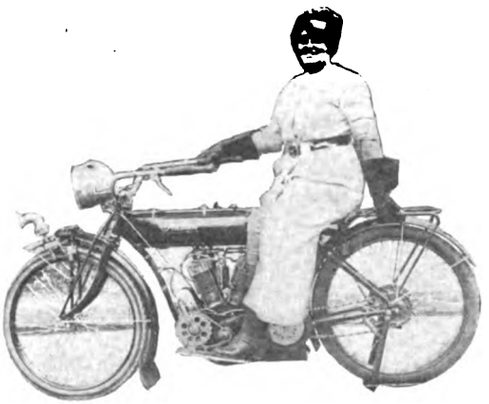
I have been with quite a number of ladies on their first ride, and not one of them has blundered or lost control of her machine. What is even more encouraging to the tutor, each one of them became at once a convert and a prospective buyer of a machine. Just let the average girl have a fair trial of a suitable motorcycle and she is bound to want one for her permanent use. First she must get rid of the idea that the motorcycle is essentially a man's mount, for it is not. At least, it is no more so than the automobile is strictly a man's vehicle. Many ladies drive their own motor cars and think nothing of it; in my opinion piloting a motorcycle is much more interesting and every bit as safe and ladylike.

In the photograph of the sidecar outfit coming over the bridge which accompanies this article, appears Mrs. Mary Riley, of Birmingham, England. Some time ago Mr. Riley purchased a 6 h. Royal Enfield motorcycle and

Digitized by Google

sidecar with the intention of occupying the saddle himself, but Mrs. Riley, after a few runs in the sidecar, decided that she would like to handle the outfit. Accordingly the plucky lady learned to operate the powerful combination, and every week-end now finds the Riley party camping out in some beautiful country spot. Their turn-out is an interesting sight when equipped for touring, as it carries a camping kit, camera and huge lunch baskets in addition to the two passengers. Mrs. Riley not only uses her motorcycle for pleasure trips, but has recently finished among the winners in several severe competitions.

The picture that appears in silhouette on the opposite page is of Miss May Walker, of Redbourne, near London. Miss Walker is a keen photographer and finds her handy Hobart indispensable in connection with her hobby. She is especially fond of finding pretty country spots and photographing them, and with the aid of her motorcycle she is able to cover a wide area. Miss Walker states that motorcycling and photography make an ideal combination.



MISS FRANCES LOEB, of New York City, who recently became a member of the Harlem M. C. Miss Loeb has put many centuries behind her Indian 7 and is not averse to participation in an occasional endurance trial. She attended the meeting in New York City on April 28, at which plans were developed for organizing the state F. A. M. body.

State Convention Plans in Oregon

Portland Will Be Scene of Big Assembly in June at Which 1000 Motorcyclists from Neighboring States Are Expected to Appear

ALTHOUGH there are only 400 F. A. M. members in Oregon, a State organization has been formed and elaborate plans laid for the coming summer. A number of the best riders in this section of the country will be sent out on a circuit throughout the entire Northwest. These men will be furnished with the fastest racing machines that can be bought, and they will ride, in all, 73 days at meets in Oregon, Washington, Idaho and British Columbia. These events will take place between April 15 and November 1.

Probably the most important feature of the program is the convention of the State Federation, which will be held the first two days of the Rose Festival which take place in Portland June 9 and 10. Tuesday, June 10, will be known as motorcycle day. Monday morning members of the Federation will convene for their first session and in the afternoon races will be held at the County Club track. The second session of the convention will be held Monday night. Tuesday morning a huge motorcycle parade will be held in connection with the Rose Festival, in which 1,000 motorcycles are expected to participate.

In the afternoon the final races will be held and in the evening all visiting motorcyclists will be the guests of the local riders at a banquet. There are 800 riders in Portland and 1,300 other riders scattered throughout the State, and routes and tours are being so arranged that nearly every motorcyclist in the State is expected to be on hand. The State Federation touring committee will have roads mapped and will furnish blue prints of the routes. It will also arrange for all stops and supplies while en route and will designate the best hotels at which to stay and will arrange for special rates.

The longest tour will be from Baker, Ore., and riders from towns along the route, including La Grande, Pendleton, Walla Walla, North Yakima and The Dalles, will join the original party. Another tour will start at Medford with riders from Klamath and Medford. This squad will pick up riders at Roseburg, Cottage Grove, Ashland and Grants Pass, and further on at Willamette Valley, of which Salem, Albany, Eugene, Corvallis and Woodburn are the largest centers. This party is expected to be more than 400 strong when it reaches Portland. A third tour is being arranged from Seattle and Tacoma, Wash.

Representatives of the State Federation have been in conference with General Manager George L. Hutchin, of the Rose Festival, and all arrangements as to dates have been completed. Trophies will be offered for the parade and designers are now at work on floats for this occasion. It is also planned to have the fastest racers on hand who will compete for the $600 in prize money to be offered in Portland. Later in the season Portland riders will tour to Seattle when that city has its Golden Potlach.

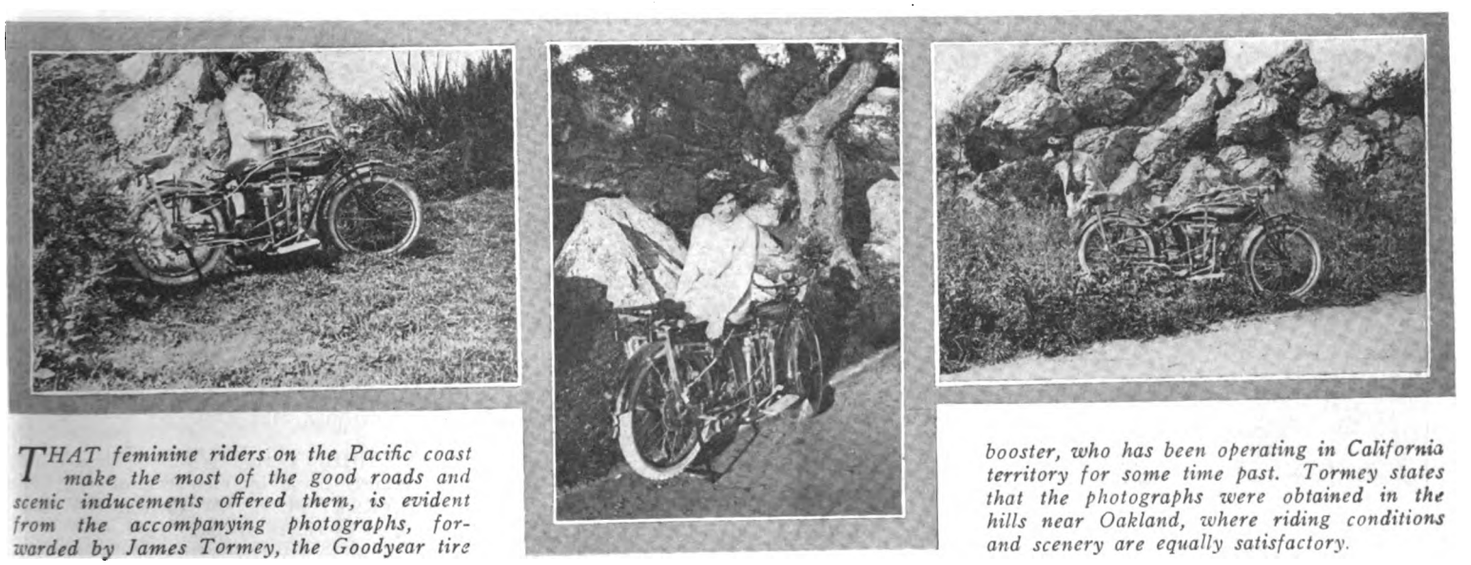
PLAN BI-WEEKLY RUNS

AT a recent meeting of the La Porte (Ind.) M. C., the touring committee announced the destinations and dates for bi-weekly runs to be held by the club during the summer. The first run, which was held April 20, was to Gary, and the officers were well pleased with the turn-out of riders. The schedule as presented at the meeting is as follows: May 4, to Crown Point; May 18, to Culver; June 1, to Chicago; June 15, to Bass Lake; June 29, to Logansport; July 13, to Elkhart; July 27, to St. Joseph; August 10, to Rochester; August 24, to Chicago; September 7, to Three Oaks. The objective point of the run for September 21 will be announced at a later date.

A number of prizes will be awarded to the riders finishing the season with the most points. Before the first run each rider was credited with 100 points.

MISS PATTERSON A CAPTAIN

MISS INEZ PATTERSON, daughter of President Patterson of the F. A. M., has been officially appointed a captain of the Short Grass Touring Club to have charge of a division of girl riders. Miss Patterson expects that not less than fifteen girls will participate in the coming tour of the Short Grass Club. She is anxious to hear from all feminine riders in the United States, whether they expect to take part in the run or not.



THAT feminine riders on the Pacific coast make the most of the good roads and scenic inducements offered them, is evident from the accompanying photographs, forwarded by James Tormey, the Goodyear tire booster, who has been operating in California territory for some time past. Tormey states that the photographs were obtained in the hills near Oakland, where riding conditions and scenery are equally satisfactory.

No Sidecar License Needed in New York State

Decision from Office of Secretary of State That Passenger Attachments Are Exempt from Registration Clears Situation That Has Been Badly Muddled of Late—Vans Must Be Licensed

SIDECAR users of New York State who have been on the anxious seat for a month past as the result of efforts in certain districts to bring the motorcycle passenger attachment within the scope of the Motor Vehicle Law, will welcome a declaration made from the office of the Secretary of State a few days ago to the effect that the addition of the third wheel to a motorcycle outfit does not constitute a legal departure from motorcycledom. In other words, the status of a motorcycle is not changed by the attaching of a sidecar for passenger-carrying purposes, and no registration fee is required. A commercial van, or any attachment intended for business purposes, is exempted from this interpretation and must be registered.

As was stated in the last issue, several New York City sidecarrists were haled to police headquarters and compelled to pay a five-dollar registration fee for their motorcycle attachments, while riders in other districts of the city were not molested. This state of affairs led to numerous complaints and general uneasiness, and the situation was brought to a head when A. de Graaf, of 225 Columbus avenue, was arrested for operating a sidecar without a license. Upon appealing to the office of the Secretary of State he was informed that there was no registration clause covering sidecars. He again attempted to use his motorcycle with the passenger attachment and was arrested a second time

He then called the matter to the attention of Chairman J. P. Thornley, of the F. A. M. Competition Committee, and in the absence from the city of Chairman J. Leo Sauer, of the Federation's Committee on Legal Action, the doctor opened negotiations with the New York office of the Secretary of State. The New York officials communicated with Albany by long distance telephone and a short time later made known the decision that pleasure attachments for the motorcycle require no registration. This declaration was embodied in a letter to police headquarters in New York City by the State officials, and a letter confirming the decision was later received by Chairman Thornley. Doctor Thornley's letter of protest follows:

"There has been considerable annoyance to motorcyclists who are driving sidecars for pleasure, who have been arrested and taken to the station house, there to be told that they must get out a license or be arrested again. When applying at the office of the Assistant Secretary on Seventy-third street, New York, they are informed verbally that no license is required, except on sidecars operated for commercial purposes. Taking this verbal statement at its face value they go out without a license only to be arrested again.

"I respectfully submit that these men are attempting in every way to obey the law, and are entitled to a written statement from your office, or the office of the Assistant Secretary of State, that license has been refused because the law does not require it, or that their request for a license be granted.

"Motorcyclists as a general class are anxious to obey the law, and keep within its limits. There is nothing to be gained by persecution, or by keeping them in uncertainty as to exactly what the law is."

The brief but satisfying reply from the office of the Secretary of State is printed herewith:

State of New York
Office of the
SECRETARY OF STATE
Broadway and 74th St.
New York City

April 28, 1913.

Dr. J. P. Thornley,
Hotel Ansonia,
73rd street and Broadway,
New York City.

Dear Sir:—In reply to your letter in regard to three- (3) wheeled motorcycles, carrying passengers, would advise that this type of motorcycle does not have to be registered in this State.

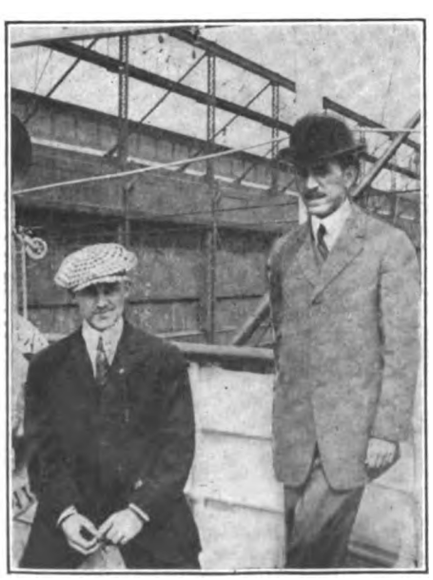
This is to confirm my telephone message of this date.

Respectfully yours,
(Signed) JOHN E. NUGENT,
Deputy Chief Auto. Bureau.

ELMIRA, N. Y.—The Elmira Arms Company has contracted for the agency for Goodyear tires.

New Orleans Riders Sail for Long Tour

V. L. NICHOLSON and John de Phillippi, both of New Orleans, sailed on the steamer Niagara on Saturday, April 24, for a motorcycle tour of European countries and a side journey to Tunis, Algeria. They will ride Indian 7 two-speed machines, equipped with Goodyear 3-inch tires, Stewart speedometers, Prest-O-Lite tanks and specially constructed luggage bags to be fastened on either side of the luggage carriers. Suitcases are also strapped on the carriers proper. The tourists have made arrangements to ride through the chateau district of France and to Italy, from which country they will make the trip to Tunis. On their return they will tour Switzerland, Germany and several other continental countries before going to England.



Nicholson and de Phillippi.

Before leaving New York Mr. Nicholson made arrangements to write a number of special articles for MOTORCYCLE ILLUSTRATED, dealing with the more interesting touring districts found on the tour. One will be devoted to the trip to Tunis, where the motorcycle is still something of a curiosity. Each article will be profusely illustrated with photographs, and it is likely that the first one, covering the chateau district of France, will be ready for publication in an early issue.

ILLINOIS STATE F. A. M.

THE ILLINOIS STATE F. A. M. has been organized with the following officers: G. Whitney, Chicago, Chairman of the Touring Committee; B. Blankenheim, Chicago, Chairman of Roads and Highways Committee; G. Anderson, Chicago, Chairman of Legal Action Committee; C. B. Leitner, Chicago, Chairman of Membership Committee; G. A. Wadsworth, 3600 West North avenue, Chicago, State Secretary. The State Commissioner is N. L. Donovan, Chicago, who has made a promise that the Illinois membership will be increased by at least 500 members during the coming season.

NEW YORKERS MEET.

AT a meeting of motorcyclists of the Metropolitan District held in the World Building, New York City, Monday evening, April 28, plans were discussed for organizing a state F. A. M. body, and the original dates set for a convention, May 29-31, were set aside with a view of affording clubs and riders in other sections of the state an opportunity to participate in the organization plans. The meeting was called to order by State Commissioner J. A. Hall, and one of the principal speakers was Robert S. Morton, former State Commissioner for New York.

State Commissioner Hall read a letter from Chairman J. Leo Sauer, of the F. A. M. Legal Action Committee, explaining his inability to be present owing to a lecture engagement in Philadelphia. Mr. Sauer's letter suggested that the proposed convention be postponed to permit of co-operation by the up-state clubs. After a brief discussion it was decided to hold the state assembly July 3-5, and Poughkeepsie was mentioned as a likely scene for the program. R. S. Morton, Henry Kest, of the Harlem M. C., and President Bowl, of the Plaza M. C., were named as a committee to get in touch with clubs throughout the state with a view to interesting them in the convention plans. Another meeting of riders of the Metropolitan District will be held in the World Building Monday evening, May 12.

A SOCIABILITY run to Clifton and Clyde was recently made by members of the Clay Center (Kan.) M. C. At Clifton the party was joined by riders of that city.

24-Hour Run to Feature Indiana Program

State F. A. M. Body Plans 'Round-the-Clock Circuit Out of Indianapolis for May 17-18—Complete Regulations and Outline of the Route—Merz Heads Big Squad of Club Boosters

F. A. M. riders of Indiana, headed by John E. Merz, the Federation live wire and trade booster of Indianapolis, are now perfecting plans for a twenty-four-hour endurance run to be held in connection with the state convention, May 17-18, and the outlook is bright for a most successful program. Merz is devoting much time to the convention schedule and particularly to the endurance run arrangements, and is visiting many cities in person to get in touch with motorcyclists and arouse interest in the project.

It is the intention to have the run start at noon on May 17 and close at noon the following day. The route will be from Indianapolis to Martinsville, Gosport, Spencer, Vandalia, Bowling Green, Terre Haute, Rockville, Crawfordsville, Frankfort, Elwood, Tipton, Alexandria, Muncie, Dalton, Hagerstown, Richmond, Knightstown, Greenfield and return to Indianapolis. The riders will check out at the headquarters of the Indianapolis Motorcycle Club.

The event will be open to all F. A. M. members, without regard for the size of motor used, but contestants will not be permitted to use ported cylinders. Machines must be provided with efficient mufflers and full road equipment, according to catalog specifications. The entry fee will be $3 for amateurs and $5 for professionals, and post entries will entail fees of $5 and $10, for amateurs and professionals respectively. The entry list will be closed at 6 p. m. on May 15, and blanks and entry fees should be mailed to F. I. Willis, 113 West Market street, Indianapolis, without delay.

Contestants will be called upon to report at the headquarters of the Indianapolis Motorcycle Club at 9 a. m. on May 17, so that their machines may be inspected by the contest committee and to permit of numbers and schedules being distributed. Each entrant will be furnished with a running schedule naming all the principal points en route, progressive distances and the time at which he is due at checking stations and controls. Entrants will be divided into A and B classes, the former for amateurs and the latter for professionals.

The official route will be marked with signs at all turns and crossroads as follows: One white line to indicate a right turn; two white lines to indicate a left turn and one cross to inform the rider that his course lies straight ahead. The riders will be started in pairs at one-minute intervals. The supper control will be at Terre Haute, the midnight control at Frankfort, the breakfast stop at Richmond, and the finish at Indianapolis, as before stated. There will be checking stations at Spencer, Rockville, Alexandria and Greenfield. A rider found thirty minutes ahead of his schedule at any of the checking stations will be disqualified.

Complete replacements of motors, mufflers, carbureters, timers, tanks, magnetos or wheels will not be permitted, under penalty of disqualification. Should a contestant break the seal placed on any of these parts by the committee he will be penalized five points for each seal broken. The other penalties will be as follows: One point for each minute early or late going into or leaving controls, not in excess of thirty minutes; two points for each minute thereafter. Contestants will be liable to disqualification for the following: Repair work on machines while held in controls; being towed or using any power in covering the course other than that of his machine or his own muscular power; making replacements as named in a paragraph above; cutting the course and failure to sign the checking sheet at any control.

The contest committee places special emphasis on the announcement that machines must be equipped with efficient mufflers, and riders will be warned against using their cutouts when passing through a town.

Unusual interest has already been aroused in plans for the run and it promises to be one of the most successful ever put on in the Middle West. A number of entries have been received and there are indications that before May 15, when the list closes, the number of riders lined up for the event will break records.

Important Bridge Down At Herkimer

Tourists Crossing New York State Must Follow Revised Route Because of Damage to Bridge Caused by Recent Floods.

ONE result of the recent floods in New York State was the carrying away of the steel highway bridge over West Canada Creek, at the eastern edge of Herkimer, N. Y., a short distance above the junction of this creek with the Mohawk River. Unfortunately, this bridge was on the main line of travel between Albany and Buffalo, and was the only entrance into Herkimer from the east via the State road on the north side of the Mohawk River; and its destruction is temporarily interfering considerably with road travel across the State. The flood was caused by the immense amount of water coming down from the lower Adirondacks over Trenton Falls and by West Canada Creek, sweeping away the structure that has done duty there for many years.

While this bridge is down, it will be necessary for west-bound motorcyclists to leave the State road on the north side of the Mohawk River at the Hotel Richmond, Little Falls, crossing to the south side and running along through Jacksonburg and passing the site of old Fort Herkimer, recrossing the Mohawk River and the New York Central tracks —a very dangerous grade crossing—into the center of Herkimer, joining the usual route. Eastbound it will be necessary to cross the New York Central and Mohawk River at Herkimer, following eastward past old Fort Herkimer and through Jacksonburg, recrossing the Mohawk at Little Falls, and joining the through State road by a right turn near the center of the city.

It is unfortunate that this should have happened on the most important trunkline in New York State, particularly at a time when the road conditions generally on that line have been very much improved. Of course, touring motorcyclists will necessarily accommodate themselves to this new condition. A temporary structure has been contracted for, to be opened in May; meanwhile the State Highway authorities are planning a fine new bridge, not only to take the place of the old one, but also to eliminate the steep hill over the present route.

ONE DEALER OMITTED

IN REFERRING to the motorcycle dealers of Pittsburgh, Pa., in a recent issue the name of H. E. McCanless was inadvertently omitted. Mr. McCanless is one of the leading dealers of the city and the item was incomplete without his name. He handles both the Schickel and Reading-Standard machines, and supplies. His headquarters is at 1611 Penn avenue.

A. FREED, the hustling Thor distributor on the Pacific coast, forwards the accompanying photograph from his San Francisco headquarters. It shows one of Freed's enthusiastic patrons in Sacramento using his motorcycle to haul a load of oranges into the city. Note the unique construction of the trailer and the size of the crate that the rider manages to handle with the aid of his single-tracker.

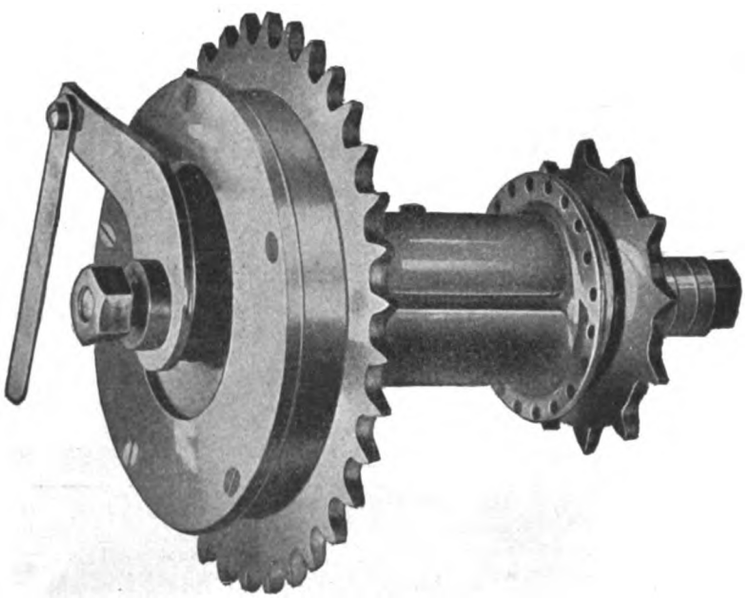
ECLIPSE

As a Stopper It's a Corker

The Brake You Can Trust

Terrific Gripping Power
Tremendous Strength
Unfailing Reliability
Instantaneous Action

These four positive qualities, harmoniously combined, produce this exceptional brake, "The Brake You Can Trust." More powerful than an automobile brake in proportion to its size—One Hundred Square Inches of Braking Surface.



Dealers—we again ask you to look ahead. Do not be caught napping. We positively predict the most sweeping, the most insistent demand from riders, for Eclipse Free Engine Pulleys and Multiple Disc Brakes that has ever been experienced since their introduction to the motorcycle rider. Lay in a heavy stock. You will thank us for this sincere and earnest advice—if you follow it.

ECLIPSE MACHINE COMPANY

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:

HARRY G. JACOBS

1220 First National Bank Building, Chicago. Telephones 5908 Central and Randolph 1022.

CIRCULATION THIS ISSUE MORE THAN 14,000 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

TELLING HOW TO TOUR

MOTORCYCLISTS throughout the country who were moved to compliment us upon the makeup of our 1912 Spring Touring Number will find that the coming Spring Special—due May 15—will make even a stronger appeal. We say this without qualification, for never have we entered with more enthusiasm upon the preparation of a special number of MOTORCYCLE ILLUSTRATED.

The May 15th number will be unique in several respects, but primarily because it will tell HOW, as well as WHERE to tour. Herein is embodied a fertile idea, one that has kept us busy for weeks past and that will pay big returns to the rider—and to the advertiser who is catering for the rider's patronage. In addition, there will be an unusually striking array of pictorial features—exceptional even for MOTORCYCLE ILLUSTRATED.

If you are a rider we need only call your attention to the fact that the 1913 Spring Touring Number will be issued May 15; if an advertiser, we feel that only one suggestion is necessary—forward your copy early.

EDITORIAL VIEWPOINTS

REGARDLESS of tariff tinkering, war scares, vice commissions, and what-not, the business of the manufacture and sale of motorcycles grows apace. In every part of the country the writer has found the demand to exceed the supply. Every live dealer is doing splendidly, whether his store be located in Boston or Los Angeles; in Jacksonville or Seattle. Everywhere there are signs that the motorcycle's growth in popularity during the past twelvemonth is one of the most remarkable manifestations of public enthusiasm in the sport history of the world. Neither the politicians nor the diplomats will find it possible to hamper the motorcycle business for 1913, or 1914, or 1915, for that matter. Any number of makes and models are giving splendid service to thousands of delighted owners, and each properly operated machine is making friends for the sport. A tour of the country has convinced the writer that the outlook could hardly be brighter. Only the concern which cannot deliver, and the dealer who is unable to get deliveries, can possibly have any fault to find with either the present situation or their prospects.

THE EXEMPTION OF SIDECARS

THAT motorcyclists of New York State have no reasonable grounds for complaint relative to their legal status, is evident once more in the declaration just issued from the office of the Secretary of State exempting sidecars from registration. Owing to the law's tendency toward circumlocution and weird presumptions, a less favorable interpretation might easily have been given, and the decision that sidecars do not come within the scope of the statute applying to automobiles is marked by a spirit of fairness that does not characterize the attitude of state officials in general. It is to be taken for granted that sidecar users of New York City and vicinity who have been compelled to pay five-dollar registration fees of late will have their money refunded, and that police officials will quickly accustom themselves to distinguishing between a motorcycle passenger attachment and an automobile.

F. A. M. STATE ORGANIZATIONS

FROM coast to coast and from Boston to Dallas, the F. A. M. director who has just completed his long tour of the country has sought to impress upon his audiences the desirability of organizing each state to the end of enabling every member of the Federation to take active part in its government. Assurances have been given everywhere and in at least a dozen instances, the work is already under way. This is particularly true of practically all the New England, Middle Atlantic and Middle Western states, also Maryland, Virginia, and a few of the states in the Far West and on the coast. The plan of procedure is roughly outlined elsewhere in this issue, but the idea is to afford to F. A. M. members and riders in each state the widest possible latitude. The national body does not limit the state commissioners and assisting clubs to any specified organization scheme, the only limitation being the reasonable one that nothing shall be done which might conflict with the provisions of the F. A. M. constitution and by-laws.

The national directorate, the national committee chairmen and the national officials have heretofore shouldered the burden of practically all the executive and administrative work, not because of any desire on their part to "run the F. A. M." but, instead, because they found it necessary to do the work pending the development of a thoroughly systematized national organization and, more particularly, the perfection of the various state organizations, several of which have already proven their tremendous value.

State lines are the normal limits of governmental units in an American organization having, like the F. A. M., a country-wide scope. Two or three states have already shown what can be accomplished by State bodies when well organized, and as the mode of procedure is so simple, the excellent examples set by the most active State Commissioners should, and promise to be, followed during the next three months by a score of other State heads. We predict that the F. A. M. and its entire membership will benefit wonderfully as a direct and immediate result of the organization movements now being boomed.

NIGHT RIDING AND THE SPEED FIEND

SEVERAL letters have been received by the Editor of late expressing the hope that this publication will undertake an active campaign against indiscriminate speeding on the highways, and that methods will be found to prevent individual riders from engendering unfavorable public sentiment by their reckless disregard of the rights of pedestrians and other road users. Within the last month at least half a dozen motorcyclists have maimed themselves, destroyed their machines and involved other persons in accidents that were easily traceable to carelessness on the part of the motorcycle pilots, and in addition several serious mixups have occurred as the result of night riding without proper lighting apparatus on the machines. Here are two problems out of the same cloth. The rider who drives his machine at top speed over unfamiliar highways—or even over those with which he is well acquainted—is quite likely to attempt night trips without a headlight, or with a makeshift, and he is also a difficult chap to approach with an argument. Were he otherwise he would not be found in the category above referred to.

We are at a loss to state just how a reformative movement can be made productive of results, but it would seem that affiliated clubs should be able to curb careless members, at least to the extent of preventing them from venturing upon the highways at night without efficient lighting equipment. The speeder presents a knottier problem, but he, too, may have a crimp put in his recklessness by judicious club regulations, strictly enforced. MOTORCYCLE ILLUSTRATED has preached the doctrine of efficient lighting for years past, and has never overlooked an opportunity to impress upon the highway speedster the damaging influence of his dereliction. With the summer riding season again at hand, there is the usual crop of fatalities and sensational accidents to be credited to the speed fiend, while the rank and file of motorcyclists continue to suffer unjust condemnation. What's to be done about it?

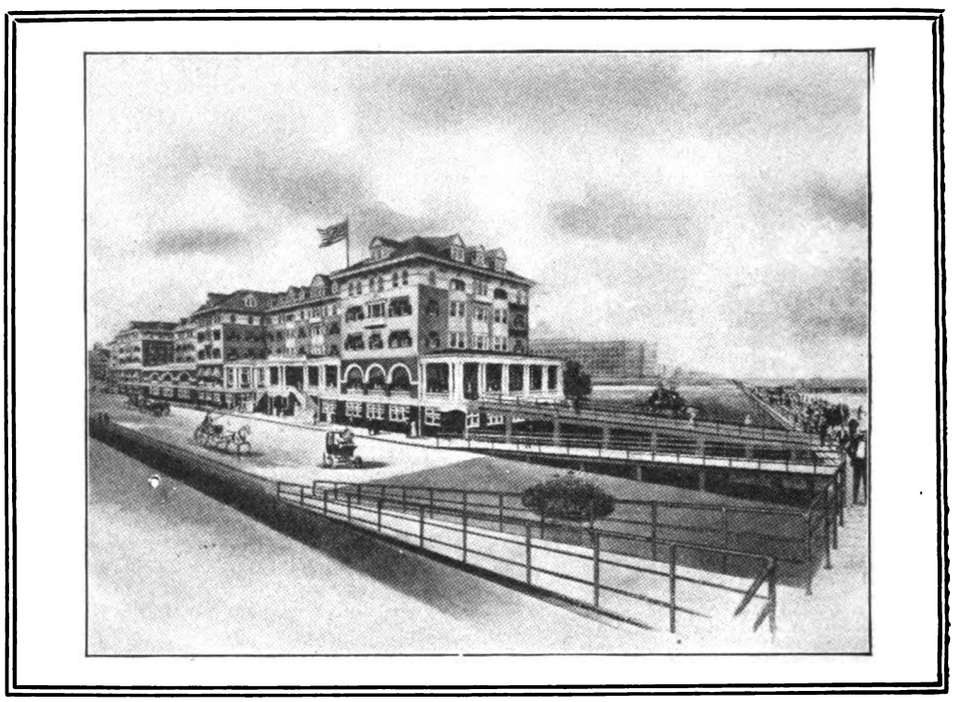
Headquarters for Cycle Parts Convention

Trade Men Will Gather at St. Charles Hotel, Scene of Previous Successes, for Their Annual Program to Be Held in Atlantic City, August 5-8—Four-Day Schedule Now Being Prepared

ANNOUNCEMENT is made by the committee in charge of arrangements for the seventh annual convention of the Cycle Parts and Accessories Association, to be held in Atlantic City, August 5-8, inclusive, that the St. Charles hotel will again be the official headquarters. This statement will be welcomed by the members of the association, in view of the fact that the St. Charles has been the scene of the convention for the last two years. Arrangements have been closed for meeting rooms at the hotel, to be used by the Motorcycle Manufacturers' Association, the Cycle Jobbers' Association of America and the Cycle Parts and Accessories Association, and a liberal promise has also been given by the hotel management relative to individual accommodations.

Vice-president David Smith and Treasurer William J. Surre, of the Cycle Parts Association, make up the committee of arrangements. On a recent trip to Atlantic City they learned that the St. Charles hotel will be prepared to accommodate 150 of the convention visitors, provided no time is lost in making reservations. It is suggested that when rooms can no longer be reserved at the official hotel, prospective visitors may be accommodated satisfactorily at the Lorraine or Raleigh hotels, which are almost opposite the St. Charles, or at the Islesworth, which is about two blocks distant. Reservations for rooms must be made directly to the hotel management, a rule which recently went into effect prohibiting the committee of arrangements from undertaking this task for the individual members.



The committee is now at work on an elaborate program to cover the four days of the convention at the famous New Jersey resort, and while it will be difficult to make the schedule more interesting than preceding ones from a business viewpoint, it is stated that sufficient variety will be injected into the entertainment features to establish a new record for general enthusiasm. The official headquarters for the convention is shown in the photo above.

Four National Tours to F. A. M. Convention

ACCORDING to the present plans four national tours to Denver will be conducted by the F. A. M. in connection with the 1913 convention of the governing body, but as yet the only road program to be mapped out is that of the Southeastern Division, which will be merged with the annual outing of the Kansas Short Grass Club. Recently officials of the F. A. M. and the American Automobile Association met in Hutchinson, Kan., and agreed to co-operate on plans for the tour, and as a result it is likely that no less than 1,000 motor cars will accompany the Short Grass riders in their run to Denver. The clubs that are to figure in the tour will leave Salina, Emporia and Wichita July 20 and meet in Hutchinson, where an interesting program is to be given.

The motorists will then proceed over the Santa Fe Trail to Pueblo, Canon City, Colorado Springs and on to Denver. The scenic features along this route are not surpassed anywhere in the world, and the Short Grass riders and their guests from neighboring states will take advantage of every opportunity for side trips along the line. It is the intention to confine the actual road work of the tour to the mornings, as far as possible, so that the afternoons may be left open for special entertainment programs and outings to points of interest.

Arrangements will be made by the Short Grass tourists to pay their secretary a certain sum at the beginning of the trip so that general expenses along the route may be paid out of a common fund. The total outlay for the trip is figured at $20 per rider. This fee covers all hotel bills and storage expenses from the time the squad leaves Hutchinson until after the first dinner in Denver. The trip to the convention city has been so mapped as to consume ten days. The riders will get under way at 7 o'clock each morning and a schedule of about 20 miles an hour will be maintained. There will be no attempts at speeding and the whole program has been arranged with a view of affording a fine pleasure trip, not a speedfest.

The Short Grass Club requires each member to wear a uniform, so that an impressive display will be made when the riders are in line. Each rider will be supplied with a pennant by the club. The touring body will be divided into squads of twenty-five men, each under the leadership of a captain and a lieutenant. If the schedule is adhered to the Short Grass tourists will arrive in Denver at noon on July 30.

Full information relative to the tour may be obtained from P. E. Zimmerman, of Lindsberg, Kan., secretary of the Short Grass Club. Mr. Zimmerman is also ready to receive applications from those who wish to accompany the Kansas squad on the trip to the convention city.

Announcement is made that the three other tours to Denver, in addition to the Short Grass or Southeastern Division, will start from San Francisco, Chicago and Aberdeen, S. D. W. G. Collins, of 636 Van Ness avenue, San Francisco, is in charge of arrangements for the touring body that will leave the Pacific coast for Denver; P. N. Bushnell is booming plans for the tour that will have Aberdeen, S. D., as its base, and Dr. B. C. Wildman, of Havelock, Neb., is the organizer for the Central Division.

HAMMER'S BIG ORDER

E. H. HAMMER, of Hammer & Bissett, agents for the Indian in Minneapolis, Minn., reports that the company has just sold its eighth machine to the Minneapolis Electric Company. The Electric company bought four machines last year and has now bought four of the 1913 models.

C. H. TURNER and E. R. Davis, motorcyclists of Topeka, Kan., are riding their motorcycles from Chicago, Ill., to San Francisco, Cal. The boys left Topeka on April 21 and went to Chicago by rail. Their route to the coast is by way of Denver, at which point they will be joined by two other riders.

A Forty-Mile Jaunt on Long Island Highways

Route for a Pleasant Night Trip That Is Open to Riders of Metropolitan District—Many of the Roads Mentioned Have Been Improved During the Last Year and are Well Lighted

RIDERS of the metropolitan district will no doubt welcome the following suggestions for short night trips over the Long Island roads. The recent improvements on Long Islands roads generally, and through Queens County in particular, have made night runs more popular than when the motorcyclist had to depend upon his searchlight to pick out the road. The roads on the following route are all well-lighted and for the most part have been rebuilt within the last year. The following run of approximately 40 miles will be found to meet all the requirements for a short jaunt.

From Manhattan the route lies over the Queensboro Bridge, across the plaza and Jackson avenue, and over the viaduct to Thompson avenue—a magnificent bit of pavement lighted as brightly as Broadway. Thompson avenue is followed into Hoffman Boulevard, and this in turn into Hillside avenue, Jamaica, really the beginning of the trip. From Brooklyn this starting point is best reached by Eastern Parkway, always in good repair, to the Brick Hill leading up into Forest Park. A beautiful road through the park, though almost unlighted, leads into Hoffman Boulevard, just a mile or so above Hillside avenue.

Hillside avenue is good going until the Peace Monument is reached. There a turn to the right leads one across Fulton street and the Long Island Railroad tracks into the Merrick Road. The first part of this road has been repaved and lighted, and is now a boulevard for the one and one-half miles which it is to be followed. A turn to the left carries the motorist along Central avenue then to Springfield Road, which crosses the Long Island Railroad tracks at Queens.

The road is followed across the Hempstead-Jamaica Turnpike and the Jericho Turnpike into Hillside avenue. Here a usual turn is to the left, leading back to the city over the Hoffman Boulevard.

A variation which leads the night-time driver over other good roads is to cross Hillside avenue and follow the Rocky Hill Road, a winding path to Bell avenue, some three miles beyond. Twenty-two miles have then been covered from Queensboro Bridge, and three miles further on, through Bayside, Bell avenue becomes Willett's Point Road and leads to Fort Totten. A turn to the right there, on Fourteenth street to eleventh avenue, and a second right turn at Eighteenth streets, leads into Thirteenth street, College Point. After crossing the College Point Causeway and taking the first turn to the right one gets into Jackson avenue, crosses the Flushing River, passes the Shell Road, and then turns to the right once more into the Astoria-Flushing Road. The road runs straight then to Second avenue, and a turn to the left leads to the Queensboro Bridge and home.

The Brooklyn motorist may turn to the left again at the bridge, and, instead of crossing it, follow the Manhattan man's original route down Thompson avenue and Hoffman Boulevard to the Forest Park Road and back over this to the Brick Hill and Eastern Parkway.

A TOWING RECORD?

A DEMONSTRATION of the pulling power of the Yale single was recently given when W. H. Schafer, agent for the Yale at North Creek, Ohio, towed John Dwar on his machine to Toledo, a distance of 75 miles, in just three hours. Dwar was riding toward Toledo when the exhaust valve on his machine broke and he asked Schafer to tow him to Toledo, as he could not wait for a new valve. Schafer assented and brought his Yale single out for the trip. There were a number of stiff hills encountered and in some places the roads were in bad condition, but the trip was made without mishap.

IT would be difficult to imagine more severe tests than those to which Dayton motorcycles were subjected during the recent flood period in Dayton, Ohio, and that the machines measured up to expectations on every occasion speaks volumes for their dependability. They were used for all kinds of work, but in each instance the prime requirement was get-thereitiveness and the city was given the finest kind of a first-hand demonstration of the adaptability of motorcycles in general and the Dayton in particular.

The Davis Sewing Machine Co., producer of the Dayton, turned about fifty of its machines over to the relief squads and they were given the hardest sort of usage. The squad that appears in the photograph is made up of Dayton motor-cops, equipped with Dayton motorcycles. They established a remarkable record for efficiency, for ability to carry on their work in the face of appalling conditions, and their Daytons stuck to them from start to finish. As a result the city of Dayton has a new conception of the motorcycle.

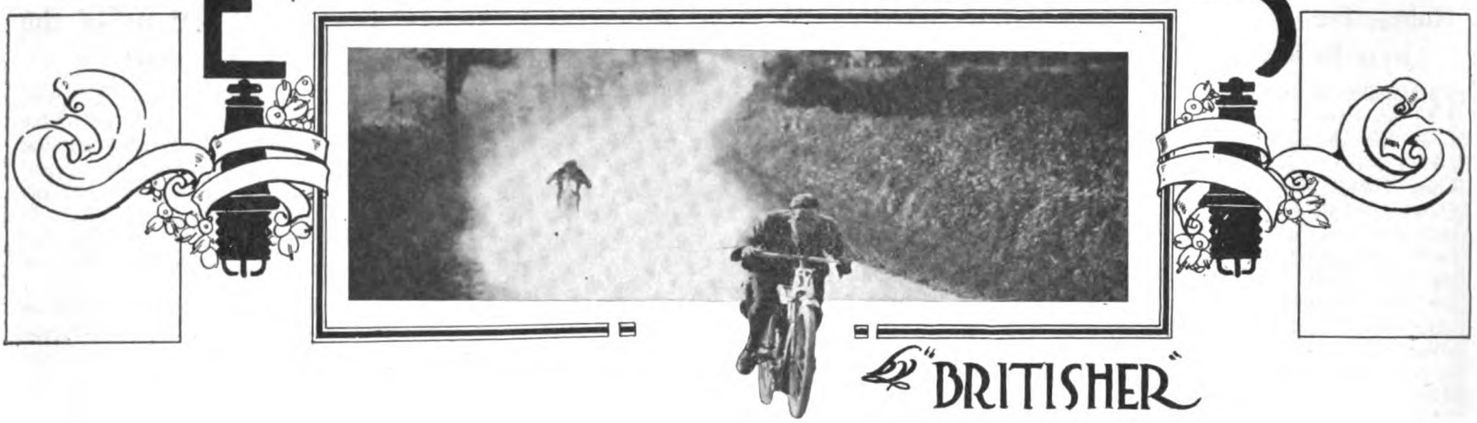
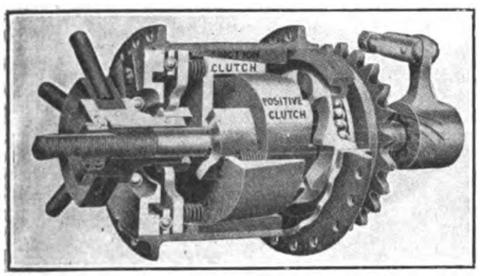
ENGLISH NOTES



"BRITISHER"

THE writer's first experience of free engine clutches dates back to 1903, when he rode a machine fitted with a miniature plain leather cone on the crankshaft. You had to wear a rubber-soled shoe to let this ferocious little coupler in without balking the engine; it slipped like a drunken man on ice, and not infrequently shed its intestines on the roadway, while the end-thrust it created was positively terrific. Since then we have travelled far and fast, and today a hub clutch, embodying 24 steel discs, is the most popular; these hub clutches render a start up a 10 per cent. grade quite possible with a 3½ h. engine geared 5 to 1, and are reliable in wear. Their sole defects are that they must be accurately lubricated with the correct oil, that the springs require replacing about every 2,000 miles, and that the presence of the clutch complicates the removal of the back wheel for tire changing purposes.



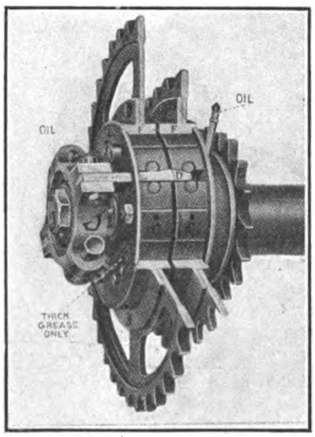
The Villiers Free-Engine Hub.

Of all free engines I have tried, the Villiers, illustrated herewith, makes the strongest appeal to me, for it always permits of a gentle gliding start, and yet insures an absolutely slipless drive. The drawing shows its duplex construction. When the controlling pedal is let up the drive is first taken by a frictional cone clutch, enclosed in the hub and embodying a satisfactory contact area. As soon as the friction surfaces are home, a second and positive clutch, formed of metal dogs, slides into engagement, and the drive is thenceforward positively locked. This clutch was designed and patented by a young mechanic, employed in the Bradbury factory, and is now applied to many different makes of machine.

THE RUDGE MULTI GEAR.

Hard on the heels of the Triumph in the race for supremacy comes the Rudge, which has a slightly superior track record, but has never equalled its older predecessor in road events. Freak hill climbing is all the rage in our endurance runs at present, and corner-strewn grades of 1 in 4 and 1 in 3 figure in almost every competition. The three-speed hubs make light of these acrobatic ascents, as they can get a bottom gear of 12 to 1, or even lower, at will; and these freak gears are impossible with machines which, like the Rudge, rely on expanding and contracting pulleys for a change of ratio. But the Rudge continues to hold its own with the general public, because its duplex pulley system affords ratios from 3½ to 7½ to 1, between which no less than twenty gears are obtainable by the single action of moving the long lever shown in the print.

These infinite ratios enable the rider to set his gear at precisely the correct ratio for any road conditions; and they are far more delicious to ride than any gear limited to two or three arbitrarily chosen "steps." The engine pulley expands and contracts under the motion of the long black lever, which is covered with celluloid, and is released from the "gate" on the tank side by a slight inward pressure. Simultaneously the belt slack is taken by the rear pulley. The outer flange of the rear belt-rim is separately spoked to a sliding shell in the rear hub. As the outer flanges of both pulleys move in the same direction for all gear changes, the belt is always in line.



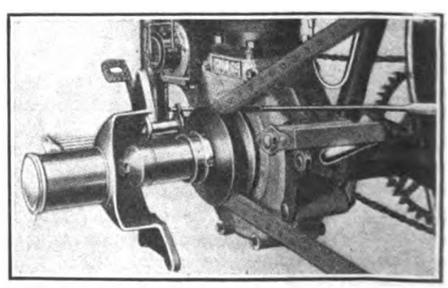
Phelon-Moore Two-Speed.

A multiple disc clutch is enshrined in the long barrel perceptible on the tip of the crankshaft; this clutch is operated by a tiny handlebar lever through a flexible wire. For passenger purposes the Rudge Multi is provided with a 750cc. engine, a single-cylinder rated at 6 h., with a long stroke of 130mm. I am at present bestriding one of these monsters, and find it will roar up any grade on its top gear of 3½ to 1; the standard machine, as delivered to me, will do 75 m. p. h. on the flat, and will carry a sidecar and four men up a grade of 16 per cent. on its bottom gear of 7½ to 1.

THE PHELON-MOORE TWO-SPEED CHAINDRIVE.

The Phelon-Moore is probably the British machine which approximates most closely to American practice, in that it has chain drive, an inclined engine, and a two-speed gear. It is unique, in that it has won high place on the home and colonial market without ever scoring a single speed success of any sort or kind. It is quite a slow machine, and its engine cannot be induced to turn over at the 3,000 r. p. m. beloved of speed merchants; but it is magnificently reliable, and it wears for evermore, world without end, amen.

The details illustrated show how eight years of experience have led a British maker to soften the acerbities of chain drive, when transmitting the power of a slow-running, bullocky single-cylinder engine. The row of bits shows the manner of fitting the front sprockets. The high gear sprocket is rigidly mounted on a barrel, keyed and nutted to the engine shaft; but the low gear sprocket is friction-held by a spring washer and double nuts; on paper one might guess that this "spring drive" would be rigid in practice, but on the road I have learned that a tap on the nicked locking ring increases or softens the rigidity of the drive in marked fashion. The second cut shows the double clutch arrangement on the countershaft. The spring bronze rings C are expanded by the wedgebars D, which are shown in the intermediate position, where both clutches run free. Any couple of gear ratios desirable may be ordered. The chains are adjusted by revolving the entire gear in an eccentric mounting; this is the weak point of the gear, as the chains share a common adjuster, and their wear is uneven; but it has not militated against success. Most users make up the long chain in two sections,



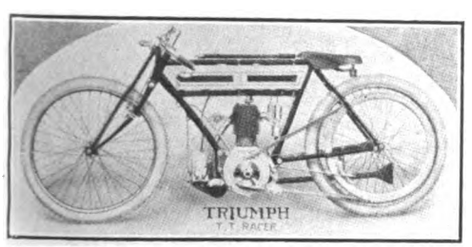
Rudge Free-Engine Clutch (cover removed).

Digitized by Google

of which the shorter contains the same number of links as the other chain, and occasional swapping equalizes the wear. The P. & M. team have won the team prize for many years past in all our big trials with quite monotonous regularity. Their three or four entries, usually comprising two amateurs, invariably climb all the hills, record absolute non-stops and finish looking cleaner and nattier than anybody else.

Another picture shows a fearsome monster, indeed, in the shape of the 8 h. Williamson, which is really the big sister of the world-renowned Douglas machines, though it goes by a different name. Its genesis was as follows: the Douglas factories were overburdened with orders for their 2¾ h. horizontally-opposed twins, and could not respond to the demand for a more powerful machine on the same lines. But the engine factory was less busy, and was making a water-cooled 8 h. twin for the Marconi Wireless Company. Mr. Williamson found himself at a loose end, commercially speaking, and he got a contract to deliver a decent number of 8 h. twin engines in both the air-cooled and water-cooled forms.

He saw its perfect balance, enormously high revolutions, unique smoothness and general popularity promised it a big market; and slinging it in a suitable frame, he began to offer it to sidecar enthusiasts. It is selling faster than he can turn them out, though nobody on this side uses such a giant engine for solo work. As the prints indicate, the engine has an outside flywheel, with its weight concentrated in the rim, and the drive is by two wholly enclosed chains, a dog clutch two-speed gearbox figuring as the countershaft.



The Triumph Stripped for Racing.

I depict herewith the best-known of all British motorcycles, the 85mm. x 88m. Triumph, shown in its racing guise. It is also made as a road speedster, as a light tourist with hub free engine, and as a go-anywhere tourist, with three-speed gear in the back hub. Conservatism has been the keynote of Triumph policy, directed by a board including a large element of naturalized Germans. Its makers are always busy trying out many new notions—at the present moment they have eight different variable gears and three revolutionary engines under test; but they never standardize or sell any fitment, large or small, until it has undergone the most crucial butchering on the road.

For this purpose they rely very largely on their most expert amateur customers, who are often supplied with experimental machines twelve months ahead of the time, and asked to butcher them as thoroughly as possible; the factory testers are fully employed in passing the output of stock jiggers, though two testers are given the chance to smash up anything new. The position of the firm on our market is now so paramount that they get the first look at anything new brought out by small inventors in search of a financier.

IMPENDING RECORD ATTEMPTS.

The proposed cyclecar road race, by which the Irish Automobile Club proposed to observe the tenth anniversary of Jenatzy's Gordon Bennett, is bang off; as I prophesied, the cyclecar manufacturers had too much sense to submit their flimsy vehicles to a day's bucketing at top speeds over the rough roads and donkey-back culverts of the Emerald Isle; it would have been a toss-up whether anybody finished at all. In lieu of this exciting item we are now promised several attempts to set up a cyclecar record between Land's End and John O'Groats, and the services of drivers who know the route and have won honors over it, are in great request.

The distance is nearly 900 miles, and the

P. & M. Sprocket Fittings (*see opposite page*)

roads are representative, including much shocking going and some dreadful hills. If anything of an advertisement is to be won, the existing sidecar record must be beaten, so that a speed of 25 miles an hour all through, inclusive of stoppages, must be maintained. It is very doubtful whether any existing cyclecar can stand the racket. However, two or three eager makers are laying their plans for next June, when the dark nights will be at their minimum. The machines that go for record will, however, scarcely be standard; I hear of special multi-speed gearboxes being fitted amidships when the back axle is the standard location; of special engines; of relays of detachable wheels, ready shod with special tires, being stacked at 50-mile depots all the way down—in short, of the usual complete organization designed to excite and to hoodwink a rather gullible public. In any case it will be creditable if any of the vehicles get through without tumbling to pieces. To drive a 7 cwt., under-engined chassis at racing speed over 900 miles of bad road is a tough proposition. After it is over, the Auto-Cycle Union will promptly suspend the driver *sine die* for a breach of the road laws, so that professionals are rather chary of taking on the job; they may fail to finish and still lose their right to compete in official events.

THE CRAZE FOR SPEED WORK.

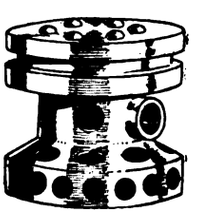
The appended drawing of the Zephyr steel two-piece piston show the lengths to which the speed craze is carried over here. Let it be clearly understood that these special speed-coaxing bits are not made solely or chiefly for the crack professionals. Dozens of amateurs all over the country experiment in these costly directions with much labor in order to win the local hillclimb against neighboring amateurs. The waist of the piston, like the holes with which it is riddled, prevent the excessive oil fed for fast work from entering the explosion chamber and drenching the sparking plug, while the steel lessens the weight and sends the revolution curve towering steeply upwards.

The top or ring-carrying section is a mere featherweight, riveted to the sturdier lower portion, which carries the gudgeon pin. Other laborious items beloved of the speedier amateurs are special cams, permitting freak valve-timing overlaps; the purchase of valve-rocking levers, in the soft, filed to freak contours.

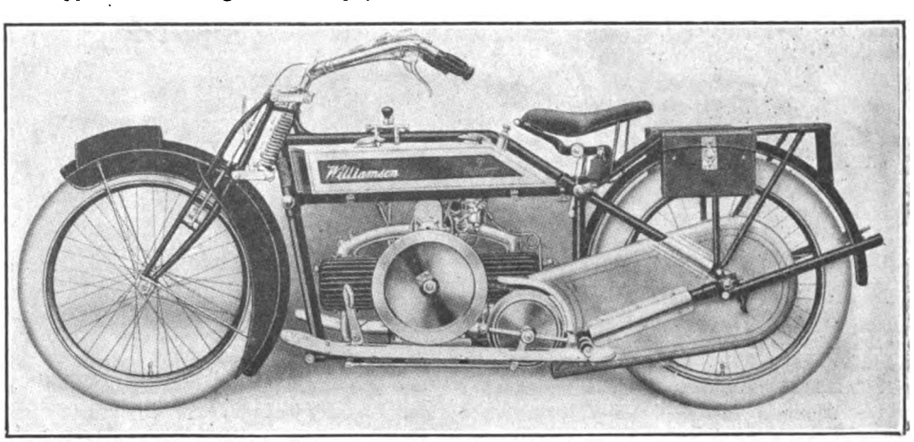
THE ARDEN CYCLECAR.

My first experience of what would now be termed a "cyclecar" happened to be with an American-built Crestmobile, for which, if memory does not betray me, I paid $425 about ten years ago. It was a very light two-seated chassis, carrying a 3½ h. air-cooled engine, mounted vertically in front of the dash, tiller steered, driving by a chain to a countershaft, on which two sliding metal cone clutches coupled up either of two chain and sprocket drives to the back axle. I remember that it used to burn out an exhaust valve every 100 miles; that its chains snapped with astonishing frequency, and that I had to dismount every fifteen miles to pour oil through a plug-hole into the crankcase.

Last week I drove one of its British descendants, the Arden cyclecar, which is a miniature small car in outward appearance. The bonnet is fronted with wire gauze, behind which modestly lurks an 8 h. V twin engine, air cooled, 85 mm. x 85 mm., with two internal flywheels and an extra heavy external flywheel added for luck and steadiness. A chain conveys the drive to a three-speed gearbox amidships, whence a shaft carries on the good work to the rear axle. It has no hub brakes, but a single central drum carries an internal and an external brake.



Zephyr Steel Piston Designed for Speed Work.



The 8 h. Williamson, Big Sister of the Douglas.

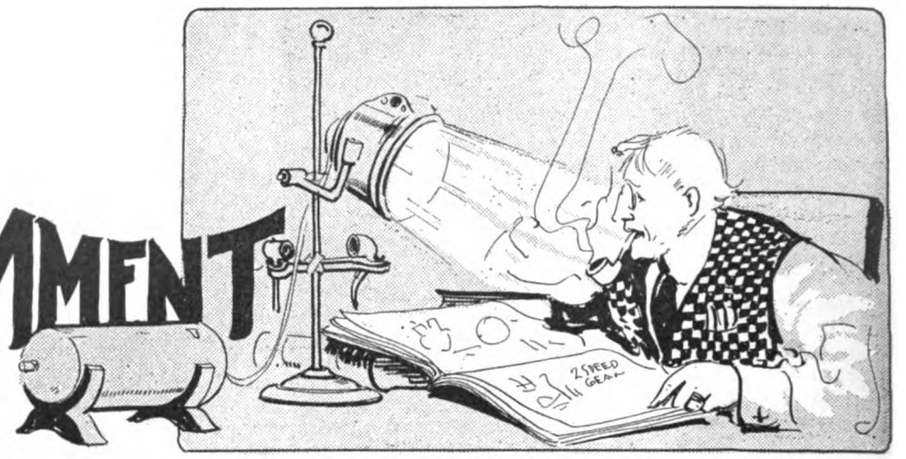
KINKS & KOMMENT

by "COURIER"



THE rider of a certain make of machine naturally thinks that his is the best, with a capital B; to admit that another make was better would be a reflection on his own judgment in choosing as he had chosen. This may be loyalty in a high degree, but it is usually accompanied by the juvenile habit of blaming some organ of the machine for the neglect of the owner. Those brothers who used the clutchless motorcycles of past seasons will remember the old excuse: "Compensating sprocket was slipping," on the chain-drivers, and "belt was stretched," on the flat-belters. Now the poor clutch is blamed: it is never right when the other fellow has done the "trimming." The blame is thus transferred to the manufacturer, to save the *amour propre* and use of a wrench of the rider. Isn't it about time that a rider should "take his medicine" and act like a true sportsman when somebody else has shown himself his superior in riding, instead of grouching? The pastime is certainly old enough for true sportsmanship among amateur riders.

USING SECURITY BOLTS.

IT MAY be said that the standard tire for twins this year is the 2¼-inch, but there are a number of 3-inch tires fitted also. Now, a 3-inch tire is pretty big to be held from creeping by only the valve-stem and its grip in the clinches, and right in my neighborhood there are several cases of constitutionally-leaky valves on these tires. The dealer whose buses have had the trouble says that it is the fault of the rider and the latter blames it on the tire-maker, to whom the responsibility belongs, but not in the way the rider means. What is needed is a system of security-bolts, such as are used on automobile tires—about three should be sufficient to each rim. This refers to driving-wheel tires especially, and not so much to front tires. At present, the rider will have to have these put in himself, but they will cure a lot of valve trouble that is now laid to the doors of the tire-makers.

WHY POWER FALLS OFF.

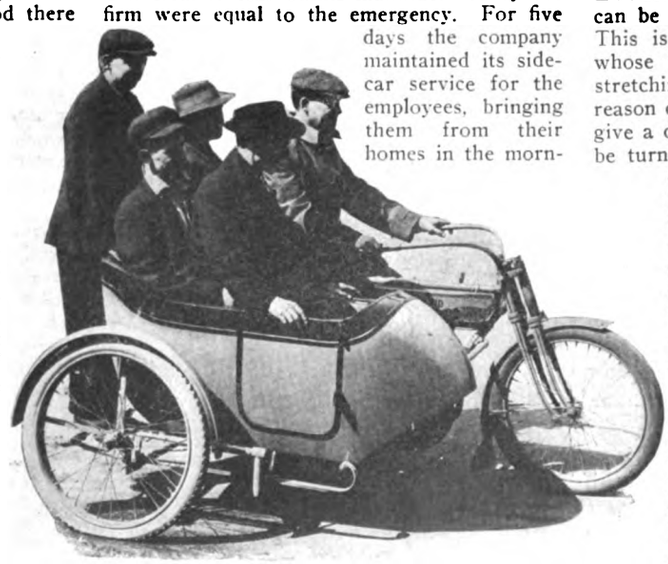
AFTER considerable use some motors are faster on the level than when first purchased, and this is true in particular machines that have not had a preliminary road test. But, with this increase of speed, there is too often a falling-off of power in climbing hills, which can generally be traced to raising of the compression by carbon deposits, reducing the clearance space. Cylinders should be cleaned every 800 to 1,000 miles, particularly if used for sidecar or tandem work.

SOME CHAIN ADVICE.

I WAS talking with a chain-sharp quite recently, and decided to get his end of the chain proposition, after having heard the riders' end for some time. Among other things, he argued that the chain should never be run very slack, as the tendency to "whip" broke more chains than did setting them too tightly. He said that the fear of having the chain jump acted as a good deterrent on most riders, but where the chain was tight the bearings were worn too rapidly, and where it was too loose, power was lost and a break might occur. He also favored running the chain always in the same direction; the practice of reversing it is poor economy in his opinion, and results in needing both renewal of sprockets and chain instead of a chain only. He spoke strongly against putting a new chain on old sprockets.

SOLVING TRANSPORTATION PROBLEMS

DURING the street car strike in Buffalo, N. Y., the Greyhound Motor Company found it necessary to carry some of its employees to and from their homes in sidecars, and the accompanying photograph proves that the Universal sidecar outfits manufactured by the firm were equal to the emergency. For five days the company maintained its sidecar service for the employees, bringing them from their homes in the morning and carrying them back at night. They could hardly be induced to go back to ordinary street cars again after their experiences with the comfortable Universal outfits. The sidecars bore the unusual strain without a hitch.



All these tips are interesting, but to follow them would be very expensive in the long run and most riders cannot see reason for laying out money on a new chain until the old one has been ridden until its useful life is long past.

LARGE OR SMALL CARBURETERS.

A CORRESPONDENT writes me that he cannot get a satisfactory carbureter for his motor, as owing to its unusual size, the stock instruments are either slightly too large or too small. He asks which one would be the better, and the answer is easy; the small one should be taken. The idea is to get the mixture to the motor as cool as possible, and the small carbureter will give a very cold mixture even in the hottest days of summer, while the large one will give a weaker and flabbier mixture, which, if made richer than normal, will soon cause overheating. On the other hand, with the small carbureter there will be a tendency to form frost in the various passages on cold days, and in winter he may have to use another carbureter. Sounds odd, doesn't it, to hear some rider say: "Just took off my winter carbureter yesterday, and am using my summer one hereafter." But with the fuel we are getting now, it may come to that.

THE COMPRESSION COCK.

EVERY motor that has compression cocks can be started without using the valve lifter. This is a "kink" that is of value to riders whose piano-wire connections are given to stretching or where the lifter is for any reason out of service. When opened the cocks give a decompressor action and the motor can be turned over until it fires, when the cocks can be closed. For a twin, this should be done on the stand, but for a single it can be accomplished when running alongside also, as most singles have the cocks situated so that they can be easily reached. The compression cock was really the first decompressor and was so used as far back as 1897 on motor tricycles.

USE OF THE RAINCOAT.

THE late Jake de Rosier introduced kneepads into this country, having brought over a specially-built set for use on his racer, but any rider can improvise a good substitute with a raincoat. When this is folded and strapped to the tank so as to hang down each side, the knees will find a good grip for rough roads or speed work, and at the same time a good place for the coat is found where it is quickly reached when wanted.

Route Changes Following Recent Floods

Motorcycle Tourists in Central West During the Coming Summer Must Be Prepared for Tedious Ferry Trips Across Rivers Stripped of Bridges and Detours to Avoid Damaged Highways

By Tourmaster.

IN view of the recent unprecedented floods, especially in the Central West, motorcycle tourists are making constant inquiries about changes in road conditions; and for convenient reference the subjects most discussed are covered briefly in the following paragraphs. In most cases this information will hold good throughout the greater part or all of the 1913 riding season.

Fortunately, the New England states entirely escaped these floods, and with minor exceptions, there are no radical changes in the routes of those six states for the coming touring season as compared with 1912. This is in fact the only large section east of the Mississippi River and north of the Potomac and Ohio, that has not been somewhat affected.

New York State as a whole suffered comparatively little, one reason being because its principal through highways are better drained and bridged than the average for the country. As noted elsewhere in this issue, the most important of the bridges carried away was the one over West Canada Creek at Herkimer, on the main line between Albany and Utica. Some incidental damage was done in the southwestern part of the state, but nothing to change the course of travel in that section. For several miles the New York Central tracks between Rennselaer and Hudson were under water; but the state road between the same points was not injured on account of its being on an average of two or three miles back from the river.

The through routes of Pennsylvania were very little damaged, except in the Ohio watershed, near or west of Pittsburgh; and the same can be said of West Virginia, with the exception of the Wheeling district, where some damage was done to portions of the Old National Road, which crosses the Ohio River at that point. Of course, the most serious troubles of all this year will be found in central and southern Ohio and Indiana, due to the heavy rains which fell in the vast areas drained by the Ohio, Scioto, Muskingum and Wabash, resulting in a flood of waters which made a record "rise" all the way from Pittsburgh to New Orleans, submerging parts of Wheeling, Marietta, Portsmouth, Cincinnati, Louisville, Cairo, Memphis and many other cities and towns.

Many important bridges were carried away throughout all this territory, especially in the vicinity of Dayton, Indianapolis and Hamilton; in many cases tourists this year will be obliged to take improvised ferries to reach these and other cities. At Lafayette, Ind., on the Indianapolis-Chicago route, one important bridge over the Wabash was washed out, but a new one will shortly be ready. At Logansport, all northbound travel must cross the Wabash at Eighteenth street; many other bridges were carried away, so that at this writing the nearest crossing east of Logansport is at Peru, and west at Delphi.

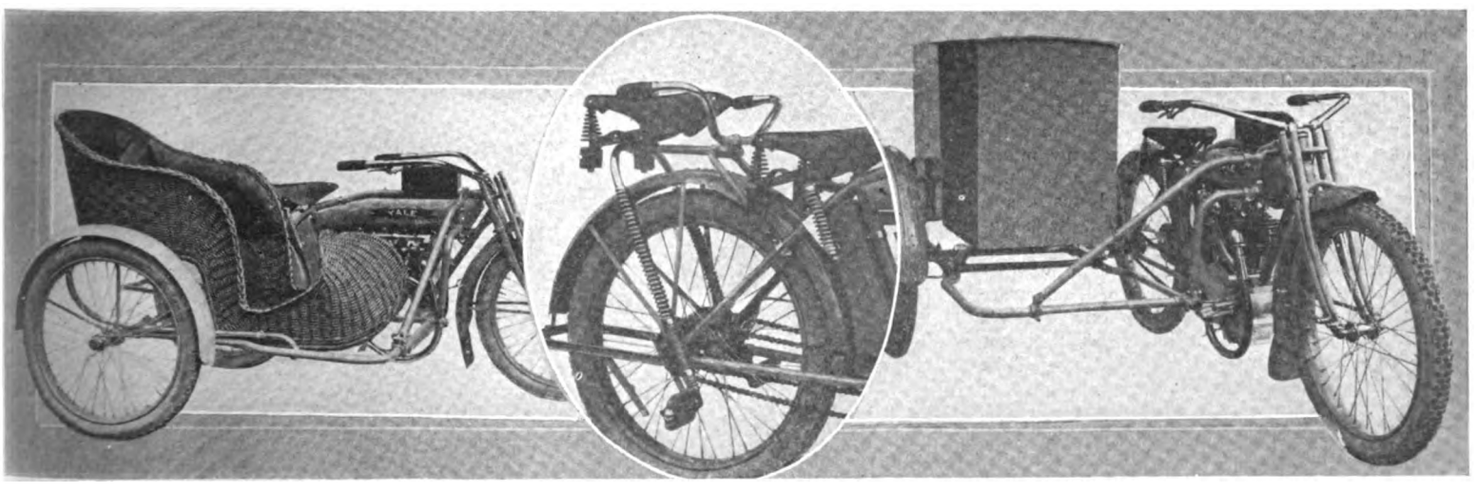
Ordinarily the western rivers are peaceful and quiet, and give no trouble; but when gorged with a sudden flood of waters, they carry everything before them. The writer remembers coming up over the roads from Peoria, Ill., to Chicago, three or four years ago, after floods almost but not quite as bad as those of this last spring. The down trip was made in dry weather and at good speed; but on the return trip the roads were deep with mud, and on approaching Ottawa, Ill., from the south, the bridge over the Illinois River was found to be carried away.

The experience in trying to cross this swollen stream on an improvised ferry is remembered with anything but pleasure, and the same sort of thing will be met generally by motorcyclists who plan trips in the Central West this year. For a good description of the effect of floods upon the western rivers, it is suggested to those interested to read Frank H. Spearman's "The Spider Water," which appeared in McClure's magazine several years ago, and can be found in any large reference library.

One result of the road changes due to these floods will be much less touring out of central and southern Ohio and Indiana than usual this year, and particularly less traveling on east and west routes through that territory. Those living in the affected territory, planning trips to eastern New York State and New England, will generally take the northern routes through Cleveland, Buffalo and Albany, rather than the lower lines through Columbus, Wheeling and Pittsburgh. Of course, most of the localities whose bridges have been washed away will arrange some temporary crossings, in the form of quickly constructed bridges or ferries, until new and more substantial structures can be erected. For this reason, while travel over the principal routes will naturally be greatly interfered with, probably none of them will be entirely closed.

Perhaps the worst individual effects of the floods will be felt by those who have garages located on the main routes in the flooded territory. It is well known that the business of many of these places comes principally from their location on through routes into and out of such cities as Dayton, Columbus, Indianapolis and Cincinnati, alongside or near by the steady stream of travel. In instances where the main thoroughfares are sure to be out of commission for months together, and improvised routes used instead, it is likely that the garages will lose, temporarily at least, a great part of their current business.

MEMBERS of the Marysville (Cal.) M. C. recently held a run to Colusa. The club is now making arrangements for a run to Sacramento at an early date.



FROM the busy factory of the Consolidated Mfg. Co. come the photographs which make up the accompanying lay-out. The first shows a Yale with sidecar, and the method of connecting the passenger attachment to the motorcycle is worthy of special attention. Note the sturdy mooring encircling the motorcycle frame just back of the steering-head; this feature permits of four-point suspension when a sidecar is fitted to the Yale. The picture in the center shows a sturdy and unusually resilient tandem attachment which bears the stamp of Yale workmanship, and the photograph at the right gives a view of the neat van that is being used to good effect by a number of enthusiasts who are adapting their Yales to commercial service. It is argued that this trio ought to meet all demands.

WHAT SHOULD JONES DO?

IF John Jones, a dealer, learns that Sam Smith is in the market for a motorcycle—through seeing him ride a demonstrating machine belonging to a competitor—is Jones justified in striving to interest Smith in the make of motorcycle he is handling, or should he leave the coast clear for the agent who first had dealings with the prospective buyer? In other words, does a prospect "belong" to the dealer who "discovers" him, or should any other agent in the city feel free to seek his patronage regardless of who started the ball rolling?

JONES ENTITLED TO A CHANCE

"JONES should certainly strive to interest the prospect in his make of machine, regardless of who started the ball rolling," writes a New York City dealer. "Competition is too keen these days for any dealer to expect to hold a prospect to himself; if he can do so, let's give him credit for diplomacy and salesmanship, but if Jones gets on the trail there is no reason, in my opinion, why he should feel backward about putting forth his best efforts to land the sale. From my point of view, Jones would be unnecessarily scrupulous if he passed up his opportunity, and what's more he would soon go out of business."

SPORTING SPIRIT WILL HELP

"IF BOTH Jones and the first dealer are possessed of a little true sporting spirit there should be no trouble," writes "A Marylander." "Let the prospect try out both machines, the one represented by the first dealer and that sold by Jones, and the problem will probably solve itself. Not long ago I sold a machine against strong competition because my model could climb a hill that balked the machine offered by my competitor. If Jones has a better machine than the first agent he is entitled to the sale, in my opinion, and unless he gets out after every prospect in his district he will not have a chance to demonstrate that his offering is the better one. Here's another point: If the first dealer has just what the purchaser wants, no other dealer will be able to take him away and sell him something else. If the prospect is not entirely satisfied, it is the duty of Jones or any other agent in the city to make an effort to please him. More luck to the Joneses! They keep things moving."

SALES RACE A "FREE-FOR-ALL"

"HOW is Jones to know whether the first dealer really has developed the prospect?" queries "An Indiana Veteran." Continuing, he expresses the opinion that Jones cannot be expected to take the first dealer's claims for granted, and that when the former sees a prospect on a competitor's demonstrating machine he is justified in believing that the race for the business is a "free-for-all." He points out that the conditions are likely to be reversed at any time, so that Jones will find himself in the place of the first dealer, and that in the long run open competition will give all the agents in a city an even chance for business.

LEAVING IT TO THE PROSPECT

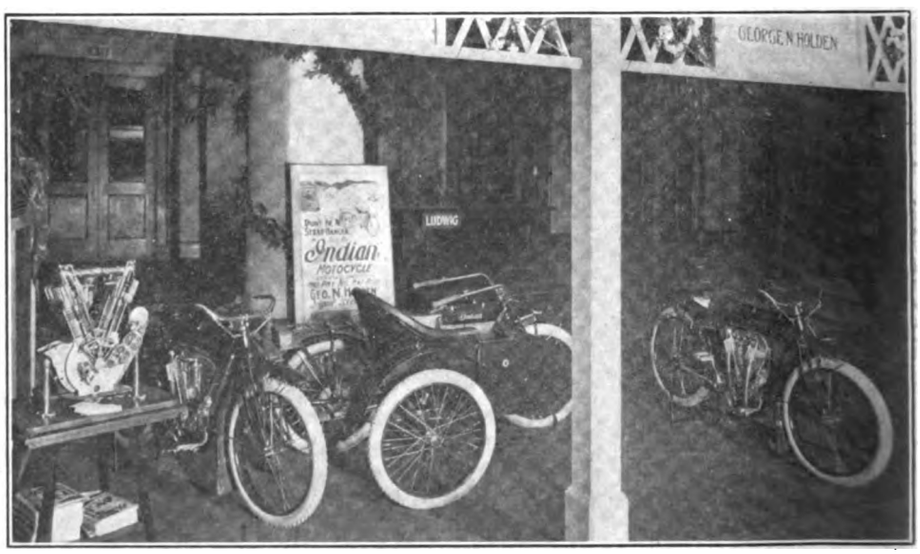
"A PENNSYLVANIA DEALER" writes as follows: "It appears to me that in nine cases out of ten the prospect will settle the problem himself. If he is not satisfied with the machine offered by the first dealer he will probably visit Jones or some other agent without being invited. How he is going to tell whether he is getting the most for his money if he visits only one dealer is a matter for his personal consideration. Our automobile friends draw no fine lines when dealing with a prospect. If one automobile dealer sees a prospect out in a rival's car today he will be around with his own car to take the prospective buyer out for a spin bright and early tomorrow. In short, I believe Jones should take his chance. It is up to the first dealer to beat Jones to the business; if he fails he must blame himself or the make of machine he is handling."

LEEWAY FOR THE FIRST DEALER

"I BELIEVE the first dealer should be given every consideration," writes an up-State New York agent, "for in many cases it will be found that he has given valuable time to developing the prospect. On the face of it, we can hardly say it is fair for a second dealer to step in when the tedious work is finished and reap the benefit of someone else's industry. Many a rider would not be in the ranks if some energetic dealer had not got on his trail and persuaded him to give the motorcycle a trial. If an agent who works along these lines is going to have his business taken away from him by Jones at the last minute, he will very soon decide that the motorcycle field is no place for him, and the trade will lose a good man. We need real boosters, men who go out and develop business, and unless the Joneses give them a fair chance they will become disgusted and quit."

AMONG THE MISSING

A BRAND new twin Harley-Davidson is reported stolen from the Harry Svensgaard Sales Corporation, of 471 Woodward avenue, Detroit, Mich. The machine was taken from the salesroom on the night of April 20. The motor number is 3818-E. Another twin Harley-Davidson, belonging to B. B. Pennington, of Detroit, engine No. 1443-E, is also reported missing.



INDIAN motorcycles were attractively displayed at the recent Commercial Travelers' Exhibition in Springfield, Mass., by George H. Holden, Springfield agent for Hendee products. As will be noted in the accompanying photograph he showed several of the 1913 models and an Indian sidecar in addition to a motor in section. He reports brisk sales.

Big Miami Branch Factory in Indianapolis

Middletown Company Takes Over Factory Structure Vacated by Prest-O-Lite Company in Hoosier Capital and will Devote it to Production of Flying Merkel Motors on Elaborate Basis.

K. R. JACOBY, president and general manager of the Miami Cycle & Mfg. Co., Middletown, Ohio, announced this week that he had secured the Prest-O-Lite building in Indianapolis for an auxiliary factory to the already large plant located at Middletown.

While the announcement came as something of a surprise, it was not wholly unexpected, in view of the fact that the growth of The Miami Cycle & Mfg. Co. has been unusually rapid of late. Expansion naturally was a thing to be expected. The company only last January moved into its big new concrete and steel factory, the addition embracing some 55,000 extra square feet of floor space, but even with this additional elbow room it found that it did not have large enough venue for its operations.

The new factory which has been secured at Indianapolis is the plant just vacated by the Prest-O-Lite company, which has acquired a larger plant at the new city known as "Automobile," located near the motor speedway. It is located on South street, four blocks from the Claypool hotel, and consists of a three-story and basement building of reinforced concrete, measuring 250 by 65 feet.

In this new building the motors used in the Flying Merkel motorcycle will be built complete; also the two-speeds and band brakes. These will be the only items manufactured in the Indianapolis plant. In order to take care of this work President Jacoby has already let the contracts for $100,000 worth of machinery. Machinery now in the Middletown factory, which is used exclusively for the building of motors, will be transported to the Indianapolis factory, while the $100,000 purchase represents entirely new machinery, part of which will be used at Middletown and part at the company's branch in Indianapolis.

The new factory will employ 800 men, and C. S. Barkelew was engaged this week as mechanical engineer; he will have charge of the Indianapolis factory. The new plant will be ready for occupancy August 1, at which time also the Miami Cycle & Mfg. Co. will have 1914 models ready for shipment. In order that its production may attain a maximum standard, instead of laying off men during the dull months of July and August, as do most manufacturers, the Miami company will operate night and day through these months, working up material and complete machines so that all next season immediate deliveries can be made. To this end a large storehouse will be built at Middletown, and a stock of finished and crated machines kept on hand.

Another noteworthy feature, and one that positively will be carried out in every detail, has to do with the testing of motors, and the great care that is being taken in the production of the Flying Merkel. At the Indianapolis factory every motor will be block-tested before being shipped to Middletown. At the Middletown factory the complete machine will be assembled, and construction will start next month on a five-lap banked track, where all motors will be given a test for speed. An artificial hill also will be constructed, and every motor must attain a certain degree of efficiency before it will be passed by the final inspector. This five-lap track and the hill will be located in the present grounds of the Miami company at Middletown, and the track which will describe a perfect circle, will be covered by a corrugated iron roof, so that testing will be uninterrupted during any kind of weather.

The output of the company for 1914 will be 25,000 motorcycles. The company also is planning to double its production on Flying Merkel bicycles, Hudson bicycles, Racycles and Musselman coaster brakes. So far business in these lines has more than doubled over 1912, which latter year was, up until that time, the banner year in the company's history.

The advantages of an exclusive motor, two-speed hub and band brake factory at Indianapolis are readily apparent. Nothing but the most skilled labor can be employed for the proper manufacture of articles of this kind, and because of the high cost of living in Middletown, it is difficult to secure the same skilled labor that is possible in a larger city like Indianapolis. In Indianapolis the company will be able to secure the right kind of labor and the assurance that it will not experience any more labor trouble, of which it had a little flurry early this spring. The net result is that better motors can be produced on a more economical basis.

MIAMI DEPARTMENT HEADS

IN THE photographs reproduced below appear a number of department heads on the staff of the Miami Cycle and Mfg. Co., at its factory in Middletown. Factory Manager A. C. Bryan is found within the circle in the upper left-hand corner, and the next picture to the right shows Advertising Manager F. L. Valiant and Purchasing Agent Joseph Jeffcott, the latter at the telephone. In the circular picture at the right appears W. D. Witner, who is in charge of the Repair Department. The lower left-hand picture shows the Sales Department heads holding the daily conference, and the remaining photograph gives a view in the draughting room, where new Merkel ideas are transferred to paper.

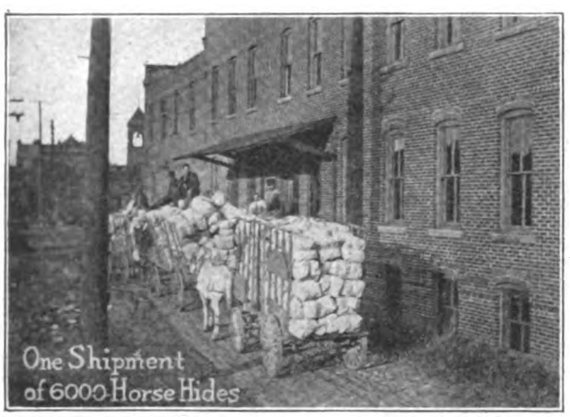
Making Grinnell Gloves to "Sell With a Bond"

How An Ideal Factory Location, Up-to-the-Minute Producing Methods and a True Spirit of Co-operation Enable the Morrison-Ricker Firm to Cover Its Products With Ironclad Guarantee

NO motorcyclist, even of limited experience, would think of making a road trip without a presentable pair of gloves, but despite the generally acknowledged need of suitable coverings for the hands on such outings comparatively few riders have any definite idea of the work involved in turning out a pair of really good gloves. Having this in mind, the writer welcomed an opportunity not long ago to make a trip through the up-to-the-minute glove factory of the Morrison-Ricker Mfg. Co., at Grinnell, Iowa.

On my arrival at the factory I was greeted by B. J. Ricker, a member of the firm, who personally escorted me through the different departments and explained in detail the interesting processes by which the raw material is



One Shipment of 6000 Horse Hides

transformed into the finished product. I was very favorably impressed with the general layout of the Morrison-Ricker factory. It stands back from the road a little and is not crowded by any other buildings. There is plenty of open space around it, so that every corner of the busy plant is bright and airy.

When I called attention to these conditions Mr. Ricker agreed that a more desirable location could hardly be obtained. "If we were called upon again to make a selection of a site," he said, "we could not improve upon this spot where we have been carrying on business for fifty-seven years. To the southwest is the principal hide-producing district of this country, so that we have comparatively low freight rates on raw material, and our location in the center of the great Middle West means that we can guarantee quick and economical deliveries to every state in the Union."

Mr. Ricker led me through the spacious general offices where clerks were busily engaged in classifying a flood of morning orders and handling correspondence. Then we proceeded to the tannery, a three-story building in which great piles of hides were awaiting the tanning process.

"Our policy has been to buy in large quantities," said Mr. Ricker, "for in this way we obtain rock-bottom rates. Accordingly we are enabled to put the highest grades of leather into our gloves at the lowest possible prices." As we made the rounds we saw the hides being washed in great revolving drums, "put in soak" as it is technically expressed. Then they are run through the "fleshing" machine which removes the hair and scrapes the hides clean. The few hairs that are missed are removed by knife in what is known as the "fine hairing" process. Finally we stepped into a large room where huge paddle-wheels were stirring hundreds of hides about in the tanning liquor, and Mr. Ricker explained that this system was used to insure more even tannage.

From this department we went to the rooms where the hides are dried after the tanning process by hot air blasts heated by steam. After passing through this department the skins are stiff and crusty, and they are then given another treatment which leaves them very soft and pliable. Next comes the measuring of the hides on standard machines which tell accurately the number of square feet in each piece of leather. When the skins leave these machines they are ready for the cutting rooms, and here the leather first takes on the semblance of gloves. This department is equipped with every mechanical device to facilitate the manufacturing process and keep down expense without detracting from quality.

In the long sewing room we found many bright young women engaged in operating electrically-driven machines which sew the parts together into gloves. A cleaner and more cheery place could hardly be imagined, and it struck me that the girl workers were perfectly satisfied with their surroundings. What's more they seemed to be really interested in the work they were turning out. Such conditions always insure quality in a product. The "laying off" or finishing room was visited next. Here the gloves are pressed and the seams smoothed.

Mr. Ricker called my attention particularly to the inspection department. The company spends thousands of dollars yearly in making certain that each pair of Grinnell gloves is perfect before it is packed, and the thoroughness with which this branch of the work is carried through impressed me deeply. After being inspected the gloves are banded and boxed and sent to the general stock-room in the warehouse, a three-story building, each floor of which contains over 6,000 square feet of space.

North Sewing Table

This building is devoted almost entirely to storage and shipping. The firm aims to fill every order the day it is received, and there

Ready for Packing

is room to have 1,500 orders under way at one time.

After this we inspected the packing department. Shipping cases in "knock-down" condition are bought in carload lots and made up in the box department as they are required. The packers are very carefully trained and the company's loss in shipping amounts to little or nothing.

As we walked back to the main offices Mr. Ricker spoke of the general policy of the company. "It is our aim," he said, "to keep the factory bright and clean and up-to-date in every way. We believe that much of our success has been due to the loyalty of our workers, who take a real interest in our progress. We pay them wages commensurate with their ability. We provide the most satisfactory working conditions and each year at Christmas the staff shares in our profits. Our people are proud to be making Grinnell gloves and we are mighty glad to have them feel that way. We are trying to give the buyer the best possible product, and our employees put their best into every piece of work turned out."

As I was leaving the factory Mr. Ricker gave me a pair of street gloves with the request that I subject them to all the tests possible and then report on the manner in which they bore the strain. I have worn these gloves for several months past and they have had the hardest kind of usage, but they are as good today and as attractive in appearance as they were when I put them on in Mr. Ricker's office. I advise motorcyclists who find themselves in the vicinity of Grinnell to visit the Morrison-Ricker factory and learn how gloves are made to be sold "with a bond." It's worth while.

Eighth Harley-Davidson Building Under Way

New Six Story Structure Containing 40,320 Square Feet of Floor Space Will Replace Machine Shop With Floor Area of 5,760 Feet That Was Considered Adequate in 1909

WORK is now being rushed on the eighth factory building at the Harley-Davidson plant in Milwaukee, and the plans for the latest addition indicate that it will be fully deserving of a place with the other modern structures that have sprung up with startling persistency of late to meet the heavy demands that are being made upon the company. The new building is to be of reinforced concrete construction, and of the same general design as the big addition which was completed last Fall.

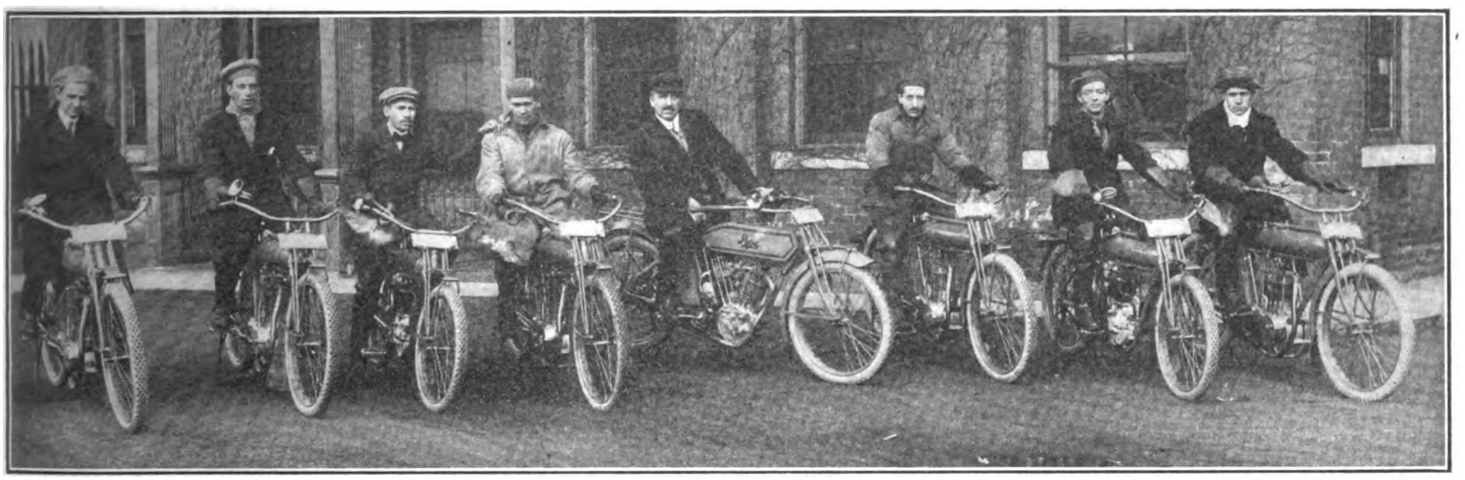
The building, which is to be ready for occupancy by the middle of August, will contain 40,320 square feet of floor space, replacing the saw-tooth machine shop with 5,760 square feet of floor space which was built late in 1909. The new building will give an increase of 34,560 square feet floor area. It will have a frontage of 90 feet on Chestnut street and a depth of 64 feet. The depth is being limited to 64 feet to obtain maximum light and air for all of the departments that will be located in the structure. The new addition is to be six stories high with a 12-foot basement.

This latest extension to the plant of the Harley-Davidson company is indicative of the rapid growth of the motorcycle industry. In the fall of 1909 the company erected a saw-tooth machine shop, one story high, in accordance with what was then considered the most modern factory architecture. It was believed then that the building would be sufficient for many years to come. Three and one-half years have passed and it has been found that the perfect factory of 1909 is entirely inadequate for the factory needs of 1913. Accordingly, plans were perfected to tear down the 1909 building and make room for another modern factory addition.

In other words, the development of the motorcycle industry has been so great during the past three and one-half years that the company feels warranted in razing what was considered a perfect building in 1909 to make room for a new structure. No stronger proof could be given of manufacturing activity.

The razing of the 1909 saw-tooth machine shop was started on April 17 and was completed on April 23. The excavating contractor estimates that it will require about two weeks to complete his share of the work, and it is expected that the first floor will be completed and ready for use by the middle of June, and that the remaining floors will be built during the succeeding two months so that the company will have the use of the entire building by the middle of August.

The construction of this latest factory addition will not interfere in any way with the factory routine. A runway has been constructed to connect factories Nos. 5 and 6, so that material can be handled expeditiously around the building in the course of construction. The new building is going up without affecting any of the forty-three departments.



POPE FLYING SQUAD

AT a recent gathering of the Pope salesmen at Hartford, where the company's headquarters is located, a number of the boys organized themselves into the "Pope Flying Squad." The squad is shown in the accompanying photograph, ready for the road.

SAMSON ELECTRIC HORN

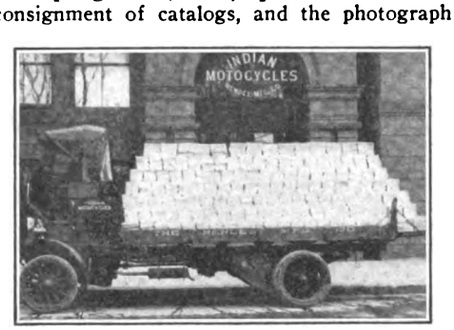
HAVING demonstrated its efficiency and economy throughout two seasons, the Samson motorcycle horn, produced by the American Electric Company, of State and Sixty-fourth streets, Chicago, is now coming into favor with riders who desire a compact electrical warning device. The Samson operates from two dry batteries or a tube of three Tungsten cartridge batteries, and a case for holding the latter may be obtained at slight additional cost. The American Electric Company produces the well-known Samson electric horn for automobiles and the motorcycle product is turned out along the same general lines, but with a few minor changes to adapt it to motorcycle requirements. The horn is substantially made, pleasing in appearance and capable of producing a warning tone that will meet all the requirements of the road.

NEW ENGLAND AGENT BUSY

REPORTS from W. J. Walker & Company, of Danvers, Mass., New England distributors of Harley-Davidson motorcycles, show that the firm has been selling from 10 to 20 machines per week for the past few weeks.

A LOAD OF HENDEE CATALOGS

NOT long ago the Hendee Mfg. Co. deluged the Springfield (Mass.) post office with a consignment of catalogs, and the photograph



shows the motor truck that carried the load, ready for its trip from the Wigwam. The post office officials threw up their hands when the cargo of catalogs arrived.

UNPRECEDENTED TIRE DEMAND

TIRE manufacturers this year are confronted with the problem of taking care of the biggest demand for tires of all descriptions that ever has been known in the history of the industry. They are figuring on equipping 250,000 motorcycles, not to mention the tremendous automobile and motor truck business, which is figured at more than 5,000,000. J. D. Anderson, general sales manager of the United States Tire Company, in a recent interview, stated that although the spring season was barely started, there is every indication that the volume of tire business this year will exceed by a great margin anything ever known before, and that manufacturers will be pressed to the utmost. Mr. Anderson predicted this demand some time ago and consequently all four of the United States company's factories have been running night and day. Extensions have also been made and new equipment installed and the company has brought its output to a point where it can meet all demands.

F. H. MARTIN has been appointed Eastern sales manager for the Stewart-Warner Speedometer Corporation, of Chicago, with headquarters in New York.

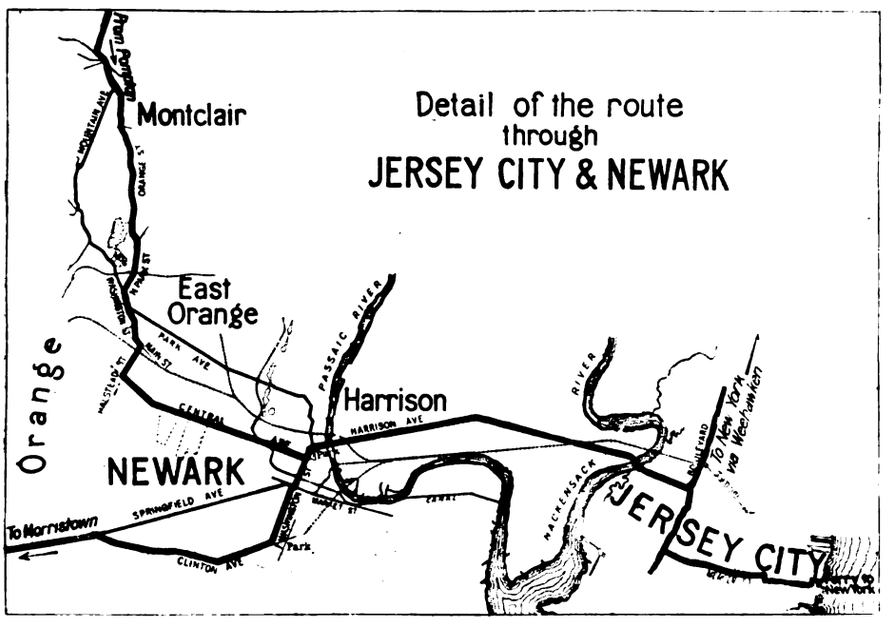
At the Threshold of Jersey's Highways

IN the April 17 issue there appeared an article on "Mapping an All-New Jersey Endurance Run," from which the accompanying map was omitted for lack of space. It is printed here for the reference of the many motorcyclists who travel between New York and Newark or beyond; and shows at a glance the essential details between the river front and points immediately north or west of Newark. It will be noted that the Hudson County Boulevard, at the western edge of Jersey City, is the common meeting point for the exit from Manhattan via the Forty-second street ferry and Weehawken, and also for the one via the Pennsylvania Railroad down-town ferries. Formerly the latter were used more than the line through Weehawken; but on account of the congestion of traffic in the lower part of the city, a majority of the travel now prefers the slightly longer but less interrupted route via the West Forty-second street ferry and Weehawken, joining the route out from Jersey City at a point about a half-mile east of the Hackensack River.

Starting west from the Hudson County Boulevard, this route crosses the Hackensack River and a long stretch of meadows alongside the Newark Turnpike, although gradually there is being developed a better way over what was formerly the old Plank road. The latter is used now to a limited extent, but not generally, because the work is not complete, and its entrance into Newark is far from agreeable.

The turnpike becomes Harrison avenue in passing through Harrison, and then you cross the Passaic River into Bridge street, Newark, at the northern edge of Washington Park. Here, as the map shows, the travel from Jersey City divides into two main streams, one using Washington street (or else Broad street, not shown on the map), into Clinton avenue, from which connections are made west to Morristown, or south toward Trenton and Philadelphia.

Next in importance is the group of routes which begins by turning right from Washington street at the farther edge of the park into Central avenue, with important connections either through East Orange and Montclair, or more directly west over the Orange Mountains to Morristown. The route referred to in the "All-New Jersey Endurance Run" followed Washington street and Clinton avenue to Morristown, returning through Pompton by the way of Montclair and East Orange to Newark; but readers of MOTORCYCLE ILLUSTRATED will find this map of useful reference on many occasions in traveling between Jersey City and Newark.



Newsy Paragraphs Concerning Baltimoreans

BALTIMORE, MD., April 27. The run of the Maryland M. C. to Annapolis on Sunday, April 20, was one of the best ever held by the club. Over 100 riders made the journey over the new boulevard, a large number of them carrying ladies along on their tandem seats. Rain spoiled the blind run called by Capt. Johnson for last Sunday.

A big state meet is being planned by F. A. M. Commissioner William Wood for July 4. A number of towns located near race tracks have put in bids for the meet, which will include a big mass meeting, touring contests and speed championships on the track.

The two-wheeler has proved a great boom to Messrs. Heimbach and Rochester, inspectors for the Baltimore Street Cleaning Department. The bad weather recently did not interfere with their work and they were enabled to accomplish more by using their motorcycles than before in using horses to get about the city.

The Indian M. C. has just come into existence at Annapolis, with George Davis as its father. The boys down the line are very enthusiastic riders and are always out in force to meet the local boys whenever they run down to the capital.

W. E. Baker, of New Windsor, is performing some stunts with his new two-speed Indian, only recently pulling a 20 h. runabout out of a mud-hole.

Robert L. Butler, a veteran motorcyclist, will penetrate into the wilds of West Virginia this summer on his vacation instead of traversing the beaten paths of travel in New Jersey.

Several students of the Maryland University are planning a long trip on their two-wheelers for this summer after school has closed.

Howard A. French & Co. have just placed an order for three more carloads of Indians, making six since February. French is finding the demand enormous and can hardly keep up with it. All the other dealers are equally rushed.

Baltimore Council No. 1, Jr. O. U. A. M., plans to purchase four motorcycles for the use of the relief committee.

A joint run of the Maryland M. C. and the Washington M. C. will be held on May 4, with the probable destination Ridgeville. Sidecars and tandems promise to be conspicuous on this run, with over 200 riders in attendance.

Determined to break up speeding on the part of motorcyclists, the Maryland M. C. has joined hands with the Automobile Club of Maryland in a war on the speed bugs. They are becoming a nuisance in this section and an effort will now be made to stop them from beating it on the city roads and in the country.

One of the contestants in the annual spring tour will be Chic Thomas, the retired champion of Maryland. Chic promises to give a good account of himself as usual.

Senator Casper French, who has been laid up with a sprained ankle, is out again and will be on the joint run next Sunday, making the trip in a sidecar with Fred Hippler as the pilot.

Unable to guide his motorcycle owing to a recent accident, Steve Shipley, the champion roller skater, has employed a chauffeur to take him out on his outings, he riding tandem.

G. & K. SALESMEN MEET

Annual Gathering of Graton & Knight Boosters Is Featured by Presence of Founder of the Business.

IN accordance with its policy adopted a number of years ago, the Graton & Knight Manufacturing Co., of Worcester, Mass., the well-known oak leather tanner and belt-maker, recently held a salesmen's convention at its main factory in Worcester. This convention was attended by the company's salesmen from all parts of the country, and the various sessions were devoted to an inspection of the factory and to a study of methods of manufacture, as well as to the sale and application of the company's products.

At the close of the convention a banquet was served at which more than 100 officers, salesmen and other employees were present. A feature of this year's meeting which was especially inspiring to those in attendance was the presence of Henry C. Graton, founder of the business. To a very large extent the phenomenal growth of the business from a small belt shop in 1851 to a plant that is one of the largest of its kind in the world is to be attributed to the sagacity and wisdom of Mr. Graton and his early associates, and to the persistent adherence of the firm to the policy early adopted of endeavoring to meet the steadily increasing demands for the most serviceable leather belting.

MOTORCYCLISTS of Louisville, Ky., were the guests of Ray Brothers, 308 West Jefferson street, agents for the Yale, at a banquet given on April 24 at the Old Inn.

Combination of Thor Two-Speed and Brake

IN occupying its new factory building which was recently leased in Chicago, the Aurora Automatic Machinery Co. will give special attention to departmentizing the work, and it is announced that sections will be set aside for motorcycles, motors, motorcycle coaster brakes, bicycle coaster brakes and hubs. It is explained that the special department for coaster hubs is necessitated by the decision of the company to market for 1914 the Thor two-speed, complete with the motorcycle coaster brake. It is argued that this arrangement will give the purchaser maximum satisfaction and that the combination of the two well-known features will fill a wide demand.

The Thor coaster brake has met all the requirements of hard service for the last thirteen years, and the improved type which the company will be ready to place on the market in the near future promises to add still further to this reputation. The two-speed device is now fitted on 70 per cent. of the Thor machines, and there is no doubt that this fitment, combined with the new brake, will quickly justify the company in setting aside a special department for its production.

The patented Thor two-speed is notable for its compactness, as well as for its original design and workmanship and the positive control and lock devices which insure perfect operation at either high or low speed. The company reports that this product has given uniform satisfaction, and that the demand for Thor two-speeds has exceeded all expectations. Of late the company has been approached by several manufacturers with the suggestion that the two-speed device and coaster brake be furnished together.

FEW CLEAN SCORES AT SAVANNAH

SAVANNAH, GA., April 27.—The double reliability trial of the Savannah Motorcycle Club proved even more interesting than had been expected, and the returns show that fifteen of the nineteen starters in the 300-mile event finished the grind, while only four of the entrants in the 200-mile division were in their saddles at the finish. The schedule for the longer trial covered Saturday and Sunday, while the 200-mile run was confined to Sunday.

There were no accidents worthy the name during the trials, although several of the boys figured in spills while they were trying to make up lost time. Just as the 300-milers were about to start on Saturday there was a heavy hailstorm which lasted for half an hour. The riders who sought shelter were penalized five points each.

In the three-hundred mile event W. C. Everett, riding a 5 h. p. Harley-Davidson finished with a perfect score. G. F. Balmer, with a single Harley-Davidson, and L. G. Buckner, mounted on a single Indian, tied for second place. John Balmer, the Henderson rider, and Archie Raven, on a Harley-Davidson, broke even for third place, and Frank Laird took fourth place on his Excelsior.

There were no perfect scores in the two-hundred mile contest. W. A. McIntyre took first honors with O. A. Meyer second and W. C. Carraway third. McIntyre and Meyer rode Excelsior machines and Carraway rode an Indian.

RUN TO BUFFALO

TWO of the most important events scheduled by the Indian M. C., of Cleveland, Ohio, for the summer are runs to Buffalo, N. Y., and to Cedar Point. The run to Buffalo will be an event of the near future and will mark the official opening of the club's touring season. On this run the riders will be entertained by both the Buffalo and Rochester clubs.

IMPROVING MAINE ROADS

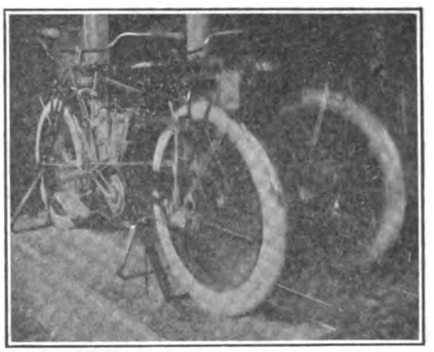
DESPITE the fact that the roads out of Portland, Me., are in bad condition, making it impossible to ride with any degree of comfort, the dealers of the city report a lively interest in the 1913 models. It is reported that the road between Portland and Portsmouth, N. H., is being improved and will be in good shape before the first of June. This is on the popular line of travel between Boston and Portland, and will encourage motorcycle travel in these parts.

OVER WASHINGTON-BALTIMORE PIKE

ONE of the most successful runs of the National Capital Motorcycle Club was held on Sunday, April 20. More than sixty riders were lined up at the clubhouse for the start. Proceeding out Bladensburg road, the procession was joined by ten Indian riders from the Washington Motocycle club and later by a squad of thirty Flying Merkel riders, headed by Harry Seamark. The course was over the new Washington-Baltimore Boulevard to the latter city, where a dinner was served. Many improvements have been made on this road within the past year and the entire distance of more than forty miles is in fine condition, with the exception of a fifty-yard stretch around the curve at Bladensburg. Riders contemplating using this pike are warned against speed traps.

AN UNUSUAL DEMONSTRATION

AT A glance it might be supposed that the accompanying picture was intended simply as a demonstration of poor photography, but this is far from being the case. As a matter of fact it is a fairly good illustration of an unusual test to which George H. Maslen, of Philadelphia, Pa., recently subjected two Indian machines at his motorcycle headquarters. The machine at the left is a spring-frame model, while the one at the right is of the rigid-frame type. With the former the vibration was so



slight that an almost perfect photograph of it was obtained, but the rigid-frame mount, as will be noted, gave the camera little more than a blur to record. Maslen states that the demonstration aroused much interest in his district.

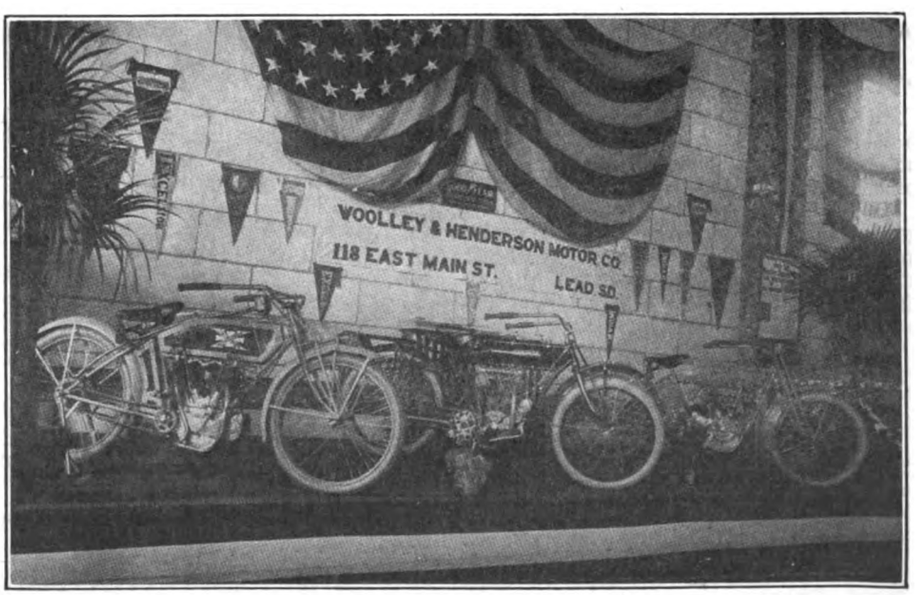
PACIFIC RACING ASSOCIATION

HAVING sub-leased the Meadows one-mile track, near Seattle, Wash., the Pacific Motorcycle Racing Association will hold a series of races throughout the summer. "The Motorcycle Inaugural" will be held on May 11, and it is planned to run six events on every racing day. The Portus Baxter trophy, a handsome gold watch, and $200 in cash will be awarded.

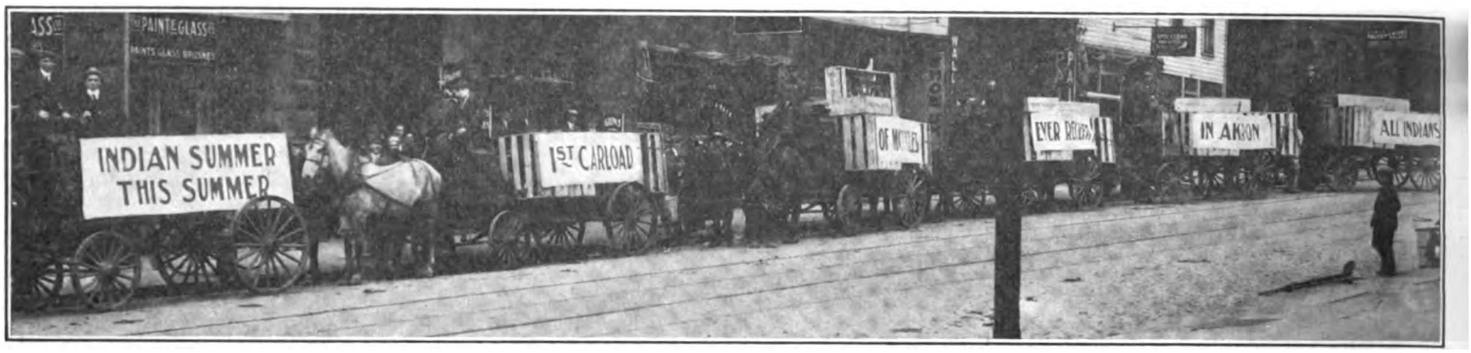
MOTORCYCLES AT DEADWOOD

SEVERAL motorcycle dealers were represented by attractive displays at the show recently held in Deadwood, S. D., one of the most comprehensive being that of the Woolley & Henderson Motor Co., of Lead, which is shown in the accompanying photograph. This firm handles the Indian, Excelsior and Harley-Davidson lines. The show was the first of its kind to be held in the western half of South Dakota and was well patronized by both riders and dealers.

The new Yale models were shown by P. Schonberger, of Deadwood; the Flying Merkel line by G. Edgerton, also of Deadwood, and the Pope by the Van Brunt Auto Supply Co., of Sioux Falls. Although no sales of motorcycles were made at the show all the dealers lined up prospects and the outlook for business was considered very encouraging.



Digitized by Google



FIRST CARLOAD IN AKRON

BY WAY of celebrating the arrival of the first carload of motorcycles ever received in Akron, Ohio, the Buckeye Motor & Cycle Company, agents for the Indian and dealers in a complete line of sporting goods, hired a number of trucks and paraded through the town. The accompanying photograph shows the line-up of trucks; the first contains a band and the others the shipment of machines. H. J. Tucker, of the Buckeye company, states that as an advertising stunt this program was a great success as on the following day he received a number of requests for catalogs. The company conducts a large jobbing and retail business and issues a 48-page catalog.

WHAT THE MAGNETO DOES

"A RECENT internal combustion research proved that it takes 1/1000 of a second to fill the cylinder of a racing motorcycle with gas," said A. H. Bartsch, of the Bosch Magneto Company, in a recent interview, "and less time to fire the charge. This being so it surely proves what a wonderful machine the magneto is to be able to generate current so rapidly and so efficiently as to fire the complete charge of gas in less than 1/1000 of a second"

ATTRACTIVE NEW CATALOG

WITHIN the last few weeks no less than 50,000 motorcyclists throughout the country have received copies of the new catalog of the Motorcycle Co-operative Company, of Detroit, Mich. The catalog is illustrative of the company's extensive line of accessories and will be found helpful in the selection of general equipment for the motorcycle. The company recently moved into its new quarters in the Motorcycle Building on Automobile Row, Detroit.

Motorcycles Score Hit at Racine's First Show

MOTORCYCLE dealers of Racine, Wis., are elated over the results of the first automobile and motorcycle show held there, which closed Saturday night, April 19. The attendance on the closing night was more than 2,000, and on Friday there were about 1,500 paid admissions.

James C. Nelson, agent for the Eagle and M. M., displayed two machines. The 9 h. Eagle, equipped with Solar headlight, Prest-O-Lite tank, and a Standard front-wheel-drive speedometer, was the only fully-equipped machine on exhibition and was an object of much interest.

In addition to showing two twin Indians, Christiansen Brothers displayed a line of bicycles and tires. One of the busiest booths was that of Jonas & Prostenick, who displayed a line of Pope motorcycles and bicycles. The Pope and Eagle exhibits included engines in sections to give the uninitiated an opportunity to inspect the inside workings of the motor.

Two of the Dayton twins with the Spacke De Luxe motors, as well as a number of Dayton bicycles, were featured at the booth of Dayton Cycle Company, of which R. W. Hanson is proprietor. Three of the 1913 model Thors were displayed at the booth of Pederson & Fox, one being fitted with a two-speed gear. Mr. Pederson reports that a two-speed Thor has been sold to the Racine police department.

The Henderson and De Luxe machines were attractively displayed at the stand of the Wadewitz Machine Company, under the management of Mr. Sorenson. L. R. Rice, of the L. R. Rice Cycle Company, was kept busy explaining the merits of the 1913 Excelsior. There were four models on exhibition as well as a line of accessories and a number of bicycles at this booth.

ROCKFORD'S SUMMER SCHEDULE

AT a recent meeting of the Rockford (Ill.) M. C., the list of events planned for the summer was announced. The program includes a couple of parades, race meets, hill-climbs and endurance runs. Seventy-five members of the club have expressed their intention of participating in the parade, which will be held during the festival and home-coming week, from June 3 to 8. Immediately following the festival week the club has arranged for a couple of race meets to be held at the old driving park. In all there will be seven race meets during the summer. It has not been decided just how many hill-climbs to hold, but the committee in charge have been at work for some time selecting suitable hills. The endurance runs will be held to the following places: Chicago, Aurora, Elgin and Madison. The dates for these runs have not been set.

NOTES FROM COLUMBUS

COLUMBUS, OHIO.—Burglars entered the motorcycle store of L. P. Birkenbach, of this city, recently and stole supplies to the value of $150. Birkenbach is distributor for the Thor in Central Ohio.

The Warner automobile bill was passed by both Houses of the Ohio legislature before the recent adjournment. It provides that all automobiles, as well as motorcycles, used on the public highways in the state will be required to carry a state license. The yearly fee for the motorcycle is set at $3. The law takes effect January 1, 1914.

A movement is being started in Columbus for the revival of board track racing on the local motordrome which is now in the hands of receivers.

NEW CLEVELAND AGENTS

CLEVELAND, OHIO.—A new motorcycle agency has been opened in this city by J. C. Storer. His store is located at 1711 Crawford road. He will have the agency for the Black Hawk in Cleveland and eight surrounding counties, and also a sub-agency for the Flying Merkel. O. K. Snyder, of Cleveland, will have charge of the sales department.

The J. L. & W. Motorcycle Company, a new arrival in the Cleveland field, has contracted to handle the A. M. C. J. L. Moritz is manager of the new company, with headquarters at 6814 Detroit avenue. The company will also handle Greyhound sidecars and a full line of accessories.

Denverites Clamoring for New Models

BUSINESS in the Mile-High City, according to late reports, is in an excellent way and motorcycle dealers of this city find little time for anything else.

Mr. Pettee, of the Pettee Cycle Company, agent for the Pope, is a veteran bicycle dealer and devotes a good part of his energy to that end of the business, but he has found time to dispose of thirty 1913 Pope motorcycles and is still lining up prospects.

Manager Crocker, of the Hendee branch, reports a big demand for the two-speed machines. He is now selling from his eighth carload.

Harry Ott, city distributor for the Excelsior, and Ed. Meade, State distributor, are both enthusiastic over the outlook. Mr. Ott already has 92 Excelsiors on the streets of Denver, while Meade has disposed of 200 throughout the State. Mr. Ott is also handling the Henderson line and reports a number of sales of the four-cylinder machines.

Walter Whiting, agent for the Harley-Davidson, has sold 95 machines.

Williams & Phelps, distributors for the Thor, report 32 sales for the city, but could not give any figures as to the sales in the other parts of the State, as the factory ships direct to sub-agents. Mr. Williams stated that most of the orders called for two-speed machines.

O. P. Daenitz, agent for the Flying Merkel, has been somewhat handicapped of late owing to the delay in deliveries caused by the flood. He has a number of orders waiting to be filled.

Rohrer & Newell, who handle the Yale line, are not located with the other dealers on Automobile Row, but have headquarters nine blocks south, where they say business is brisk. Leo Scott, State distributor for the Yale, claims that his sales will reach the 300 mark before the end of the season.

40 Miles an Hour in 190 Feet from a Standing Start

The Harley-Davidson "5-35" will do this. No other single can.

It took the Harley-Davidson engineers nearly two years to develop this quick "pick-up," a sure sign of *a world of reserve power.*

The Harley-Davidson "5-35" is positively in a class by itself for speed, power and flexibility, proved by the fact that Harley-Davidson dealers are selling these machines to riders who formerly rode twins of other makes.

Harley-Davidson "flexibility" is exclusive with the Harley-Davidson.

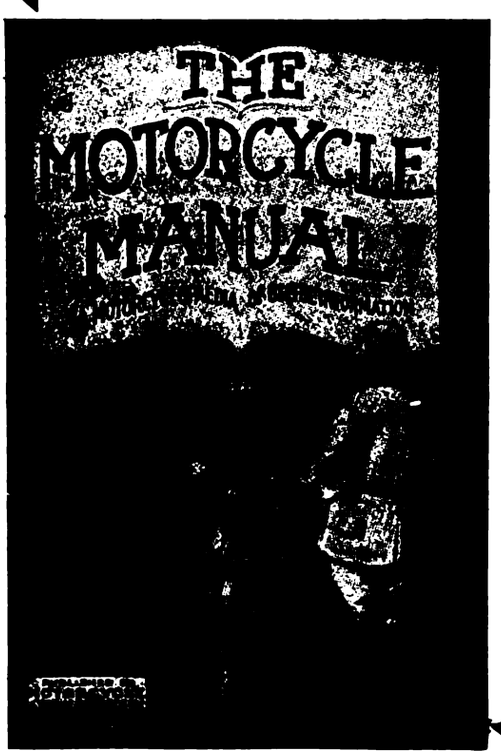
There are times when Ignorance is Not Bliss

Let us enumerate:

For instance, on a sweltering day while you're happily breezing along, your motor suddenly develops the "fidgets." You get off and investigate. If you know all about a motor's internal construction and are "wised up" on how to handle a cranky magneto, and know all there is to know about the carbureter—you will EVENTUALLY locate the trouble. But if you don't—you're STUCK!

Then is the time to dig into your tool box and consult your tried and true friend

The Motorcycle Manual



Its trouble chart tells how to locate the trouble and REMEDY IT. It tells all there is to tell about every part of your motorcycle. It gives concise information regarding license laws in every State in the Union. It gives the official racing records. It explains horsepower and other mechanical formulae; it is a handy motorcycle trade directory; it enlightens you as to the F. A. M.—who's who and what he is doing—it—oh, well!—do you think you can afford to be without it?

And it costs a quarter. We don't have to tell you what to do with the coupon in the corner.

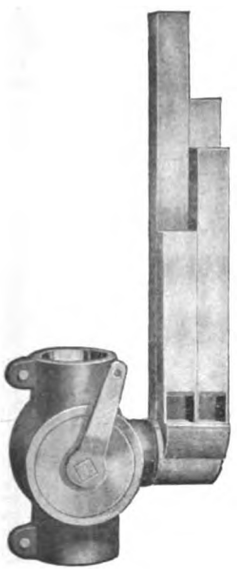
Trinity Chimes Exhaust Horn

"YOU CAN HEAR IT EVERYWHERE!"



The only signal that will warn pedestrians in the proper manner. Absolutely self-cleaning. Easiest horn to attach. Out of the way and cannot jar off. Its classy appearance is a subject of interest to the motorcyclist.

To Dealers

Let us send you a "Trinity Chimes" horn today. It is the biggest seller in the accessory line. It is only necessary for a rider to hear it once and the horn is sold. It is a "live wire" that makes money for the dealer.

We are offering a **special discount** to dealers and jobbers who answer this adv. The offer is void after June 1st.

Write at once.

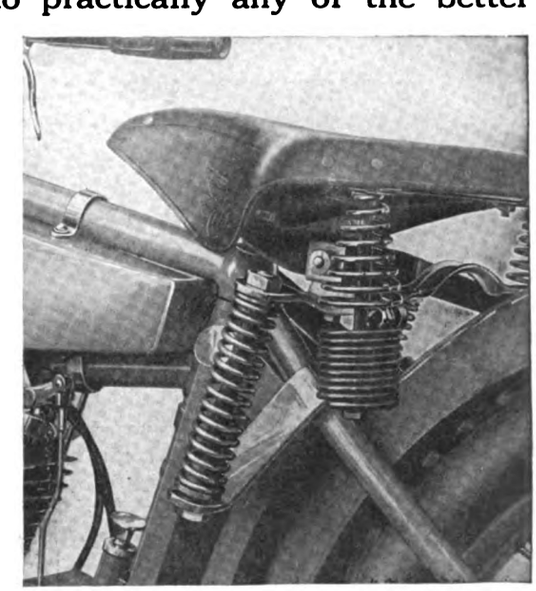
Comfort on All Roads

MAKE YOUR OLD MACHINE UP TO DATE

THE Y-A shock absorber, which can be attached to practically any of the better machines, effectually smoothes out all rear-wheel jolts. Two big, flexible coil springs take up every road jar and vibration, while the design eliminates any possibility of sideplay and does away with need of joints in the frame.

The Y-A shock absorber is made to fit the Harley-Davidson, Excelsior, Thor, Indian, etc., of 1911 or earlier models. State make and model of machine when ordering. Price, $5.



Y-A Shock Absorber, $5

Dealers and jobbers can increase profits greatly by fitting Y-A shock absorbers to old machines. This makes second-hand machines much easier to sell and doubles the satisfaction of their service. Write at once for our dealer's proposition.

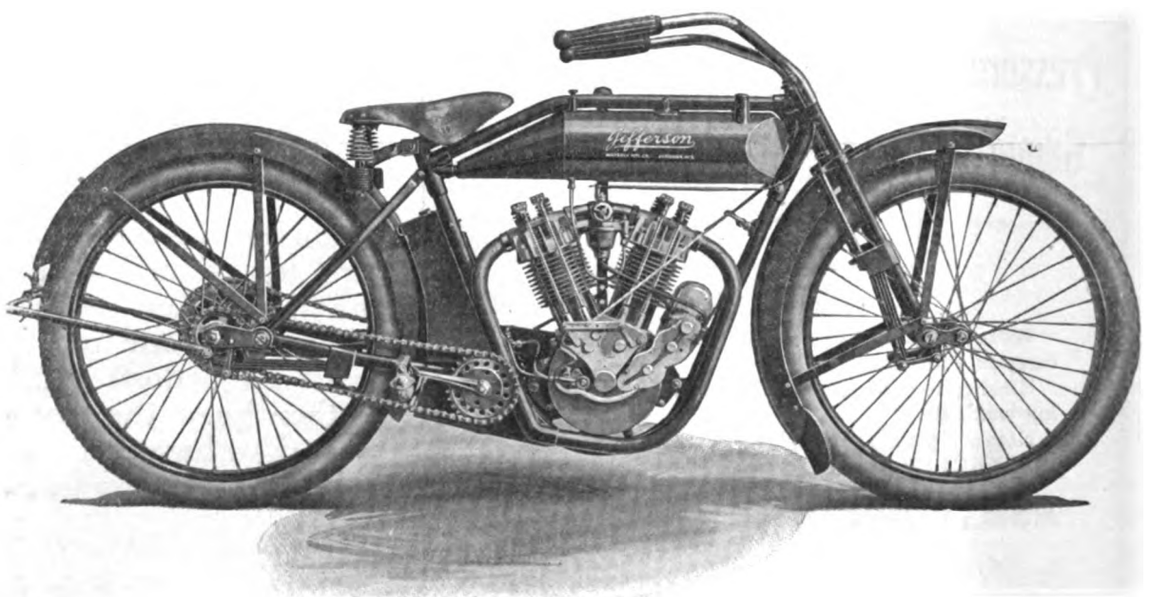
Handsome Is As Handsome Does



It's a beauty and no mistake, but don't judge by the looks alone. Note the automobile leaf springs, front and rear—the clean-cut powerful motor, with overhead valves, its perfect balancing. Note the absolute absence of superfluous parts, the simplicity of the grips, without clutch levers of any sort. Do you know what that stock motor can do, **without** special preparation or "tuning up" of any kind? Oh, only about 78 miles an hour! And without turning a hair. Yes, it's there with speed, but it's got service, too, in its make-up.

Our catalog tells the rest. Post a postal for it NOW.

Which Magneto?

How One Great Firm Decided the Question

Hit or miss methods will not do for the house of Rudge Witworth in Coventry, England, the largest English manufacturers of motorcycles and cycle-cars. Not satisfied to equip their splendid cycles with a Magneto simply because it **looked** to be best or because people **said** it was best, they determined to make an exhaustive analysis of the various Magnetos on their own account. They wanted to **know** beyond question that their equipment could not be surpassed.

Their chief engineer, Mr. Holroyd, was delegated to examine into the matter. He visited practically every Magneto manufacturer on the Continent, naturally including in his trip Stuttgart, the center of the entire world in Magneto production.

While in Stuttgart, Mr. Holroyd called at the Ruthardt plant, the home of the HERZ MAGNETO. He was shown everything from raw material to finished product, including the elaborate testing plant, where a diagram is taken from every Magneto built. Mr. Holroyd stated that no other factory he had visited had such complete facilities for testing, that most of them had none at all and no diagram indicator, and some did not even know what the latter was.

When we say that HERZ MAGNETOS were selected by Rudge Witworth under these conditions, the statement needs no comment.

HERZ MAGNETO gives a strong, hot spark under fuel compression at 35 R.P.M. as against 45 R.P.M. for the best of the other makes. Its superior efficiency and serviceability are beyond all question.

Brown Scientific Non-Deflating Pneumatic Tube

AN AIR-FILLED MOTORCYCLE TUBE POSSESSING VERY UNUSUAL FEATURES:

First: It withstands a tread puncture without deflating the tube.
Second: The higher the pressure the tighter the puncture closes.
Third: It eliminates the risk of destroying casings by reason of punctures.
Fourth: The danger of loss of control of machine is removed.
Fifth: It assures you of not being obliged to repair a puncture on the road and gets you "there and back" on full tires.

AIR FILLED ONLY.

Punctures are self-closing by reason of a scientific but simple principle of construction.

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYCLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

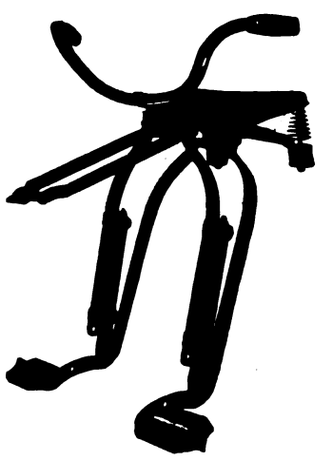
Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

Jeffery-Dewitt Company **55 Butler Avenue, Detroit, Mich.**

Simplicity—Comfort—Stability

The Empire Special

SPRING TANDEM



"IT FLOATS"

You wouldn't seriously consider purchasing a motorcycle that does not possess at least these three cardinal points. Then why permit a tandem attachment to be fitted on your machine, that has not proven to your complete satisfaction that it possesses these three characteristics in full measure? Here is

The Empire Special Spring Tandem

"IT FLOATS"

There is nothing about the Empire Special to get out of order. Simplicity is the keynote of its construction.

By a peculiar and ingenious invention, for which patents have been allowed, the Handle Bars and Pedals are caused to float with the saddle, insuring the maximum of comfort and smooth riding on the roughest of roads.

The famous Kelly No. 10 Adjustable Handle Bars are fitted on all Empire Specials.

Constructed of steel and no malleable parts, the Empire Special is practically indestructible.

Ask your dealer for our booklet. If he hasn't it, send us his name and you'll get one by return mail. The Empire's proof of superiority is in it.

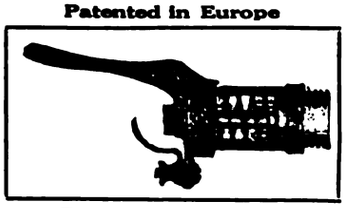
IF THE M&M ECONOMIZER COULD TALK WE WOULD NOT HAVE TO ADVERTISE

Patented in Europe



Patented in America

The M&M is positively guaranteed to save from 40 to 50% of gasoline, and increase the speed and power 20% with less gasoline and less carbon. With the throttle set at twelve miles per hour, by opening the M&M your mileage will be increased to eighteen or twenty miles, WITH THE SAME AMOUNT OF GASOLINE, and LESS CARBON.

The M&M is the only known carbureter adjuster on the market, and can be used for priming the engine. Do not throw your old carbureter away until you have applied our device. THEN NOTICE RESULTS. The M&M is also one of the greatest carbon eliminators on the market, and also acts in the capacity of an air-brake. In fact, IT IS BECOMING THE RAGE IN MOTORCYCLISTS' REALM.

The M&M can be successfully applied to any motorcycle on the market. It requires a ¼" pipe tap to insert into manifold, but can be reduced to ⅛" if necessary. It is made with one valve and six portholes, which admit auxiliary air into the manifold, and will give you that uniform mixture which is ABSOLUTELY NECESSARY in order to obtain SPEED and POWER. The M&M is nickel plated and highly polished.

HOW ABOUT THIS LETTER!

Milwaukee, Wisconsin, No. 842 30th Street, April 22d, '13.

Moller Bros., Phila., Penna.

Gentlemen:—I have placed an M&M Economizer on my 9 h. p. DE LUXE Motorcycle, and have found it to be a great success in more than one way. By opening the M&M, I can increase my speed 15 miles per hour or more. It also gives me more power in climbing hills. I find it is a great saver of gasoline, and the money saved on gasoline would pay for the M&M in a very short time. With the magneto cut off, I can use my engine as a brake, by leaving the compression on, and at the same time cool off my engine, by absorbing in cool air. I believe the M&M will work just as well on a smaller horse power engine, and I am sure that any rider would be as well pleased with it as I am. Yours very truly, JAMES A. STEWART.

WE GUARANTEE THE M&M TO DO JUST WHAT WE CLAIM, or money will be refunded in 30 days. (Reference—Citizens National Bank, Lewistown, Pa.) No dealer or jobber is authorized to sell without giving our guarantee.

Send for our catalogue and information. **PRICE OF THE M&M ECONOMIZER—$1.25 PREPAID.** **BEWARE OF INFRINGEMENTS!**

The STAR LUGGAGE CARRIER

Is Built for Heavy Duty

For the rider who wants to carry an excessively heavy weight behind the saddle, the Star Luggage Carrier fills the bill.

Scientifically constructed of steel, heavily re-enforced at points of wear, the Star can withstand considerably over 300 lbs. weight. For tandem riding the spring action makes it an exceedingly comfortable seat.

The Star is handled by the leading jobbers in America. Write us.

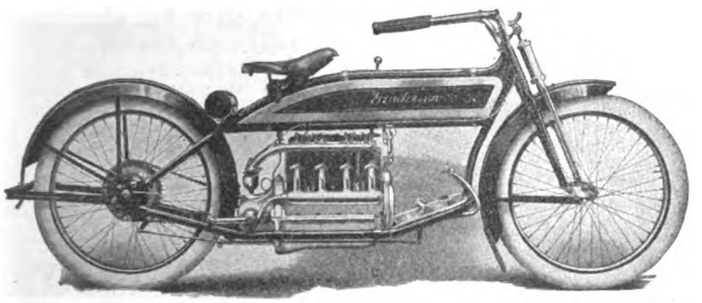
Henderson



8 H. P., 4 cylinders, free engine, chain drive, $325.

Why Four Cylinders?

Because the motorcyclist wants three things—power, flexibility of power and easy riding.

The Henderson's four cylinders develop 8 horsepower—enough and to spare to go over any road or climb any hill you will encounter, and far more speed than you will dare use.

This power is flexible. You can throttle to walking speed and still it pulls. You can jump to high speed without nursing the motor.

Four cylinders produce less vibration than one. They are placed low, so the center of gravity is low. The machine rides easier and holds the road better; and the wheelbase is longer.

These things have given the Henderson national popularity. Write for the literature.

Henderson Motorcycle Company

1158 Cass Avenue **Detroit, Mich.**

Double Protection Against Plug Troubles

Every J-M Spark Plug has both a mica and a porcelain insulation, either of which is sufficient in itself to prevent any leakage or short-circuit—even when current is furnished by a magneto. Therefore, double protection against insulation troubles is positively assured by the use of the

J-M SPARK PLUG

Furthermore, the center electrode is scientifically tempered to withstand the highest temperature of the engine, and after being assembled all parts are subjected to heat and thoroughly baked to prevent undue expansion in service.

Firing points are made of Platinum-Iridium and Nickel Alloy, and will not fuse, pit excessively or carbonize.

J-M Plug combines all the advantages of both the all-porcelain and the all-mica types, and embodies many features of individual merit.

Its superiority has been proven by the most severe service tests.

All sizes can be used for magneto or battery. Price $1.00 each. Sent prepaid from our nearest branch if not at your dealers.

Ask our nearest branch for booklet.

Baxter

The strongest, the lightest, the most comfortable sidecar in the world.

Its inimitable spring frame construction, its double truss chassis and its classy shape make it the logical 1913 sociable.

Our handsome illustrated booklet sent on request. It describes the entire line of Baxter Commercial and Pleasure Sidecars.

BAXTER SIDECAR CO. 119 Bway., Cambridge, Mass.

The Stoll Spring Tandem No. 2

Price $12.50 complete.

THE RIGHT TANDEM AT THE RIGHT PRICE FOR THE 1913 INDIAN

This tandem has a spring action of about SIX INCHES, provided by long, coil springs enclosed in steel tubes. Cushion is curved in the fore part, which gives a very comfortable position. Has a very flexible action and for COMFORT, DURABILITY and APPEARANCE it outclasses many of the higher priced tandems. No side sway. Folding handle bars, lock securely in either the raised or lowered position. If your dealer does not handle these tandems, send us a money order for $12.50, and we will ship one of these tandems to you express prepaid, complete with handle bars, cushion and tool box attachment. Tandem is enameled Indian red. Dealers, write for our proposition.

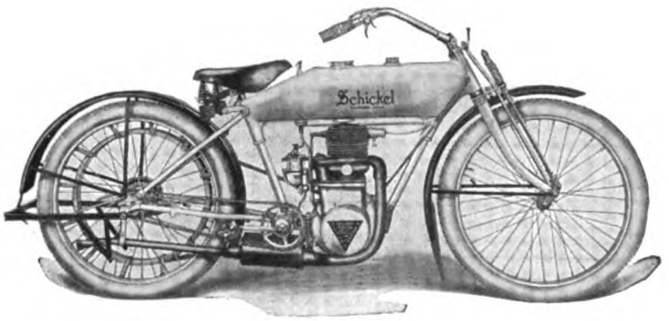
"BIG SIX" FLEXIBILITY



The extraordinary flexibility of the Schickel "Big Six" is easily one of the most important of the 1913 improvements in motorcycles.

To get the utmost pleasure out of riding a powerful machine the motor must be flexible in its operation. The "Big Six" is exceptionally quick on the get away. It accelerates rapidly from standing start to maximum speed. When forced to travel as slow as ten miles an hour the "Big Six" will outpull any four-cycle motor—regardless of cubic displacement.

Such is the power of the Schickel "Big Six."

Great flexibility is just one of the "Big Six" features that assure you of utmost satisfaction. Full information on the other "Big Six" features sent on request.

Write today.

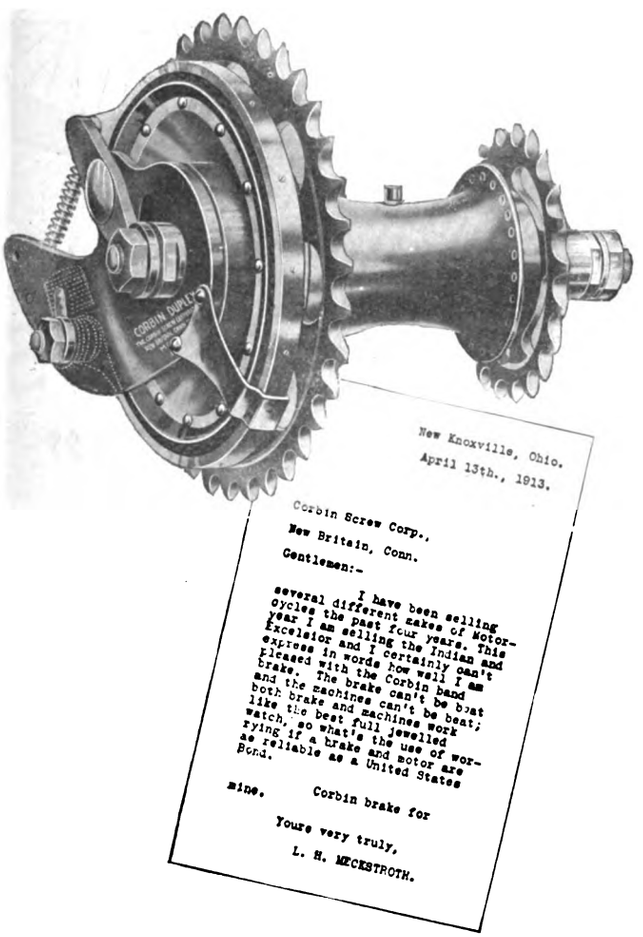
The Popularity of the

CORBIN Motorcycle Band Brake



This letter is merely a selection from many of like nature.

The superiority of the Corbin Motorcycle Band Brake is a fact to which the vast majority of motorcycle dealers and manufacturers throughout the country testify.

This testimony is backed by the fact that more than 60 per cent of all the 1913 motorcycles are equipped with Corbin Motorcycle Band Brakes.

Send for catalog, describing all the models of Corbin Brake and Hubs.

Blaze Your Way To Greater Motorcycle Sales With "Black Hawk"

Live-wire dealers everywhere are grasping the local sales-rights of this new motorcycle, designed by the oldest, wisest heads in the motorcycle world.

The "Black Hawk" is the motorcycle all masters of motorcycle craft impatiently awaited for over a year and a half. It is the masterpiece of the acknowledged geniuses of the motorcycle world—a wonderful achievement.

The "Black Hawk" Is the Motorcycle Sensation of 1913

The success of each "Black Hawk" agent is **sure**—because the supremacy of the "Black Hawk" is **certain.** No other motorcycle shown in 1913 combines within itself so many **new** features that appeal so forcibly to riders--so many innovations that are such **real improvements.**

Check these improvements over—as they are noted in the panel to the right. Then act quick—don't let "the other fellow" beat you to this sure, easy sales-maker. Time is slipping—don't let it slip this opportunity through your fingers. Write today.

BLACK HAWK MOTOR CO.
Dept. B Rock Island, Ill.

"Black Hawk" Betterments That Bring Bigger Sales to "Black Hawk" Dealers

Spring Forks and Seat Posts designed so uniquely that they cannot "bottom"—that they cannot break.

Free Engine Clutch—instead of an unsightly bump on engine shaft or side of machine, clutch is **on the inside of rear hub**—thoroughly protected—most durable, being of the multiple steel disc type. This clutch is **lubricated while slipping,** thus avoiding wear and tear on engine and whole machine.

Most Flexible Motor—as fast and almost as silent as thought, yet extremely flexible, handling machine flawlessly at all speeds from 50 to 60 miles to 4 miles per hour without use of clutch.

Steel Oil and Fuel Tank Built Integral With Frame—enabling saddle to be placed low without sacrificing strength or beauty of frame—and also making the "Black Hawk" balance almost as perfect as that of a fine watch.

Sight Feed Mechanical Oiler — our exclusive position automatic oil pump, with only one moving part, cannot clog, always furnishing perfect lubrication, with oil flow increasing automatically as speed of machine increases, the flow stopping when engine stops.

The New Thor Factory in Which the Finest Built Motorcycle Will Be Made.

HASTE and Expediency in motorcycle manufacture emphatically do NOT mean the same. Haste denotes inadequate equipment—a general state of unpreparedness—and invariably means slurred inspections, careless workmanship, flawed construction and, finally, as a natural result, poor service on the road.

Expediency, on the other hand, indicates the presence of sufficient machinery, skilled labor, and, above all, a frictionless, smooth, "ball bearing" system of factory supervision and operation that eliminates every suggestion of wasted time and yet automatically assures absolutely flawless construction.

Therefore, we believe you will understand us when we say that every THOR motorcycle leaving our plant is made with expediency, which does NOT mean haste. That is why every THOR dealer can count on absolutely prompt deliveries. And that, also, is the reason why every THOR rider can be assured of his mount's flawless perfection—of its speed—of its comfort—of its invariably perfect enduring service.

Model "13-M" $225.00

Some Thor Facts

Power, Comfort, Silence, Durability, Economy in operation, beauty of appearance. These are the features you should look for in a motorcycle, and these qualities are possessed in full measure by the THOR.

The THOR has overhead, mechanically operated valves. That means perfect cooling, higher compression, stronger down stroke—consequently greater power. Add to this the famous THOR undergeared internal gear direct chain drive, and you have the reason for the THOR'S tremendous speed and great reserve power.

Comfort is well represented in the THOR by its spring fork, of exclusive THOR design, affording literally a floating riding motion, the famous THOR free engine clutch, eliminating all tendency toward jerky transmission, the vibrationless roller bearing motor, assuring a smooth continuity of power always, low saddle position afforded by the graceful sweep of the THOR frame and the THOR spring seat post with springs of varying strength for light or heavy road shocks.

From the standpoint of economy, again the THOR predominates. The THOR automatic carbureter, with twin butterfly adjustment, is responsible, to a large degree, for this. It affords a mixture absolutely correct at all times, yet consuming considerably less gasoline than other machines. It is not an unusual performance for a rider to make from ninety to one hundred miles on one gallon of gasoline.

A glance at the THOR shows its quality. It's a machine that looks like what it is, a thoroughbred. Its light, classy, graceful lines make it a machine to be exhibited with pride.

The Thor Line comprises Model 13-M, a 4 h. p. single at $225; Model 13-W, 5 h. p. single at $240, and Model 13-U, a 7 h. p. twin at $290. We will be glad to send our handsome catalog on request.

EMBLEM MODEL 108—67 Cubic In. Piston Displacement, Price $250.

Why the Emblem Motor is Powerful, Silent and Flexible

We invite your careful attention to the illustration of the EMBLEM motor shown here. Note the mechanical inlet valves of the overhead type, which permit of perfect cooling, higher compression—hence, greater power. Add to this flywheels of exceptionally large diameter, with the bulk of the weight in the rims, where it is most effective, and you have two good reasons for the indomitable power of the EMBLEM motor.

Then consider the EMBLEM system of lubrication, conceded by the American Association of Gas Engineers to be the **most perfect** system in the world. Force feed pump with sight feed are the generally accepted forms of lubrication, and these have been followed in EMBLEM construction. But—here is the difference—the crank and flywheel shafts are hollow, and have oil holes allowing both an **inside** and **outside** flow of oil, thus positively assuring a constant flow of oil throughout.

We give here but the salient features of the EMBLEM motor, the mainspring of EMBLEM efficiency. The rest you will learn from our catalog, which will be sent upon request.

CHIBECO SERVICE

For Riders

After all, the rider is the final judge. In almost every mail we receive a letter telling the remarkable service given by a *SEA LION* or *WHITE STRIP* Belt. Such letters are the best evidence both of the superiority of the belt transmission, and of the supreme qualities of *SEA LION* and *WHITE STRIP* Belts.

For instance, the other day we heard from a man weighing over 200 lbs., who has used a *SEA LION* Belt two years, ridden over 20,000 miles and who ends his letter with the statement that the belt is still in good condition, and will last another season.

Another letter says, "I have used your *WHITE STRIP* Belt over 10,000 miles, and can truly say it is superior to any belt on the market, and it does not stretch."

That is what we mean when we talk about service for riders. The best service we can give a rider is to furnish him a belt better than any other on the market, and that's exactly what we are doing.

When you write for our catalogue send us your nearest dealer's name. We have something that will go back with the catalogue that you can use to advantage.

For Dealers

One of the big things we are doing for the dealer is the *CHIBECO* Belt Bulletin. If you are not getting this regularly, let us know, so we can put you on the mailing list. The bulletin is full of selling helps for you. The May issue, just off the press, has a table of belt sizes for all makes of machines from 1900 to 1913.

The *CHIBECO* Repair Outfits, *CHIBECO* Window Displays, *SEA LION* Dressing Display Cabinets—all to help the dealer. This space is too small to tell you more, but a letter from you will bring full details.

CHIBECO service means real help for you in increasing your business.

Now, don't forget to subscribe today for the CHIBECO Belt Bulletin. It will only cost you two minutes' time, and a postage stamp.

That Big Bargain Book

300 Pages

We have gone to heavy expense in preparing our big 300-page catalog, covering our entire line of motorcycle and bicycle accessories and machinists' supplies. But the result is worth the effort. The unexampled opportunities for money-saving contained therein should not be overlooked by any dealer or repairman.

Nothing can give you a better idea of the wonderful scope, size and variety of our line as this book, and we earnestly urge you to get your copy **without delay.** As it looks now we may have to run another edition, so if you don't want to be kept waiting, sit right down now and drop us a postal.

We sell to the Trade only. When writing for Catalog, use your printed stationery or tell us who you are, that we may know you are entitled to Wholesale Prices.

Weather Forecast:
Every Day Fine for the "Big Y"

Road-Riders' Edition

The Yale Bulletin

Published by Consolidated Mfg. Co.
1730 Fernwood Ave., Toledo

May 15, 1913

Circulation, 100 per cent Live Wires

Springtime and the Lure of the Road

IN the Springtime the motorcyclist comes into his own. He may have been one of the sterner sort who got into his cold-proof winter-riding clothes and bucked snowdrifts or defied the bitter north winds all winter with his steady-going Yale; but no matter how triumphantly he overcame the obstacles that Old Boreas set in his path, or how keen was his enjoyment of winning in those contests, the coming of Spring and the opening of road riding brings a thrill that nothing else equals.

Bursting Buds and Meadows Green

The sun begins to make its warmth felt, soft and delicious after the sharp, biting blasts of winter. As your machine purrs smoothly over the highway the grass in the meadows along the road is turning green. The buds are bursting on the trees, giving the woods a fresh, delicate tint of new life.

The air as it brushes your cheek has a balmy, caressing touch that invites you to stay out in the open, forget your troubles, and really enjoy life.

The World is Your Oyster

There is a feeling of independence—of fitness to meet creditably whatever may be in store for you—a knowledge that you can go where and when you please, free from the worries and discomforts of train, car or horse, with the unfailing dependability of your "Big Y" to insure a quick and pleasant trip, with no mechanical troubles to mar your enjoyment.

Over the Hills—

Ahead of you looms that big hill that other riders have told you is such a test for an engine—you remember their tales of how they pedalled, and pushed, and stalled their motors on that grade last year.

It's the first time you've tried that hill on your new Yale twin, but you open the throttle and speed toward it confidently, for what riding you have done so far has shown you the wonderful capability of your mount. As you go up the grade you wait for the motor to slow down and show signs of the hard pull—but it doesn't do it. Instead, when you open the throttle a little more on that steeper part near the top, it lets out another link of its immense reserve power and hurtles up the grade faster than ever.

And Far Away

As you shoot over the top and cut off power to coast down the other side, you find yourself wondering what those other riders found difficult about that hill—and then you remember that none of them rode a "Big Y", which explains it.

Riders Answer Call of the Open as Riding Season Starts

And there's a whole lot of satisfaction in knowing that you're riding a machine that will take you where the others can't go, and that you can "go them one better" at any game they want to try—speed, hills, sand, mud, or rough roads, for your Yale is built to win under just such difficulties as are met in give-and-take road riding.

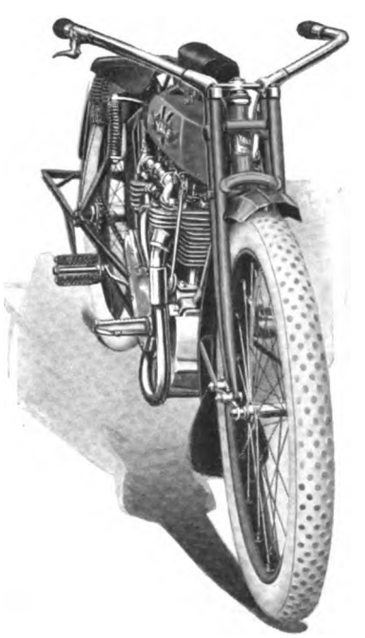
Getting a Six-Cylinder Goat

A few miles farther you have a little brush with a fellow who comes along with a big automobile. Just because it has a six-cylinder 60-horse engine stowed under its hood, and cost him about $5,000, he thinks that he can leave you behind easily, but—you don't feel that way.

Your right hand gives the gas to your big Yale twin, and you hold just even with him for a time, keeping several notches of speed up your sleeve for use when needed. He is the most surprised man you've met in a long time, and gets rather excited about it, for it's simply scandalous that a "big six" roadster like that, which the motorcar makers insisted was the fastest thing on wheels when they took his $5,000, should be matched so easily by a motorcycle—though he admits to himself that it's the raciest, classiest looking motorcycle he ever laid eyes on.

Then You Trim Him

He tries to jam his throttle lever over for a little more speed, but it's wide open now and he can't get another ounce out of his motor. Then you get sort of tired of playing with him, so you turn the throttle grip farther and shoot easily ahead, leaving him behind you in the midst of dust and amazement.



FACE to face with the fastest machine on the road, the 7-8 h. p. Yale twin. Note the substantial front fork of triple-stem design, with drop-forged crosshead connecting forksides, handlebars and central stem. Extra long, specially tempered springs that cannot break give luxurious comfort, and its great strength makes this the most dependable and enduring of all for hard use.

GETS ATTENTION IN EUROPE

Paris, May 10—Art C. Hanifin, the Chicago architect who is touring Europe on a 1913 Yale twin, is having great success. Hanifin's first trial of motorcycle riding was when he took his machine out of the crate after leaving the ship at Londonderry, Ireland, but he has had no trouble in handling it under all conditions.

His trip is for the purpose of studying the architecture of the countries here, and he would have no time for tinkering with mechanical troubles, so he uses a machine that has no mechanical troubles to tinker with.

His big twin attracts much attention wherever he goes, for its speedy, classy lines catch the eyes of the fastidious motorcyclists here, and they are surprised by the remarkable speed and power of the motor, which easily excels anything they had seen before. In England, where motorcycling is particularly popular, his "Big Y" was a center of interest wherever he went.

Hanifin is congratulating himself on his choice of machine for his journey, as he is so far from home that it would take a long time to get new parts if he was riding one of the cheap kind that need repairs frequently.

A Yale sale makes a Yale booster, for the rider has such a good machine that he can't help talking about it. He paid a fair price for quality and got surplus value for his money.

YALE BULLETIN

May 15, 1913

Preparing for a Season on the Road

THIS is the time when riders are deciding on their new mounts for the coming season—making up their minds as to what kind of machine to buy. Of course, considerable thought is given to the question, for everyone wants to get all he can for his money.

Right there many riders make mistakes. They are led to believe that if they can buy at a lower price they are getting more for their money than if they buy a Yale. The flaw in this is that they get so much more when they pay the Yale price that they really get much greater value for each dollar spent than if they purchased "cheap" machines

The Quality Standard

Before buying any machine, measure it by the quality standard. Inspect it carefully in every detail, to be sure that it will stand up under the strain of hard road use, and will not be found wanting because the maker wouldn't build it any better because he wanted to make bigger profits.

Inspect the motor. See if the cooling flanges of the twin are in line with the air currents—horizontal, as on the Yale, so that both cylinders will be cooled. If they are not, you probably will have an overheated rear cylinder.

Bearings

What kind of bearings? Be sure you get bronze bushings of generous size, made of special friction-proof alloy, such as are in Yale motors. Ball or roller bearings sound nice in catalogs, or when the salesman tells you about them, but neither gives sufficient bearing surface to sustain the heavy work that a motorcycle engine should handle.

Tips on Choosing a Machine That Will Give Most Satisfaction

As you sum up a list of all the good points that years of experience have shown to be desirable in a motorcycle, you will find that all of them are in the Yale. Then note the list of mistakes that have been made in motorcycle construction by various manufacturers, and the experiments and freak ideas that some of them are trying out on the riders—you will find none of these in Yale design.

All the Good Points

In the "Big Y" you get every really good and tested point known to motorcycle designers of this country and others, and at the same time you avoid all the wrong ideas that are so costly to riders after the machine is in use.

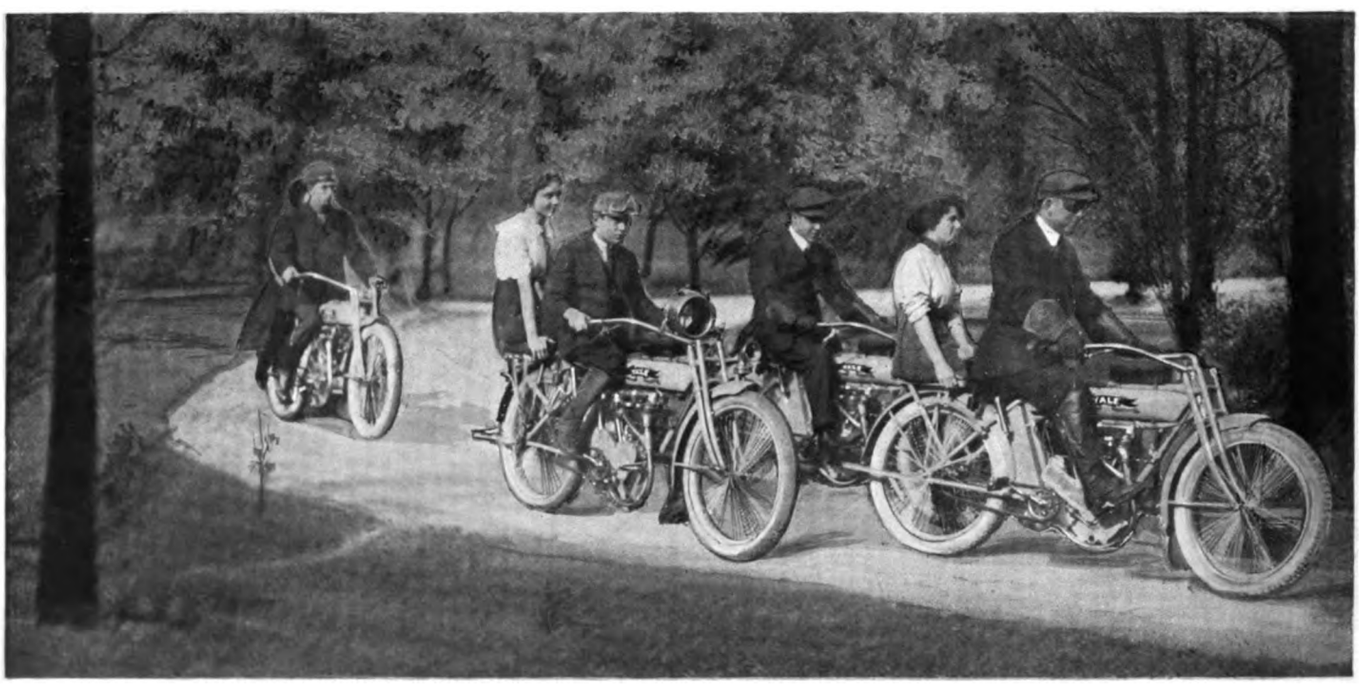
You can't afford to miss one good point, or to buy one bad one. The sure way of being right is to choose a Yale.

From Our Country Correspondents

Pikesville, May 12—Si Perkin's wife says she's agoing to leave him if he keeps on riding that there motorsycle he got last month, with them funny new springs on it, for Hez Jones and his wife with their Yale twin have trimmed Perkins and Mrs. Perkins every time they've went out tandem riding and Mrs. Perkins says she won't live no longer with any man what aint got gumption enough to get a Yale.

Five Points, May 9—Ezra Brown is slowly recovering at the hospitle over to the city, after getting hurt when the frame of his machene broke where there warnt no drop forged connection. His brother Jim was with him when it happened and says if Ez had been on a Yale, with drop-forged frame connections and reinforcements, there wouldn't have been no accident. Ezra says he'll sell his old boat to Abe Einstein, the junk man, and buy a Yale soon as he gets able to be about again. Good idea, Ezra.

Mount Eli, May 11—Bert Williams let Hiram Brooks, our well-known grocery and dry goods store keeper, see his (Williams') bank book yesterday and it most near took Hiram's breath. He says Bert's getting to be a regular capitalist. Bert has took the agency here for them Yale motorcycles that everybody's talking about and he's just getting rich selling them. He sold a twin day before yesterday to Deacon Summers' son George, and Zeke Myers is riding one he got last week and Joe Simpson's ordered one and three other parties that we could name are also proud possessors of this kind of machine. It might be added that Dr. Smith, the eminent physician of this city, is going to order a machine from Bert soon, cause he says Old Dobbin aint equal to the hurry-up calls he gets and he's got to be able to go to a patient quick when he is wanted. Doc is a mighty enterprising man and we can recommend that whenever you feel sick, call Doc Smith and you'll never need a doctor any more (cause Doc says he'll tell you to ride a Yale so the fresh air will keep you healthy).



THE Yale puts all the pleasure of the open country in reach of the riders. Yale tandem clubs all over the continent are enjoying outings now on every sunny holiday. It is the kind of recreation that puts color in the cheeks and sparkle in the eyes, with no danger of injury from buggy springs breaking or mechanical trouble from cheap construction, to spoil the pleasure of the trip.

Digitized by Google

For Leadership Under Average Conditions

OF COURSE you want a machine that has enough speed to "trim" the other fellows on the road when occasion arises. You may not care much for speed all the time, but you like to know that you have it with you in case you do want it. And if you have a Yale twin you can be confident that it will give you all the speed you ask for—no matter how fast you like to go—whenever you open it up, for the big Yale has more speed than the most nervy rider dares turn wide open on the road. So when the time comes, you can give the throttle to your "Big Y" and leave everything on wheels in your dust.

For instance, one morning you start out for a ride. With your Yale twin purring softly you glide out of the city and onto the road leading out into the open country.

Meeting the Road-Burner

A little farther on, when you are loafing along at about 15 miles an hour, taking life easy and enjoying the scenery, another rider storms up from behind and shoots past you with throttle wide open, and as he passes he gives you a sort of pitying side glance that says plainly as words:

"You poor, slow little dub, don't you wish you had some speed such as I have?" His make of machine made some racing records with specially built track models, and that has made him think he has a really fast machine.

Then You "Show" Him

You don't care much for "burning up the road," as a general thing, but you simply can't resist the temptation to show that deluded speed-bug what real speed is, so you give the throttle grip a twist and with a deep bass roar your machine leaps in pursuit.

Machine with Road Ability, Not Track Records, Stays Ahead

The terrific power of your Yale twin motor picks up speed remarkably fast when you turn it loose, and within a few seconds the road is being reeled back under the wheels in a flying dun-colored blur to the accompaniment of the deep-toned "speed song" of the exhaust. The gap between you and the other man begins to narrow.

He hears you coming, steals a hasty glance over his shoulder to see you gaining hand over fist, then he flattens out on top of the tank and coaxes every inch of possible speed out of his "fast" twin.

Taking the Lead

But your machine was built for just such high-speed road use, and it is right in its element, and all the other man's efforts do not help him. Just to emphasize matters you give your throttle a little more opening and with your machine under perfect control (you feel safe and have no trouble in steering, for the fine balance makes the Yale handle beautifully at high speed) you flash past him at express-train speed.

As you go past you notice the trouble he has in steering, too. Although you are riding sure and safe at ten-miles-an-hour greater speed than the other man, he is wobbling perilously and has his hands full keeping the machine on the road for the less perfect balance and less carefully worked-out design of his frame and fork make control at high speed very hazardous. If something had broken—as you have heard of frail parts breaking—at the speed he was traveling — well, it's not nice to think of those things.

That Troublesome Sideplay

As it was, the sideplay gave him plenty of trouble at high speed, and you were on a good road, too. If it had been rough, where a machine is harder to handle, his mount would have been unmanageable, while your Yale would have been troubled little. The Y-A shock absorber, you know, is put where it insulates rider and machine most effectively from road jars, but where it **does not cause weakness** or allow sideplay.

And as you leave the other man in the dust behind you, you thank your lucky stars that you have a safe and sane shock absorber under you, for it makes you uncomfortable to think of a frame proving defective at such speed.

The Yale is built to do easily what other motorcycles cannot do at all—that's why it has won so decisively in all the big endurance runs held under most severe conditions.

Out in California, where the riders have a pretty good idea of what a motorcycle should be, they are taking to the Yale fast. In Los Angeles alone scores of riders have gotten rid of machines of other makes so as to buy Yales.

THE 1913 Yale twin is showing greater speed on the road than any other machine made. Its 61-inch motor develops remarkable speed and power, and the low center of gravity, perfect balance and unusual ease of steering make it easy to handle this machine at higher speeds than is possible with others on ordinary roads. The man on the Yale twin can easily leave behind him everything on wheels, for a turn of the throttle grip gives all the speed that the most daring rider will ask for. The flexibility of the motor delivers lots of power on low speed, too, so that the Yale plows steadily through mud or sand where other machines are stalled.

YALE BULLETIN

May 15, 1913

Dealers Running Ahead of Schedule

LAST FALL, before the tremendous $125,000 advertising campaign of the Yale was started, and before the 1913 models were announced, the prediction was made that the "Big Y" would be the easiest machine on earth to sell.

Now, with the active riding season just starting, this prediction is coming true in a most emphatic way. Yale dealers have been making sales in volumes never before approached. Several have already sold more machines than their original contracts called for, and dozens of others have delivered more than 75 per cent of their allotted number. Here are just a few instances:

J. J. Weber, of Dorrance, Kan., contracted last fall for the number of Yales he thought he could sell in 1913, but before the middle of March he had sold two more than his contract calls for and was still taking orders. Seeing the swarm of orders ahead, he doubled his contract on March 21st, and insists he will sell more than that before the summer is over.

Ray Bros., of Louisville, Ky., are also among those who already have sold more Yales than they expected to all season. The Bluegrass country knows all about fast horses and apparently has learned to know fast motorcycles, for it is very enthusiastic about the "Big Y".

It has kept W. C. Wood, of Fonda, Ia., busy increasing contracts to keep pace with his sales. Last winter he signed the original contract for what he considered the number of Yales he could sell. About a month ago he had sold all of them, so he asked to have his contract increased more than half.

It was granted, but he straightway sold all the machines covered by the increase, and applied for another increase equal in amount to his first contract. By the present time those machines are about all gone too, so that Wood will probably want another increase soon—if the rush of business will allow the factory any chance to give him more machines than his present contract calls for.

DO IT NOW!

FOR a successful season on the road, get the machine of greatest road ability. Now is the time to get your order filled, for only so many Yales can be built this season, you know, and if you wait too long there may be none left for you. Get your order in before your agent has sold all machines on his contract, for we cannot guarantee delivery of more than the contracted number of machines to any dealer. Several agents have already exceeded their original contracts, but had wisely given specifications far in advance, so that the factory was able to take care of them. But extra machines cannot be allowed on very many contracts, so get your order in before your dealer has sold his allotment.

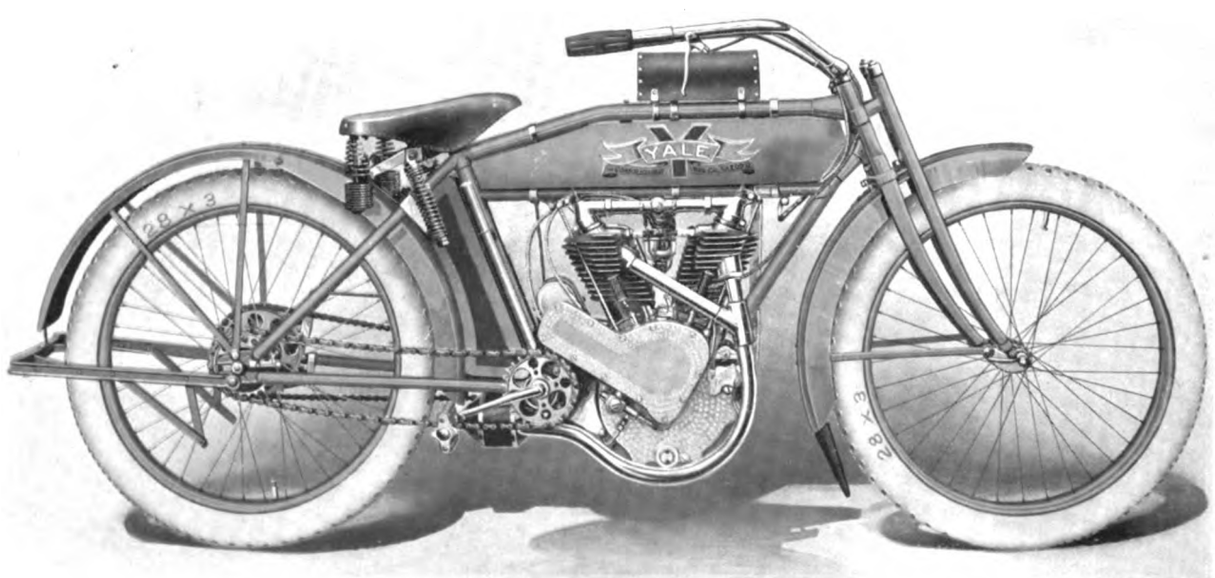
Over in Rochester, N. Y., John Kimpson is Yale agent, and glad of it. After the New York Show, Kimpson contracted for what he felt sure was all the machines he could sell during the entire season, but he would be a sad man now if he had been held to that original contract, for he already has sold and delivered more than the contracted number.

Down in Texas, W. E. Britain signed a contract about two months ago for all the machines he thought he could sell during the season. But he soon found his mistake, for just two weeks after signing he wrote to the factory to more than double his contract, for he had sold all the machines covered by the original one. His increase was granted, but that didn't hold him very long, for a few weeks ago he had sold all the machines granted on the increase and wanted to raise his bid again—this last increase being for more than the total of the original contract plus the first addition. At present he has taken nearly five times as many machines as his first contract called for, and is still going strong.

The Howard Cycle Co., Trenton, N. J., has rather surprised itself by the volume of its sales. It has already sold more Yales than its first 1913 contract called for—and that was no little contract, either.

Perry Rowen has been "whooping 'em" up out in Oklahoma—Renfrow is his town. He has sold all the machines on his original contract and is now making "excess sales," and watches his soaring bank account with an expansive smile.

C. D. Freeman, El Paso, Tex., has already delivered more than twice the number of 1913 Yales that he contracted for at first.



BIG 7-8 h. p. Yale twin. Note the racy, attractive lines of this machine. Long-stroke motor that gives a pull of 10 real horsepower at the rear wheel on actual test. Lubrication by positive mechanical oil pump of plunger type. Large separate tanks holding three gallons of gasoline and a gallon of oil. Chain or V belt drive—no motorcycle-size flat belt could hold such tremendous power. Yale cushion fork. Y-A shock absorber. Three-inch tires. Hinged rear mudgard. Footrests with auxiliary brake pedal. **$275**

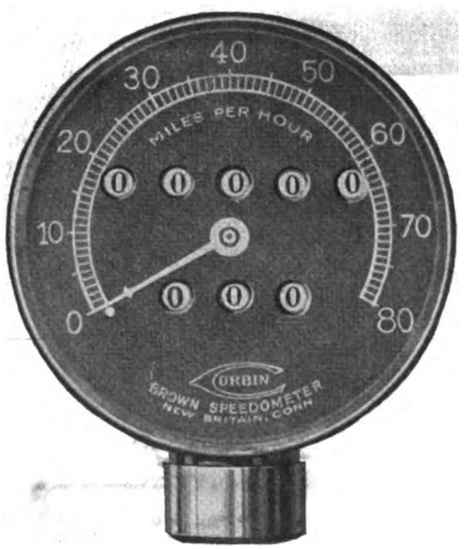
CORBIN-BROWN SPEEDOMETER

"THE SPEEDOMETER OF ABSOLUTE ACCURACY"

"Not quite 20 miles," says the man with the average speedometer.

"Actually 20," says the man with the Corbin-Brown—the centrifugal principle leaves no room for doubt.



Start the summer with a Corbin-Brown Speedometer and end it with an accurate record of mileage run.

The Corbin-Brown writes a true story of every mile and its hand never travels before or behind the fact.

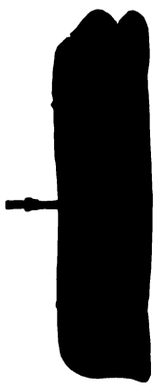
Continental-Erie Accessories

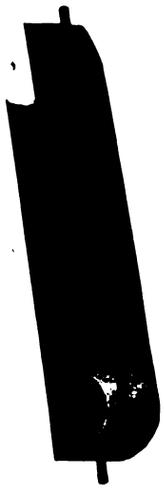
For completeness and quality, CONTINENTAL-ERIE Accessories are easily the leader.

Keen study of the rider's requirements, together with our comprehensive knowledge of the rubber industry has enabled us to offer the rider what we **know** he really needs to keep his tires up to the mark.

Continental-Erie Reinforced Tire Grips

Grips are made with an inner lining of fabric throughout and are also reinforced in the centre or relief part with a Woven Steel Reinforcement, making them absolutely indestructible. This new woven steel reinforcement is pliable and does not detract from the resiliency of the grip.





Non-Slip-Lag

the new lining for pulleys prevents tearing of belts, increases their life.

One Tread—One Quality—The Best

The Spring Touring Season is again in full swing! And again Continental-Erie Tires will convince their users of the value of **concentrated** tire manufacturing—why they are productive of GREATER SERVICE.

No tire manufacturer making several different styles of tread can afford to put the quality of materials, the concentrated attention into his product that we can in

Continental-Erie Motorcycle Tires

The heavy, clearly cut studs, the highest grade of LONG STAPLE Sea Island Cotton and the extra thickness of tread make for greater durability, greater mileage, greater service. Day after day more riders are learning the true meaning of tire satisfaction. One enthusiastic rider wrote us "I firmly believe that the only reason CONTINENTAL-ERIE TIRES are not exclusively used on every motorcycle is that not every manufacturer **knows** the incomparable service to be obtained from them." ASK THE JOBBER—HE KNOWS.

"Do I Enjoy Touring? Of Course! I Ride an Excelsior"

There you have it! With the Excelsior, every minute you spend on the road is crowded with sixty seconds of pure, unadulterated enjoyment. Your only worry is to keep your gasoline and oil tanks full—and at that the "EX" gets along on less fuel than any other motorcycle.

Perfect Control

Always at your instant command. The wonderful EXCELSIOR CLUTCH on the left-hand grip is firmly locked by a mere twist of the wrist. The magical ease with which you can "jockey" with the EXCELSIOR is a revelation. It gives you that superb feeling of confidence—born of absolute mastery of your mount.

Excelsior Durability

In the two hundred-mile endurance races held by the Savannah Motor Cycle Club, on April 26th and 27th, the Excelsior took first and second places, winning over all other makes. Contests of this kind prove the real worth of the Excelsior. It shows what they are made of, and what each rider can expect from his machine. The Excelsior wins the majority of such contests which it enters.

The thousand and one other points of perfection are detailed in our handsome ART CATALOG. Get it today.

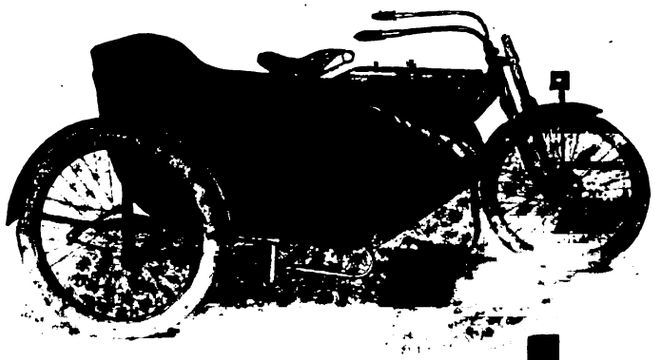
Universal Sidecars



The highest development any sidecar has ever attained

Autocar Model **$125.00**
Delivery Van **$75.00**

Autocar body, with extra van body interchangeable on same chassis. Combination price, both bodies and chassis, complete $150.00. Deliveries on this model can be made within 8 days.

Universal Sidecars are a practical demonstration of how highly the sidecar really can be developed. They have brought to light possibilities in elegance of appearance, strength of construction and all-around "class" that were undreamed of before UNIVERSALS entered the field. We show here two models that combine all the comfort, roominess, luxuriousness and durability of a high priced automobile.

Autocar Model

A genuine automobile body, made of the same materials and in the same way, by experienced craftsmen, whose sole business has been the designing and building of high grade automobile bodies. The frame is of clear selected ash braced and joined in the same way and with the same care as is an automobile body. Covered with 16 gauge sheet aluminum and mounted on our No. 3 underslung chassis with 8-inch road clearance. Luxuriously upholstered with the highest grade of imitation leather over curled hair. Seat of box type, made super-comfortable by spiral springs, removable to give ample space for storage of luggage and tools. Door has the regular automobile lever lock and rubber bumpers. It is roomy as any modern runabout. Bodies finished in all standard colors to match machines. For luxurious comfort and supreme safety—specify the AUTOCAR MODEL.

Reed Body Model

Here is a beautifully light and compact model which possesses all the charm, comfort and individuality that can be built into a sidecar. It is made of the finest imported reed, stained in rich baronial brown and upholstered in highest quality dark red imitation leather. The frame is effectually braced and reinforced, a floor board also adds to this strength and prevents "weaving." There is room for a tool and luggage receptacle under the seat. Mounted on chassis No. 2, with special "C" type steel springs, which exhaustive tests have shown to give the maximum of easy riding. There is nothing unfinished about this model—nothing left to chance. It is perfect in every way. Lightness, comfort, strength and durability are combined in overwhelming quantity in each UNIVERSAL Sidecar.

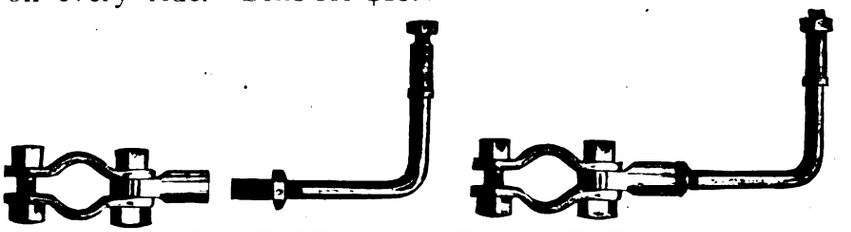
Fully Equipped

For genuine comfort and real service, Fentress-Newton specialties are necessary equipment. The F-N combination tandem attachment gives luxury to the passenger—ask anyone who has ridden it. Its low riding position makes steering easy. The carefully-designed shape of the seat, narrow in front, and the compound springs insure enjoyment on every ride. Sells for $15.

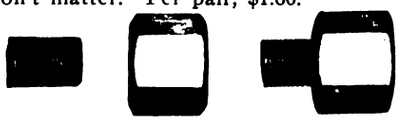


LAMP BRACKET FOR ANY MACHINE

The only lamp bracket that will fit any machine. Adiustable in all directions. Shape of handlebars don't matter. Per pair, $1.60.

F-N BACKREST

This backrest gives automobile luxury to the motorcyclist and relieves strain on the back on long tours. Attached or removed in a moment's time. Price, $2.60.



F-N EXTENSION NUTS

The F-N Extension Nut, for attaching tandems or luggage carrier, has a screw insert that acts as lock for the nut. Made in these sizes: ½ x 24, ½ x 20, and 9/16 x 24. 40 cents per pair.

If you are not using Fentress-Newton equipment you are not getting the full benefit of your machine. Find out about this—write for our catalog.

What is True Transmission Efficiency ?

A transmission, to be truly efficient, must, primarily, require little or no attention. It must always be in tune with the motor. It must be economical. It must effect minimum wear on motor bearings and gears. It must be clean. It must be simple in construction; hence, less liable to get out of order. It must be silent.

The famous "G & K Belt Talks" have demonstrated by clear, logical, convincing reasoning, the preponderance of these true efficiency traits in

SPARTAN BELTS

The Economical-Comfortable Efficient-Transmission

When writing to advertisers, please mention MOTORCYCLE ILLUSTRATED.

Digitized by Google

These scientific treatises were corroborated by floods of enthusiastic letters from dealers throughout the country—from dealers who **know.** Some of these letters have been published in our former advertisements. Others will follow.

Riders! Do not underestimate the importance of these dealers' opinions. Their mechanical knowledge, their long experience, eminently qualifies them to speak authoritatively on the transmission question. These dealers have the future of the motorcycle too much at heart to fail to do their utmost to put the rider on the right transmission path. They have endorsed our statements because they know them to be true. That is why the utmost confidence should be attached to their endorsements of our claims, which in substance are as follows:

SPARTAN BELT TRANSMISSION causes less trouble and expense than other forms in that it is not seriously affected by a misalignment, which causes other transmissions to wear appreciably and frequently results in costly replacements.

SPARTAN BELT TRANSMISSION insures minimum wear of the power plant and frame, as its flexibility absorbs all road shocks, which, by a more positive method of transmission, are communicated to the entire machine.

SPARTAN BELT TRANSMISSION, in contrast to a more positive method of transmission, causes less wear to the bearings and gear than any other drive, because of its slight slippage under abnormal loads, such as quick starting, etc.

SPARTAN BELT TRANSMISSION assures a high degree of comfort on account of its smooth action when starting, and its elimination of overload shocks when accelerating or diminishing speed.

SPARTAN BELT TRANSMISSION is more cleanly than other transmissions, requiring less frequent lubrication, and the use of a lubricant more easily and neatly applied.

SPARTAN BELT TRANSMISSION is more silent than other transmissions, as no metal touches the pulleys—in revolution leather touches metal, not metal to metal. Furthermore, the SPARTAN BELT in its makeup has no small metal parts to loosen, rattle and clank.

If you have confidence in your dealer's judgment, if you take his earnest advice, you will use the SPARTAN BELT TRANSMISSION.

SPARTAN BELTS ARE USED ON 90% OF ALL BELT-DRIVEN MOTORCYCLES, BECAUSE EXPERIENCE HAS PROVEN TO THE THOUSANDS OF SPARTAN USERS THAT JUST AS THE BELT IS THE HIGHEST AND MOST EFFECTIVE FORM OF TRANSMISSION, THE SPARTAN RANKS FIRST IN PERFECTION.

Our 1913 SPARTAN CATALOG describes our complete line of Spartan Belts and Accessories. Your copy is waiting for you.

Prest-O-Lite
For Motorcycles

Join the Night Riders!

In the day time ruts, rocks, bumps and other chances for a spill don't bother you much.

But, by night, how different if you have to depend on a poor treacherous light! A sudden bump and your feeble light may go out, leaving you at the mercy of ruts, bumps, wash-outs, and what not. You creep along trembling and cold-footed, while the automobile you dusted so handily during the afternoon sweeps by you.

You can change all this EASILY by adding Prest-O-Lite to your equipment.

Prest-O-Lite is the ONE practical dependable light for motorcycles; turns on and off like a gas-jet, and gives a brilliant, uniform light that stays with you through thick and thin. Has no troubles and costs less to own and use than any other system of brilliant lighting.

Yet Prest-O-Lite costs no more to use than the troublesome gas generator. One night accident might cost you more than several years of Prest-O-Lite protection.

A Splendid Buy

The money you pay for Prest-O-Lite is not really **spent but invested.** A genuine Prest-O-Lite never becomes second-hand. It is in such universal use and demand that it can always be sold for about what you pay for it.

Our 30 Day Trial Offer

Put Prest-O-Lite on your machine. Use it for 30 days on all kinds of roads and conditions. At the end of that time if you feel you can get along without it, return it to the dealer and your money will be refunded promptly and without argument. Can anything be fairer?

The Prest-O-Lite Co. **246 East South Street Indianapolis, Ind.**

Canadian General Offices and Factory, Merritton, Ont.
Exchange Agencies Everywhere

TO DEALERS: There are five times as many motorcycle Prest-O-Lites in use today as there were one year ago. Are you getting your share of this business?

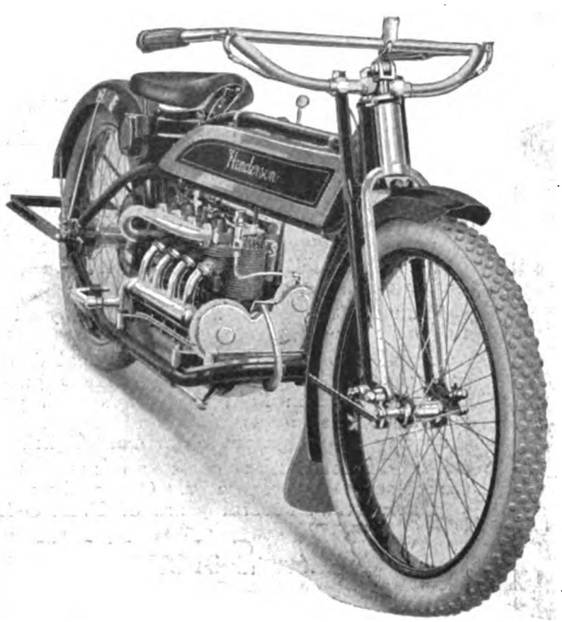
Let the Henderson sweep this season as a



The 1913 Henderson 8 H. P., 4 cylinders free engine, chain drive **$325**

We mean just what we say in the headline.

The Henderson will sweep you into the front rank, whether you are a dealer or a rider.

The Henderson itself is in the front rank—and this, mind you, after one season before the public.

Its rise is the most remarkable rise to popularity the motorcycle industry has known.

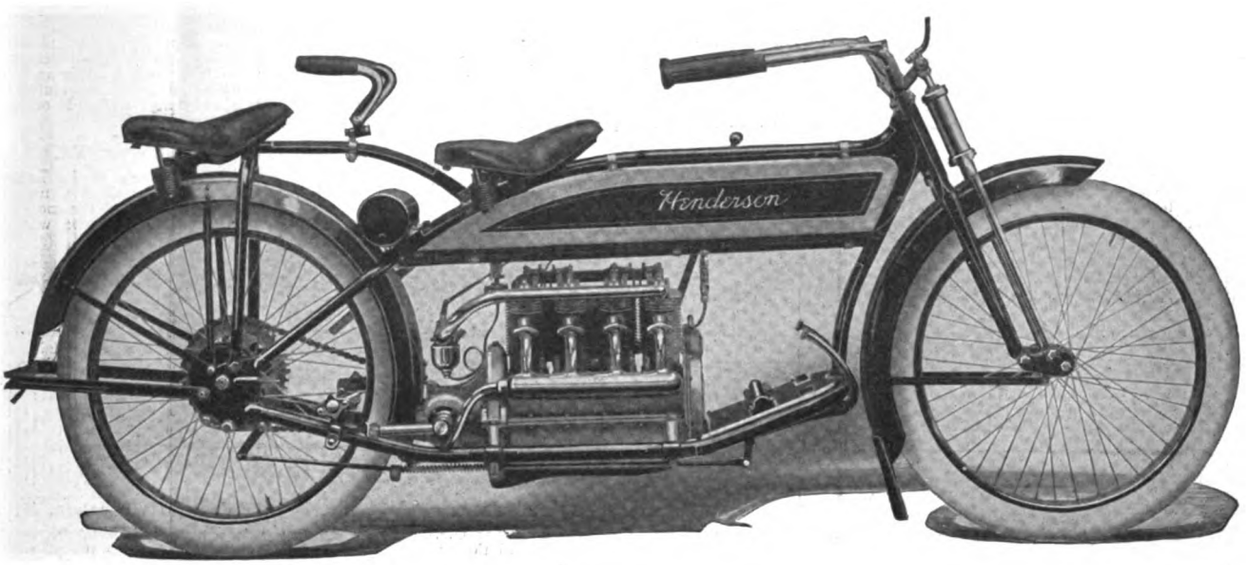
Moreover, its popularity is permanent. It is increasing, both in sections where the Henderson is known and in new territories.

Get in touch for full particulars about the Henderson; and about your own territory if you are a dealer.

Henderson Motorcycle Company, 1158 Cass Ave., Detroit, Mich.

Digitized by Google

you into the front rank dealer or a rider



Tandem attachment complete with grips, foot rests, skirt guard, etc..... **$25**

Why has the Henderson made its remarkable strides?

Because it is a comfortable machine—one that rides without excessive vibration.

Because it is powerful—8 H. P. in its four cylinders—and because it is flexible to handle in traffic, quick on the pick-up and getaway and quiet in its operation.

Because these advantages are not possible in so great degree with any single or twin.

Because of new and better ideas of design and construction that carry a distinct appeal to the discriminating buyer.

Try out the Henderson, and see for yourself the great advantages of four cylinders.

Henderson Motorcycle Company, 1158 Cass Ave., Detroit, Mich.

Twenty Straight Tips From Pope Users

Here's your chance, Mr. Dealer, to get a line on POPE MOTORCYCLES. Below we print a symposium of dealers' and riders' opinions regarding Models L, K and H—twenty straight tips from satisfied users. Our files are full of other testimonials just as good. Could anything be more significant or convincing to the man who wants to be shown than these reports from the front?

Plenty of Rooters for the Pope "Twin"

(1) From John H. Kuenzli, Milwaukee, Wis.

"The Pope Model L is the most flexible, powerful and speedy twin I ever rode in all my days. Saturday I talked Pope to a shrewd, practical man, He said nothing, and the reason for this I expected was that he wanted to be shown. I took him out for a ride. When we returned I took his money."

(2) From Jesse J. Lesh, Chattanooga, Tenn.

"The twin is doing very good work and seems to have all kinds of power. Last Saturday I took a 180-pound man behind me to the top of Lookout Mountain. The mountain is 5 miles long and has 68 curves from the bottom to the top, and at some places it is almost straight up, but the twin climbed it with all ease."

(3) From Myron L. Foote, Rochester, N. Y.

"Just a few lines in regard to the Pope twin I am riding. I have ridden motorcycles for six years and nearly all kinds of machines, as I was a repair man and had to do testing. I received one of your twins last Monday and am pleased to say that it is the easiest handled motorcycle I ever sat on. I can get it down to 5 miles an hour on a level street without slipping the clutch. It has power to throw away and all kinds of speed."

(4) From R. G. Miller, Hornell, N. Y.

"Received the Model L motorcycle all O. K. and am more than pleased with it. Everyone who has seen it pronounces it the finest in town. I intended to keep this machine for a demonstrator, but a fellow coaxed so hard that I had to let it go today, so that leaves me without a machine again. If possible, wish you would ship the other two at once."

(5) From H. C. Fronheiser, Richland Centre, Pa.

"I had the Model L machine out nearly all Sunday and was doing fine under all road conditions. We passed the Lehigh Mountains both ways, and the mountains seemed to be about as much to this machine—Model L 7-8 h. p. chain drive—as a small pretzel would seem to one when real hungry, with but little effect on one."

(6) From R. Gallaher, Easton, Pa.

"I have received motorcycle Model L and found it in good condition and am very much pleased with the machine. Have tried the motor and find everything satisfactory. Everyone who sees the machine speaks well of it."

(7) From H. Ferguson, Grand Rapids, Mich.

"The Pope twin is making a hit with everybody who sees it. Last night a bunch of us were out for a ride. We all carried passengers. We came to a hill about ⅓ of a mile long and very steep. The other machines made a race for the hill and were some 3 or 4 rods ahead when I opened up. When we got to the top of the hill there was not a machine within 200 ft. of the Pope. I think we must have been going close to 60 miles an hour."

(8) From C. C. Simmons, Oakland, Cal.

"The twin is without a question of a doubt the classiest looking twin on the market. The sample showed up very satisfactory on the hills and is above the average in this respect. She is in my estimation a *bear cat* of a motorcycle."

(9)

"I received my first Pope twin a week ago today and I must say that it is certainly a dandy. It started with ¼ of a turn of the pedal. I will say that in my opinion it is the best and most powerful twin of today. The U. S. Special Delivery boys are all crazy about same and are all talking about getting a Pope twin."

Dealers Endorse Powerful Model K

(10) From W. M. Chelf, Leoti, Kas.

"I tell you that the Big 4 skins them all. We can take them to a cleaning with it at anything that they want to go at."

(11) From J. H. Kuenzli, Milwaukee, Wis.

"The Model K 4 horsepower which is in the U. S. Special Delivery service is cleaning up all the new 1913 5 h. p. machines in this service."

(12) A. Ross Rider, New Lebanon, N. Y.

"A young man owning a Model K is already a terror to everyone living along the pike on account of the way he burns up the road, and must say that the performance of this Model K has been wonderful, because the chap can ride it up the side of a house, hills having no terror for him whatever."

(13) From T. B. Hallbourg's, Clearwater, Fla.

"Mr. Kennard of Tampa rode the Model K to Clearwater yesterday. A friend went along with him and rode a twin of another make. On the trip they met some other riders, and this P. M. they dropped into Kennard's store and told about meeting him on the road and said the K would run away from the twin like it was tied to a stump."

(14) From New Eng. Motorcycle Co., Boston, Mass.

"I consider the Pope Model K one of the best motorcycle propositions that I have ever seen and it is undoubtedly the best buy in a single cylinder machine in the market today."

(15) From S. E. Matthews, Austin Centre, Tex.

"The Pope Big 4 is a crackerjack. I believe it's the best that can be made for the money. Mine has given perfect satisfaction. Pulls everything, slow or fast. It is worth $50 more than you sell it for."

Pope Model H Popular Everywhere

(16) From Dallas Rubber & Cycle Co., Dallas, Tex.

"I cannot place the Pope too high. It is as near fool-proof and perfect as a motor could be. Also have had 6 in our service for the last 18 months, 24 hours a day. Rain or shine, hot or cold, have no effect on them, and we lay our success in our business to the Pope. For hill-climbing they leave them all. You cannot overload them. We have tried nearly every make and could not keep them because the repair bills were too much."

(17) From Joseph Lesage, Cuoro, Tex.

"I hardly know how to find words to express how I am pleased with my Pope. Have ridden it about 2½ months now, covering about 1,500 miles, and I want to tell you that I have not had a bit of trouble with my motor, and that is something that many others here cannot say."

(18) From O. C. Berger, Reedley, Cal.

"I have ridden and repaired different machines, new and old, but can say from experience have found nothing to stand with the Pope for quality, as I have ridden my Pope over 17 months and with very little expense beside gas and oil."

(19) From A. Ledger, Horton, Kan.

"I rode a light-weight Model H last summer which gave me perfect satisfaction in all ways. I always rode with several fellows who had machines of same h. p., and I could go places where they couldn't think of trying to go, and for speed, I was always in the lead. Of course I was not afraid to give her throttle. I used to have one sitting on the luggage carrier nearly all the time, and I can say I never stalled on a hill with two of us on."

(20) From Walter L. Hotopp, Jersey City, N. J.

"Have just completed the most successful season on a 1912 Pope. Little did I dream of the quality this light machine can give. During the whole 9 months of continuous service I hadn't one minute's trouble or delay—it was always ready for me. I use it mostly in my business to see my customers, as I cannot make the proper car connections, so bought the Pope. Now I can do 3 days' work in 1 day which by car took me 3 actual days. It is the most serviceable and always ready for the roughest kind of use you can give it. You may have heard of Dan Kelley's hill; it is one of the roughest in this section. Why, it is a cinch for the Pope."

DEALERS—To the right dealers in the right localities we have an attractive proposition to offer. Send for catalog and further particulars.

HERZ PLUG

"Bougie Mercedes"

Racing men and other motorcyclists who know that it pays to be particular about their Spark Plugs have long insisted upon using HERZ PLUGS.

These Plugs are now in their twentieth year—twenty years showing a continuous record of efficiency and steady improvement!

The new model has a completely protected terminal which renders it dustproof and waterproof and obviates the possibility of short-circuiting.

Other important Herz features are the Four Sparking Points, the Platinum-alloy Electrode, the Self-cleaning construction, and above all the Unbreakable Blue Enameled Double Stone Insulation instead of porcelain. Every Herz Plug is

GUARANTEED A FULL YEAR

HERZ MAGNETO is as far superior to other Magnetos as HERZ PLUG is to other plugs. In the official English test against 15 competitors, it was adjudged the most efficient Magneto of its size and weight by 25%.

HERZ MAGNETO is small and light, and absolutely protected against atmospheric conditions, dust and moisture. It was run completely submerged in water for 16 days, at this winter's New York and Chicago Shows.

The strength and reliability of HERZ MAGNETO is attested by the fact that it is used by so many racing men—among others, by Lee Humiston when he made his new world's records from 1 to 100 miles.

The One Perfect

THE 300-mile Savannah Endurance Contest, April 26th it pays to put the kind of stuff in a motorcycle that

Two Harley-Davidson "5-35" singles started in this contest and both finished on time. The average score of these machines was higher than that of any other make. After a most rigid technical examination by experts both machines were pronounced to be in absolutely perfect condition, not even a nut or screw was loose

The Harley-Davidson was the only single cylinder machine to score perfect and was the only single made good enough to stand up and travel along with the twins for the hard 300-mile drive. Eight different machines rated at 7 H. P. or better, and representing five different makes, were unable to stand the grind that the Harley-

Harley-Davidson

Single—the "5-35"

and 27th, was a splendid demonstration of the fact that enters into the makeup of the Harley-Davidson.

anywhere. One machine was awarded a perfect score of 1000 points. The other machine, although it in itself was in perfect condition, was given 995 points because its rider (whose weight was over 250 pounds) had violated the rules of the run and dismounted outside of a control.

Davidson "5-35" singles stood.
It is a mechanical impossibility for any motorcycle built of material inferior to that of the Harley-Davidson, or in which the workmanship is inferior, to give the same service as the Harley-Davidson.

NORTHERN MOTOR SUPPLIES LIMITED
Edmonton, Canada

February 26 1913.

Jenkins & Co.,
Des Moines, Iowa.

Gentlemen:

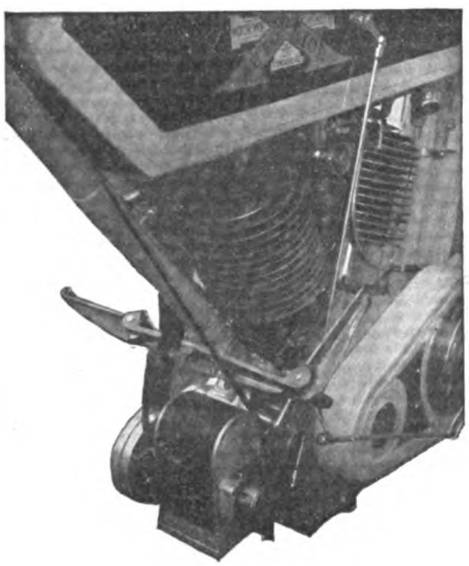
Yours of the 18th received. The Indian riders here want your Jenco Indian carrier. Please ship thirty by freight immediately.

Yours truly,
Northern Motor Supplies Ltd.
Per Manager.

ONE OF THE MANY ORDERS RECEIVED FROM FOREIGN COUNTRIES.

Jen-Co Specialties Are Right

Study them over carefully. The Jen-Co Indian carrier is built to fit 1913 Indians, Merkels and Reading-Standards. It stands to reason that you ride much easier with suspension springs than with compression springs. Springs on our carriers are adjustable to weight of person. Note the fine folding foot rests in cut. The position is great. You can clamp the driver with your knees and hold on tight. Jen-Co spring carrier is made to fit all machines. Made on same principle as Indian carrier except that carrier frame and all is furnished either nickeled or enameled to match any machine. This carrier is built strong and springs are adjustable to weight of person. The neatly made pad shown in cut is made to fit this carrier exactly, $1.00 extra. Jen-Co spring tandem is made to fit any machine. The springs are long and flexible. They play inside of a tube which is hid from view by the large mainstays. Built on the same principle as Excelsior and Harley spring seat posts. A strong feature is that you are not thrown into the air after hitting a bump. You come back just as easy as you went down.



JEN-CO FOOT RESTS FOR ALL MACHINES

Price $2.50

New Lite Electric Lighting Outfit
Price Complete, as Shown on Cut, Less Battery, $30.00

The New Lite Electric Lighting Outfit

is the only practical principle of automobile electric lighting applied to motorcycles. The New Lite is not run from the tire, it is run direct from the engine. Our dynamo has a governor to take care of the speed, no matter how fast your engine runs. You can have light whenever your engine is running. For those who want a light when their machine is at rest we furnish a storage battery about the size of a Presto tank for $10.00 extra. You may depend on this outfit. We stand behind it.

Jen-Co Lamp No. 1 is just as substantial and beautiful as the cut shows it. It is not too big and not too small. Just what you want. 8 in. door, 5½ in. mirror, set screws to hold brackets, everything riveted, beautifully nickeled. Positively right and can't be beat.

Jen-Co Indian spring seat post is built on same principle as Excelsior and Harley seat posts. Any one can install. A combination of this seat post and the 1913 spring frame is great. At last!!! We can all have foot rests. Jen-Co foot rests are made to fit all machines. They are simple, easy to install and thoroughly reliable. When you fall they do not break off, they fold up just like Indian foot rests. Order a pair. We buy and build everything in the largest quantities, therefore quote you prices that can not be touched by any of our competitors. We can either save you money on the same quality or give you better quality for the same money. Send for our new up-to-the-minute catalog. Prices positively lowest. Dealers' prices in proportion.

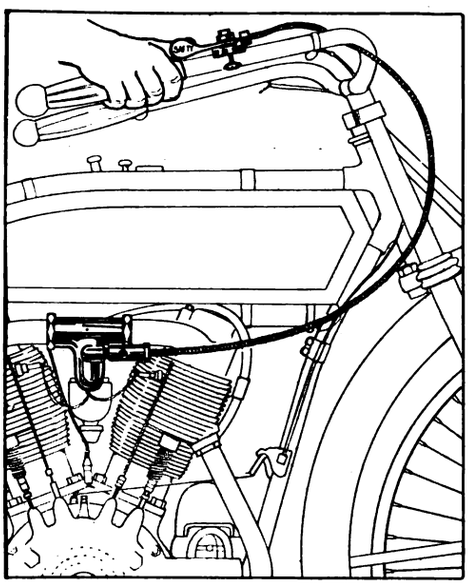
SAFETY GAS SAVER

WHAT IT IS:

The SAFETY GAS SAVER is a patented air control device fitted to the intake manifold and a perfected thumb control attached to handle bar close to either grip.

The GAS SAVER body is machined from brass and has a close fitting piston which closes upon a ground seat. The piston is actuated by the movement of control lever on handle bar.

One of the patented features of this device is the opening in the body for the admission of air. This opening is a rectangular slot and as the piston is drawn out this slot is gradually uncovered, making it possible to quickly and accurately adjust mixture.



Large holes are drilled in the body which the piston uncovers at the end of its stroke permitting an excess of air to enter making the mixture non-combustible.

The handle bar control is made entirely of brass and is so constructed that lever can be easily adjusted and will remain in any position. The flexible connection is known as the Bowden control cable and will conform to any curve without binding or breaking.

The SAFETY GAS SAVER is neatly designed, heavily nickeled, and highly polished, so constructed as to be adaptable to any make or model of motorcycle.

WHAT IT DOES:

The SAFETY AIR VALVE is primarily a gasoline saver, but adds to the efficiency of the motor in so many ways that it is an economical necessity.

It is a well-known fact, and generally understood that the Carbureter of today does not fulfill all the requirements, in that it cannot be adjusted to automatically furnish a mixture suitable to any and all conditions. Hence the development of an auxiliary air valve and the perfection of a device to answer the purposes of all drivers and all motors, known as the SAFETY GAS SAVER.

By our patented means of admitting air you can decrease the consumption of gasoline by 25 to 40 per cent.

You can increase your speed from 5 to 10 miles per hour.

By using the SAFETY you are assured a perfect mixture at all times, regardless of weather conditions or altitude, and a perfect mixture lessens the smoke and accumulation of carbon in the cylinders and helps keep the valves and plugs clean.

By fully opening valve and admitting an excess of air you can use compression of engine as a brake. This is serviceable for several purposes, for rounding corners or descending grades.

Is used to clean and cool engine while coasting. Can also be used as a safety lock. No one can start engine with valve fully open.

OUR GUARANTEE: We guarantee the SAFETY GAS SAVER to reduce your gasoline consumption twenty-five per cent. To increase your speed at least ten per cent. To keep your motor cooler. If the SAFETY fails in any of the above claims return same and we will refund your money. All dealers and jobbers are authorized to sell under this guarantee.

OUR TRIAL OFFER: Upon receipt of Two Dollars and a Half ($2.50) we will prepay to any address, one SAFETY GAS SAVER. Use this for thirty days and if not as represented or thoroughly satisfactory return same and we will refund money by first mail.

MR. DEALER: Our discounts are liberal and our guarantee bona fide. Increase your profits by handling accessories of merit. Purchase through your jobber.

MR. JOBBER: We have several thousand SAFETY GAS SAVERS in stock and can make delivery day your order is received. Sample will be mailed upon request. A clean-cut proposition to offer. Write.

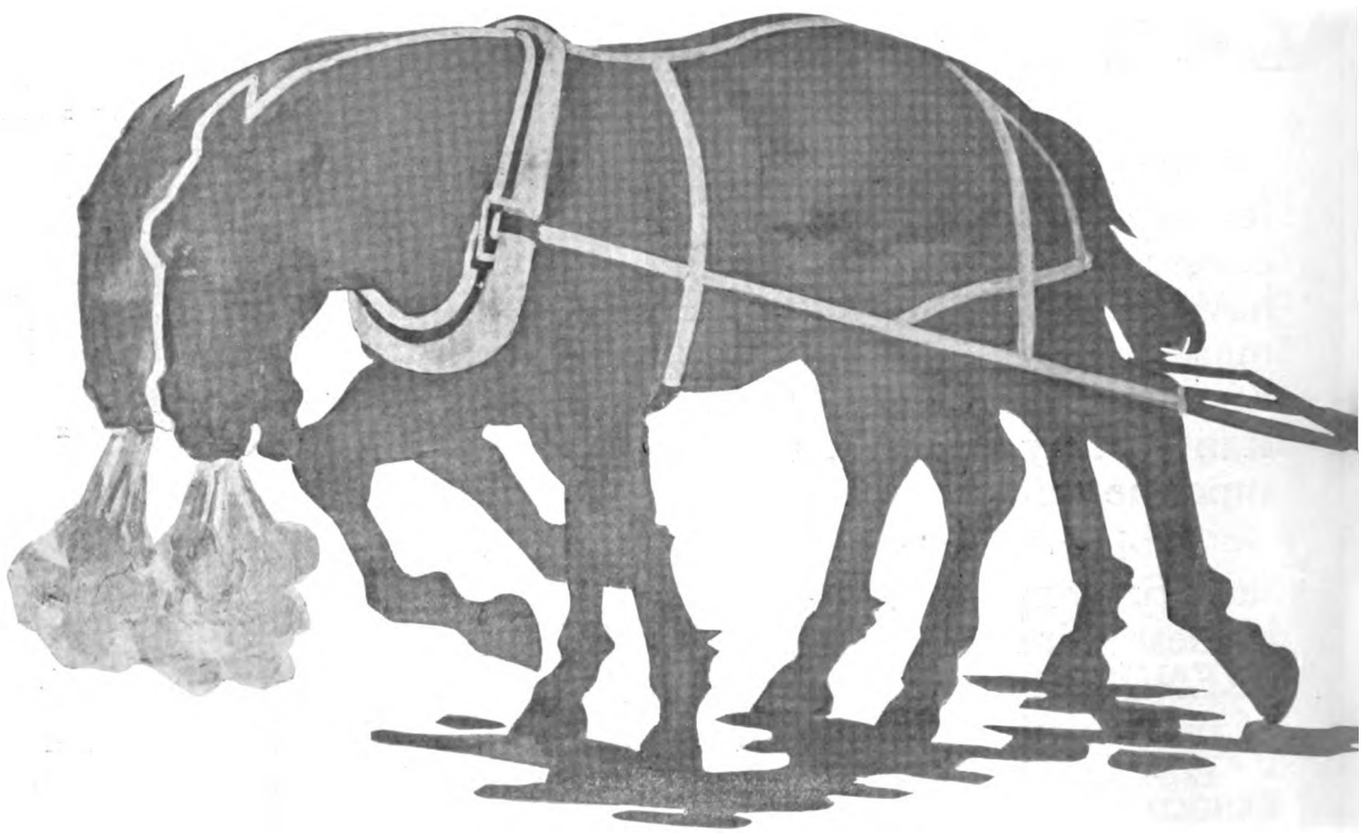
WILL STOP Y

Do you suppose that the combined strength of these two heavy Percheron draught horses could hold and stop your machine? Of course it could. The new New Departure Motorcycle Coaster Brake is even more powerful and gives you the same retarding effect at the brake drum as would the pulling of these two horses against your motor and momentum. This is not a fantastic statement, but a fact; mathematically correct



the ingenious, strong, simple leverage mechanism of the new New Departure—in emergency cases, the retarding power of the brake is equal to that of three or four horses.

The brake can be applied gradually or instantly,

MODEL 206

Anders Sidecar

"With the Rocker Motion"

The ultimate pleasure to be attained is a ride in an Anders Sidecar, the most easily handled, the lightest, the most comfortable and by far the most durable sidecar made. Add the final touch of distinction to your motorcycle by fitting an Anders Sidecar.

THE ROCKER SPRINGS

The springs in Anders Sidecars are distinctive of the whole outfit, in that they assure the long-desired "rocker" motion. They are made of oil-tempered Swedish Spring Steel, body resting on body loop, bring springs on either side of body, therefore totally eliminating all side sway. The front spring is fastened to the frame by a T-socket, thus instead of the usual swaying motion, you have the rocker motion, the spring under the foot of the car working in unison with the rear spring, which assures comfort and safety for the passenger.

The supremacy of the "Anders" Sidecar is upheld not only in the superior quality of materials, the ingenuity and excellence of design, but also in the promptness with which deliveries are made. *Every sidecar* ordered will be delivered when wanted. That's saying a lot—when you consider the tremendous demand for "Anders" Sidecars.

Classy Clean Cut Designs

Superior designing skill, coupled with a positive GENIUS for the evolving of distinctive, graceful shapes, that smack not in the slightest of "freakishness"—Anders models have that thoroughbred, "classy" look. They are made to be admired, as well as to serve.

Anders Commercial Sidecars

The commercial sidecar field is as broad as it is rich. No wide-awake dealer can overlook the sales possibilities of the ANDERS Commercial Van. Your butcher, your grocer, your launderer —every local tradesman will be interested in the ANDERS.

Our catalog comprehensively covers the ANDERS line, and also our National Accessory line of tandem attachments. A postal card will get it.

Two Persons Motor Seats that mark the millennium in saddle perfection.

SPECIFY PERSONS SUPERIOR SADDLES

Most of the pleasures of Motorcycling are spoiled because of uncomfortable positions that riders must assume. Free your body from discomfort, and you put your mind in the best possible position to enjoy the ride.

PERFECT SIMPLICITY and MECHANICAL EXCELLENCE Predominate in the

1913

Persons Champion Motor Seat

throughout. True Compound Spring Action, Scientifically Correct and Mechanically Perfect, is found in PERSONS Duplex Compound Springs. Of the thousands or more patents issued on Saddles, but five show designs of true Compound Spring Action. One is owned in England; the other four —by PERSONS.

IN A SET OF PERSONS PATENTED COMPOUND SPRINGS THERE ARE ONE HUNDRED AND FORTY-EIGHT INCHES OF TEMPERED STEEL SPRING WIRE, OF WHICH ONE HUNDRED AND FORTY-FOUR INCHES ARE ALIVE. This is true of no other saddle on earth.

No Re-Bound! A Spring upon a Spring! A Motorcycle equipped with Persons Seats is miles faster than others.

The one piece—high—arch bridge insures low Saddle position without the usual "bumping."

PERSONS CHAMPION is so constructed as to prevent tipping. It is built with the only safety clamp ever invented. This holds the Saddle at two points and absolutely prevents tipping. Seven high carbon steel drop forgings are used in these clamps.

Persons Anatomical Motor Seat

or "PAN-DANDY"

is built to meet a demand. It meets the demand among riders who desire a low snug-seating Saddle of SUPERFINE QUALITY. This method of construction gives a slightly elastic seat, free from deadness and with a feeling of "bottomless velvet" when in use. "Saddle Fatigue" is impossible with a PERSONS ANATOMICAL. This model can be equipped with either PERSONS DUPLEX COMPOUND SPRINGS as shown on our Champion, or with extra large lowers as illustrated above.

Write for booklet of "Facts and History." It throws new light on the Saddle Question.

After experimenting with several different makes of machines the Park Board of Minneapolis has just placed its order with the Edwards Cycle Company of that city for another motorcycle. Quite naturally it is

In 1910 the Minneapolis Park Board purchased three single cylinder motorcycles—one Flying Merkel and two other well known motorcycles of different makes. The motorcycle was a new thing for this city department and the Park Board very naturally desired to ascertain which make would show the greatest percentage of efficiency. These three motorcycles were used unsparingly for a year. In 1911 the Park Board purchased four new motorcycles and—EVERY ONE OF THE NEW MACHINES WAS A FLYING MERKEL. The Minneapolis Park Board found after a year's test that the Flying Merkel could always be depended on to give the greatest service. These five Flying Merkel motorcycles had rendered such splendid work that it was not necessary to purchase new machines in 1912. A week ago the Minneapolis Park Board sold one of the other makes and placed its order for a 1913 Flying Merkel, thereby recognizing the superiority of the Flying Merkel over all other makes.

There's a mighty valuable lesson in the experience of the Minneapolis Park Board for every motorcycle rider. Why experiment with other machines when for practically the same price you can have the BEST MOTORCYCLE MADE? A Self Starter, Two-Speed Hub, Adjustable Spring Frame, Ball Bearing Motor, Spring Fork, Low Saddle Position, Throttle Controlled Oiler, are only a few of the many exclusive features of this wonderful machine.

Have you seen our new art catalog? It's free for the asking. Remember,

United States Tires

WHAT KIND OF A TIRE DO YOU WANT?

Pick out the features you want to find in the tire you buy. You want generous mileage, an effective non-skid tread, protection against rim cutting, ease of manipulation and security of fastening.

Measure up this ideal tire against every other tire on the market and then compare it with United States Tires.

You will find United States Tires combine all these identical features of your ideal tire in a way that no other tire on the market approaches.

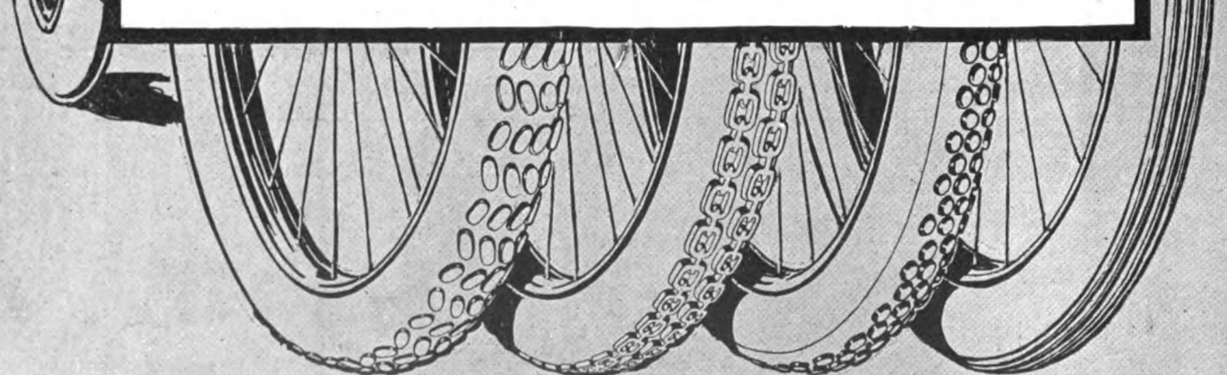
United States Tires yield an average mileage from 25 to 50 per cent above the highest point ever reached by any tire maker previous to the organization of the United States Tire Company.

In the United States line you can find non-skid treads to suit every possible kind of service—Nobby and Chain treads are the most famous and widely used non-skid tires on the market today.

Rim cutting is a rarity with users of United States Tires.

United States Tires are accurately sized and are extremely flexible, insuring absolute security of fastening together with ease of manipulation.

In fact, if you were to have a tire built to your order it would be difficult for you to specify a single desirable feature that you won't find today in United States Tires.



United States Tire Company-New York

VOL. 7

MOTORCYCLE ILLUSTRATED

NO. 10

WITHOUT striving especially for a symbolical effect the artist has embodied a forceful suggestion in the picture which adorns this page. We find the tourists, smiling, confident, gazing across a sweep of fair country to the rising sun—obviously appreciative of what Nature has already done for them, keenly alert for new beauties to be unfolded as Sol climbs the sky.

So do thoughtful trade workers and riders look out upon the possibilities of motorcycledom. Much has been accomplished, but our sun is still rising; as yet it is two-thirds below the horizon of ultimate achievement. The scope of this Spring Touring Number, the nation-wide interest which justifies it, leave no doubt of this. The 1913 riding season is with us, unprecedented in the inducements it holds out—and we are ready for the road. Give 'er the throttle!

Cleveland and Norfolk Capture F. A. M. Trophies

Award for Largest Number of Memberships Turned Over to Director Sauer Goes to Cleveland M. C. While Virginians Made Best Showing in Attendance at the Official's Lecture—Standing of the Clubs.

WITH an address before a meeting of New York riders in the World building Monday evening, Chairman Sauer, of the Legal Action Committee of the F. A. M., brought to a close his missionary tour in the interest of the Federation. The Legal Action chairman will be glad to address further meetings of riders in and about Greater New York at any time that will be mutually convenient, and he invites interested clubs to write to him at his business address, 51 Chambers street, New York City.

Chairman Sauer announced yesterday the winners of the membership contest trophy and the attendance cup, which were offered by the National organization in connection with his tour. For contributing the largest number of memberships, the Cleveland club, with 116, tops the list. Elmira, with 47, is second, and Norfolk, with 37, third. The first twelve cities in the membership contest, and the number of members handed to Mr. Sauer in each one of them is as follows:

Cleveland, Ohio	116
Elmira, N. Y.	47
Norfolk, Va.	37
Indianapolis, Ind.	28
St. Louis, Mo.	26
Savannah, Ga.	25
Salt Lake, Utah	22
Ft. Worth, Tex.	19
Buffalo, N. Y.	18
Portland, Ore.	17
Louisville, Ky.	16
E. St. Louis, Ill.	15

It is probable that the presentation of the trophy will be made to the Cleveland club during the Ohio State Convention in Cleveland next month.

Quite as interesting as the membership figures is the attendance tabulation. It will be remembered that when Mr. Sauer started on his tour, he announced that another trophy would be awarded by the F. A. M. to the city having the best attended meeting in proportion to its F. A. M. membership the first of March. The idea of basing the attendance award on a percentage basis was to afford to clubs in every city, no matter how small, equal opportunity to win the cup. The percentages given below may be illustrated by the following examples: Assuming that a city having an F. A. M. membership of 200 had an attendance of 100 at the F. A. M. meeting conducted by Mr. Sauer, it would get a percentage of 50. If, on the other hand, a city having an F. A. M. membership of 25 showed an attendance of 50 riders, or double, it was given a percentage of 200. Worked out in this way, the city of Norfolk, Va., with a percentage of 350, had an attendance of three and one-half times its F. A. M. membership and was easily a winner and will be awarded the attendance cup. Boston was second with 225 per cent. and Milwaukee third with 210 per cent. The percentage of attendance in each city on the Legal Action chairman's schedule is given herewith:

	Per Cent.
Norfolk	350
Boston	225
Milwaukee	210
New Haven	175
San Jose	150
Denver	140
St. Louis	130
Richmond	130
Baltimore	125
Indianapolis	125
Louisville	120
Cleveland	120
Hartford	115
Buffalo	110
Elmira	110
Salt Lake City	110
Newark	105
East St. Louis	95
Savannah	85
Atlanta	85
Detroit	85
Fort Worth	75
Pittsburgh	65
Los Angeles	60
Rochester	55
Cincinnati	50
Tacoma	50
Seattle	45
Portland	40
Washington	40
Philadelphia	40
Bakersfield	35
Birmingham	25
Toledo	25
Chicago	20

Chairman Sauer has discussed with a number of trade folk the question of the date of the Denver Convention which, according to present arrangements, is slated for the week beginning Monday, July 21. The impression is general that if this date is adhered to, very few of the trade will go out to Denver, owing to the fact that most of them wish to attend the Cycle Trades Convention in Altantic City the second week in August. Those of the trade who are accustomed to start for the Pacific Coast in September have suggested that the F. A. M. convention be held the latter part of August, so that they could first attend the Atlantic City gathering, and then take in Denver on their regular westward business trip.

On the other hand, the Denver hotel people claim that August is pretty well filled up, and that they would prefer the week which the Directors have decided upon. The latter are still in communication with the Denver club and it is possible, though not probable, that the date for holding the convention may be changed. In the mean time, however, nothing will interfere with the plans of the Denver club, which is proceeding with the purpose of making the Denver convention a record-breaker in the annals of the Federation.

Colorado State Commissioner W. W. Whiting, of Denver, advises that he will soon turn in a big batch of memberships and the affiliation papers of the Denver club, which had just been reorganized previous to Chairman Sauer's arrival.

From all indications, the tours to the Denver meet will be participated in by scores, if not hundreds, of long-distance riders. The section between the Mississippi and the Rocky Mountains will be particularly well represented and tour arrangements are under way in cities as far east as Indianapolis, Buffalo, Elmira and Rochester. As a matter of fact, aside from the convention tours, this year promises to establish a new high-water mark for transcontinental touring. This is evident from the number and character of inquiries for long-distance touring information received daily at the headquarters of the F. A. M. National Touring Bureau.

New York Riders Discuss State Convention Plans

Committee is Named at Enthusiastic Meeting to Learn Sentiment of Clubs Throughout Empire State Relative to Choice of Assembly City—Elmira is Making Strong Bid to Play Host to Delegates.

CALLED by State Commissioner J. A. Hall, a meeting of Greater New York riders was held in the *World* building, on Park Row, New York City, Monday night. The purpose of the meeting was to afford the State Commissioner an opportunity to sound local sentiment in connection with the proposed New York State convention, which in all probability, will be held during the week of the 4th of July.

Although the meeting was not largely attended, it was a representative one and enthusiastic withal. A half-dozen New York and Brooklyn clubs were represented by delegates, and the State convention situation was thoroughly threshed out, with the result that, upon motion by Chairman J. P. Thornley, of the Competition Committee, seconded by J. W. Constant, a committee consisting of Commissioner Hall, Chairman Sauer and William Gladish were appointed to get immediately in touch with clubs throughout the State, with a view to selecting the convention city as soon as possible. Although the State Commissioner is empowered to make the selection on his own responsibility, State Commissioner Hall explained last night that one of the purposes of calling these meetings was to ascertain the sentiment of the riders, so as to be sure of their co-operation after the selection has been made.

Some of those at Monday night's meeting were strongly in favor of holding the convention in Poughkeepsie because of the fact that if the convention is held there it will be possible to run off the State championships on a first-class mile dirt track. At the same time, the meeting adopted a resolution offered by

Digitized by Google

Mr. Sauer that it was the sense of the meeting that the convention be held in a centrally located city.

Thus far the city which has made the strongest bid for the convention is Elmira, N. Y., the Elmira club having been working enthusiastically to land the convention since the proposal that a State convention be held in New York was made by Chairman Sauer on the occasion of his visit to Elmira about three weeks ago. The suggestion was immediately taken up, and the Elmira boys are today not only willing but anxious to entertain the delegates.

To prove just how anxious they are and how well prepared to make good, at a recent meeting of the Elmira club's board of directors it was unanimously voted to raise at least $1,500 for the entertainment of the convention. The club, at its regular meeting last Thursday, immediately ratified the action of the board of directors and appointed a committee consisting of Burton A. Forsythe, LeRoy Morris, Harold McGlen and F. N. Barthne, to take up the matter of the selection of the convention city with all the affiliated clubs in the State. General Manager Ralph D. Webster, of the Eclipse Machine Company, is among the enthusiastic Elmira boosters and is co-operating with the local club in every way. It is said that the Buffalo, Rochester, Syracuse, Utica, and other clubs in the western and central districts will be well represented if the convention is held in Elmira. Only one objection has been offered to the selection of Elmira, viz., the fact that the Elmira track is a half-mile circuit At the same time it has been suggested that the twin-cylinder State championships could be held separately on a mile track.

An important matter in connection with the selection of the convention city will be the assurances given the F. A. M. State Commissioner as to what extent the convention will serve to establish a comfortable nucleus for a State F. A. M. fund. Not much money is necessary, for ordinary purposes, to conduct State affairs of even a commonwealth as large as New York. At the same time, every well-populated State should have at least a few hundred dollars in its treasury. But the distribution of even a hundred or two hundred dollars to each State by the national organization, inasmuch as the membership dues are only one dollar a year, is quite out of the question. It is for this reason that the New York State Commissioner, as are no doubt the commissioners in other States, will largely gauge the selection of the convention city according to the probability of its paving the way for establishing a State F. A. M. fund.

The New York meeting was addressed by Chairman Sauer, Chairman Thornley, "Happy Days" Pitman, and others. State Commissioner Hall presided.

Big Tours to Feature Ohio State Convention

Four F. A. M. Divisions Will Start on June 19 for Cleveland, the Points of Assembly for Tourists Being Cincinnati, Marietta, Toledo and Ashtabula—Two-Day Entertainment Program in Convention City Includes Racing and Parade of the Visiting Motorcyclists.

PLANS for four tours to be held in connection with the state convention of the Ohio F. A. M. organization were launched at an enthusiastic meeting of the directors of the body in Middletown, Sunday, May 5. The tours will start simultaneously from the four corners of the state on June 19, Cincinnati, Marietta, Toledo and Ashtabula being the points of assembly for the tourists. Two days will be allowed for the riders to reach Cleveland, the scene of the convention, and bronze medals of special design will be presented to the riders who finish the trip. It is stated that the runs will have all endurance and speed features eliminated, and that every effort will be made to develop them along social lines. It is expected that many women enthusiasts will be included in the parties.

The annual business meeting of the Ohio State F. A. M. will be held on the morning of June 21, at Cleveland, and in the afternoon a big race meet will be staged at the Randall track, under the auspices of the Cleveland Motorcycle Club. All the events will be for amateurs. In the evening races will be held at Luna Park motordrome. On the morning of June 22 a parade of riders will be held through the principal streets of the city, and it is confidently expected that 1,000 machines will be in line.

One answer to the oft-repeated question: What do I get for my F. A. M. dollar? was embodied in a report of the Legal Action Committee of the Ohio state body, submitted at the recent meeting of the directors. The report showed that it was due to the activity of the state organization that the recently proposed $5 license fee for motorcyclists was reduced to $3 before the measure was adopted. There was a determined effort on the part of the lawmakers to railroad the unfavorable bill through, but such opposition was worked up by the F. A. M. officials in the state that the fee was cut to $3.

State Commissioner J. A. Campbell, of Toledo, presided over the directors' meeting and the other members of the board in attendance were as follows: Edward Hensley, of Dayton, secretary; M. E. Remelin, of Cincinnati, chairman of the Highway Committee; Carl Cappel, of Dayton, chairman of the Legal Action Committee; Walker Brown, commissioner for Hamilton County, and F. L. Valiant, chairman of the Publicity Committee. Among others in attendance were George Squiers, of Dayton, and M. E. Horn, president of the Cincinnati club. There was so much business demanding attention that the board held two sessions, one in the morning and the other in the afternoon. After the latter meeting Mr. Remelin, the Cincinnati member of the board, entertained the visitors at dinner and also took them on a sight-seeing trip in his automobile. The next meeting will be held at Dayton, May 25.

BAKER'S TOUR COMPLETED.

MEMBERS of the Indianapolis M. C., headed by President McLain, met Erwin G. Baker at Plainfield, Ind., as he was returning to Indianapolis the latter part of April. Baker had many thrilling stories to tell of his extended tour. The last leg of his trip, from Los Angeles to Indianapolis, included the desert region of California and Arizona, where it was necessary to carry water, gasoline and oil in canteens. Baker says that he traveled fully a hundred miles without seeing any sign of life in the country about him, and that the heat was terrific. Baker is the first man to cross Cuba on a motorcycle. While there he paid $1.10 a gallon for gasoline, which was furnished in pint bottles, sealed with paraffin. The accompanying photograph shows Baker being welcomed by President O. F. McLain, of the Indianapolis club, who is also State F. A. M. commissioner.

Baker will compete in the twenty-four-hour endurance run to be held in connection with the Indiana State Convention, May 16, 17 and 18. He will also assist McLain, who has been appointed tourmaster for Indiana, at the time of the tour to Denver. The Indiana tour will pass through St. Louis, where the party will be joined by the St. Louis riders. From St. Louis the route leads over the Santa Fe Trail to Hutchinson, Kan., at which point the party will join the Short Grass Club in their tour to Denver. The photograph shows Baker (on the machine) being welcomed by State Commissioner McLain.

MILWAUKEE'S THREE-DAY RUN.

LACY CROLIUS, chairman of the touring committee of the Milwaukee M. C., with H. E. Jamieson and Louis Bauer, members of the club, have just completed a pathfinding trip preliminary to the three-day tour which will be held under the auspices of the club, beginning Memorial Day. It is planned to have Madison as the first night control and on the second day the riders will pass through Sun Prairie, Columbus, Beaver Dam, Fon du Lac, Neenah, Menasha and Kaukauna to Green Bay, where the second night control will be arranged. The third day's riding will bring the riders through all the towns along the lake between Green Bay and Milwaukee. The course covers a little less than 400 miles.

ALONG the NEW JERSEY COAST

by TOURMASTER

FOR at least seven months in the year—frequently more—there is almost a steady stream of motorcycle travel between New York, Long Island, Newark and the metropolitan district generally, and the long stretch of New Jersey shore that lies between Sandy Hook and Cape May. Fortunately, or no, from the New York end the start-off is the slow, annoying part of the whole ride, as the really good stretches do not begin until one is below Keyport; but from that point nearly all the way to the tip end of the southern New Jersey peninsula the roads are mostly good, with some pieces of gravel unexcelled in the United States.

To the locally unacquainted motorcyclist, the geographical situation between Manhattan and the two Amboys or below, is both intricate and puzzling; and whichever way you go means a sacrifice of distance. By the simple expedient of laying a rule—or even a pencil—down on the accompanying map between New York and Seabright, it will be seen how much additional road mileage is made necessary in order to get around the large indentation of Raritan Bay—something, of course, that can never be helped except by the establishment of a boat line carrying motorcycles, automobiles, etc., between the metropolis and the head of the North Coast, which the "Sandy Hook" route will not do.

The present way is easy, however, compared with not many years ago, for before the Perth Amboy-South Amboy bridge was built (and one summer afterward when it had to be closed for changes insisted upon by the War Department), it was necessary for road travel to go all the way around by New Brunswick (too far west to be shown on the map). There have been other changes for the better on these routes, as will be noted further along, as no other section so near New York has been undergoing more constant and important improvements.

LEAVING NEW YORK CITY.

For laying out a motorcycle trip between Manhattan and the New Jersey seacoast, the first essential is a good reference map showing at a glance the choice of routes in their correct geographic relation. While the accompanying diagram, made specially to illustrate this article, is necessarily on a small scale—and in fact is tilted somewhat to go in an arbitrary page—it will be useful for planning this tour to best advantage down and back.

It shows the two main lines between New York and Lakewood—one across Staten Island, and the other through Newark and Elizabeth, both meeting at Perth Amboy, in order to use the only approach to the Raritan River bridge. Of course it has been stated before, but needs to be referred to again in discussing the advantages and drawbacks of these two routes, that the Staten Island line is the shorter, more logical and better-surfaced route, but requires a difficult and sometimes even a dangerous ride through the heavy traffic of the middle and lower city on week days.

The trouble is that the great city of New York has only one through road all the way to South Ferry, and into Broadway—especially below Fourteenth street—are jammed more street cars, delivery wagons and other vehicles than anywhere else. A trip downtown on the average afternoon will mean keeping out of the way of all these, and at the same time dodging several hundred pedestrians. But Sundays or holidays, in the early morning or late at night, the Staten Island route is the preferable way, as under all conditions it is the logical route from Brooklyn or Long Island points, touching only a small portion of lower Manhattan.

CROSSING THE RARITAN RIVER.

The roads from New York, via either Weehawken or Jersey City, thence around through Newark, Elizabeth and Rahway, are never as good as the line across Staten Island, for they necessarily traverse a heavy manufacturing and thickly-settled suburban district. But despite this, and the much greater distance, many motorcyclists prefer this route to the one which requires riding to the tip end of Manhattan. Of course, tourists coming from Newburgh, Paterson, Lake Hopatcong, Port Jervis, etc., bound for Keyport, Red Bank and the Coast, desiring to cut New York City out entirely, may do so by an intermediate connection at Newark, as the map shows, thence down through Elizabeth and Rahway.

Meeting at the western edge of Perth Amboy, both routes come together to cross the Raritan River bridge, a curious, angling structure, 1 1/3 miles long—none too wide for the amount of traffic going over it, but free from toll—leading into South Amboy. Old-timers will remember the famous "hole-in-the-wall" under the Pennsylvania Railroad tracks between the bridge and the town; that has now been largely superseded by the construction of a shorter connecting link, but not done away with altogether, as there was one time in 1911 when some repairs were made on the new route, and the old line through the dark tunnel had to be used for several weeks. Perhaps it is being retained for just such emergencies.

After literally wriggling through South Amboy, one has a fairly clear stretch—with one sharp curve at the edge of Cheesequake Creek, and a very dangerous grade crossing at Morgan station—to the western edge of Keyport where, as will be seen by the map, the two routes to Lakewood divide. The majority of travel which goes down the coast continues into Keyport; turning right at the central four-corners of that old town, the going rapidly improves to the little old village of Middletown.

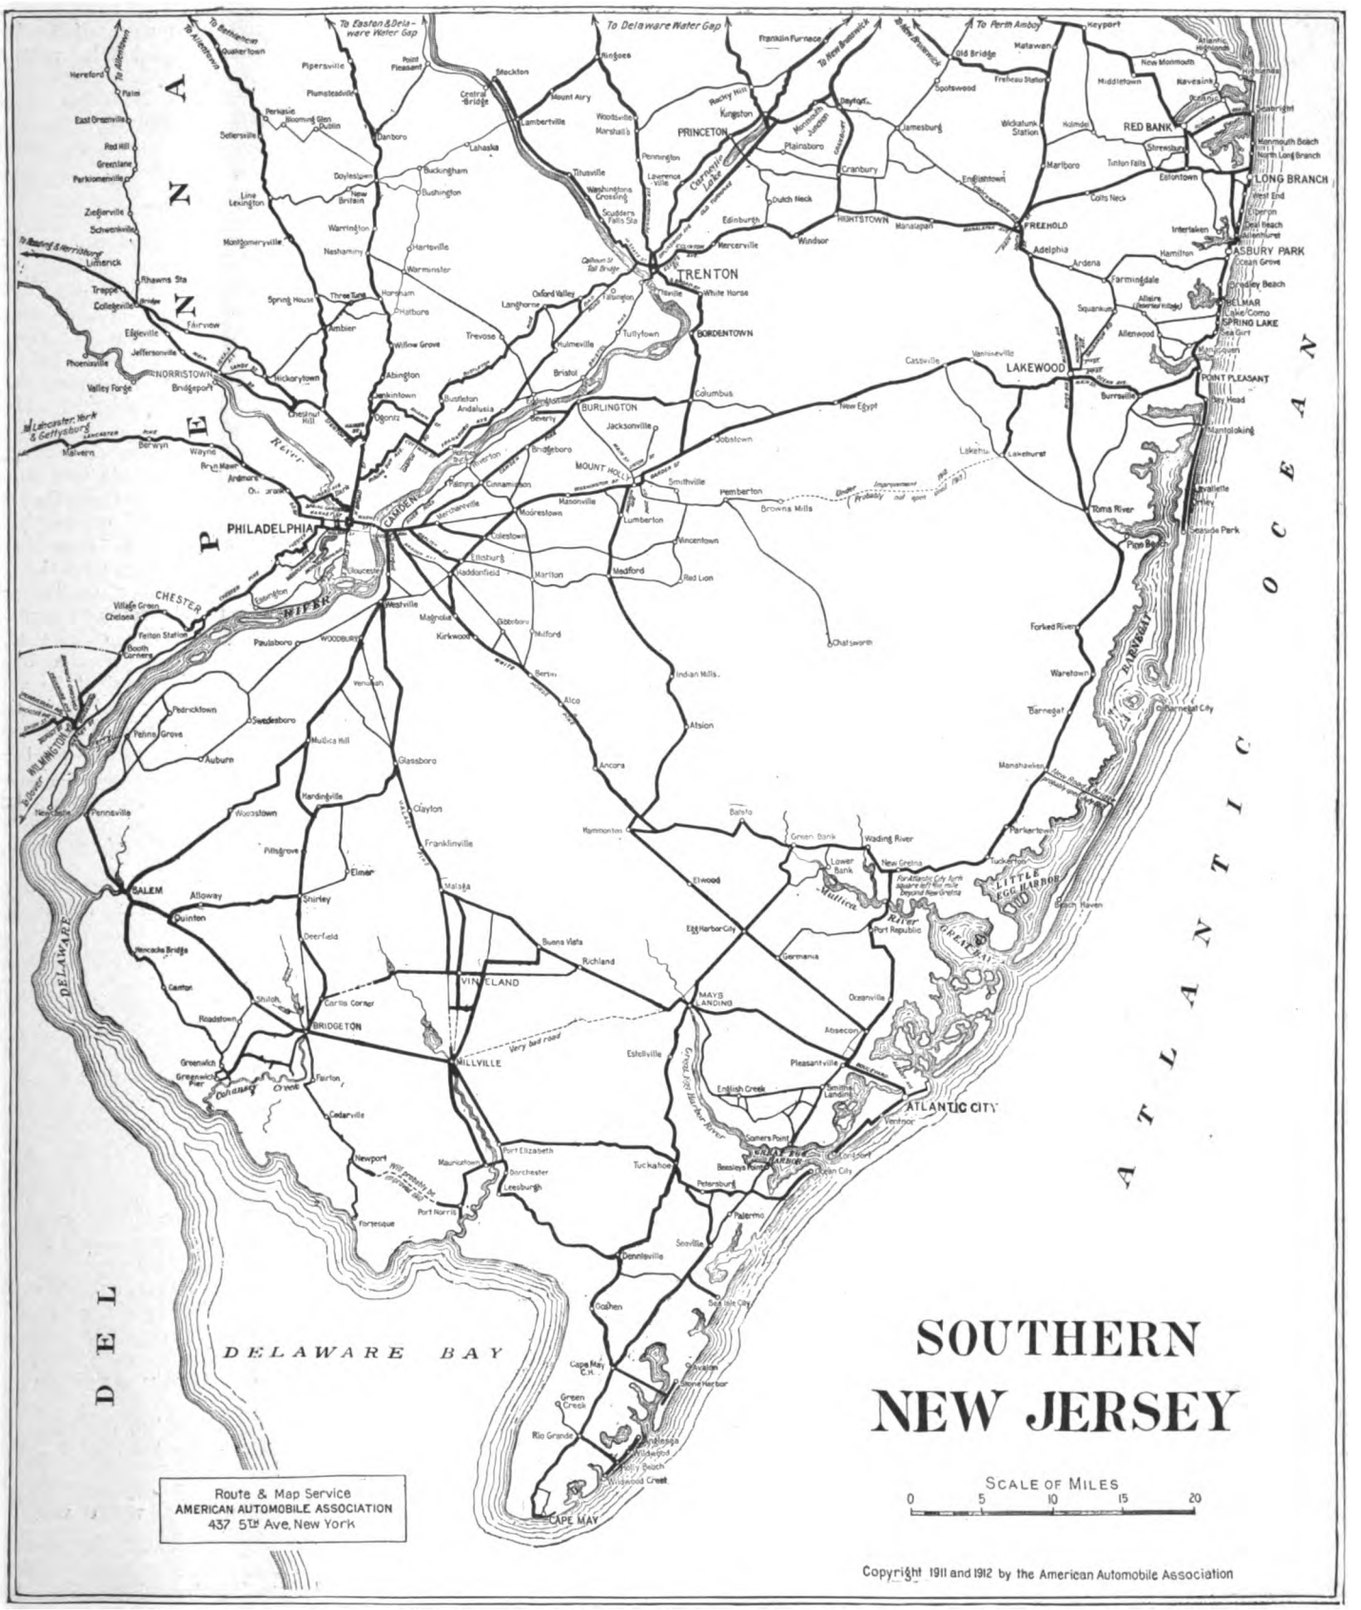
Here the road makes a square left turn, and in so doing crosses the tracks of the New York and Long Branch Railroad twice in the same tenth of a mile; whether this is the result of poor calculation on the part of the road or the railway does not appear, but so far as the writer's observation goes, it is the only situation of its kind. It is not likely that that will remain much longer. Beyond these two overhead bridges begins a stretch

Digitized by Google

of as perfect road as will be found anywhere, though it loses a little in quality just before crossing the bridge over the Navesink River into Red Bank—as the map shows, an important junction point for the two routes farther down the coast.

The reader who may choose to follow out these suggestions by reference to the map may possibly wonder why a circuit that shortly loops back to Atlantic Highlands should be run all the way from Middletown to Red Bank; but the reason will soon be apparent. In addition to missing the excellent piece of road already referred to, the short-cut from Middletown would run above Little Silver, reached only from the north or west by going through Red Bank, and the principal gateway of the famous Rumson road. A ride over this road is one which no stranger should miss, and which is at the same time the best for the every-day traveler.

Little Silver is not a town, but simply the locality, marked by a signboard, where a square left turn is made from Branch avenue,

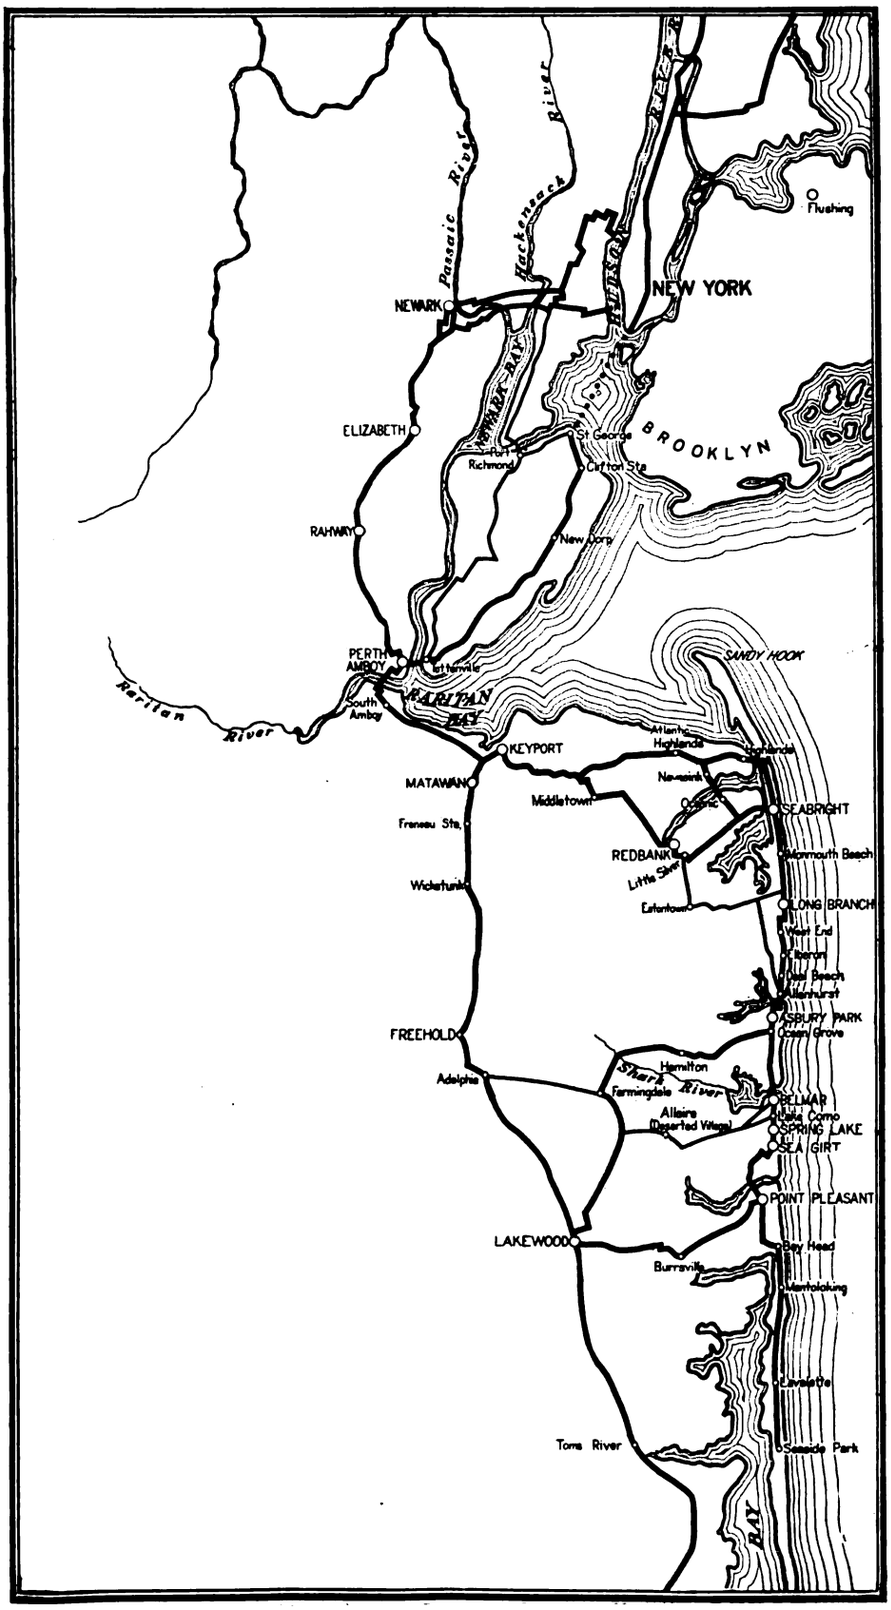


This small-scale map shows all the practicable connections to the popular New Jersey coast, particularly from Trenton, Philadelphia, Wilmington and points west or south of these cities.

Digitized by Google

Red Bank, into the Rumson road—wide, direct and lined on both sides with magnificent estates. This is considered by many the most elaborate country road in America—located on Rumson Neck about midway between the Navesink and Shrewsbury rivers.

If anything, more emphasis is laid upon the grounds along this drive than upon the buildings, spacious, velvety lawns and well-kept hedges are universal, and some of the houses are entirely concealed in the foliage. Except for the Rumson County Club, which is, of course, in harmony with its surroundings, there is practically no break in the line of these pretentious estates from Little Silver to Seabright, a distance of about five miles.



Upper half of the route from the Metropolitan district to Cape May, N. J., along the New Jersey seacoast.—Interesting country and roads fair to good.

It is best to follow the road to its end at the bridge over the entrance to the Shrewsbury River; cross the railroad tracks at Sea bright station and turn left for a short circuit to Highlands, Atlantic Highlands and back to Seabright via Oceanic, which will take in the most interesting places on the extreme northern coast with the least extra mileage. Now you are immediately alongside the Atlantic, on a narrow tongue of land dotted with summer homes and hotels; parts of the shore in this neighborhood are known as Rumson Beach, Normandie, Navesink Beach and Highland Beach, but the dividing lines between them are not visible as one passes through.

A VISIT TO FORT HANCOCK.

At what is practically the end of the road, turn square left across the bridge near the mouth of the Navesink River into Highlands, a picturesque summer resort that has grown up at the meeting place of the river with Sandy Hook Bay and the ocean. This locality is separately named to distinguish it from the better-known Atlantic Highlands. The government naval reservation at Sandy Hook is, as the map shows, immediately above Highlands, and a good road leads into it, but no one is allowed to run a motorcycle or automobile onto the "Hook," or, as the Navy Department officially calls it, "Fort Hancock."

Nor can parties on foot go onto the government reservation without a preliminary arrangement, likely to take some time and cause considerable trouble. The officers at Fort Hancock have stringent orders that only citizens of the United States shall be admitted under any circumstances; and it is also required that any third parties who enter shall be accompanied on the reservation by those who have requested their pass. This is a matter of safety for strangers, as a great deal of firing is going on, especially "proving" of guns, and the government could not be responsible for the safety of visitors.

On the shore of the bay, just outside of Highlands, is Water Witch Park, a picturesque spot made famous by J. Fennimore Cooper's novel, "Water Witch." A summer home on this fine stretch of coast line, with the "Highlands of Navesink" as a background, embracing a profusion of marine beauty and frequent glimpses of trans-Atlantic and coastwise liners, the "Sandy Hook" fleet of fast passenger ships and many a sailing craft approaches the ideal.

The road which crosses the "Highlands of Navesink" to the stone church (an important junction of three roads, with no other name), and then nearly west on the Valley Drive to the lower edge of Atlantic Highlands, is not quite as good as that from Seabright to the Navesink River bridge, and more winding, but still picturesque and interesting. A right turn on First avenue will take you through the center of the town to the large piers, where connection is made between the "Sandy Hook line" of steamers and the trains of the C. R. R. of N. J. Contrary to the usual impression, these boats do not land on the "Hook," nor does the Cetral Railroad go north of Highlands village.

GETTING BACK TO THE COAST.

A pleasant way to complete the circuit back to the coast is to start southeast from Atlantic Highlands, running through the little hamlets of Navesink and Locust to Locust Point; here cross the bridge over the Navesink River, which is now seen for the last time on this

Digitized by Google

trip, into Oceanic. After making a short left and short right turn at Oceanic into Bingham avenue, continue along the latter to its intersection with the Rumson road.

Turn square left on the Rumson road and run over a short stretch already covered on the way from Red Bank; again cross the railroad tracks at Seabright station, but this time turn right, starting down the coast. In the course of the next mile, the traveler will see many fine cottages built, like those between Seabright and Highlands, on a narrow strip of land between the roadway and the ocean. Low Moor, Galilee and Monmouth Beach are three small aristocratic summer colonies on the way from Seabright to Long Branch, but to the motorcyclist passing rapidly along, it is one uninterrupted string of summer homes.

There is a break in the continuity of the shore road coming into Long Branch, but the way is made clear by signposts and the wear of travel on the streets. After some vicissitudes, Long Branch is coming into its old-time popularity again, especially since the encroachments of the ocean have been stopped by the expenditure of large sums of money. A few years ago this ocean road was partly washed away, but it is now better and more secure than ever; and the whole ride to the fashionable "West End" is now lined with summer homes even more elaborate than those seen at Seabright.

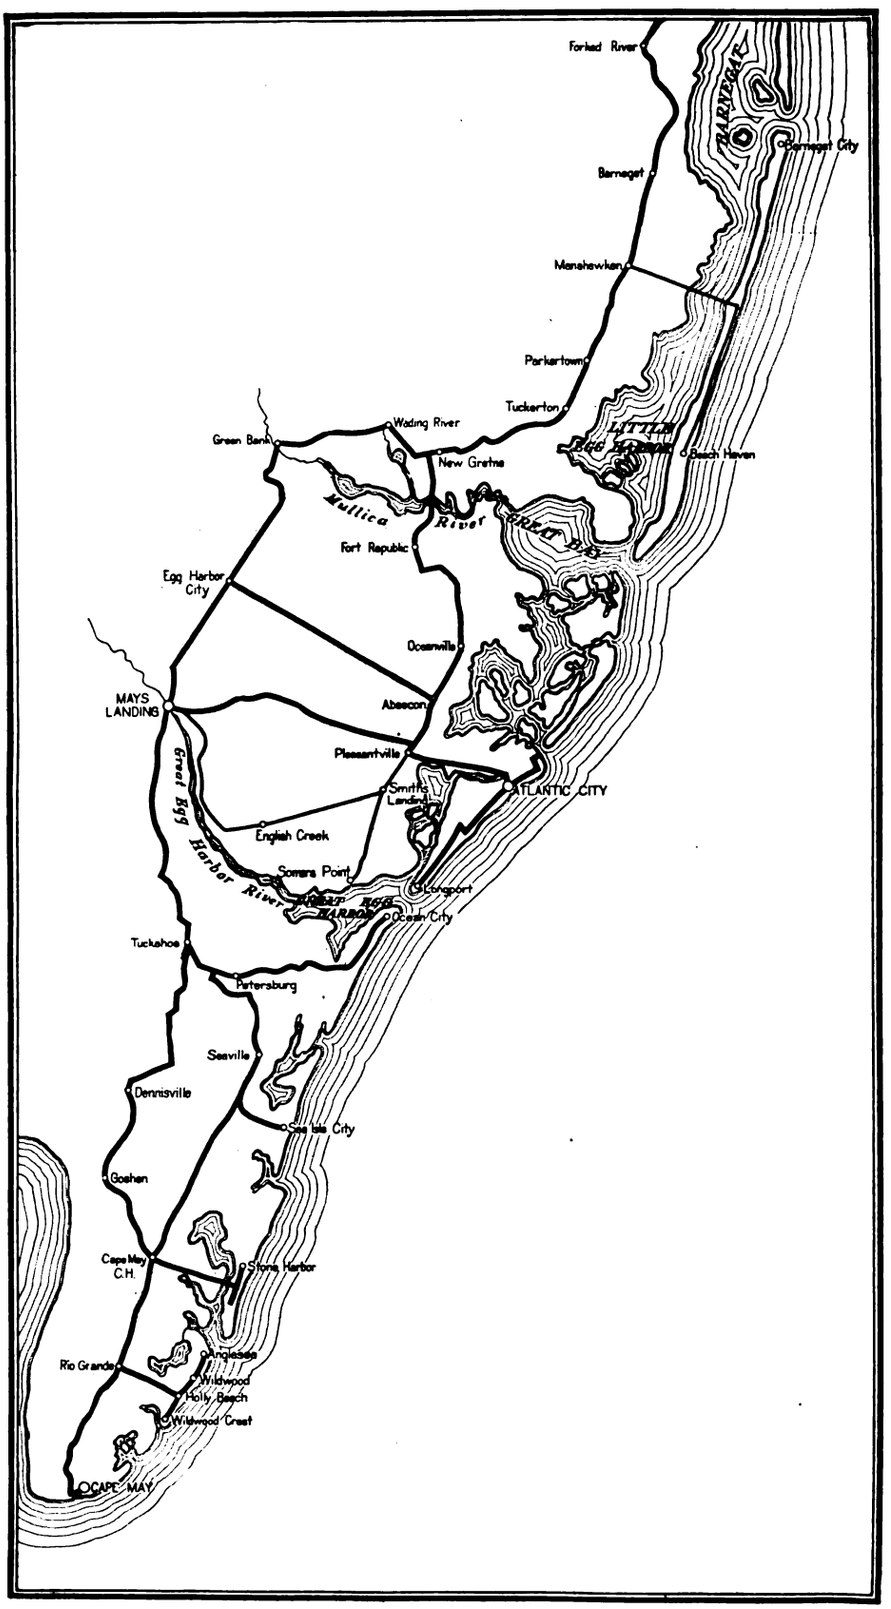
Long Branch was once the most popular resort along the Atlantic Coast, especially during the presidencies of General Grant; then Narragansett Pier, Bar Harbor, Atlantic City, Asbury Park and other places started in more nearly to divide the honor. Ocean avenue, on the way to the next summer village of Elberon, crosses beautiful little Takanassee Lake; a short distance beyond, at the beach end of Lincoln avenue (best identified by the slight "offset" it causes on Ocean avenue), can be seen the house where President James A. Garfield was taken after being shot by Gitteau, and where he died. It is still known as "Garfield Cottage."

AT ASBURY PARK AND OCEAN GROVE.

Deal Beach and Allenhurst are between Long Branch and Asbury Park, both located to excellent advantage in a rare combination of ocean and indenting lakes, several of the latter being crossed by all road travel up or down the Jersey coast. There are famous golf links at Deal, and at Allenhurst is the home of the Allenhurst Club, a large colonial building with conspicuous pillars, located on the corner of Corlies avenue and Paige avenue, where most tourists coming from Long Branch or above make the last turn for Asbury Park. During the summer the restaurant at this club is open to transients.

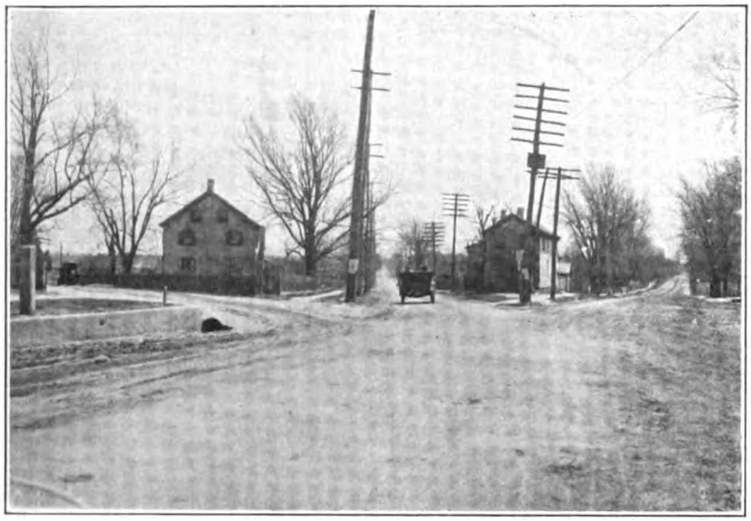
You cross Deal Lake into the city of Asbury Park on one of two bridges, both somewhat back from the ocean; on quick trips some time can be saved by riding straight down either Grand avenue or Main street, through a detour to the beach, and the principal hotels need only be a matter of fifteen or twenty minutes. Asbury Park has grown very rapidly and substantially since the waterfront was bought from "Founder Bradley." It is also becoming a more important route center, especially since the completion of a good road about two years ago from just opposite the Ocean Grove gates, nearly directly west to Farmingdale, thus making a good short route to Freehold, and giving another good one to Lakewood, via Farmingdale.

Ocean Grove, the great Methodist camp meeting resort, begins immediately south of Wesley Lake, but except for the gates—closed to strangers on Sunday—it looks like a southward extension of Asbury Park. Avon-by-the-Sea borders on Shark River inlet, which divides it from Belmar; both are fortunate in a rare combination of ocean and lake, furnishing varied entertainment to their large summer population. Belmar is of additional importance to the motorcyclist because the road that skirts the lower side of Shark River (or more properly bay), is a good, logical connection from this part of the coast to either Freehold or Lakewood via Allaire, the "Deserted Village." There is also a good connection into this road from Lake Como.



Lower half of the route from the Metropolitan district to Cape May, N. J., along the New Jersey seacoast, with Atlantic City a feature point on the way.

Digitized by Google



Not especially picturesque, but a strategic point—the triple fork on the Berlin Turnpike, the middle road leading to Atlantic City.

At Spring Lake—a growing resort, with some fine hotels—the main road winds easily along the lake, crossing Wreck Pond into Sea Girt. The latter is less built up than Spring Lake, and is the site of the New Jersey State Camp, as well as the place where important shooting contests, both military and civilian, are frequently held. Sea Girt is well adapted for these purposes, on account of its large area of level ground, not yet appropriated by the summer visitors. While Governor of New Jersey, Woodrow Wilson had his summer home at Sea Girt, and will probably retain it as President.

WHERE "ZIMMY" MAY BE FOUND.

The next town, Manasquan, is somewhat back from the ocean, and for those who prefer the salt-water breezes, somewhat diluted with pine, this locality is recommended. It is likewise an excellent place for the motorcyclist, who is also a fisherman, to stop. One familiar with the history of bicycle racing years ago will recall the name of Arthur A. Zimmerman, once the world's short and middle distance champion: "Zimmy," of course, races no more, but busies himself with the management of a summer hotel.

Below the town our road curves inland to secure a good crossing of the Manasquan River by a rather long bridge into Point Pleasant, one of the most important route centers along the coast. A glance at the map will show the good road extending down from Point Pleasant to Bay Head, Mantoloking, Lavallette and Seaside Park. Unfortunately, there is no road connection below Seaside Park, and while it is necessary to return the same way, the detour down this fine strip of seacoast is well worth the extra mileage to cover it.

Until the continuous shore road that has been confidently talked about for several years is built, it will be necessary for all road travel from Point Pleasant or above to turn almost directly west from that point to Lakewood; this is, however, practically a ten-mile boulevard of unusual width and straight except for one curve shown at the little intermediate village of Burrsville. Half of the entire cost of this road was paid by George J. Gould, whose country home, "Georgian Court," is the one great show place at Lakewood.

The Point Pleasant-Lakewood stretch necessarily adds to the normal distance between the upper coast and Atlantic City or Cap May, for at Lakewood one is as far from either of these places as when at Point Pleasant—and slowly but surely an equal excess distance must be covered in returning to the shore road below Toms River. Of course, the New York-Perth Amboy-Freehold-Lakewood route saves time, distance and numerous turns, and is, therefore usually taken for quick through trips; but there are no points of interest that way (unless one wishes to visit the Monmouth battlefield, which is west of Freehold, on the way to Englishtown), and tourist travel usually does well to go around by the coast, despite the extra 20 miles.

LAKEWOOD THE MID-DAY STOP.

When the New York-Atlantic City trip is made in one day, luncheon is usually planned for Lakewood; and, if time permits, a run around the city may well be included. Mr. Gould's estate is just north of Lake Carasaljo, quite a distance west of the business center and somewhat beyond the point where the turn is made for Atlantic City. When ready to continue the trip, take the most convenient street to River avenue, turn down that avenue, skirting the eastern edge of Lake Carasaljo into the fine stretch of road through the pinelands to Toms River.

Cross the bridge at Toms River (named after "Tom," an early Indian character), and curve left on the main highway; in a few minutes you begin to see a series of left-hand roads leading down to the ocean front at Forked River, Barnegat and other places, usually sign-posted to catch the eye of the traveler. One who is interested in deep-sea fishing and oyster gathering would do well to follow some of these roads to their end at salt water, especially if in search of a real "shore dinner," for nowhere in all the land are they better. Here, by dint of watchfulness and long hours of toil, large numbers of fishermen snatch a comfortable living from the turbulent deep.

Now and then there is a glimpse of a life-saving station, for occasionally the storms along the seacoast are sudden and severe. Almost invariably the only road back from the seaside to the main highway is the one used in traveling to it. Near Manahawken, a sleepy old place below Barnegat, a road has long been under construction to connect Beach Haven with the mainland, and thus do away with the infrequent boat service that has heretofore been the only dependence. Completion of this road has been promised for a long time; but it is not yet "officially" open, and until it is complete, road trips to Beach Haven cannot be planned with certainty.

From Toms River to New Gretna is one long stretch in Ocean County; there is little or no trouble in finding the way, as it is principally one road with very few forks. However, the stranger is likely to be disappointed in not seeing the ocean at all, if the main road is followed without detours by side roads to the coast, already referred to. Undoubtedly the reason for this is that the main road was laid down many years ago along the lines of least resistance.

IN ATLANTIC CITY.

Just beyond New Gretna, however, an important option begins, as the map shows; for the usual route to Atlantic City a square left turn is made to cross the Mullica River to Port Republic. This is the only part of the New York-Cape May route that is likely to be flooded in wet weather, when some stretches may be three or four inches under water, as the writer saw it on one occasion. In or after a heavy rain it may be better to take the longer way around through Wading River, Green Bank, Egg Harbor City and back to the regular shore road again at Absecon.

Under all ordinary circumstances, make the left turn as shown on the map just beyond New Gretna, crossing the long drawbridge over the sluggish Mullica River to Port Republic; thence along the one unmistakable road through Oceanville to Absecon, where a

Fine straightaway on the Shore Road between Lakewood and Toms River, N. J.

Digitized by Google

large amount of travel for Philadelphia, via Camden and Hammonton, comes in from the right. The next place is Pleasantville, just beyond the center of which you turn left from the main street into Verona avenue, which becomes the boulevard across the lowlands to Atlantic City.

Tourists who remember the old road along the trolley line—under water several times a year, and never good—will be in a mood to appreciate what a good approach the great South Jersey resort has now. For the benefit of first-time visitors, it may be added that there are several hundred hotels in Atlantic City, most of which charge about 50 per cent. more than the accommodations warrant, as compared with other places. But if one has the time and patience to look around, discarding all until suitable accommodations are found at fair rates, sooner or later the search will be rewarded.

COMPLETING THE RUN TO CAPE MAY.

Probably 75 per cent. of the trips from New York to below Lakewood are scheduled to and from Atlantic City; and most tourists stop there even on the way to Cape May. But that is not necessary, for as the map shows, one may save turns, time and at least some distance on through trips to Cape May, by taking either the New Gretna-Wading River-Green Bank-Egg Harbor City line to Mays Landing—or of running into Pleasantville and turning right there on the prominent road shown from that point to Mays Landing. The latter option will give something over ten miles of fine wide road after leaving Pleasantville, with only two or three small houses, and where higher speed can be made with less danger than anywhere else I know of along an open road.

At Mays Landing both roads down from New Gretna come together to cross the bridge over Great Egg Harbor River, thence south on the one well-traveled road to Tuckahoe, from which point there is another choice of roads to Cape May Court House, one via Seaville, and the other through Dennisville and Goshen. If for any reason one desires to visit Ocean City or Sea Isle City, the former will necessarily be chosen, and reference to this recalls an unusual incident. Several years ago the writer was riding down this stretch when his neck was caught by a telephone wire that had fallen from the pole nearby. It was a bad contact at best, and at greater speed might have been serious.

On account of the large amount of improved road that way, much of the through travel goes down from Tuckahoe via Dennisville and Goshen to Cape May Court House—seeing as much of the ocean as via Seaville, which is none at all. From the town so named, because it is the site of the County Court House, there is one through line to Cape May, with a very important left-hand connection from the main road at the little, scattered hamlet of Rio Grande, to Holly Beach, Wildwood and Anglesea. When the road comes to an end, you turn sharp left, passing the Pennsylvania Railroad station to the beach at Cape May; that is the "Land's End" of New Jersey, as there is nothing in the peninsula below to interest the road traveler.

Every motorcyclist in the metropolitan district who is not familiar with it, should become acquainted with this long stretch of fine seacoast. Atlantic City and Cape May are, of course, much nearer Philadelphia than New York, which may account for the apparently much larger number of visitors from the City of Brotherly Love than from old Father Knickerbocker's domain. Here one can add to the delights of speedy travel (below Keyport), the salty ozone, fresh from the billows of old ocean and the fragrance of large areas of pine woods.

All the way from the Highlands of Navesink to Cape May is interesting country, its only drawback being the distance from the main road below Lakewood to the ocean, already referred to, and which will ultimately be remedied by carrying the Shore Boulevard all or nearly all of the way down to the lower New Jersey peninsula. It is true that occasionally one does meet with some pesky mosquito and its consort; but fortunately they are not speedy; and with a little more power they are left behind with the road that melts away in the distance. The inducements of the trip far outweigh the disadvantages.

Two Classes Only for Elgin Road Racers

Chicago Club Decides Against Having Both Single and Twin Divisions for Amateurs and Professionals in Big July Fourth Program—Over $6,000 Already in Hands of Committee to Defray Expenses.

REPORTS from the committee in charge of the national road race to be held over the Elgin (Ill.) course on July 4, under the auspices of the Chicago Motorcycle Club, are to the effect that the project looms larger day by day. It is estimated that it will cost $8,000 to stage the big program, and $6,300 is already in the hands of the Chicago club's committee. It is expected that the balance will be raised in ample time to carry the committee through its work with flying colors.

Instead of following the original plan to have four divisions, single and twin races for both amateurs and professionals, the club has decided to have only two events. The pro event will be over a 250-mile course, for machines not exceeding 61 cubic inches piston displacement, and the awards will be $500, $250 and $100, for first, second and third place, respectively. The amateur race will permit of using machines of the same rating, and the winners will receive merchandise to the values of $250, $125 and $75, as first, second and third awards.

The Elgin course is a little over eight miles long. It will be thoroughly guarded on the day of the race by State militia. Owing to the shortness of the course and the large number of participants the scoring presents a problem and the club has lined up officials as follows to cope with the situation: 100 scorers, 30 checkers, 50 flagmen, five timers nine judges, a clerk of the course and his assistants, five in number; the starter and his assistant; the referee and assistant and an umpire and two assistants. The only official so far named is Frank L. Valiant, who will act as starter. Mr. Valiant is also handling the publicity plans. The other officials will be selected in the near future, and many of them will probably be club officials, experienced in road events, who will make the trip from neighboring cities and states to be on hand for the big program.

One of the features will be a telephone system encircling the course, with stations at short intervals, so that the officials may be kept informed of developments at all times. The course is in excellent condition, and is to be oiled for the races so that fast time should be possible. The riders will be started at half-minute intervals, the amateurs leading the way. Five minutes after the last amateur the first professional will be sent off.

The Chicago club has already received a number of applications for entry blanks from owners of single-cylinder machines who feel that in such a long, closely-observed run they will have an even chance with the twins. There are indications that there will be as many contestants in each class as the committee will care to send out on the course.

THE LETTER OF THE LAW

ALEXANDER SCHWALBACH, who successfully engineered the protest of the F. A. M. against the passage of unfavorable motorcycle regulations by the New York State lawmakers recently, in the absence of Legal Action Chairman J. Leo Sauer, calls attention to the fact that the sidecar licensing matter has been satisfactorily disposed of by the insertion of a definition exempting "motor bicycles, motorcycles and motor tricycles" from the provisions of the act. The reference to "motor tricycles" is intended to eliminate pleasure sidecars from the motor vehicles subject to licensing.

Digitized by Google

RAINY weather means a slack time for the dealer, and most men who repair motorcycles are always willing to talk "shop" during slack times. So one sloppy afternoon recently the writer floated into a metropolitan shop where repairing is a specialty and the talk soon drifted to the subject of magnetos. It might be stated here that Al, the repairman in this particular place, gets most of the magneto work within a radius of 50 miles, and is perfectly at home with any juice-generating apparatus.

"If I depended upon magneto repairs entirely," said Al, "I might just as well take to driving a moving van. There would be more money in it, for if you let a magneto alone it will grind out the juice day in and day out with only a kind word and a little oil each month or so. It's another story when Inquisitive Ike makes up his mind that the little steel jigger that wiggles every time it hits the what's their-names is working too slowly and needs loosening up, or when he figures that a bath of oil will help the wiring to turn more freely in the armature-tunnel. I suppose that I ought to rejoice when the results are handed over to me to cobble back into operating order, but I hate to see anyone treat machinery as if it were a bug that had to be dissected. So I generally give the rider some advice on the subject of keeping his hands on the grips and off the magneto."

HOW DIRT CAUSES TROUBLE.

"Well, what are the commonest things that happen to a magneto" I asked. "I have straddled magneto mounts for several years and about all I have had to do was make a few adjustments on the platinum points. Practically the only tool I had to use was a Swiss file and the little combination wrench and gauge that came with the machine."

"As I recollect, dirt in the contact-maker casing is the chief trouble that riders who tour considerably encounter," said the repairman. "You can't include the boulevard burners in this, as they don't often go out of sight of a shop. When the magneto is in front of the motor, no mudguard flapper will keep dirt away from it, and you'd be surprised how dust will creep in where the cover fits into the casing. When enough gets in, the motor will generally pull up short, as there will be no break between the points, even though they separate, and the high-tension current will not be built up enough to cause the spark to jump between the points of the plug. When a rider goes out and gets water also inside the casing, there will be a fine mud formed which will interfere with the movement of the interrupter, and cause it to stay open. No current is generated and the motor refuses to mote."

"But a rider could easily see that if he didn't get any spark at the plug, something was wrong with the magneto," I suggested, "and make an examination of the only part that he could get at—the contact-maker."

"Yes, but since they generally have trouble with the carbureter," retorted my friend Al, "they pedal their heads off, or change the mixture, and come to the plug last of all. If their carbureter was set right, it would next be dirty fuel, and then the magneto. I'll tell you the best way of making sure, before the thing happens: look at the contact-maker regularly and clean the casing with a rag moistened in gasoline. Follow the same process if the stop is mysterious when riding; a handkerchief is the thing to use. If a rider uses the rags generally found in his tool box he will only cause more trouble."

WATER AND OIL BUGABOOS.

"How about water or oil in the magneto" I asked. "One maker has had lots of machines returned for repairs with water and oil inside the armature-tunnel."

"I never had any case of water or oil in the tunnel," replied Al, "and don't know how it could get there unless the rider that owned the machine ran it through a pond or cleaned the outfit with a hose. With the enclosed type of magnetos it would be hard to get any water inside."

"Yes, but how about getting it in from the other end—the drive end," I queried. "Probably you have never thought of it, but I had a case a short time ago where the whole armature winding was put out of business through oil passing into the tunnel."

"Must have been a poor sort of mag.," was Al's reply.

"No, it was the fault of the maker of the machine," I insisted. "The gear-wheels of the magneto train were too close a fit in the casing, and the oil was pumped up all the time and some of it squeezed out onto the magneto armature shaft. You know how oil or drops of water run along a shaft. Well, some of the oil kept on going into the tunnel and soaked the windings, and Mr. Magneto soon quit work."

"Seems to me I've heard of that before," said Al, "and now I see how it could happen. All you need to do is to vent the casing around the shaft and the trouble could not occur. That's just what ought to be done, and some of the makers whose machines had that trouble are doing it now. I know what water does to a coil, but never had it soak up a magneto winding yet. I've had soaked armatures, but I usually send them to the makers. If not, I do the job myself, and it's pretty nice work. But the next thing to dirt and water is your usual trouble, pitted points."

"I use a Swiss file, one dead smooth," I explained, "for trimming them up, and also OO-emery cloth. As for adjustment, an ordinary business card will answer if I have no gauge."

EMERY PAPER PREFERABLE TO FILE.

"Nothing doing on the file for mine," asserted Al. "It's all right for you, but I can't see any ordinary rider with a file without having visions of forty miles from home and mother, and no juice at all. No, if a rider has to do any trimming the emery cloth is the best, and the business card gauge is too crude. The magneto people have a gauge for testing for shorts and setting points, and you can get one anywhere that supplies are kept. Business cards vary from paper thinness to match-box thickness."

"Do you get many cases of broken carbon brushes?" I asked.

"Not many," said Al, "but when I do and the rider is stopping off to get a new one, I

Digitized by Google

always tell him that he can limp along pretty well if he will turn the brush upside down in its holder. The symptoms are a pull-up of the motor while running or no starting at all. But a broken brush is unusual, and would be one of the last things I would look for. I think the Germans and English have it on us for touring. They carry a set of spare parts for the magneto in a pocket-case, and if a man will study up the book concerning his magneto and use one of these cases, he will not have any trouble that he can't remedy. But as I said before, trouble with a magneto is very rare nowadays.

"By the way," said Al, "What's the latest in spark plugs?"

"You have me," I answered. "I noted about fourteen different makes recently that were listed in one accessories catalog, and there must be at least that many more in the market. Some of them I have only seen in illustrations, but they seem to favor the multi-point type."

"Multi-points or rings and one point, they all seem to work well until water hits them; that is, the porcelain plugs, and if they are not in the rear cylinder of a twin," was Al's remark. "The man who can guarantee a regularly-firing plug that is proof against oiling will be hailed as a benefactor by everyone that uses motors. Give me a mica plug any time in preference to a porcelain one. Three points are enough on any plug, as far as my experience goes."

VARIOUS SPARK PLUG TYPES.

"I don't agree with you as to the way in which porcelain plugs crack when water is thrown on them," I objected, "and personally I haven't had much trouble with the rear plug so far, as I don't over-oil. A mica plug is good as long as it is put together right, and there really ought to be a cover over the mica. I have a sort of leaning toward a soapstone plug, in preference to either of the other kinds."

"I've never used one," said Al, "but, anyhow, as far as the plugs are concerned, it's poor lubrication that causes the sooting. You have to be careful in choosing a plug to get one that will stand the heat of the magneto spark. Points on a plug sometimes burn off in short order, leaving the rider stranded somewhere in the woods. Or, as happened to me once, he may find himself near an auto supply house with dozens of plugs, all ½-inch or some other insane standard about as useful as a corn-cob to me. I stick to one make, but I know of several others that will work well in case my kit should be empty. In going on a tour, I always carry an extra set of plugs, plus one more, so that I can stand three rear cylinder sootings before I have to do any cleaning. My front cylinder has had the same plug in it for over 900 miles.

"That's how they all ought to do," continued my friend Al. "I don't think it's necessary to carry three extra plugs, but it certainly isn't working on the wrong side. A plug-cover is a good thing for those who ride in all seasons, and I use one on each plug. It also saves unexpected electric treatment if you have on a pair of thin trousers and accidentally make a contact with the terminal. Carry the spare plugs in a cloth roll in your pocket, and don't let them mess around with a monkey-wrench and a pair of pliers in the toolbox if you want to keep them in trim."

Just about this time a rider entered with a magneto that he said had lost its magnetism, but Al showed him that a broken brush was to blame, and after some further observations about jumping hastily at conclusions, the writer took his departure, leaving Al to talk matters over with the new arrival.

A PLEASANT SIDECAR TRIP

IN A letter to the Majestic Mfg. Co., of Worcester, Mass., Mr. and Mrs. J. W. Newton, of Fall River, Mass., tell of a 210-mile trip they made on Sunday, May 4, with their Excelsior machine and Majestic sidecar. They are enthusiastic in their praise of the outfit, which carried them over the course without a sign of trouble, mechanical or otherwise. They left Fall River at 4:30 a. m., riding along the Blackstone Valley to Woonsocket. On reaching Worcester at 7:05 a. m., they were welcomed by Mr. Persons, of the Persons Mfg. Co., and a representative of the Majestic company. About 8:25 a. m. they were under way again. They climbed every

grade, including the well known Leicester Hill, without using the clutch or pedaling. The motor was geared 4¼ to 1. They arrived in Palmer at exactly 10 a. m., and left at 1:45, passing through Worcester at 4, and arriving in Fall River at 7:45 p. m. Both the machine and sidecar are equipped with Goodyear studded tread tires.

AN order for six 1913 Indians for the Detroit police department has just been filled by the Metzger Motorcycle Company, of Detroit, Mich. This is the second order placed by the city with the Metzger company.

BALTIMORE BREVITIES

BALTIMORE, MD., May 12.—At the Maryland M. C. meeting on May 7, F. S. Long, secretary of the National Capital Club, was one of the speakers. He came over to talk of the unjust legislation against motorcyclists in the District of Columbia. The local riders are interested in the fight being made by the Washington boys, so the club voted $25 toward the legal fund of the Washington club.

Last Sunday the run of the Maryland club was to Conowingo and Bel Air, Capt. Johnson leading a large bunch of riders over the fine pikes in Harford County. The section traversed is a beautiful one at this time of the year, and with the going good the tourists had a fine time.

Interest in the spring tour of the Maryland M. C. is increasing daily and many riders have entered. The dealers have taken considerable interest in the reliability run and have donated prizes.

Howard A. French & Company have just received the fourth carload of Indians, with two more carloads due this month. The machines are being disposed of as fast as they are received.

The Consolidated Gas and Electric Light Company has just added eight new Indians to the twenty or more now in use by its service department.

"Happy" Mears is making such a success as a teacher of novices that he is seriously considering opening a night school for motorcycle riders if he can obtain an enclosure large enough.

Matt Gault, former captain of the Maryland M. C., who sold his machine last fall, cannot resist the hum of the motor and expects to be out on the road again with a new Indian in a few weeks.

HUDSON RIVER RUN

A SUNDAY run to Nyack was held by members of the Newburgh M. C., of Newburgh, N. Y. Leaving Newburgh the riders went to Tarrytown by way of Fishkill and Peekskill. At Tarrytown they took the ferry over the Hudson River to Nyack, and from there returned to Newburgh, passing through Tuxedo.

THREE-DAY EVENTS

A NUMBER of this season's holidays fall on Friday and clubs are taking advantage of this by planning three-day runs for Decoration Day, Fourth of July and Labor Day. The Harley-Davidson M. C., of Philadelphia, is among the clubs holding three-day events on these occasions. On May 30 the club will have a run to Stone Harbor, N. H. One of the features of this run will be a race meet on the 7-mile beach at the Harbor. The July Fourth and Labor Day runs will be to the same place.

TOURING CONDITIONS in the GREAT CENTRAL WEST

By ROBERT BRUCE

TYPICAL BRICK ROAD IN THE CENTRAL WEST
NORTH RIDGE ROAD · CUYAHOGA CO. OHIO

THE zig-zag line made up of crosses and circles on the map between Toronto, Canada, and Wheeling, W. Va., which appears with this article is intended to give graphic form to an impression that usually grows upon anyone who travels observingly across the territory to which it applies. In a touring sense, at least, to the right of this irregular line from top to bottom of the map is East; to the left of it is Central West. Hamilton, Ont., the Niagara frontier, Buffalo, N. Y., Erie, Meadville and Pittsburgh, Pa., and Wheeling, W. Va., are the neutral points, half eastern and half western, as the Toronto-Hamilton-Niagara Falls, Buffalo-Erie, and Erie-Pittsburgh lines are neutral routes; but the territory on either side of them is openly more of the East or more of the West.

One rides into Hamilton from Toronto or beyond, or from Niagara Falls, through a portion of Ontario so much like northern or western New York State that sometimes only the uniforms of the police and postmen remind one of being in another country. But in going farther west—either to Windsor and Detroit, or Sarnia and Port Huron—you are speeding over another portion of the same province almost as level as Indiana or Illinois.

AN INTERESTING TRANSFORMATION.

The change is distinctly marked in a day's run, though naturally gradual to the eye. In turning the corner at Buffalo, on the main-traveled highway from New York State and New England to the Central West, you take a southwesterly direction for a trifle less than a hundred miles along the "Lake Shore Road," during which the transformation from East to West is almost imperceptible. But soon after passing Erie, Pa., Ohio characteristics begin to appear, and predominate for the next 250 miles.

Motorcycle tourists starting from points in Pennsylvania, Maryland, the District of Columbia, or northern Virginia, crossing the Alleghenies on their way into the West, usually head for Wheeling or Pittsburgh, two of the most important route centers of their size in the United States. Wheeling is a considerable distance to the west of the mountains, and soon after going through Pittsburgh, one begins to leave the rough and wearing roads encountered east of that city for the easier grades and more diversified scenery of the Ohio valley—a change which continues slowly but surely across Ohio to the levels of Indiana and Illinois. Only the Old National Road—that great, long, wide strip of rolling highway from Cumberland, Md., to Indianapolis, Ind., survives in any marked degree the visible change from East to West.

LAKE TRANSPORTATION A FACTOR.

The situation of Lake Erie, in the direct line of road travel between the East and the Central West by the northern group of routes, makes it a factor of unique importance, so that motorcyclists frequently find it desirable at times to use the boat service instead of riding all the way around either side of the lake. Naturally the greatest amount of travel is to and from the terminal points—Buffalo, Cleveland, Toledo and Detroit—between all of which one is carried in a night, saving a day, or perhaps more, as compared with the all-road trip. These boats are especially convenient when one is short of time or happens to strike bad weather.

By shipping from Buffalo to Detroit, or vice versa, one misses some fine touring through lower Ontario, though the slight delay at the customs, and the necessity of putting up a deposit or taking out a bond keep many from going that way. However, this is not as much trouble as is often supposed, and the deposit can always be received back when leaving the province.

Between Buffalo, Erie, Ashtabula and Cleveland, along the south shore of Lake Erie, stretches one of the best 200-mile roads in the country; of course there are no customs this way, and lake transportation does not figure heavily. While a day or so can be gained that way, it would be at the expense of the best single part of the Buffalo-Chicago through line. But the road between Toledo and Detroit, along the western edge of Lake Erie, is one of the poorest in the Central West, and at certain seasons of the year is utterly unfit to travel over. For this reason the boat lines between Detroit and Cleveland, and especially between Detroit and Toledo, carry many automobiles and motorcycles that under normal conditions would make these trips over the roads.

EASTERN VS. WESTERN ROADS.

There is and must always be a marked natural difference between the average roads

Digitized by Google

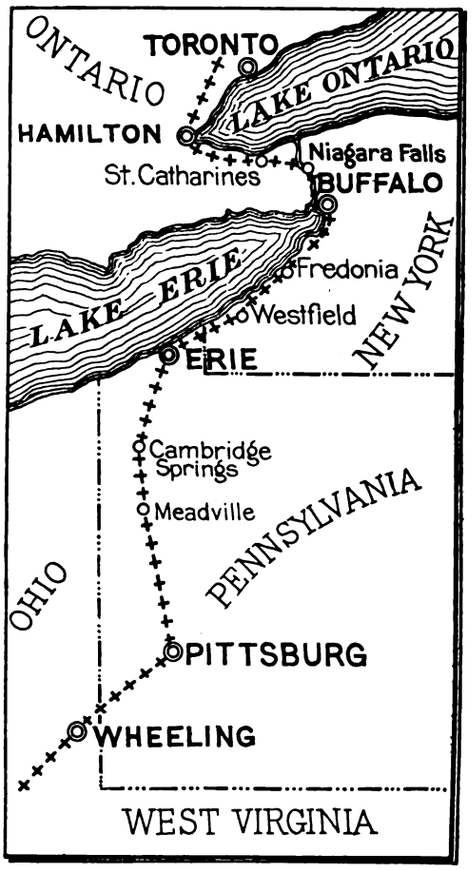
of the East and the West, based principally upon differences in soil and climate, extent of territory traversed, density of traffic, and comparative taxable value per mile of highway. Eastern roads were almost always laid out along lines of the least resistance, and without regard to the points of the compass —sometimes to penertate a wilderness, frequently to take advantage of the comparative level of a stream, often merely to connect pioneer settlements by the easiest way at the time. The next generation invariably followed in the same paths, only vastly increasing the amount of travel; in time extensions and improvements were made, but principally on the old lines, the result of which is that the East must always have a picturesque but unscientific road system.

Most of the Middle West was prepared for settlement in an entirely different way, an important feature of which was that the roads were generally decided upon and marked out in advance, instead of being left to the chance tendencies of travel. The unbroken prairie was easily divided and subdivided into squares and rectangles, out of which States, counties, townships and sections were staked out as the eastern surveyor would mark off a city lot or a ten-acre farm. Naturally the more important western highways were laid out along convenient boundaries—a system at times varied by special conditions, such as the interference of a river or lake, or the necessity of reaching some important center by a road built out of the regular order.

A native of the Central States almost invariably confines his directions to the points of the compass, telling you to go so far "east," "west," "north" or "south," instead of directing you to "turn right" or "turn left," as has always been the custom in the East. Inquiring strangers are also told to "angle" right or left, or (in exceptional cases), to take the "diagonal" road—terms frequently confusing at first but easily understood in actual use.

KINDS OF ROADS YOU MEET.

These differences become apparent to the easterner soon after he enters Ohio, and they continue practically to the foothills of the Rockies, where the system of square or "checkerboard" roads found generally throughout the Central West again becomes impracticable on account of the rough and broken nature of the country. Western roads will not average as good as the roads East, in part because the right kind of building materials are comparatively scarce, as they must always be in a country of deep, rich soil, given over almost entirely to agriculture. Nor can they be traveled on an average as early as eastern roads, especially in the Great Lakes district, where there is enough clay to make trouble until thoroughly dried out; even May is too early in case of a wet, late spring. The mileage of macadam is insignificant, and that of gravel a very small proportion of the whole, while brick is gaining very rapidly in favor throughout all the central States; but it will require many years to make much of an impression on a total mileage almost beyond comprehension.



To the right of the heavy crossed line is East; to the left is the Central West.

Iowa, for instance, has about two miles of highway to one in the State of New York, where the proceeds of a $50,000,000 bond issue have been spent without completing the most important trunk lines laid out in the law under which the money was raised, and without adequate allowance for proper maintenance (and another bond issue of the same amount has been authorized). The Hawkeye State could not possibly follow out the same plan with the larger mileage and less population and wealth. A sum equal to the taxable wealth of all the real estate in Missouri —including the cities of St. Louis and Kansas City—could easily be spent on the roads of that great State, still leaving much to be desired; and the same is true generally of all the territory between the Alleghenies and the Rocky Mountains, while in the newer States, additional thousands of miles must be laid out within the next few years.

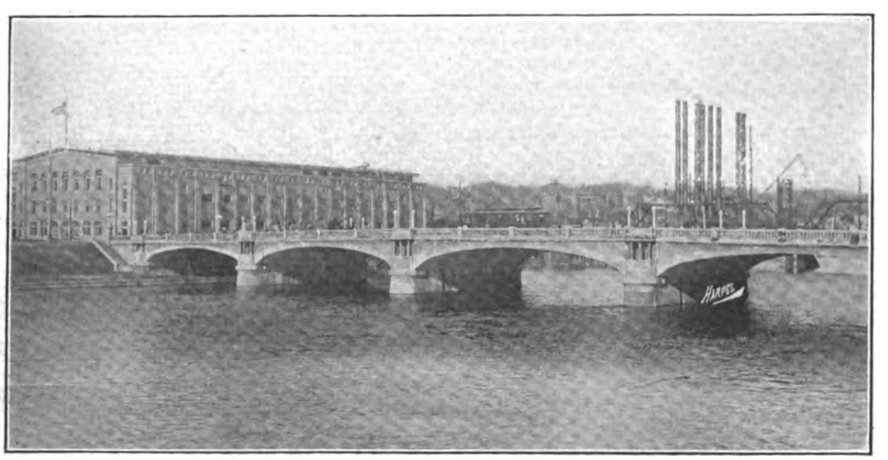
Unfortunately, the old idea of "working out" the road tax still prevails in many sections, though it is being gradually superseded by the money system, now practically universal in the East. A township might as well pay its school taxes the same way, by calling upon each landowner to take his turn at teaching the country schools, instead of paying a tax and hiring a trained teacher. Another objection to the labor system is that the roads are often worked at the wrong time of the year, and usually neglected when they need attention most.

HOW THE "DRAG" IS OF VALUE.

A relatively new but important factor in keeping the roads of the prairie States in good condition is the King drag—commonly known as the "split-log" drag—usually made at home at little or no expense. This has been of immense value on western highways, which might otherwise receive no attention from one year to another. In many sections the farmers are enterprising enough to have these drags always ready for use, and go out voluntarily at the right time to level the ruts and smooth the surface generally; and on some of the most important routes whose upkeep is in the hands of organized associations, the farmers are paid enough for the work to encourage them to do it when most needed, even at some inconvenience to themselves.

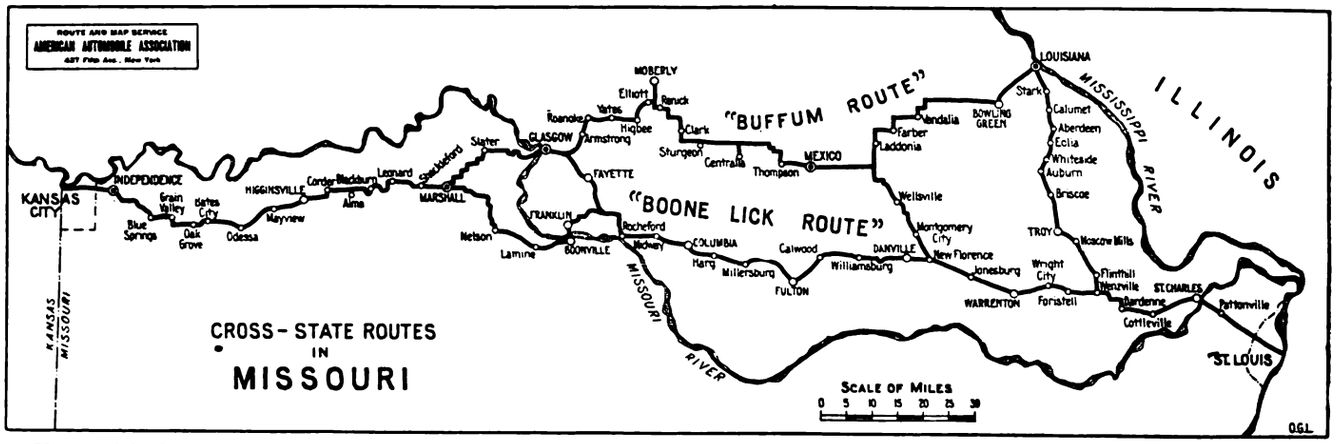
Along many portions of the Omaha-Lincoln-Hastings-Denver route, farmers have pledged themselves to maintain this road past their respective farms. So great is the enthusiasm of certain communities that as high as four and five thousand dollars' worth of work has been freely given. There is one community especially, just west of Atlanta, Nebraska, where the farmers were so determined to have the road put in the best shape, that they opened their farms and permitted the Executive Commission of the Omaha-Denver Goods Roads Association to send engineers to lay out a new road through their property. Not only did they give the grounds, but also gave their money and labor to cut down the hills, building bridges and maintaining the roads in general through this locality.

Tourists from the East, planning their first trips into the Central West, should bear in mind that the greater part of the territory between the Allegheny Mountains and the Rockies is fair-to-good traveling in dry and settled weather; but the agricultural sections are usually difficult or unpassable for two or three days after heavy rains. They are at their best in the late summer or early fall, when ruts are smoothed out, and the clay stretches (found too frequently for comfort, especially around the Great Lakes), are thoroughly dried out. One who travels extensively in the prairie country must be prepared for a great deal more dust in



The substantial bridge over the Des Moines River, at Des Moines, Iowa.

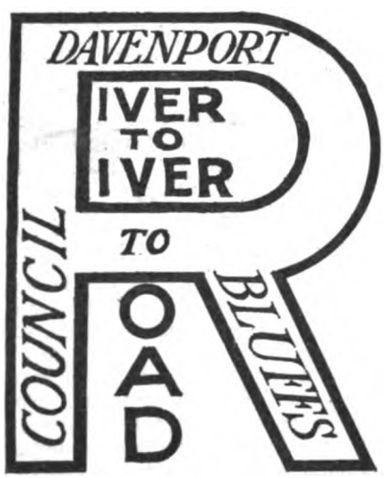
Digitized by Google



Very spirited competition has developed between the various routes across Missouri. The upper way is commonly called the "Buffum Route" from its long and persistent promotion by Col. F. M. Buffum, of Louisiana, Mo.

dry weather than would ordinarily be found in covering the same distance in the East.

Rain and thunderstorms are also more sudden, and sometimes almost tropical in their fury, so that some kind of waterproof should always be a part even of the lightest equipment. Distances between towns and cities are naturally greater than in the older States; and it is always well, especially for the stranger, to carry some light lunch. Any good brand of eating chocolate (not confectionery), is recommended.



Symbol of River-to-River Road. Designed and copyrighted by Robert N. Carson, Iowa City, Ia., and used with excellent effect.

In some of the older States, especially Ohio, Indiana and Kentucky, the principal cities and towns are connected by well-traveled "pikes," which, though not always kept in good condition, are generally preferred to the ordinary dirt roads in the same territory. While there are some excellent stretches in the northern part of that State, Illinois as a whole is extremely backward in the good roads movement, though signs of a greater interest are now apparent. Consistent progress is being made in Wisconsin and Missouri, both of which have better road building materials than Illinois.

One annoyance in the past has been the lack of signboards, particularly at road intersections, often miles from any opportunity to inquire the way; but this primitive condition is being remedied now, and some of the most important signboard campaigns in the United States are being carried on in the prairie States. In the newer sections, the traveler still finds it necessary to inquire his way from one city or town to another, but as through travel increases, the trunk-line idea is taking root, and in most cases is being planned with great care. In no other section of the country will mistakes in laying out through lines of travel be more difficult to correct at a later day.

Motorcycle tours between the East and the Central West have probably doubled in number within the past year—due very largely of course to the increased sale of machines, but in no small degree also to the better knowledge of the roads and the improvements in maps, though the latter work is still in its infancy. A surprising feature is the number of eastern trips made by motorcyclists whose homes and business interests are west of Cleveland or Pittsburgh. They usually allow plenty of time, and travel largely between the prosperous towns and cities of the Central West, and New York, Boston, Philadelphia, the Atlantic coast resorts, the Berkshires, Adirondacks, Catskills, Poconos, etc.

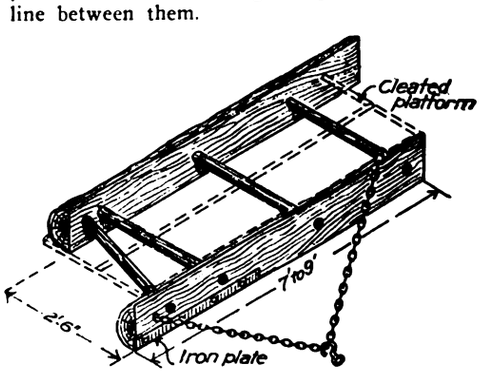
There is also an immense amount of touring in the form of inter-city trips, such as between Cleveland, Columbus and Cincinnati; Detroit, Jackson, South Bend and Chicago; Chicago, Milwaukee and Madison; Chicago, Galesburg and Peoria; Chicago, Des Moines and Omaha; Wheeling, Columbus, Indianapolis, etc., with considerable, but naturally less, between more widely settled cities, like Kansas City, St. Paul, Louisville and Grand Rapids.

NEW ROAD BUILDING ERA AT HAND.

The Central West is still a section of expansion, construction and new enterprises in many directions; with special emphasis now on good roads; and nowhere else is this progress better exemplified than in the enterprising and prosperous State of Iowa. One of the most interesting and important road developments up to the present time in the United States is the "River to River Road" across that State from the Mississippi at Rock Island—Davenport to the Missouri at Council Bluffs—Omaha. This is a "dragged" road about 380 miles long, passing through Des Moines, capital of the State, a dozen hustling little cities with from 5,000 to 25,000 inhabitants each, and some 30 small towns and villages; over 600 farm-houses front the road, and more than 1,500 stand within a mile of it.

When the idea was first taken up, committees of business and professional men and farmers in each county along the line were quick to assume the responsibility and expense of preparing their part over a route shown in considerable detail in one of the diagrams accompanying this article. There was naturally a contest over rival routes, but in the end differences of opinion were harmonized and plans for the actual work begun. A characteristic symbol was adopted, not only for use on the literature of the association, but also as a road sign on the route itself. The King drag was brought into use in large numbers, fills and cuts were made when necessary, and in an incredibly short time an excellent highway in all weather was provided across the full width of the Hawkeye State, over a route probably destined to become part of a great modern road between Chicago and Denver.

The cities of Des Moines and Davenport are especially interested in this new enterprise, because what has generally been considered the standard tourist route across Iowa entered the State by crossing the Mississippi at Clinton, running nearly straight west through Cedar Rapids, Marshalltown, Ames, Boone and Carroll to Dennison. From Dennison a decidedly southwest angle was taken to the town of Missouri Valley, and then almost directly south to Council Bluffs, where the Missouri is crossed to Omaha. This left Davenport about 40 miles to the south from Clinton and Des Moines about 34 miles south from Ames, and encouraged the laying out of another route, which should pass through these cities and take in the very many prosperous towns on the long and practically only line between them.



Sketch of the "King Drag," the little wonder that has helped to develop many of the roads of the great agricultural west.

Digitized by Google

When the Governor went over the road, the association decorated practically every farmhouse across the State with American flags; and so well organized was the enterprise that on one occasion nearly every foot of the "River to River Road" was "dragged" in a single hour. On a stated day, bands about 18 inches in width were painted on the telegraph poles at every corner and cross-road for 380 miles, in order to make it easy for the tourist to follow the through route; in addition every corner and cross-road has an ordinary road sign. The sight of the big "R" at once shows tourists that they are on the "River-to-River Road," and makes it unnecessary for them to stop and read other signs of various sizes and descriptions.

The great value in this plan is that it definitely interests the farmer, who has felt for years the need for better highways; but, except in a very limited way, he has not realized much of his hopes in that direction. Personal responsibility was established as never before, and the results were quick and definite. "Dragging" the principal tourist roads in Iowa has spread rapidly all over the State; important as the "River-to-River Road" has been to Iowa, it is proving still more valuable as an object lesson to the rest of the Central West, showing what can be accomplished by the right sort of co-operation at relatively small expense.

Road improvement in the Central West will make more rapid and substantial progress in the future than in the past; and route compilation and map making will keep pace with it, especially since State pride has come to be a factor. In some parts of the West the Government maps are still fragmentary, and where this is the case, private enterprise finds the cost of original mapping almost prohibitive. With the geological survey basis to work on, however, the cost is not more than one-third or a quarter, and the results naturally very much better. In the reasonably near future this basis will be sufficiently complete to justify a beginning on maps of the United States like those of Europe, which will be another long step forward. Meanwhile the whole Central West is alive with good roads interest.

Plenty of Variety On Coast-to-Denver Route

Volney Davis in Recent Article Recalls Road Conditions for Benefit of Motorcyclists Who Contemplate Riding to F. A. M. Convention City—Tells of Railroad Ballast and Fair to Poor Wagon Roads.

NO motorcyclist in the United States is as well qualified to discuss transcontinental touring as Volney E. Davis, of San Francisco, the coast-to-coast record-holder, and for that reason the following extracts from an article recently written by him relative to the trip from 'Frisco to Denver will prove unusually interesting. His suggestions hold special pertinence for the F. A. M. rider who plans to ride from California to the 1913 convention city and for the Middle-Western tourist who may wish to continue his journey on to the Pacific coast after participating in the Denver Program.

Davis states that the route to Denver via Sacramento, Reno, Ogden, Rawlins and Laramie is the most desirable at all times, except in winter. If the passes are free from snow he favors the use of the route via Auburn, Colfax and Truckee to Reno. The other route is via Folsom, Placerville, Strawberry, Glenbrook and Carson City to Reno. He followed the latter route in 1911.

From Reno the wagon road is followed to Hazen, Neovia and Wordsworth. Davis states that the tourist must travel between the railroad tracks from Hazen to the outskirts of Lovelock, then ride the wagon road through Lovelock and to a point seven miles beyond, where the rider must take to the railroad again to avoid heavy sand. The railroad is followed nearly to Winnemucca, where it is again abandoned to avoid trouble with the officials. The transcontinentalist calls attention to the fact that an attempt to ride the tracks in the immediate vicinity of any town will result in arrest.

MORE RAILROAD TRAILING.

From Winnemucca the wagon road is followed through Golconda and to a point eight miles beyond, where the railroad is again trailed to Battle Mountain. Here the tracks are left and the rider bears north to white house (ranch) via blue house (ranch) and then proceeds 35 miles to Carlin, Nev. On the latter stretch only one house will be passed; this stands about a mile to the left of the road and 12 miles from Carlin. Davis reports plenty of water and a fair road for this leg.

The wagon road is followed to Elko, Halleck and Duth, and then there is good going along the railroad track to Walls Cobre, Montello, Techoma and Umbria Junction. At this point there is a choice of routes. The wagon road is north of Great Salt Lake and runs along the old line of the Southern Pacific. It is a poor road with few towns or houses. No trains run on this line west of Kelton, Utah. The more desirable route is along the main line of the Southern Pacific to Lucin, New Foundland and Lakeside and across the trestle over Great Salt Lake. The lake is 40 miles across, but Davis reports that there are little stations every few miles and that meals and lodgings can be obtained at Promontory Point. The trip across the lake is not all trestle, fortunately. There is about six miles of rough ballast, then some good going, another stretch of rough travel and finally a section of road that is fairly good before Promontory Point is reached.

After leaving the Point the rider encounters seven miles more of heavy going, and then the lake is left behind. Fair railroad ballast will then be found to within about five miles of Ogden, and the remainder of the run into Ogden is made over the wagon road. From the latter point the shortest route is along the Union Pacific on a fair road to Echo, Utah. If a visit to Salt Lake City is desirable 42 miles of good road will be found. In leaving Salt Lake the rider finds a fair wagon road to Parley's canyon, 20 miles upgrade, with an average of 8 to 10 per cent. The road continues fair to Wauship, Coalville and Echo, where the main transcontinental route is struck again. The road is followed to Evanston, and at this point Davis advises inquiries relative to the best route to Granger.

THE RUN INTO THE MILE-HIGH CITY.

Davis found the route via Cumberland and Opal in good shape, but states that a shorter trip may be made along the Union Pacific if proposed improvements have been made in this line. From Granger, Wyo., the railroad tracks are followed to Rock Springs and Point of Rocks and the rider continues along the tracks to Wamsutter. Davis states that the roughest wagon road of the whole trip is between Point of Rocks and Wamsutter. From Wamsutter to Rawlins, Ft. Steele, Walcott, Medecine Bow, Rock River and Laramie there is a fair wagon road. From Laramie the shorter road is via Ft. Collins to Denver, but it is explained that the route to Cheyenne and thence to Denver is also good.

Advice Offered by Volney E. Davis, Transcontinental Record-Holder, for the Motorcyclist Who Plans a Cross-Country Tour.

AN extra supply of gasoline is not necessary, but a big oil tank is very valuable. Good oil is scarce, while any kind of gasoline will serve in an emergency. A small supply of water should be carried. A regular U. S. Army canteen is preferable to a water-bag.

LUGGAGE may be carried to advantage in a pair of good saddle-bags. They are capacious, easily packed and keep the weight of the luggage low on the machine.

THE simplest method of solving the underclothing problem is to discard the garments as they are soiled and purchase others. This holds down the size of the luggage kit.

USE a plug instead of a drain-cock in the bottom of the crankcase. Drain-cocks break off.

EXTREME care must be exercised in riding railroad tracks. The tourist should keep a sharp watch both to front and rear and approach curves with great caution. Don't apply for a permit to ride the tracks. It will not be forthcoming.

AFTER leaving California the rider will find gasoline ranging from 30 to 60 cents a gallon, and oil at about 25 cents per quart.

FOR the San Francisco to Denver trip referred to in the accompanying article the rider is advised to use an official road map covering the roads to Reno, a Southern Pacific railroad map to Ogden and a Union Pacific map to Cheyenne.

WINDOW DISPLAY CONTEST.

MOTORCYCLE dealers in all parts of the country will be interested in the announcement of the Emil Grossman Company, 250 West Fifty-fourth street, New York City, to the effect that the company has inaugurated a national window display contest. Every jobber, automobile or motorcycle dealer, or garage keeper is eligible to enter the contest. More than $300 will be given in cash prizes to the winners. Window display material will be given free to any dealer making application to the Grossman company. Suitable judges have been selected, consisting of editors of various trade journals, expert advertising men, and artists. The contestants will be called upon to submit pictures of their displays on or before midnight of July 4. Packages bearing a later date will not be considered.

PUBLICITY CAMPAIGN A SUCCESS

UNUSUAL success has attended the publicity campaign started by the Washington (D. C.) branch of the Haverford Cycle Co. During the last ten days the company has disposed of twelve Excelsior twins. Two of these machines were sold to Counts Erik Ferstram and Theodore Dickson, of Austria, who are making a tour of the world. They left Washington about two weeks ago en route for the Pacific coast on their new machines.

BUSH & McDOUGALL AGENCY

W. H. BUSH, JR., of Bush & McDougall, agents for Harley-Davidson and Henderson machines in Newark, N. J., reports a rush of sales. The company has disposed of 60 Harley-Davidsons, 10 Hendersons and 15 Thors. The Bush & McDougall Company has spacious headquarters at 47 William street, Newark. Directly in the rear of the large salesroom is a second good-sized room where the second-hand models are kept. A 100-foot workshop, which is in the rear of this, is equipped with lathes, drill-press, anvil, brazing outfit and testing blocks.

LISTER COMPANY TO ENTERTAIN

HARLEY-DAVIDSON riders of Cleveland, Ohio, will be the guests of the Lister Motorcycle Company at a chicken dinner to be given at Chargin Falls on June 15. This is an annual event. A ball game and races will be features of the afternoon's entertainment. Four hundred riders are expected to attend.

A NEW branch of the United States Tire Company has been opened in Worcester, Mass., with L. C. Havener in charge. A complete assortment of U. S. products will be stocked.

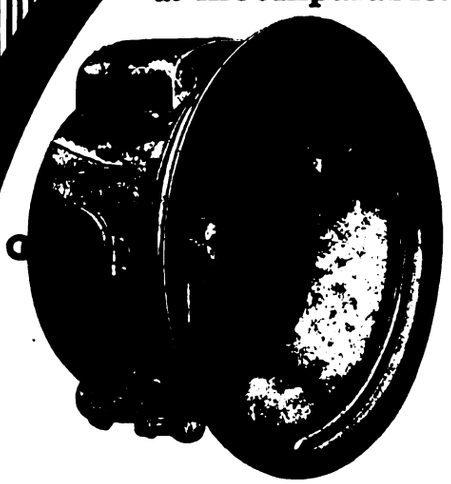
SOLAR

INCOMPARABLE

The Complete Solar Motor

It's folly for any one to compare his lamps with SOLARS. For SOLARS offer so much more for the money, they are so supreme in design, quality and service that their vast superiority is at once evident. For that reason SOLAR lamps have come to be recognized as incomparable.



"Dad" Headlight

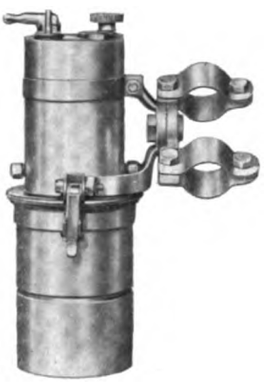
Same design as model 194 except larger, measuring 7 9/16 inches in front diameter and 5¼ inches in depth. Is as large in size as necessary and completely fulfills all demands made for a Motorcycle Headlight. The body and flare are made of one piece of heavy gauge metal, the front glass and aluminum reflector being held by a strong wire spring, eliminating a door, its hinge and catch and the possibility of their rattling. Fitted with 5-inch Solar short focus lens mirror and front aluminum reflector which produces the two necessary fields of light. Has 1½-inch ruby jewel on each side, the right side having hinge and catch for lighting ¾-foot tip and props for Solar-Morse Universal fork brackets. 195 Nickel or Black and Nickel, Each **$5.00**

Generator Headlight

This combined generator and headlight for motorcycles is a "Big Brother" of the famous Solar cycle lamp. Made entirely of heavy brass, full nickel plated, is 9½ inches high with removable silver plated metal reflector, has 3 11/16 inch double convex front lens and 1½-inch ruby jewels set at an angle, thus combining head and tail light features in a single lamp. Has props for Solar-Morse Universal fork bracket. The famous Solar gas generation with an added new needle valve gives perfect control of water feed. Carbide capacity 8 ounces, and burns 8 hours with 5/16-foot tip, for b.ackets.

4GH Nickel, with bracket, Each..... **$7.50**

With Valve to supply Gas Tail Lamp Fifty Cents Extra

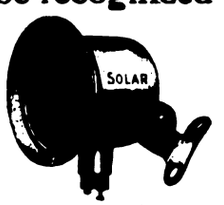


Motorcycle Generator

Is specially designed and constructed for motorcycle use, and fulfills the requirements Made from seamless drawn shells of heavy brass. Has greater carbide capacity (10 ounces) than any other generator. The famous Solar gas generation principle with an added needle valve gives perfect control of water feed. Screen in carbide cup to separate used carbide and simplify cleaning. Is 8½" high and 3¼" diameter. 91s is same except is ½" shorter and carbide pot screws on, as on cycle gas lamp. Made to fit Indian and Excelsior

91 without bracket, Each..... **$3.75**

91s without bracket, each $3.00.



Electric 102E

Gas 102G

Motorcycle Tail Lamps

Both these tail lamps are the same size, except the gas type has ventilating hood and pet cock. Are 3 inches long, 3 inches high, have 2½ inch rear ruby semaphore and have adjustable bracket to fasten on rear wheel mud guard. Heavily nickel plated. No. 102E is an Electric Tail Lamp with 1 c.p. 2 volt Ediswan type G6 Tungsten bulb in socket to which wiring is connected. Current to be supplied by battery. No. 102G is a Gas Tail Lamp fitted with 1/16 foot single jet top, gas to be supplied from generator or tank.

102E Nickel, with bracket, Each..... **$2.00**

102G Nickel, with bracket, each $1.50.

Riders, Write Today for New Catalog

Our new catalog pictures and describes the most complete motorcycle lighting system on the Market. You can see SOLARS at your dealer's today. If he is not yet supplied, he will be very shortly, because he will feel the big demand for SOLARS.

Just drop a line to us now for our book

The Badger Brass Mfg. Company,

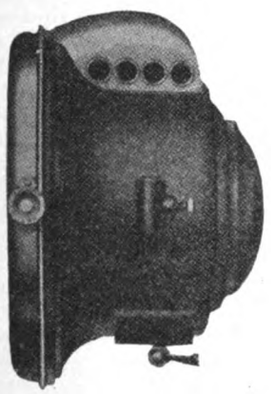
LAMPS SHOW THE WAY

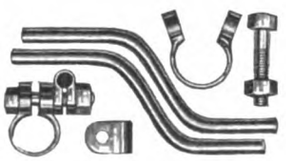
Cycle Lighting System

For your guidance we present the complete line of SOLAR Motorcycle Lamps and accessories. The prices mentioned are **standard.** SOLAR prices are not "padded," subject to big discounts. You pay more for SOLAR lamps but the small difference is greatly returned in service and quality. And that's what you want more than a socalled discount. You have too much at stake to risk commonplace lamps. Look up the facts and you'll surely choose SOLAR Lamps.



"Grandad" Headlight

Our largest and positively the most powerful Motorcycle Headlight on the market. Made of heavy drawn brass. Front diameter 9½ inches, 6¼ inches in depth. Fitted with 6-inch Solar special short focus lead glass lens mirror reflector which with the front aluminum reflector produces the two necessary fields of light. Has adjustable ½-foot tip, removable door glass, lens mirror and front reflector and props for vertical Solar-Morse Universal brackets. To be supplied with gas from tank. 1236, Nickel or Black and Nickel.....Each **$7.00**



Universal Brackets

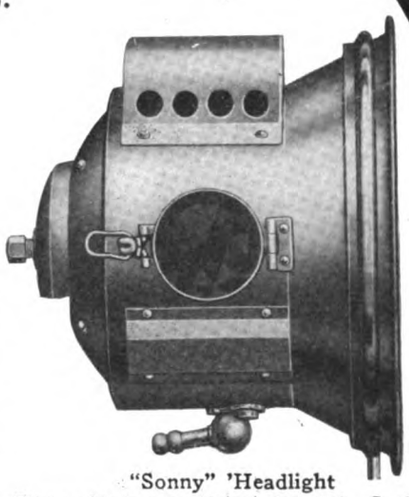
Our Solar-Morse Universal Lamp Bracket is made from heavy steel stampings and is designed to be used with our "Grandad," "Dad" and "Sonny" headlights and is adjustable to any make of motorcycle.

These brackets are supplied in pairs packed in a pasteboard box which also contains 4 fibre bushings 1/16-inch thick for fitting the clamps upon bars ranging from ¾ to 1 1/16 inches in diameter.

When used with the "Dad" and "Sonny" headlights the bracket is clamped to the handle bars, holding the lamp directly in front of the head, but can be fastened to double front forks where size of tubing permits.

With the heavier and larger "Grandad" headlight the bracket it designed to carry the lamp directly above the bars with the bracket prongs perpendicular.

Solar-Morse Brackets.....Each **$1.00**



"Sonny" 'Headlight

This model is a new design for 1913. Is 6⅝ inches in front diameter and 5¼ inches in depth. Made of heavy gauge metal, the body and flare being of one piece construction. The right hand red jewel is hinged to permit lighting and the front door is eliminated. Has 4-inch Solar lens mirror reflector and front aluminum reflector, which produces the two necessary fields of light. Model 194 for flat brackets which fits in a casting concealed inside the back of body. No. 194P with props on either side at bottom of body for Solar-Morse Universal fork brackets. 194 Nickel or Black and Nickel Each..... **$4.00**

194P Nickel or Black and Nickel, each **$4.00.**

Dealers, Order Today from Your Jobber

Your jobber will supply you with SOLAR Lamps and accessories. The prices quoted above are the full retail selling prices. Our policy of one price to all is gaining favor with dealers everywhere. The "Dad" and "Sonny" Lamps are put up in pasteboard boxes enabling jobbers and dealers to reship by Parcel Post without repacking. This is a decided convenience. Write direct to us today or to your jobber.

Trailing Pictures and Trout by Motorcycle

How a Wanderlusty Roadster and a Photographer with an Artistic Temperament Found Opportunities to Use Both Camera and Rod Effectively on a Brief Outing in Picturesque Minnesota.

By Frederick Bootz

ONE fairly mild day in April just past I began to experience familiar symptoms of wanderlust, and strolling around to the photograph studio of my friend Paul I draped my form over a bench and made the conventional inquiries anent his liver. That done I confided to him that I was being temporarily irked by civilization; that I hankered for a short trip out into the open. Paul is a photographer with an artistic temperament—not a mere taker of pictures. He likes the open as well as I do, and when I suggested a trip he simply looked up from his work and asked me if I knew where there were any trout. I told him about a little brook which the angler can jump across at almost any point; where the trout are not large, but still large enough to permit a true sportsman to go after them. This brook runs through a pleasant valley, and I knew it would make an ideal destination for us.

Then we discussed methods of transportation. I have a motorcycle, but Paul is not an owner just at present. He can ride, however, so I arranged to let him take my machine while I borrowed one from a friend. Said friend's name is O'Rielly—and he lives up to it. In other words, he is good natured. He agreed to lend me his chugger so that Paul could ride mine. O'Rielly's machine boasts a luggage-carrier, so we were able to take along some lunch and utensils for frying the trout—if we caught any.

The sky was threatening the day before we were scheduled to start on the outing, but the morning of the big day was bright and clear. I piled pans and "grub" into a basket, strapped the latter to the luggage-carrier and we were off! We were just getting outside the town when a party of school children appeared in the road ahead of us. We maneuvered around them as carefully as possible, but one little girl managed to get in front of my mount. I did some mighty quick thinking and then turned my machine down into a ditch. I cleared the youngster, but the narrow margin by which she escaped gave me a cold chill. I gave that girl a curtain lecture that she should remember for many a day, but she simply laughed.

We found the roads fair and the outward trip was a pleasant one. Somewhere along the line there must have been a few bumps, however, for I discovered later that I had lost the supply of butter and bread out of the basket. Luckily nothing else was missing, so we were not greatly annoyed. After all, pictures and trout were what we were after, and we found the films safe in the bottom of the basket. The brook was only eleven miles distant and we made the run in leisurely fashion in three-quarters of an hour. On arriving at the stream we cut willow poles, got our lines in trim and went after the trout. We knew they were there for we could see them, but they were not in biting humor apparently, and the best we landed for some time was a little two-incher which we immediately put back.

Just as we had about decided that luck was against us three fair-sized trout got into an argument over our hooks and in a minute or two we had a pair of them. A short time later I landed two others and I then began to pitch camp while Paul continued to fish. He caught several more trout and joined me in time to help build a fire. Our salt, sugar and coffee had been transformed into a rather remarkable mixture in the trip from home, but I managed to recover enough coffee to start the pot at work. Then I placed potatoes in the ashes of the fire and took up the frying of the trout. During these interesting processes I modestly allowed Paul to snapshoot me several times.

The meal seemed a long time cooking, but finally it was ready and we prepared to disrose of it. The coffee had settled, the potatoes were baked and the trout were sizzling. The psychological moment had arrived. So had our appetites. Accordingly, the repast was soon put out of sight. Paul, peeling a potato, grumbled because the little salt that I had recovered had all been used on the fish, but he managed to eat his share minus the salt. All in all, that meal was a success. It might not have satisfied an epicure, but it tasted good to us. After eating we rested a bit and then started on the homeward trip fully satisfied with brief outing.

Digitized by Google

GIVING the CARBURETOR A SQUARE DEAL

by STANLEY ROSEBERY

THERE were some first-class days for side-carring last month and naturally I took advantage of as many as I could to go through my favorite "scenic switchback section"—Westchester County, New York. Coming to the crest of one of the snaky grades which abound throughout the district, I lifted the valves and declutched preparatory to coasting it, when a very extraordinary noise behind made me pull up. It sounded like a racing single motor being overdriven, followed by a very powerful twin, but the doleful sound as of flower-pots bumping together convinced me that it was only a twin ridden by a novice. In a short time the bus came along and passed us, the rider taking the hill with the motor running badly and no more noticing us than if we were a rock beside the road.

My passenger on this trip knew nothing about motorcycling, and had the tact to refrain therefore from thrusting in his oar when we caught up with the rider of the noisy twin, which we did after a high-speed coast to the foot of the next hill. The rider of the twin was alongside the road, pedalling vigorously with his machine on the stand, but nothing in the line of explosions powerful enough to take him up the hill could he get. After he had three trials at the grade, I stepped in and volunteered to do what I could to help him out, for which he seemed grateful.

TROUBLE IN THE CARBURETER.

His motor was hardly a season old, but it ran as if of the vintage of 1908, the carbureter adjustment being way off. "I left home the day before yesterday," he said, "after having the agent in town fix up my mount for me. Just before getting into Philadelphia it rained and the motor started to act as it does now, but I managed to limp into a place on Broad street and left it overnight to be fixed up. The next morning it ran well for a while, but at Lakewood it went bad again, and I paid another bill for fixing it. In Freeport it balked entirely, and it was the same story into New York and up to this point—bang, bang, bang! for ten miles and then the motor goes lame and won't climb anything. Even the singles pass me on the road, for if I open up at all the motor stalls."

His speedometer showed over 140 miles on the trip dials, and he must have had a doleful time of it.

"Camp down here," I said, "and let me see if I can't fix her up a little better. That is, if you aren't in a hurry to get on. If you are, I'll tow you up and stay by you into Port Chester."

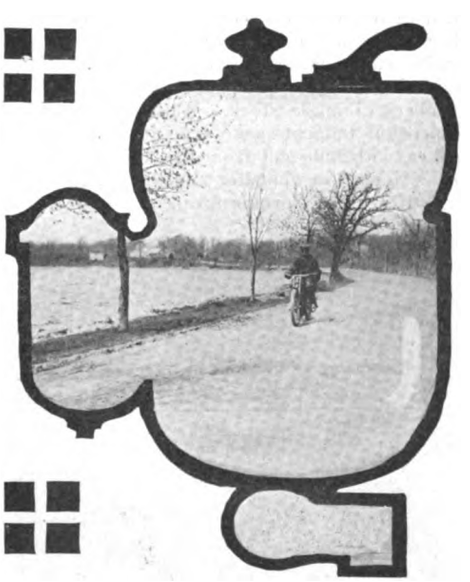
The stranger was in no hurry, so wrenches came out of the toolbag and off came the carbureter, and I took it apart. Just as I had suspected, it was a combination of jet and float-chamber trouble, and could have been fixed in ten minutes at any time.

"There's a layer of slime in the float-bowl and lots of it is road-dust," I told the owner. "If you take another trip like this, have the whole carbureter cleaned before leaving home, and look at the gauze on the primary air hood every day or so to see that it isn't getting stopped up. The dust that comes in through the auxiliary air valve goes to the cylinders and helps to make soot with the burnt oil, so there's no need to clean that part of your mixer. No wire gauze will keep out dust, unless it keeps out the air too, when it would be no good at all."

TOO MUCH TINKERING.

"When I started out after the rain," explained the tourist, "the mixture went wrong and I had the deuce of a time setting the needle-valve again. It was all wrong when the sun came out yesterday, beyond Lakewood, and I had to set the knob again. I got tired after a while and let her run as she pleased, but didn't get completely stuck until just now. These carbureters are a nuisance, for you have to twiddle them every time the sun goes behind a cloud."

"Your chief trouble," I informed him, "is from too much twiddling, chiefly on the part



of the youngsters who are sometimes given such jobs as carbureter adjusting in shops. They simply make some sort of setting of the needle-valve and put more tension on the auxiliary air valve spring—just enough to make the motor run well on the stand. I got almost an ounce of dirt out of the passage to the jet, and some of it must have been lining the opening to cause your motor to run as it did. How often do you think a change of adjustment is needed on a carbureter?"

"Judging from the way my machine has acted since I left home," was the reply, "I should say every time the wind changes, or the sun goes behind a cloud."

"Well, that might be the case with some carbureters," I said, "but not with this one. There have been too many adjustments made already. The level of the gasoline in the float-chamber is too high, and there are marks where some one has used a pair of pliers to bend the lever. Leave the float alone. When you get the outfit from the factory or dealer, everything should be in good trim and the only change necessary should be in the adjustment of the air-spring and jet-valve. Unless the weather changes considerably from hot to cold, the setting when starting out should do for all day, and possibly for the night too. After having set the jet-valve for low speeds, do all adjusting with the air-valve spring—the knob that projects in the rear of the air inlet."

GETTING AN ECONOMICAL MIXTURE.

"I know, that's what the instruction book says," admitted the tourist, "but blessed if I can tell when she's got the best mixture, except when she climbs hills well."

"There's where the muffler-cut-out comes in," I warned him. "Open it and make your low-speed setting with the jet needle-valve knob, turning it until the tone of the exhaust is sharp and ringing. The throttle must be off while you're doing this. After you get this adjustment made, use the knob on the auxiliary air valve for any changes. It's running on the most air and the least gas possible that gives the best all-around riding. And let me tell you another thing. At night, lots of motors run best, there's lots of moisture in the air and the heat of the sun is gone. This means that less fuel will give the same results, and you can generally cut down on both the gas and air at this time of the year after dark.

"That's the dope; let things alone until it is necessary to make adjustments and then make them yourself. Don't depend upon other people for riding matters; its a waste of time and money. Every rider ought to know his machine, and each mount has some little kinks in it that a stranger knows nothing about, and generally only makes more apparent when he tinkers with it. You've got a pretty dirty motor, and when you stop off for some time, have the soot cleaned out of it. Now try her again," I suggested.

Digitized by Google

The operation of cleaning and adjusting proved successful after a few more turns of the air-valve knob, and the rider negotiated the hill and was soon out of sight. My passenger, who had finished two pipes of tobacco during the operation, asked: "Do you meet many riders like the chap who has just gone off?"

"Yes, the roads are crowded with them," I replied. "They either are always fussing with the adjustments I spoke about, or they drive the machine with much too rich a mixture, using up more gasoline than a motor truck or a launch. An observant person would imagine that half the rider's time was spent in turning something or other, and that the racket of muffler explosions was merely a part of every trip, and inseparable from it. They only half learn how to set the carbureter, and when a change is needed, the result they obtain is usually bad. This chap belongs to the Amalgamated Order of Tinkerers, and I wager he was fiddling with his carbureter ever since he left faithful Fido on the steps of his home in the Blue Ridge mountains. The repairmen took his measure for an easy mark when he asked to have his carbureter adjusted, and probably only made matters worse for him.

INCORRECT MIXTURE AND DIRT.

"Its just as I have always said: the chief troubles that come to a rider are due to his ignorance of the carbureter. Lack of system in getting a good mixture at first results in constant turning of knobs and opening of shutters and valves, hunting for the right proportion of gas and air. While there are a number of things that can happen, due to some fault of the carbureter, the chief and most easily remedied ones in touring are wrong mixture and dirt. Our friend here had both, plus too high a fuel level, which made his mixture too rich. Ninety out of a hundred cases of over-rich mixture are due to too great a jet opening, and the odd one to the wrong fuel level. But if he had given the bus over to a good repairman, the high level would have been found out at once." Having relieved my mind to this extent we both mounted the trusty sidecar rig again and rolled away toward the Connecticut border.

Heitger Carbureter Co., 1129 Beecher street, Indianapolis, Ind. (Heitger.)

Breeze Carbureter Co., 250 South street, Newark, N. J. ("N. A." Breeze carbureter.)

THE CONVENTION DATES

A LETTER from President Patterson is to the effect that the F. A. M. directors by their recent mail vote have approved the plan of changing the opening date for the Denver convention, and that the big program will be staged during the week of July 21-26. It is quite likely that these dates will be adhered to, although it has been intimated since this vote was taken that another change may be found necessary in order to have the convention dates work in more effectively with other plans of trade representatives.

Unique Twombly Van and New Cyclecar Type

Commercial Product Offered by New York Company Has Three-Cylinder, Two-Stroke Motor and Many Other Features of Interest, While Cyclecar Carries Twin Seven Power-Plant and Lists at $450

THE Twombly Motors Company, of 258 West Sixty-ninth street, New York, is putting on the market a parcel delivery van of 400 pounds load capacity which embodies a number of interesting features. The construction of this vehicle has been the result of several years' study of the light delivery problem both here and abroad.

The Twombly van is fitted with a three-cylinder, two-stroke motor, the bore of which is 3 inches and the stroke 3¼ inches, giving close to 16 horsepower at normal speed. Ignition is by Bosch magneto, and a special carbureter is fitted. Lubrication is by splash. The cooling is by an unique method; the cylinders are fitted with ribs, but all three are enclosed within a "cooling jacket" which is enlarged at its rear end and open only around the top of each cylinder. The flywheel of the motor is of the Sturtevant blower type, and in revolving draws air through the top openings and through the jacket, carrying off the heated air from each cylinder by induced draft. Spark plugs are located in the center of each cylinder head and in addition there is provided a priming cock for each cylinder.

The change gear is of the frictional type, consisting of a bronze disc driven by a shaft directly from and in line with the flywheel. A simple universal coupling is used; this consists of two curved springs whose ends bear on pins projecting from the face of the flywheel and whose centers are attached to the disc shaft. The shaft is capable of being moved fore and aft to effect engagement of the disc with the friction wheel. The latter is fitted with a strong paper rim and is keyed to a countershaft fitted with self-aligning joints so that contact will always be true no matter what the frame distortion. From the countershaft, the final drive is by chain to a live rear axle and differential, as in car practice. Both motor and change gear device are mounted on an angle-iron sub-frame which is attached to main frame at the front and rear.

The motor is located under the driver's seat at the rear, the seat frame being of lattice aluminum paneling to ensure plenty of air to the cooling jacket. Steering is by hand-lever with linkage direct to Ackermann pivots on the front wheels. The four forward and one reverse positions of the friction wheel on the disc are controlled by a small lever mounted on a segment, and the spark and gas are controlled by small levers below the one used for steering. Of the three pedals on the foot-boards, the left controls the movement of the disc and acts as a clutch, the middle sets the brake on the rear axle, while the smaller right-hand one is the accelerator. The main frame is of channel iron with cross-members of angle stock. Wheels are of the suspension tangent-spoke type with 3/16-inch spokes, with hubs cut from the solid steel, and are 26 inches in diameter and fitted with 2½-inch tires. The springs are semi-elliptic with the horns at the rear ends. The wheelbase is 66 inches and the tread 42. The body is of the van type and the whole vehicle weighs in the neighborhood of 500 pounds when empty. It is priced at $450.

In addition to the parcel delivery van, the company is getting out a light machine on improved cyclecar lines. The general method of drive resembles that of the van, except that the disc shaft passes through a tube filled with grease, and the disc and wheel are at the rear of the machine, with the motor in front. The motor will be a 12 h., air-cooled twin with outside flywheel, and the friction wheel will be geared to the rear axle instead of driving by chain as in the van. Behind the motor is a scuttle dash incorporating the gasoline and oil tanks, and on the footboard are located the "clutch" brake pedals. The outfit is designed to sell at the same price as the van, $450. It is a competent roadster.

The FINE ART of LUBRICATING

by the COURIER

IT isn't often that I get poor gasoline, meaning watered stuff, but I am quite used to mixtures of kerosene and naphtha which masquerade as "gas." One time recently I was stalled with water in the float chamber and had to clean things out. Just before the final setting up of the floatchamber holding nut was complete, a rider went by on a single, leaving a trail of oil along the highway. After mounting and going along a few miles I found him by the roadside.

As I rode up I could see that he had fractured the oil lead to the crankcase, and investigation showed what was pretty nearly a "freeze-up," with no oil left in the tank. We applied the usual remedies, and after generous use of oil from my tank we got the motor free again. I always carry a small soldering iron and solder, and so made a "highway forge" and repaired the break. Then I had to free the pump line from air-locks and start the oil flowing again.

"I'm going up to Boston for a day or two," explained the rider, "and didn't have much oil left after I passed out of the last agency. Using the 'Zedel' motor, I have to get a certain oil or there is trouble. They didn't have it down at Blank's, so I thought I could make the next 60 miles and then get a fresh supply at my chum's. He rides the same make as I do."

"If you're tied down to that particular oil, you must be pretty limited as to tours unless you carry a tin of oil with you all the time," I suggested. "You can get another brand suitable for your motor at almost any garage which is first class. This is the brand I'm using now in my motor." I gave him the name of it. "It's a good thing for you to know when you do any touring," I continued, "as all garages do not carry certain brands of oil, and if you don't know of any emergency brand, you have to take the garageman's word for it. If he's honest, well enough; if not, you stand to ruin your motor. Why, I know of six different kinds of oil that I can use in case I can't get the one that I use regularly."

"They told me that only the one oil could be used with safety in this motor," insisted the deluded rider, "and I have been buying that brand right along. While I stayed around home there never was any lack of it, but coming up here I would have had to reach my chum's to get a new supply. By the way, tell me how you made that dirt forge to use the soldering outfit on my oil pipe."

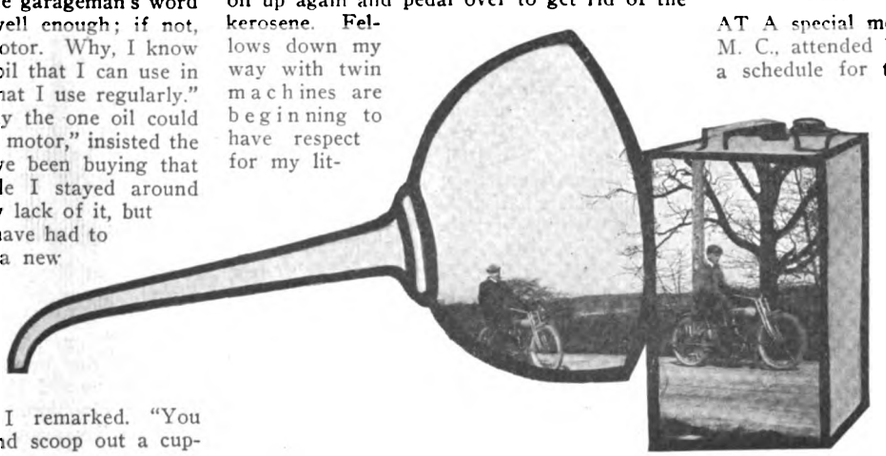
"The highway forge is one of my old pets," I remarked. "You make a mound of dirt and scoop out a cup-shaped hole in the top. Soak this with gasoline and light it. If the mound is large enough, it will give good heat for a soldering iron, and you can repair broken oil or fuel pipes on the road. After using it stamp it out and spread the dirt over the road, to prevent it setting fire to something. So much for that. You've got a hand pump for oiling, I see. How often does the motor need a charge now?"

"About once every 12 miles," was the reply, "except on hills, of course. Then I give her half a pumpful extra. The motor always smokes after climbing, but not badly, and I know just when to give the next pumpful after climbing the hill. Once or twice I waited somewhat too long, and the motor started to squeal, but over-oiling a little at once fixed that up."

"Touring in this part of the country will give you some new practice with the hand-pump," I suggested. "You're likely to strike hills one after the other, or just around a turn, where it's all you can do to get up. Follow out the old road-racer method of using the pump: half a charge every six miles, with the other half in the pump ready to use.

"With the mechanical-pump, or even with the sight-fed motor, the feed of oil shouldn't be changed for each hill unless a quick and accurate return to the regular rate of feed can be made as soon as the hill is passed. The mechanical-pump generally won't allow of this, so the rider can use the hand-pump on hills, gauging the proper part of the pump charge needed in addition to the regular feed of oil.

"There's one thing that has kept my machine in good condition, made it take most hills at a good clip and run pretty fast all the time," said the stranger, "and that's cleaning the motor out every 300 miles; just a flush-out with kerosene, tank, pipes and crankcase. Then I oil up again and pedal over to get rid of the kerosene. Fellows down my way with twin machines are beginning to have respect for my little 'one lunger,' as it runs well. The trick is in keeping it fresh and clean. I make an overhaul every 1,200 miles, too, but I've only made one so far and the next is nearly due."



"If every rider followed your example," I said, "there would be less growling about how badly the motors run. The old excuse of 'carbureter not in order' might be proved wrong, as stale oil naturally cuts down the power of a motor. It is an important matter, this cleanliness, at any time, and particularly when you are going to cover long distances. With a 4 or 5 horse machine you have to be careful to get all the power possible on hills, or it's a case of pedal or get off and push; a dirty motor can't give its full power."

"I guess that's the reason some riders buy twins," said the stranger. "In their estimation, a slight loss of power in a 7 or 8 h. machine will not affect the climbing of hills. There's nothing I would like better than a 4 h. twin instead of this single, but short of importing one, there's no way of obtaining one in this country."

Marshall Oil Co., Marshalltown, Iowa.

PLAN BI-WEEKLY RUNS.

AT A special meeting of the Reading (Pa.) M. C., attended by more than fifty members, a schedule for the first half of the season was mapped out. On May 4 the club held a run to Philadelphia, and on May 18 the riders will go to Earlville. Other runs planned by the club are as follows: June 1 to Easton; June 15 to Lancaster; June 29 to Pottsville, and July 26 and 27 to Atlantic City.

FRANK W. GLUGIA, of Joliet, Ill., who has ridden a motorcycle since 1910, states that he has spent only $10 on the machine in addition to the original cost.

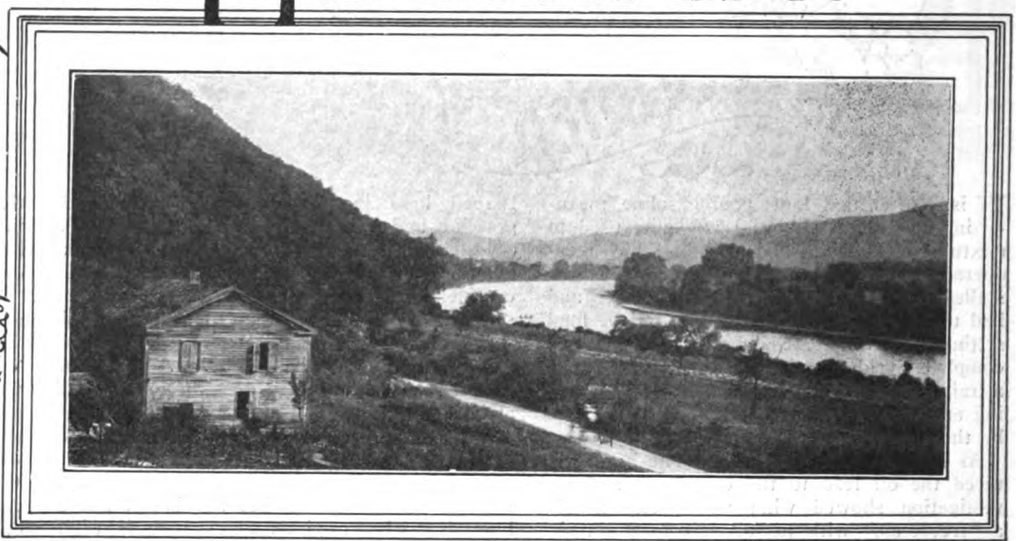
ATTRACTIVE ROUTES to the WHITE MOUNTAINS

By ROBERT BRUCE



SNAPSHOT taken ALONG the upper CONNECTICUT RIVER En route to the WHITE MTS.

A GLANCE at any comprehensive road map of the New England States will show, far up in the hill country of New Hampshire, a network of roads extending for long distances in nearly every direction, but brought to a common focus in that relatively small but important district labeled the "White Mountains." This unique convergence is due largely to the fact that here the great trunk lines or road travel up the Connecticut and Merrimac valleys meet and merge with the through routes that come over from the Lake George and Lake Champlain country across the Green Mountains of Vermont; and here also the connecting roads from the Canadian capitals, Montreal and Quebec, join. From the opposite side come the other trunk lines along the Massachusetts-New Hampshire-Maine Coast, or up through the Lake Winnipesaukee district; and also from the provinces of New Brunswick and Nova Scotia.

All these routes thread their own individual parts of New England or Canada; but sooner or later they or their connecting links are influenced by the stronger magnet of the White Mountains, and are drawn inevitably into the web of its far-reaching highways. The principal reason for this is that the valley of the Saco River and Crawford Notch on the East, with the valley of the Ammoonosuc and Franconia Notch on the west, are the strategic inlets and outlets for what is in reality a great clearing house of travel for most of upper New England. There are no good east-and-west routes for many miles above or below; and right here also Nature has been most prodigal with mountains, valleys, lakes and streams, the combination of which—plus good roads—has given the section its commanding popularity.

As a matter of fact, the New England states have been from the first the most important and best patronized touring ground in the United States—due to their relatively high percentage of improved highways, their proximity to and easy access from the large centers of population along the Atlantic Seaboard, the large number, variety and interest of their main-traveled routes, ample and superior accommodations, and uniformly liberal laws, granting to the visitor complete exemption from local registration and licenses. This favorable combination of circumstances has naturally attracted the attention of road-users all over the country, and is bringing into those six states a vast and rapidly increasing annual revenue.

CAPITALIZING GOOD ROADS.

Connecticut, Rhode Island and Massachusetts have literally capitalized their good roads, fine hotels and their many points of historic interest; and are receiving good dividends from them. A part of this revenue is being put into road improvements for the benefit of those who will come later; and thus the proverbial thrift of the section is coupled with foresight of the right kind.

Usually, there are more inquiries about routes to and from the White Mountains than about any other three localities combined, a considerable proportion of them coming from motorcyclists residing in the central or middle southern states, who may be planning trips to and from upper New England for the first time. Various other inquiries come from motorcyclists who have already made one or two trips to the White Mountains, but who wish to go or return some new way. As a glance at any good road map of New England will show, there is such a wide choice of routes to and from northern New Hampshire that one may schedule a half-dozen trips there and back without covering very much ground more than once. This is due principally to an unique geographical location, about midway between Lake Champlain and the Maine Coast, and about equally distant from the Lake Winnipesaukee district on the South and the Canadian line on the North. In fact, the principal White Mountain resorts are about a good day's motorcycling from a dozen strategic route centers; this has made them natural overnight stops—frequently lengthened into days or weeks. It has also helped to encourage the building of several of the largest, best appointed and best managed summer hotels in the world—as well as a large number of more modest hostelries. True, the famous scenery and romantic surroundings of the entire region have had a great deal to do with it, but automobile and motorcycle patronage demands not only good roads, but suitable accommodations.

Formerly it was taken for granted that only millionaires traveled this way, so that prices of everything met by them on their tours underwent a material inflation—and the end of that is not yet; but the man of moderate means, driving a medium-priced car, or riding a motorcycle, has come to be a factor to reckon with. He is beginning to show up in large numbers all along the line and is receiving respectful attention, even by the largest resort hotels; most of all, he is finding good accommodations at about city prices in the clean, well-kept, comfortable inns that dot most of New England, and by this patronage is helping to make a considerable number of them better than they would otherwise be. No motorcycle tourist need stay away from the White Mountains because of the high expense (as compared with other summer resorts), if he is willing to give a little more than ordinary care to selecting his stopping places.

ROUTES TO THE WHITE MOUNTAINS.

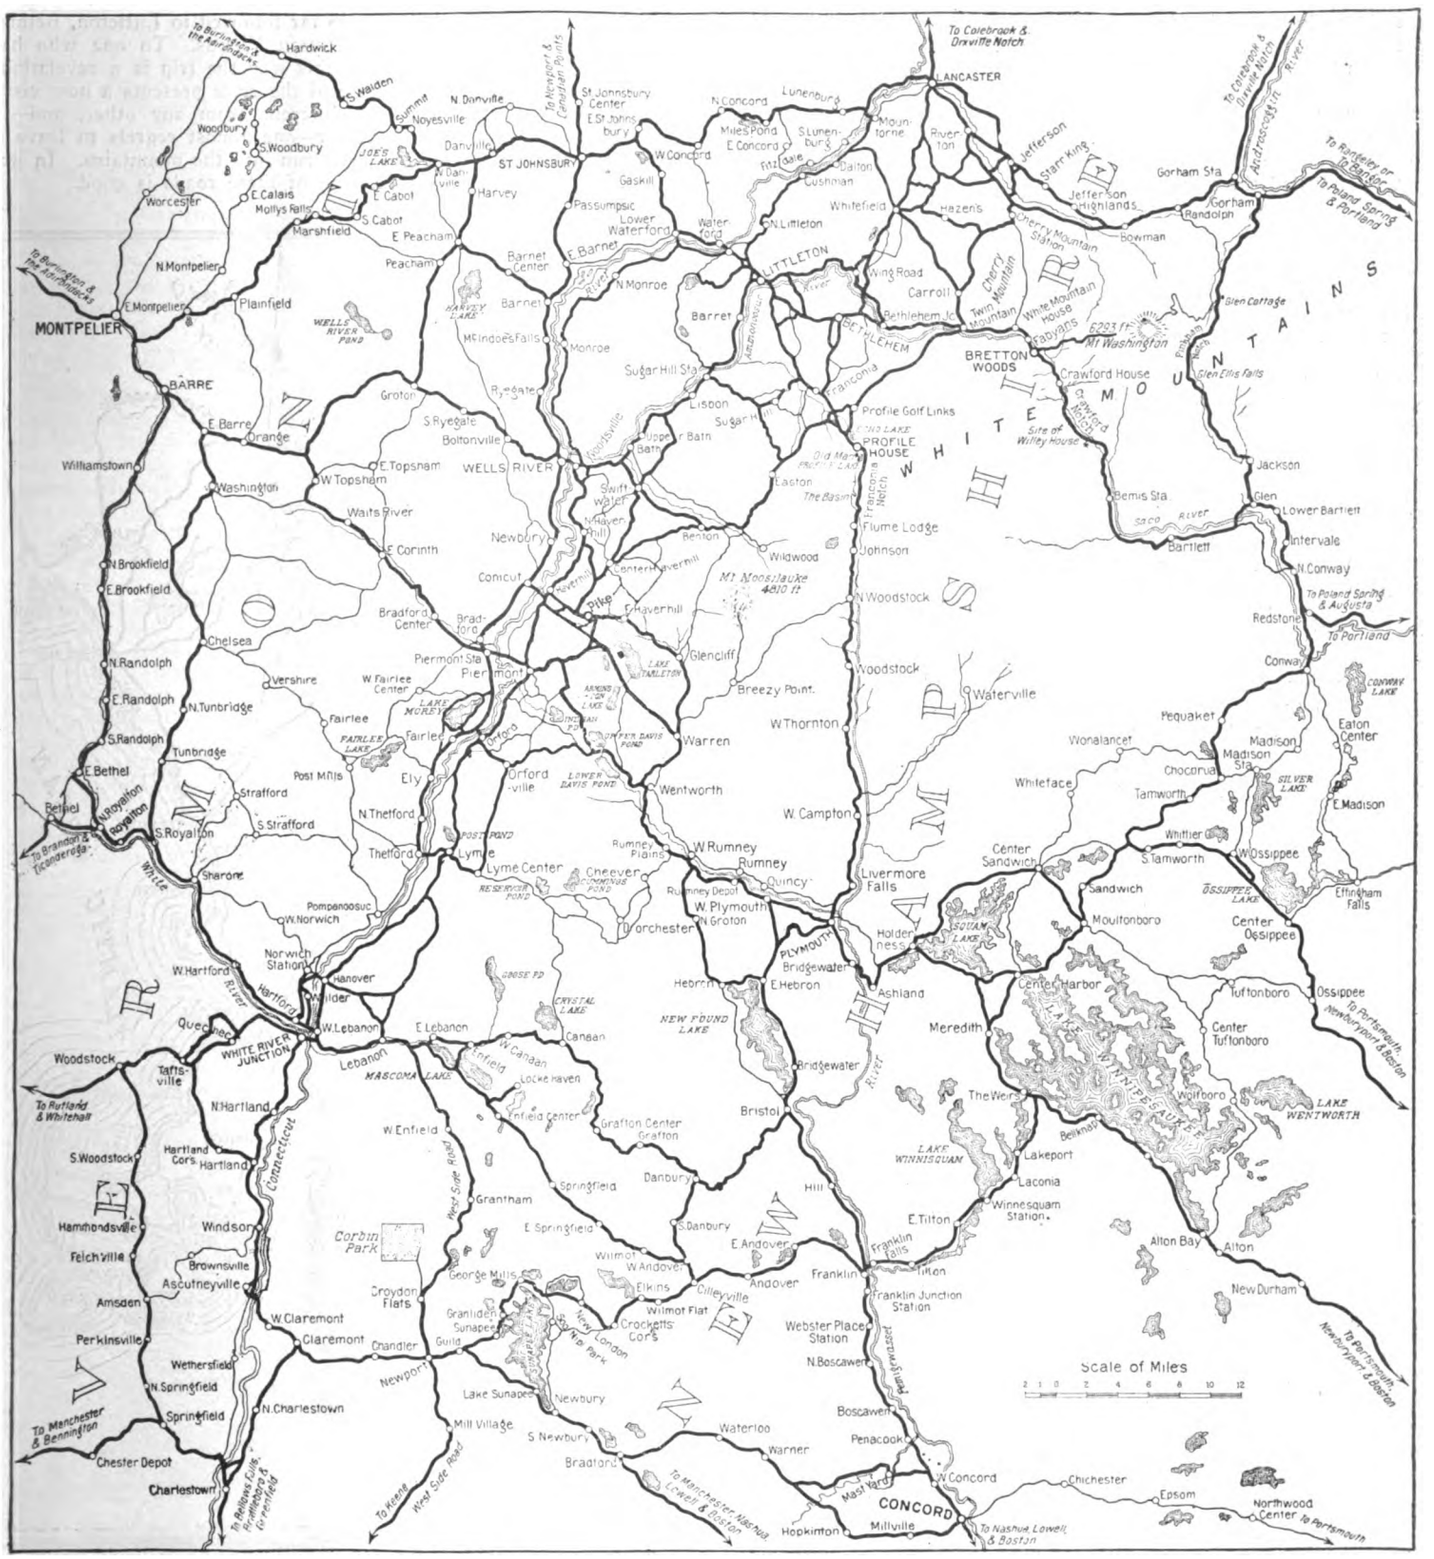
1.—From New York and the Metropolitan District generally: There is a wide choice of ways to start from New York toward the White Mountains, due somewhat to the fact that all the north-and-south lines through Connecticut and Massachusetts inevitably lead in that direction. The same is true of the Hudson River routes, with their various con-

Digitized by Google

nections into southern Vermont, or on either side of the Lake George-Lake Champlain country. Motorcyclists who prefer the hill country, with glimpses of many fine valleys, will find their needs met by one or a dozen schedules, of which the "Ideal Tour" is typical. This route, while primarily an advertisement of several interested hotels along the way, meets the needs of so many that it has come to be almost an established institution despite the rather heavy expense, as compared with the hotels along less advertised routes

This tour leaves New York by the "Shore Line" as far as Stratford, Conn., turning north at that point to Waterbury, the principal route center of the Naugatuck Valley, from whence it is continued to Pittsfield, the heart of the Berkshires, through Winsted and Norfolk, Conn., Great Barrington, Stockbridge and Lenox, Mass. The next stage—to Manchester, Vt.—is an easy and picturesque run, followed by the hardest climb on the entire route, up Peru Mountain; this is really a long and difficult ascent, and its reputation leads many to avoid the route altogether, though hundreds cross safely every summer.

After going over Peru Mountain, one descends to and crosses the Connecticut River Valley to Claremont, N. H., from which Lake Sunapee is touched on the way to the Pemigewasset Valley, thence up through Plymouth and past the Profile House to Bethlehem and Bretton Woods. The return of the "Ideal



Detailed reference map of the White Mountains, N. H., an invaluable guide for the tourist.

Digitized by Google

Tour" is scheduled via Poland Spring, Portland, Portsmouth, Boston, Worcester, Springfield and Hartford, cutting across the upbound trip at Waterbury and returning to New York by the State road through Westchester County and the lower east side of the Hudson River.

Many prefer to start north along the Hudson, turning eastward at Poughkeepsie or Hudson to Pittsfield, either joining the "Ideal Tour" at that city, or crossing to the Connecticut River at Greenfield. This is particularly the case with tourists from New Jersey, eastern Pennsylvania and points beyond, who do not care to go through New York City; but who can go up from Newark to Nyack, crossing the Hudson to Tarrytown and connecting there with the New York-Albany route. Roads from both Poughkeepsie and Hudson to Pittsfield are mostly good, and they are heavily traveled throughout the season.

TIPS FOR LONG ISLANDERS.

Residents of Long Island or summer visitors at its many resorts have the choice of going through New York, or of taking boat from Glen Cove to New Rochelle, Seacliff to Rye, Port Jefferson to Bridgeport or Greenport to New London, connecting with the "Shore Line" for all the main routes through Connecticut and Massachusetts. While there is apt to be some inconvenience in planning a trip across Long Island Sound this way, it is usually worth while, especially as it saves distance, and the ride through the heavy traffic of Manhattan.

Very many trips from New York to the White Mountains are made via Boston, particularly by tourists wishing to visit Narragansett Pier, Newport and Providence en route. This gives many fine views of the Rhode Island Coast, also of the Massachusetts Coast between Boston and Newburyport, and (especially) the unsurpassed New Hampshire-Maine Coast. At Portsmouth one may strike almost directly north through Dover, Rochester and Ossipee to Intervale, Crawford Notch and the White Mountains, or continue on to Portland, and take the longer but generally preferred route through Poland Spring. Good country roads gridiron most of this territory, with occasional stretches of gravel or macadam, the latter rapidly increasing.

There is another option frequently used by tourists who prefer to go up the Merrimac and Pemigewasset valleys—that is, to strike north from Worcester to Lowell, thence up through Manchester, Concord and Plymouth. This truck-line highway pases slightly west of the Lake Winnipesaukee district, and is much used on trips that include the many fine resorts on and about that Lake.

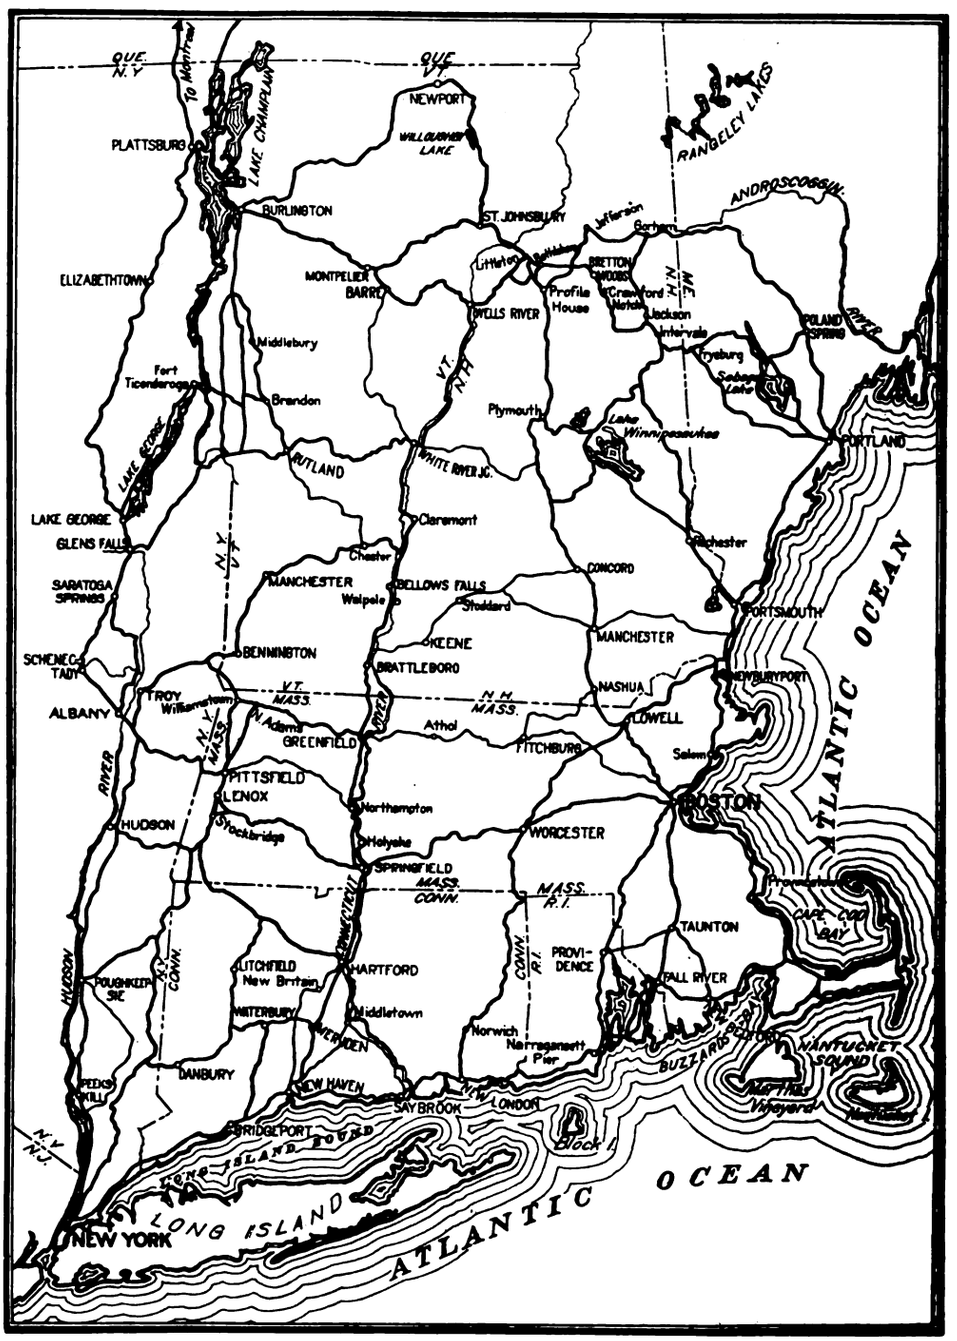
A PICTURESQUE REGION.

2.—From Troy, Saratoga Springs and Lake Champlain points: As the map shows, Troy and Saratoga Springs are the natural gateways from central and western New York State into upper New England, and through them passes a great deal of the travel to and from the West. Both have good, close connections into Southern Vermont, intersecting the Ideal Tour" at Bennington or Manchester, or following up through central Vermont, crossing at Rutland to the Connecticut River Valley, for White River Junction and points east and north. The Berkshires are easily included in such an itinerary by going through Albany to Pittsfield, thence either through Greenfield, Mass., or Manchester, Vt., though the distance is not really greater.

Lakes George and Champlain naturally interfere with what would otherwise be a number of fairly direct routes between the eastern Adirondacks and the White Mountains across Vermont. As a consequence, east-and-west travel in this region is restricted to a few points where there are facilities for crossing the long, narrow water boundary between the Empire State and the Green Mountain State. A good motor ferry connects Fort Ticonderoga (2 miles east of old Ticonderoga, N. Y.), with Larrabee's Point, Vt., making a short route to White River Junction and points north across Sherburne Mountain, which is a rough but still easier pass across an unavoidable range than Peru Mountain, farther south. Above, on the wider part of Lake Champlain, a good boat line makes one or more daily trips between Port Henry, Westport, Essex, Port Kent and Plattsburgh, N. Y., and Burlington, Vt. This boat line naturally does the most transferring between the Adirondacks and Vermont, making in reality a nearly direct route from the Thousand Islands and St. Lawrence River points to the White Mountains that way.

IN THE CONNECTICUT RIVER VALLEY.

3.—From lower Connecticut River Cities: The shortest and usually the best way from New Haven, Hartford, Springfield and Greenfield to the White Mountains is directly up the Connecticut River Valley through Brattleboro, White River Junction, Hanover and Wells River, where a right turn is made away from the valley so far followed to Littleton, Bethlehem and Bretton Woods. To one who has never been this way the trip is a revelation; every angle of the river presents a new vista, seemingly different from any other, and—in good weather—one almost regrets to leave it for the short run into the mountains. In wet weather none of these roads is good.

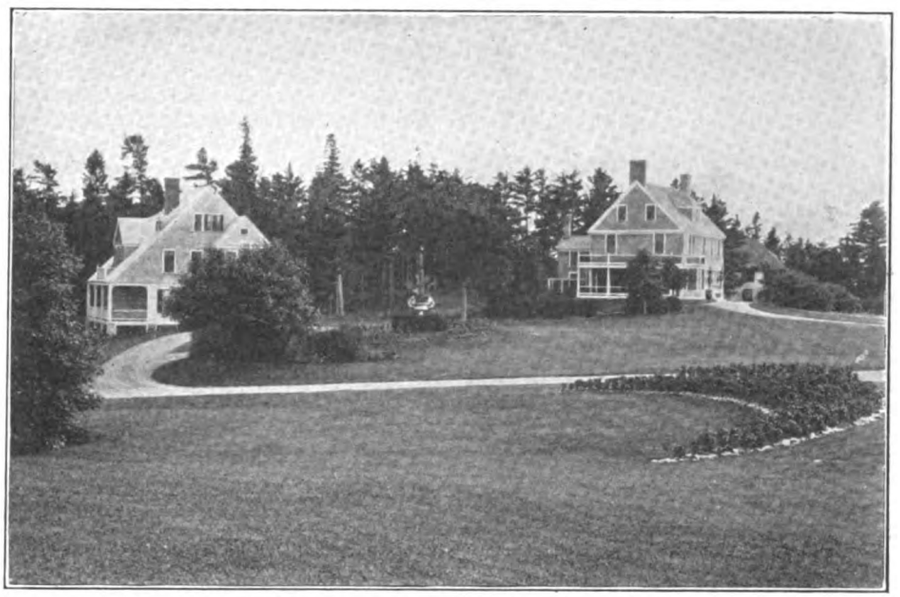


Outline map of main-traveled motorcycle routes to the White Mountains.

Digitized by Google

One interesting feature of a trip up or down the Connecticut River is the frequent crossings, in order to take advantage of the best stretches on both sides. The traveler is in Vermont for an hour or two, then in New Hampshire, crossing on some of the quaintest of old wood bridges, with now and then a more modern structure, built to take the place of an old-timer. Toll is still charged on some of these bridges, while others have been made free. There are very many grades on the Connecticut River line, but no single climb as long and steep as Peru Mountain on the "Ideal Tour" route.

4.—From the Coast resorts and Cape Cod: Most of the very large summer travel between Newport, Narragansett Pier, Providence, Cape Cod, Plymouth, etc., to points north goes via Boston (for which see the next paragraph, No. 5). This not only gives the best roads, all things considered, but it is about as short a way as can be figured. It is perfectly feasible, however, to cut across from any of these points to Springfield or Worcester for a connection with the Connecticut River Valley line or for the Merrimack Valley (the latter most conveniently reached at Lowell or Nashua).



Typical summer cottages in the hills of Northern New Hampshire.

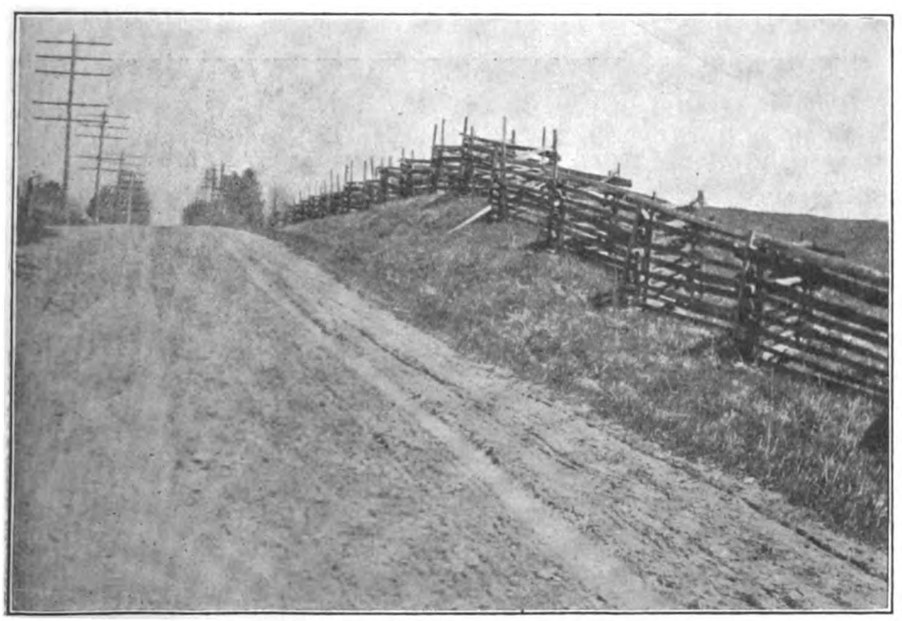
FINE RUN ALONG THE SEACOAST.

5.—From Boston and Eastern Massachusetts Points: The choice of routes between Boston and the White Mountains is not as great as from New York, principally because the Connecticut River Valley and the Green Mountains, with their many options, are geographically aside. Somewhat the shortest way is to Lowell and up the Merrimac Valley—an excellent trip, with fewer grades than the Connecticut River Valley and scarcely less picturesque. This route leads through Nashua, Manchester, Concord and Plymouth; it passes the Flume, the Profile House and Profile Lake, coming almost at once to a fork of main roads. Here you take the right for Twin Mountain, Fabyans, Bretton Woods, Crawford House, Jefferson, Jackson, Gorham, etc., or the left for Franconia, Littleton, Bethlehem, etc., in case it is not planned to go through Bretton woods.

On account of the excellent roads and fine seacoast, however, most tours from Boston to the White Mountains start up the Massachusetts-New Hampshire Coast, going through Lynn, Salem, Beverly and Ipswich to Newburyport, in leaving which the interstate line is crossed into New Hampshire. For a trifle less than 25 miles the ocean is closely followed through Salisbury, the Hamptons and Rye Beach to Portsmouth along a stretch of ocean not surpassed above or below. At Portsmouth the trunk-line so far up the coast divides into three streams of travel for the balance of the way.

The shortest of these starts north-by-west through Dover and Rochester where, bending somewhat to the right, it is continued up through Ossipee, Conway and Intervale, striking the picturesque valley of the Saco River and following it up through Crawford Notch to Bretton Woods or beyond. Roads are very good from Portsmouth to Dover and Rochester, with some stretches between Rochester and Intervale only fair, but still very heavily traveled. The principal alternate line turns gradually west from Rochester, skirting either side of Lake Winnipesaukee, and coming back into either the Merrimac Valley route or the Crawford Notch line a short distance above that lake.

It is not materially farther to include parts of Maine in Boston-White Mountain schedules via Portsmouth; in that case the tourist crosses the interstate line again in leaving Portsmouth, and continues directly up the picturesque Maine Coast through the various Yorks and the Kennebunks to Biddeford and Saco. From here a short detour can be made to Old Orchard, or the main line followed practically straight up to Portland, where a number of options again present themselves. Most travel goes, however, by Poland Spring, Naples, Fryeburg, Intervale and Crawford Notch, though a somewhat shorter line skirts the lower edge of Sebago Lake and follows the general course of the Saco River. Occasionally a still longer way is preferred via Augusta, or Auburn-Lewiston, either turning down to a connection with the regular Portland-White Mountain routes, or skirting the lower side of the Androscoggin River and entering the mountains via Gorham.



Roads in the hill country of New England are usually well drained and quickly dry out after rain, thus insuring the tourist fair going.

PLEASANT TRIPS INTO THE DOMINION.

6.—From Principal Canadian Points: Motorcycle travel between the Province of Quebec and northern New England has greatly increased during the past two years, due principally to the compilation of several good routes, aided materially by improved facilities for crossing the international border. As a matter of fact, Montreal and Brattleboro, Vt., are only about equally distant from Mount Washington, and even Quebec is nearer Bethlehem than either Hartford, Conn., or Boston. The international line makes them seem farther apart than they really are.

Trips from Montreal to the White Mountains are usually made by Burlington, running nearly south through Chamby and St. John to the upper boundary of Lake Champlain, where the choice is offered of following down the west side of the lake to Plattsburg, and taking boat to Burlington, or of turning east from the vicinity of La Colle Junction through

Digitized by Google

the Aibourg Tongue to the Hero Islands set in the midst of the lake. A surprisingly good road extends through this chain of islands, which are all connected by substantial bridges; this route comes onto the Vermont mainland a few miles above Winooski, a northern suburb of Burlington, and it makes one of the most picturesque and interesting trips to be found anywhere.

From Burlington a very good road leads to the White Mountains through Williston, Richmond and Montpelier, dividing there for two routes to points beyond, via (1) St. Johnsbury and Littleton, or via (2) Barre and Wells River. Lately a great deal of interest has been aroused in the Burlington-St. Johnsbury route via Newport, which gives exquisite glimpses of Lake Memphremagog and Willoughby Lake. It is possible to make the trip from Montreal to the White Mountains via Burlington in a long day, but there is plenty of sightseeing for two days.

VARYING CUSTOMS REGULATIONS.

The routes from Quebec to the White Mountains are not traveled as much as those from Montreal; the distance is, of course, much greater, and the trip is through a long stretch of French-speaking country with inferior accommodations. The usual way from Quebec is down through Richmond or Sherbrooke, P. Q., to Newport, Vt., from which point it is about 75 miles to the center of the mountains. Of course in crossing the international border, customs must be passed; and unfortunately this has not yet been reduced to anything like a uniform practice. At some points along the boundary, customs house brokers will go your bond for a small fee, but at other places only a cash deposit will be accepted. That being the case, the only point of safety is to carry sufficient funds to make a deposit (double the estimated duties), and get a receipt which calls for the return of the amount on leaving the country. The matter of licenses is also an unsettled one, one province adopting one policy and another province another policy. In view of the growing importance of Canada as a touring ground, it is hoped that this situation may be straightened out in the reasonably near future. However, one making a White Mountains round trip from this direction will need only one license.

The tide of road travel to and from the White Mountains naturally reaches its height in August—the most difficult month in the whole year to reconcile one's self to the cities, and—fortunately—the most convenient time to get away from the ordinary business. In August the largest crowds are at the resort hotels; this is the only time during the season when one runs much risk of finding them full, and when, in a few cases, a higher scale of rates is charged than in July or September.

RETURN TRIPS FROM THE MOUNTAINS.

Of course all tours outlined in the preceding paragraphs to the White Mountains may be reversed for use as return trips. Among the many desirable options is to go up the Connecticut River Valley and come down through Poland Spring, Portland and Boston, including in this circuit the longest and finest of all New England valleys, and over a hundred miles of splendid seacoast. Or one can go up the Merrimac Valley and return by the Ideal Tour route, and so on indefinitely, the options far exceeding the lines that can be distinctly shown on a map the size of the one accompanying this article.

For the relatively few who care to extend one of the conventional White Mountain circuits still farther, there are two additions that will well repay the extra distance traveled. One is up along the Connecticut River from Wells River to Lancaster (or from Littleton to Lancaster through Whitefield), thence to Colebrook, which is only about eight miles from the Quebec Province line. Turning right (east) at Colebrook, an excellent trip is had to Dixville Notch, one of the wonder spots of America but entirely away from the railroad and known only to relatively few.

This "Notch," or canyon as they would call it in the Far West, seems at first an impossible barrier, but as you approach it, the road opens almost mysteriously, and the climb is not at all severe. Continuing east from Dixville Notch you come to Errol, almost at the New Hampshire-Maine boundary; but instead of going into Maine, the road turns right and runs down the west side of the Androscoggin River through what they call locally the "13-mile woods." That stretches it somewhat, as my measurement was only 12½ miles; but the experience of traveling even that distance with the primeval forest on one side and the wild northern river on the other is something to be remembered. After emerging into settled country again you pass through Berlin into Gorham and are there again within the scope of the map, and on one of the conventional White Mountain circuits.

Another magnet for the distance travelers is the Rangeley Lake District, which is geographically to the north—and slightly east—of the White Mountains. The usual way to include the Rangeley section in one of the regular White Mountain circuits is to plan to go or come via Portland, Auburn, Lewiston, Augusta, Farmington, and Phillips (given in their order northbound). Connection is made between the Rangeley district and the White Mountains along the Androscoggin River and through Gorham, through a wonderland of mountain, forest, lake and stream.

Usually it takes from one to two weeks to make even the shortest of these White Mountain circuits from New York, Albany, Troy, Pittsfield, Springfield or Boston, depending of course on the route taken, and especially upon the weather, for while nearly all northern New England roads are good when dry, they are slow and unsafe when wet. One week's limit will make it necessary to hurry along more than the average tourist cares to do; but two weeks is ample, even with the Rangeley or Dixville Notch addition. The only "drawback" to going on one of these trips is that, somehow, one is uneasy until he is given the opportunity to plan another.

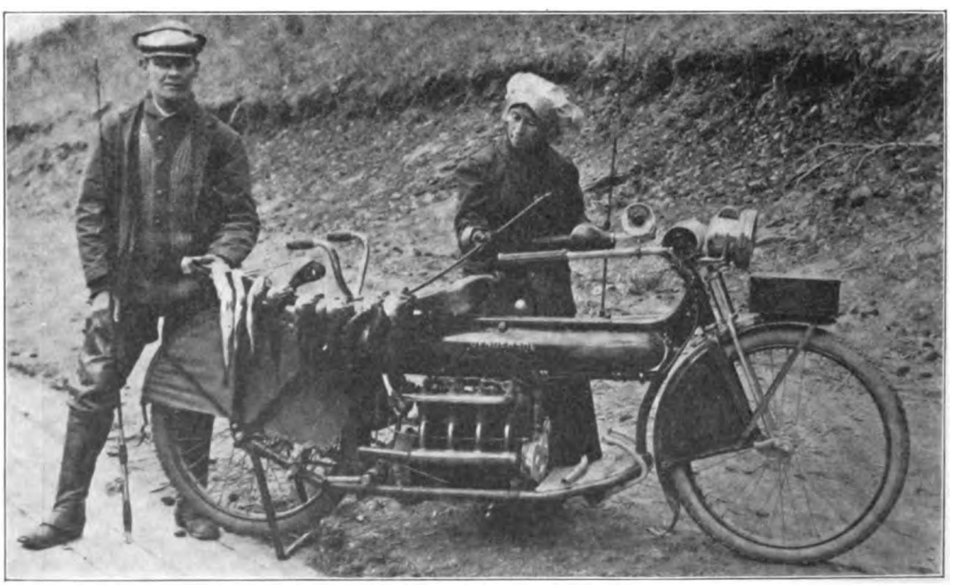
Road Conditions in Lake George District

FOR the greater part of a year, tourists making the run from Albany to Saratoga, Glens Falls, Lake George and the North have found that important stretch from Lake George village to Warrensburg closed, or partially closed, for new construction. During most of last fall, it was necessary to start north from Lake George village along the shore of the lake to a little place called Hillview, where a left turn was taken across the hills to Warrensburg.

While considerably longer than the direct road and quite hilly, it was generally preferred to passing over the obstructions on the short main line. At the present time the authorities are allowing tourists to use the direct State Road at their own risk, and a considerable number of them are going from Lake George village to Warrensburg that way, despite the difficulties on the incomplete stretches.

The spring floods carried away the bridge across the Hudson from Glens Falls to South Glens Falls on the direct line from Lake George village to Saratoga, and also damaged the bridge on the alternate line through Luzerne and Corinth. Crossing the Hudson at these important points is apt to be a more serious inconvenience during the coming summer than the road conditions above.

The Luzerne bridge, while not carried away, has been posted as unsafe, and tourists use it at their own risk; but while the Glens Falls-South Glens Falls bridge is out, it will be necessary for tourists to go around by the way of Fennimore and Hudson Falls.



Mr. and Mrs. B. H. Coats, of Spokane, at Newman Lake, Wash. ***Their time on the outing was about equally divided between their Henderson and black bass fishing.***

A CLUTCH & BRAKE CHAT

by MECHANICUS

SITTING in a sidecar alongside "The Argus" on a road trip is always productive of much excitement. The Argus, like his Greek namesake, sees and hears everything that is going or coming, and has second-sight in most road matters; hence he is perfectly safe to ride with. On one of the last trips that we enjoyed together, it was decided that the boys would hold an impromptu hill-climb on one of the local "terrors," the solo riders utilizing the sidecarrists as judges. When we reached the hill, The Argus decided to go up first, but at the initial turn he pulled up and ran her over close to the edge of the road. Before I could complain of the nearness of the cliff to my right elbow, there came into view a rider descending on his smoking brake at no mean speed. When he saw us his eyes seemed to bulge from their sockets and he stood up hard on his pedals. The coaster locked, and he was bucked off into the grass on the opposite side of the road, while his bus soon came to rest in front of us.

The Argus quietly dismounted and examined the fallen machine, which was not damaged except for a dent in the tank and the loss of a pedal. The fabric on the brake band, however, had the appearance of cotton waste and indicated strongly that it was about as effective as that article for stopping purposes. The rider was with us in a short time, and as usual it fell to my lot to bind up the wounds. By this time the rest of the crowd had come up and we all went over to the side of the road for chat.

CAUSES OF BRAKE TROUBLE.

"Aviation is quite the rage nowadays," said The Argus, "as our brother here has demonstrated. Apart from that, however, it is rather dangerous, especially if indulged in on two wheels. If I am not too inquisitive, tell me who fixed up your coaster-brake the last time?" This to the stranger.

The rider looked surprised. "Why no one did," he replied. "I haven't touched it since I got the machine, but I noticed that the lining was a little ragged day before yesterday. She worked all right until just as I saw your outfit. It looked as big as a house, so I set my brake hard, and next thing I knew I was seeing stars right here in the grass. It's a rotten brake, anyhow."

"When I was in school," said The Argus mildly, "there used to be a saying that we had to copy in our writing-books: 'Cleanliness is next to godliness.' There isn't much of the latter quality about a motorcycle, I'll admit, but keeping things clean may stave off the twanging of a harp on the part of the rider and enable him to attain the godliness in another direction. Dirt was what caused your brake to act the way it did—dirt and lack of oil. If you had tested it out every time you went for a ride, and cleaned out the dirt from around the brake-arm and take-off spring and where the pedal chain sprocket is fitted on, you probably would still have a good brake. As it is, it is dangerous to ride with."

"Well, how am I to know all this about brakes?" inquired the stranger. "There's nothing in the general instruction book about it, and I never saw anything in the magazines except how good such and such a brake was and what parts it had in it. The fellow who sold me my machine said I was to let it alone, and that's what I've been doing."

"No, the books don't tell anything about brakes," continued The Argus, "but riders are supposed to remember the *bicycle* part of the machine as well as the motor part. There are some sure symptoms that a brake is not getting the cleaning it needs, and one of these is the necessity of clearing the brake now and then by pedaling forward to prevent its binding. We've all noticed this, I think. Then the way the brake releases on the stand when you let up on the pedal is another sign. If it springs off quickly, well and good; if slowly, look it over and see what the trouble is."

ARGUMENTS FOR TWO-BRAKE SYSTEMS.

"You were saying that the coaster brake was unsatisfactory," broke in one of the bunch. "Well, that's my idea, too. No coaster for me. A good strap, lined with raybestos, squeezing a plain little drum will pull my bus up short when I want it, and there are no collars and nuts or screws and rockers to bind up. If that brake gets out of order, there are two shoes inside that open out on the drum and do the same trick. Give me two simple brakes, and I can go down any hill, using either or both."

The Argus smiled, as he is a two-brake crank. "On the two-brake proposition I agree with you," he said, "but not about the coaster being 'punk.' Every rider ought to have two brakes for touring, and he ought to look them over every day. With a coaster-brake, all that's needed is a 'wipe-off' and a test, as I have said before. About other types of the coaster the same thing holds good as to cleaning. Don't forget the brake until it won't work at all before attending to it, and don't leave the renewing of the oil in the shell until she 'hollers' from being dry. But, brother," turning to the stranger, "why didn't you come down on compression as well as on the brake?"

"I tried that," was the reply, "but the clutch was slipping, so I thought it best to use the brake alone. If I tightened it up, it ran in jerks, so I let it slip until I got to a hill, when I put it in tight to go up. The clutch gets awfully hot in this part of the country where there are plenty of hills."

"Get over the idea that a clutch is intended for reducing speed," said The Argus, "and quit slipping it except for starting off. If you handle the motor right, there's no need to slip it at all; slipping burns the working parts and soon you have something that gives you a permanent free engine. The clutch is another part that you have to inspect every time you go out, and adjust when it needs it. If this took lots of time and work there might be some excuse for not doing it as often as is necessary, but a turn of a screwdriver or a little oil will generally be all that is needed.

JUDICIOUS HANDLING OF THE CLUTCH.

"Another thing; put the clutch in gradually. The first sign of a poor rider is getting away like Sam Hill with the motor sounding like a roller-coaster near the bottom of the dip. It may strike a few riders that it is brilliancy in riding to do thus, but it merely shows that the owner is inexperienced. 'Take it easy' is a good motto."

"What do you think about oiling the clutch, Argus," said the anti-coaster rider. "One fellow told me to use neatsfoot oil in

A NEWSPAPER OUTFIT

THE 1913 Harley-Davidson motorcycle and delivery van shown in the accompanying photograph are used by the Washington *Times*, of Washington, D. C., in the delivery of its daily papers. The outfit was sold to the *Times* by Berryman & Williams, agents for the Harley-Davidson in the National Capitol.

Digitized by Google

mine, but I haven't done so, as she is running all right. George here has a fibre facing and has the deuce of a time with it."

"No necessity to put oil on raybestos," replied The Argus, "but you need it with steel plates. George's fibre facing is working poorly because it hasn't been 'run in' yet. Just a little oil wouldn't do any harm to help it take a surface, but none after that, as oil rots it. He can do the running-in by careful movement of the clutch lever over the toothed quadrant, and his facing will last longer for not having oil on it."

"About a week ago," said the rider who had recovered from his tumble and had fixed up his bus preparatory to going on his way, "I came to a hill that looked like a toboggan slide; it was one near Blank, N. J. I tried four times to rush it, but it was no use and I had to push up finally, as there was no way around. Did any of you fellows ever get up it?"

"Not without pushing," said our competition man. "It's a killer for fair. Unless I'm in a race or regular run, I push hills like that, after getting up as far as I can under power. You only overheat the motor when you try that kind of hill often. There's where some riders make a mistake. Because they straddle a big twin, they think they can climb anything, and beat up their clutches in trying every grade that comes in their road. Then they blame the machine, of course. I remember a tour through the Adirondacks some summers back, where I pushed five miles out of thirteen. My partner preferred to ride the whole distance, and had to send back to civilization for a lot of new clutch parts. He got them in a week's time, but I had to ride over rotten pine-needle roads to the station to get them. If we both had been fools, one of us would have had to walk both ways, as the freight station was six miles from where we were waiting."

"What do you think will be the future clutch control, Doctor," said the anti-coaster rider. "Will it be foot or hand?"

"I think a combination of both," was my reply, "but most riders with lever control on their machines can operate the clutch with the left foot now by simply attaching a short bar to the lever. If the lever works forward to put in the clutch, reverse the collar on the cluch shaft and have it work forward to pull the clutch out. It's handy to be able to get a free engine when you have both hands on the grips, using the foot to pull the clutch out. A movement of 1/32 of an inch will disengage most clutches."

Having spent so much time in our discussion we gave up the idea of a climb for that day. Accordingly, we all started for home, dropping the rider with the disabled brake at the next agency, and reached the club in time to clean up and go off to dinner.

DIX OBTAINS CUT IN TOLL

LOCAL F. A. M. Commissioner C. F. Dix, of Stockton, N. J., reports that through his efforts as a Federation official he has obtained a cut in the bridge toll charged at Center Bridge. This structure spans the Delaware River between Stockton, N. J., and Center Bridge, Pa., and is on the regular route between Trenton and Delaware Water Gap. The rate of toll was five cents for many years, but from now on it will be two cents.

In addition to obtaining the new toll rate Mr. Dix has found time to sell seven twin Indians and one single so far. His agency is located on North Main street, Stockton, and his repair shop is on the F. A. M. registered list. He states that club affairs in his district are receiving a new impetus, and that he expects to launch a new F. A. M. organization in Flemington in the near future.

FROM Advertising Manager Frank L. Valiant, of the Miami Cycle & Manufacturing Company, comes the interesting photograph reproduced above and the following letter:

"New Haven, Conn., now boasts a basketball team composed of girls who are also motorcycle enthusiasts, and the picture shows them ready for a recent game in which they added to their string of victories. The team has won thirteen out of sixteen games played during the last season, and its fair members are now turning their attention once more to the alluring single-tracker. The team is captained by Miss Grace C. McAllen, who is in the center of the group, holding the ball. The young chap in the background coaches the team."

COX FURNISHED A THRILL

DENVER, COLO.—While riding a one-mile exhibition against time at the Tuilleries Motordrome on May 4, Jim Cox, a local star, furnished a thriller that was not on the program. His machine caught fire and although riding at a mile a minute, Cox retained his presence of mind, turned off the power and did a circus hand-stand on one side of the machine, coming off the track uninjured. His machine was destroyed. Cox later picked up another rider's machine and figured in the most spectacular race of the day.

Summaries: One mile time trials, professional, 61 class—Bert Bruggerman, Indian, 43⅗; L. E. Bowen, Merkel, 45⅖; G. R. Stokes, Excelsior, 43⅕; L. Fleckstein, Indian, 43⅗, and Curly Fredericks, Excelsior, 41⅖.

Three-mile professional, stripped stock, 61 class—L. E. Bowen, Harley-Davidson; Jim Cox, Indian, and L. Parkhurst, Excelsior. Time, 2:37⅘.

Two-mile open professional, 61 class—L. Fleckstein, Indian; Bert Bruggerman, Indian, and L. E. Bowen, Merkel. Time, 1:34⅗.

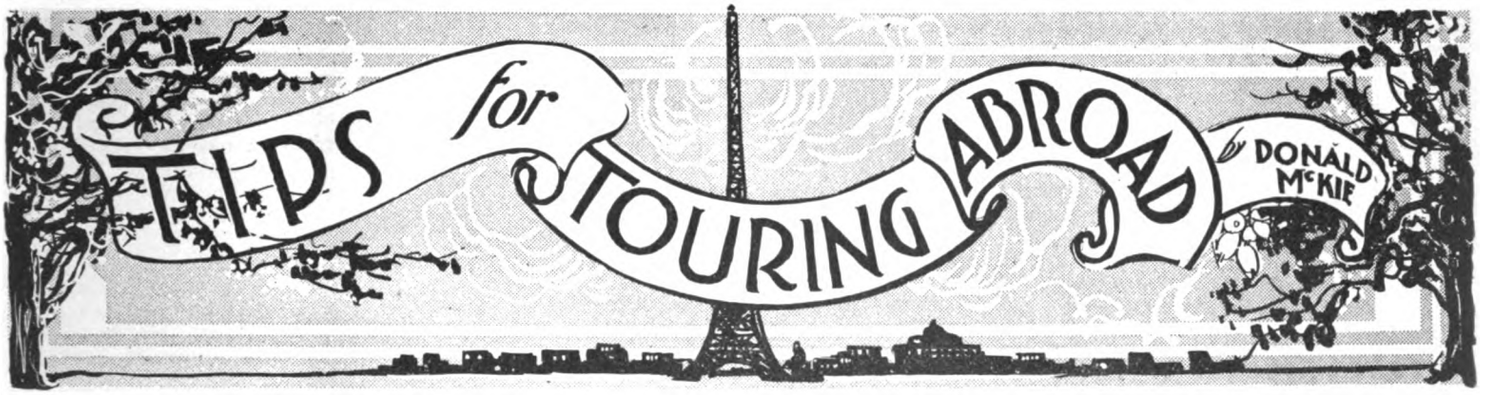
Two-mile match race, professional, 61 class—Curly Fredericks, Excelsior; G. R. Stockes, Excelsior. Time, 1:30⅗.

SPECIAL CARS TO DENVER.

ARRANGEMENTS are now being made by MOTORCYCLE ILLUSTRATED for a special car, or cars, to carry motorcyclists, trade representatives and F. A. M. officials from eastern districts to the coming national assembly of the F. A. M. in Denver. In all probability the Twentieth Century Limited will be used out of New York, leaving on Friday afternoon preceding the opening of the convention. From Chicago the trip will be continued over the Rock Island line to the Mile-High City, where the travelers will arrive on Sunday afternoon. This schedule will allow several days for sightseeing in and about Denver before the opening of the convention program. The fare to Denver and return, including the excess on the Twentieth Century, will be about $75.

All who contemplate making the trip are requested to communicate with J. Leo Sauer, 51 Chambers street, without delay, so that some idea may be obtained of the accommodations that will be required.

Digitized by Google



HAVING devoted nearly five months of 1912 to a motorcycle tour of Europe, I feel fairly competent to offer a few hints for the rider who contemplates such a trip, and at the suggestion of the Editor I have embodied them in the article which follows. I do not mean to imply that I am going to analyze the whole subject of European touring by motorcycle—far from it—but I do believe that I can give practical assistance to those motorcyclists who are now laying plans for their first journey abroad. Foreign touring is not as complicated as some riders believe, but I must admit that there are many occasions on which the traveler will benefit by having a little advance knowledge.

To begin with, the prospective tourist should give much thought to mapping his route. A main line of travel should be decided upon, with a few options that can be allowed if it is found necessary to change the plans for any reason. Much depends upon this preparatory work, for the success of such a trip is usually in proportion to the number of interesting points that can be visited along the line without greatly increasing traveling expenses. In connection with the route-mapping let me warn you against working from a railroad map. Most of them are unreliable, and at best they do not give you all the information you need.

ADVANTAGES OF CLUB AFFILIATION.

It is always best to get in touch with a good touring club, preferably in England or France, and inquire about maps covering the route you have in mind. The leading clubs in these countries keep in touch with touring conditions practically the world over, and it is therefore a simple matter for them to help you. Besides, the fees are nominal. But before discussing this phase of the situation more fully, let me give a few pointers relative to the crating and shipping of machines and the obtaining of passes to permit of travel from country to country. We will thus be dealing with our problems in the order in which they naturally present themselves.

The crating for our party was done by the Hendee Mfg. Co., but it is hardly fair to expect this service from manufacturers. Most tourists go abroad just when the factories are busiest, and the crating and shipping of machines consumes valuable time. It is more reasonable to turn the motorcycles over to a forwarding company to be crated and sent abroad. The American Express Company, for example, is in a position to take over this work. If the touring party rides to New York City it will be a simple matter to call at the company's headquarters, 65 Broadway, and make all arrangements; if the machine or machines must be forwarded to the metropolis in advance the express company officials can be instructed by mail. Having such matters to deal with regularly the express companies know just what steps to take concerning the return of the motorcycle to this country, and they will steer the rider clear of trouble with the customs officers. Keep this last tip in mind. It may save you time, worry and money.

THE INTERNATIONAL TOURING PASS.

Having made arrangements to ship his machine the tourist should next consider the pass problem. If the motorcyclist will visit England first he will be able to obtain an International Touring Pass without very much trouble, and at a cost of approximately $7.50. These passes can also be had in Paris and Berlin, but it is much simpler to obtain them in England, provided the traveler is going to strike that country before doing any continental riding. I would suggest writing the Auto-Cycle Union, 89 Pall Mall, London, S. W., relative to the pass. The organization will be quite willing to take up the matter.

Our party did not go to England first, and no International Pass was obtained. We risked getting through without difficulty and managed to do it, but as a rule I consider it safer to have the pass. Our A. C. U. cards did not carry any direct weight at the frontiers, but I noticed that where the customs officers were at all inclined to let us pass the cards appeared to strengthen our case. They proved at least that we were members of a motorcycle organization and that seemed to impress the officials somewhat. In no country that we visited was the Auto-Cycle Union listed among the clubs that were extended the privilege of a touring period without tax, and for that reason I do not consider the A. C. U. the strongest foreign body with which to be affiliated. In my opinion it would be better to join the Cyclists' Touring Club or the Touring Club of France—better both, as the cost is nominal. In England, of course, the A. C. U. is of great assistance, so it is well to affiliate with it even though it may be of small value on the continent.

A touring membership in the A. C. U. costs $1.20, and the member is entitled to the Associates' clubrooms in the handsome home of the Royal Automobile Club in London. There the tourist will have every comfort, and all the automobile and motorcycle publications will be found on file.

PASSING THE SWEDISH CUSTOMS.

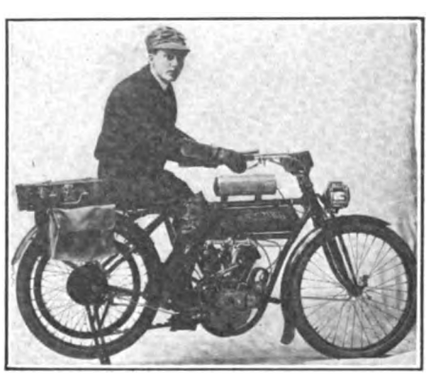
Our first dealings with foreign customs officers were at Malmo, Sweden. Here we had practically no trouble. The fee was low and the officers were quite reasonable. Then came Denmark. Motorcyclists here have to pass the Free Harbor, at Copenhagen. It is necessary to visit the government office where the rider will be furnished with a ticket allowing the motorcycle to pass free of duty, provided it is explained that the machine is not for sale and is for the owner's use exclusively. In the same way new tires and parts may be brought in. After passing the Free Harbor the rider will find it necessary to visit police headquarters and obtain a driving license and number plate, the latter to be carried on the front of the machine.

Then the machine is inspected by the fire department officials to ascertain whether it may safely be driven through the streets. We avoided the latter ordeal, as a motorcycle dealer in Copenhagen arranged matters for us. The cost of the Danish driving license and plate is 81 cents. This is all the government expense attached to touring by motorcycle in Denmark. Gasoline is obtainable in a great many stores, as well as at garages and chemists' shops. The regular price is about 40 to 45 cents per gallon, but it may be necessary at times to pay a little more. It is sold by the liter, nearly a quart, or by the kilogram, 2.2 pounds. The roads throughout Denmark are simply wonderful.

We next entered Germany. Our dealings

A PLAY BY MOTORCYCLISTS

DEVOTEES of the motor two-wheeler will be interested in the announcement that "The Ghost Breaker," a thrilling melodrama now running to big houses in the Lyceum Theatre, New York City, was written by two motorcyclists, and that the plot was almost entirely worked out on a motorcycle trip from Chicago to New York. Charles W. Goddard, co-author with Paul Dickey, who rode a Flying Merkel 6 from the Windy City to New York a year ago last April, credits the whole achievement to his machine and the stimulus of country roads.



The photograph shows Goddard on the machine with which he made the Chicago-New York trip.

Digitized by Google

here were not quite so smooth as they might have been, but there was no trouble worthy the name. Before leaving home we had obtained from the Secretary of State an official paper stating that we were duly licensed there, and we later had this paper O. K.'d by the German Consul in our capital city. On presentation of this paper at the customs office in Germany we were furnished with an escort who took us to police headquarters, and after some wrangling we were supplied with a license that was good for thirty days at any time during one year. If the tourist leaves the country the card is stamped, and it is stamped again if he returns so that the officials make sure that his total stay is not longer than thirty days. If a rider stays over this limit he must take out a permanent driving license. When the rider leaves the country and attempts to re-enter at another point the officials will probably hold out for a deposit, but this should not be paid. The rider has his thirty-day license and cannot be compelled to post a deposit. Germany's roads are excellent.

In Austria we were at first turned down. The officers could not speak English and we were equally helpless with their language, but by putting up a stiff pantomimic argument we finally got through free, with the understanding that we would not leave the country at their station. We had no trouble getting out of Austria. Touring there cost us nothing as far as the government was concerned. Gasoline is higher there than in Denmark or Germany; it costs from 40 to 65 cents a gallon, according to the disposition of the garageman and how prosperous you happen to look. In this country drive on the left side of the road exclusively. The highways are fair.

Next came Switzerland. We tried to get in without putting up a deposit but found it impossible. However, the amount demanded was only $5.60 for three machines (one of our party of four rode tandem), so we left the deposit. It was returned when we left the country. Roads satisfactory.

IN ITALY AND FRANCE.

Going into Italy we were stopped by a crowd of customs office boys who inquired if we had cigarettes. One of our party had twenty, and the boys took five as toll. When we struck the real customs officers the problem was a little knottier. We argued for several hours and finally had to pay $16.50, which was returned when we left the country. We found the roads either very good or very bad, mostly the latter. The gasoline prices were about the same as those of Austria, but fuel was harder to find. The quality was low.

France is an ideal country for touring. We paid 12 cents for a government stamp to take us in. Gasoline was cheaper than in any country we had visited previously, and the people seem to welcome motorists. The roads are good, and the towns appear to be farther apart than in most other European countries. The rule is to drive on the right side of the road, a notable improvement over the custom in Italy, where travelers occupy the roads without regard for the rights of others who may wish to use them.

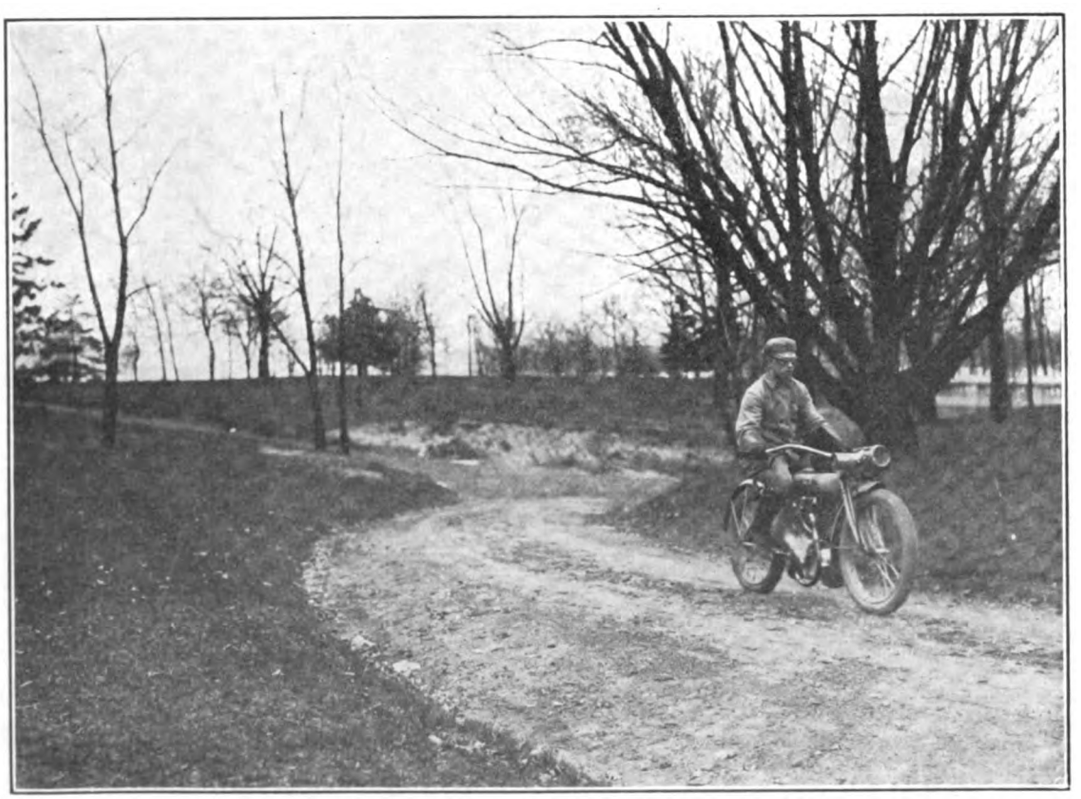
From France we went to England. We were somewhat confused when we landed on John Bull's soil. At the boat the tourist will usually be met by a guide of the Royal Automobile Club who will give him advice. If the rider is unfortunate—as I was—and has to ship to London, he should go to Spring Gardens, near Trafalgar Square, and pay $1.20 for registration and the same amount for a driving license. He should then go to a garage and have the required number plates made, the number having been specified in the registration blank.

PREPARING FOR THE HOMEWARD TRIP.

There is a government tax of about $6, but it seems to be quite the custom among tourists to ignore this. I believe November is the month for collecting this tax, and the tourist is not likely to be held up for it at other times. The roads are excellent, but full of curves, and the tourist will do well to keep a sharp lookout. Accidents are quite likely to happen when vehicles come onto the main roads from cross-roads, and the thick hedges help to confuse the visiting rider. Road signs are plentiful and the traveler can hardly become lost. Gasoline comes in sealed cans of two gallons each and the regular price is 36 cents per Imperial gallon, which is equal to about one and a quarter of our United States gallons.

From England we took ship for America and had no hitch. It is only necessary to follow closely the instructions given by the forwarding company. If these are not adhered to there is certain to be trouble. The rider may be delayed and even called upon to pay duty on his machine.

MEMBERS of the Fruit Belt M. C., of Benton Harbor, Mich., recently made a run to Niles by way of Eau Clair and Dowagiac.



DAY by day the solitary motorcyclist is becoming a more uncommon sight on the roads and the scout of a few years ago is giving way to the club squad, the tandem and the sidecar party. Still there are a few self-sufficient enthusiasts who are content with simply the comradeship of a trusty mount, and for these the lure of the open road is ever strong. The accompanying photograph shows an Ohio motorcyclist making the most of what Nature offers along the roads in his district.

TOGS for the RIDER

ONE of the most satisfactory indications for the 1913 season is a lively interest among motorcyclists in the problem of suitable costuming for the road. Heretofore this phase of the situation has been treated with considerable indifference, and as a result devotees of the sport have missed innumerable opportunities to offset the opinion entertained by most non-riders that motorcycling and reasonable cleanliness are incompatible. But we are coming to a more sensible view of the rider's togs. The F. A. M. has placed its stamp of approval upon a standard style of uniform, and the tidy motorcyclist in his comfortable Norfolk riding suit is a pleasant and more familiar sight on the roads.

After all, the choice of a riding costume does not present a knotty problem. The thoughtful motorcyclist simply demands three qualifications—neatness, comfort and serviceability. He does not expect Beau Brummel fashions, nor would he care to be seen in them if they were available. He is inherently practical, a utilitarian. In no instance would he sacrifice service-giving for mere appearance, but when the two may be combined (and they may) he is satisfied.

SELECTING A MODEL UNIFORM.

These facts were kept in mind by the committee that selected an official F. A. M. uniform not long ago. Samples were inspected—many of them—and three grades of material were finally approved. The color, dark olive, and the style are standard, but two materials are offered for summer use and one for winter. The summer goods are Roseberry and a material known as Shelter Tent, and for cold-weather service Fustian is recommended. The latter is similar to corduroy, warm, neat in appearance, and moderate in price. Roseberry is somewhat higher in price than the Shelter Tent material used for the summer suits, and the latter has the additional advantage of being waterproof.

Much depends upon the quality of the material used, but of almost equal importance is the actual make-up of the suit. Hence the F. A. M. specifications are very explicit. They are based upon the practical experience of veteran roadsters, the aim being to avoid frippery and still provide every adjunct of real value to the wearer. For this reason the motorcyclist may feel safe in following the suggestions offered, even though he may not be a Federation member or inclined to invest in one of the official uniforms.

A coat of Norfolk style is recommended, with flapped pockets and a tab collar so that the latter may be buttoned closely around the neck. Four strap pleats are specified, two in front and two in back. A suitable belt is to be provided, and the cuffs of the coat are to carry tabs so that they may be buttoned around the wrists in dusty or rainy weather. The coat must have at least one breast pocket and one inside pocket. Special attention is called to the necessity for having all suits full size, as a riding costume that proves tight at any point cannot be expected to give either comfort or long service.

TROUSERS ROOMY AND REINFORCED.

The trousers are to extend well below the knee and may be either laced or buttoned. It is likely that riders in general will find the lacing a more comfortable and handy system than the buttons. The reinforcement of the seat should be extra wide and is to extend all the way down on the inside seam. Two side pockets are needed, two hip pockets and a watch pocket, and flaps are necessary on all except the pockets at the sides.

No reference is made to leggings in the report of the F. A. M. committee for the reason that there is a considerable difference of opinion as to the most desirable style of leg-covering. For summer use the writer has found canvas the most suitable legging material. It affords all the protection that is obtainable with a puttee or hip-length leather legging and is cooler. However, the best brands of leather leggings have now been developed to the point where they are very comfortable. They are made to fit the rider's leg and are thus tidy in appearance under all weather conditions. Some hip-length makes are furnished with a gusset so placed that it affords all the pliability that can be desired at the knee. While not generally favored for summer use the hip-length legging has a marked advantage in that it provides ample protection in case the rider desires to make a short trip without waiting to change from street togs to regular road costume.

No experienced motorcyclist will undertake a long trip without suitable gloves, and even on a short jaunt some kind of covering for the hands will be found quite necessary. For summer riding the gloves should be light in weight—but strongly made. A pair of ordinary kid gloves will be quickly placed in the discard, as motorcyclists who have used them know, and it is well to avoid extra expense and annoyance by obtaining reliable gloves at the opening of the season. At least one firm specializes on motoring gloves with ventilated backs, and the value of this feature will be quickly apparent on a long, dusty jaunt over summer roads. It goes without saying that excessive heat and water are enemies of leather, and while the best gloves will withstand these elements for a surprisingly long time it is just as well to protect them as far as is possible. The writer has seen a careless motorcyclist lay his gloves on top of a hot motor while making a hasty adjustment.

Dr. Bug—"What seems to be bothering you?"
Lightning Bug—"Ignition trouble."

GOGGLES AND THE CAP.

Too much importance cannot be attached to the goggles. Many seasoned riders pretend to look upon goggles as essential only to the novice, but this is a fallacy. The eyes of the five-season roadster are no more immune from dust, flying particles of road grit, etc., than those of the rider who is making his first trip. A foreign substance in the eye may cause trouble in more than one direction. The writer has known a hardened tourist to run amuck on the road with his machine simply because a particle of sand had entered one of his eyes and temporarily blinded him. Again, the irritation caused by such a particle may lead to continued eye trouble, if not immediately dealt with—and riders who will stop on a road trip to consult an oculist are rare, to say the least. So it is safest and most economical to buy a pair of goggles before entering upon the summer's riding—*and use them.* Pay no attention to the wily chap who inquires whether you are booked for a journey around the world in four days. He is a sarcastician of the most sarcastic dye. He would give the impression that only the globe-circling speedster requires eye protection, but he is wrong. Pass him a word of advice, and continue wearing your goggles.

Goggles should be adjusted to fit over the eyes as closely as possible without exerting undue pressure at any point. They should also have a gauze guard at either side to keep out dust and still permit of ventilation.

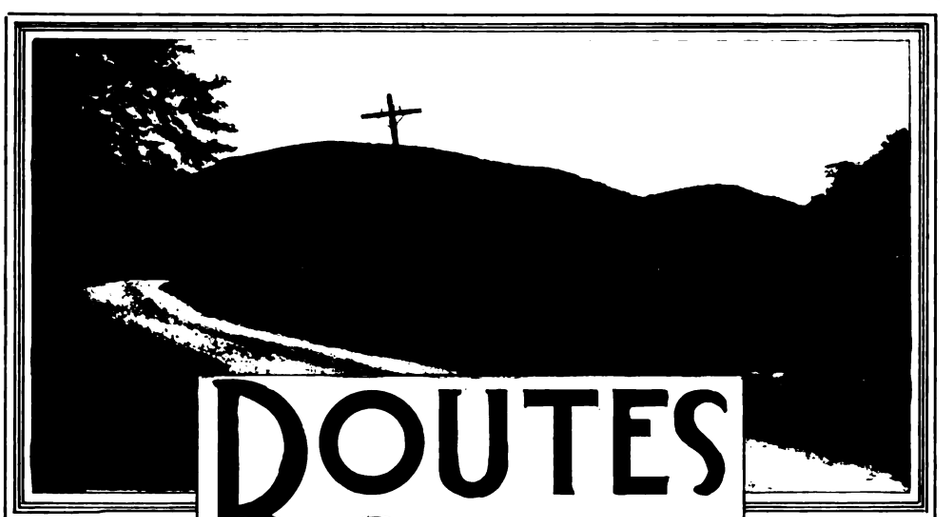
COAST to COAST ROUTES



ONE of the most significant phases of motor touring in the United States during the last year has been the rapid spread of interest in transcontinental routes, an interest enlivened by broad-gauge activities of good roads organizations and fostered by systematic mapping of the best available highways from ocean to ocean. Two years ago a 500-mile journey was regarded in the light of a notable achievement by motorcyclists; today the rider who contemplates anything more than a week-end outing is quite likely to turn his attention to a coast-to-coast trip. Thus are we demonstrating the forcefulness of the time-worn adage that ours is "a small world, after all."

In the front ranks of those who are laboring to familiarize tourists with transcontinental routes stands A. L. Westgard, the veteran pathfinder of the American Automobile Association, from whose field notes were made the extensive improvements featured in the map that accompanies this article. This map is fresh from the press and embodies easily twice as much information of value to the transcontinentalist as the best previous offering of its kind. In a recent conversation with the writer Mr. Westgard, who is now preparing to leave New York City for his seventh cross-country trip, expressed satisfaction over the development of interest in transcontinental touring and told with a chuckle of how he had encountered a solitary motorcyclist in a barren district of Nebraska, a hundred miles from the nearest point at which a single-tracker could reasonably be expected to make its appearance.

OF INTEREST TO F. A. M. TOURISTS.

F. A. M. riders who are now laying plans to join one of the national tours to the Federation assembly in Denver will find much to interest them in the new transcontinental map. They are given a comprehensive view of the routes open to them, and even of the minor lines of travel by which they will be enabled to reach the cities from which the main touring divisions will start on the long trips to Denver. Motorcyclists within easy riding distance of Chicago will make that city their point of assembly, and experience little difficulty in mapping their route to the scene of the convention. It is likely that the Chicago division will be augmented by a creditable delegation of riders from the Indianapolis district, and by another squad from the vicinity of Minneapolis and St. Paul, to the northwest. The latter squad will find roads leading almost directly southward by which they will be enabled to join the Chicago party at Des Moines, and although a little hard going may be encountered on the way to the main touring line, it will no doubt be chosen in preference to the much longer route from Minneapolis, via Milwaukee and Chicago.

From Chicago the tourists may choose between two main routes to Omaha, and it is likely that the more southerly line will be followed via Davenport and Des Moines. In addition to affording better roads in general it is a little more direct than the upper route. At Omaha the touring division will no doubt be joined by a squad from the Kansas City district, although the main body of Kansas motorcyclists will proceed directly westward out of their State and reach the convention city via Pueblo and Colorado Springs. The latter tour will be conducted by the Kansas Short Grass Motorcycle Club, which is to combine its annual outing with the journey to the Mile-High City.

FROM OMAHA TO DENVER.

Westward from Omaha the route is fairly direct to the convention city, the greater part of it being over the Platte River road. It will be seen by reference to the map that there is an optional route across Missouri, and that two main routes also traverse Kansas, so that little trouble should be experienced by motorcyclists of these states who wish to organize small parties and make the run to Denver. By considering the schedule of either the Short Grass Club or the touring division from Chicago, satisfactory connections may be arranged for at half a dozen points on the lines of transcontinental travel. Plans are under way for the organization of a squad at Aberdeen, S. D., and these riders will probably join the Chicagoans and their friends at Omaha.

From the West and Northwest the routes to Denver will not be found so direct, but they will probably make up in scenic interest what they lack otherwise. Riders from the Northwest district can follow the Oregon Trail into Wyoming and strike the Overland Trail at Granger, from which point they may proceed via Laramie to Denver. It must be conceded that such a trip is likely to afford greater road variety than the average rider considers necessary to his perfect enjoyment of a tour, but what motorcyclists have done in the past they can do again, and it is quite possible that the Northwest will have a representative body of riders on hand when the roll is called in the assembly city.

Riders in Middle Pacific Coast territory are also confronted by a rather impressive trip if they desire to bestride their single-trackers into Denver, but the journey is by no means prohibitive. From the San Francisco district the run may be made to Carson City, and thence by the Overland Trail to Salt Lake City. An option may be taken from Ely, Nev., to Springville, Utah, but it is doubtful if there would be a great gain in actual mileage and the roads are likely to be more satisfactory on the upper route, through Salt Lake City.

A REGION OF GREAT SCENIC INTEREST.

Pacific Coast motorcyclists who have slated any long tour for the 1913 season will probably take advantage of the opportunity to attend the convention and at the same time enjoy an outing which promises wonderful returns in the way of scenic interest. Every mile of the run eastward from the coast holds out inducements for the rider in search of new road thrills, and it has been demonstrated that there are no sections of the route to Denver with which a well-behaved twin machine cannot cope. From the Southwest it will be noted that the Trail to Sunset affords a direct route to the convention city via Santa Fe, Trinidad, Pueblo and Colorado Springs, and it requires no great stretch of the imagination to picture a quad of riders from points

Digitized by Google

south of the Colorado line chugging into the Mile-High City in time for the opening of the F. A. M. program.

So much for the general possibilities of the new map as an aid to motorcyclists who wish to ride to the scene of the 1913 convention. Closer consideration of it will reveal a fund of practical information which may easily be adapted to the needs of the individual rider, or the special requirements of separate touring squads on their way to join main divisions.

The motorcyclist who is planning a coast-to-coast trip without regard for the F. A. M. convention will have his attention called to the fact that there are four main transcontinental routes open to him, the Trail to Sunset, the Overland Trail, the Midland Trail and the Northwest Trail, the last being the most recently mapped. Eventually there will probably be five distinct routes across the country, the fifth one being from the lower Atlantic seaboard states through Alabama, Mississippi, Arkansas (or Louisiana), Texas and New Mexico to Arizona, in which state it may join the Trail to Sunset. Little has been done to make this route available so far, but there are indications that it will feel the impetus of the Good Roads boom at no far distant date. When improved it will provide an ideal fall and winter line of travel to California.

THREE WIDELY DIVERGENT ROUTES.

With a view of affording the tourist a wide range of scenic characteristics and also to provide him with options that may be acted upon in keeping with the season in which his trip is to be made, the data which follows has been arranged to cover the Northwest Trail, the Midland Trail and the Trail to Sunset, traversing respectively the northern, central and southwestern tiers of states. The Midland Trail is chosen for description in preference to the Overland Trail because of the magnificent scenery which features it, and for the reason that a well-organized campaign is now under way to improve it. In addition it has the advantage of a fairly direct line of travel from ocean to ocean, being somewhat more desirable in this respect than the Overland route, which has heretofore carried the greater part of the limited cross-country traffic.

It is obvious that the Northwest Trail is suitable only for summer travel, and that owing to its more recent development it cannot be expected to afford anything like uniform conditions of travel. Late reports are to the effect, however, that the motorcycle tourist need not be balked by any of the roads on this route in good weather. It is in connection with this Trail that some of the most effective work of Pathfinder Westgard was accomplished during the last year, and it will be noted that the accompanying map gives much more detailed information than has heretofore been available for this swing through the rugged and picturesque Northwest.

The Midland Trail is suitable for spring and summer touring, but as the days shorten and sunlight becomes an asset rather than a menace the traveler will naturally turn his eyes southward to the Trail to Sunset. Thus he may range from the northern to the southwestern routes, under pressure of the seasons, and achieve a happy medium between the forbidding blasts of winter on the upper trails and the relentless blaze of the midsummer sun on the lower.

ON THE RUGGED NORTHWEST TRAIL.

The Northwest route was chosen from a careful analysis of the various possible trails from Lake Michigan to Puget Sound. It acquaints the tourist with the greatest wheat belt of the country in Minnesota and North Dakota; sheep and cattle raising, as well as copper mining, in Montana; lead mining in Idaho, and immense apple orchards and magnificent pine forests in Washington. It also affords the opportunity of visiting the two greatest gem spots in the United States, Yellowstone and Glacier National Parks, the latter not surpassed by any scenery of a similar nature in Switzerland.

Upon leaving Chicago, the route leads to Milwaukee, and traverses Wisconsin via Madison, the capital and university city, to La-Crosse, where it crosses the Mississippi River, and runs via Rochester through a rich agricultural region to St. Paul and Minneapolis. It continues northwest through Fergus Falls, crossing the Red River of the North at Moorhead into Fargo, N. D. From this city the course is practically due west through the state via Jamestown to Bismarck, the capital. Here a ferry takes the tourist across the Missouri River to Mandan. The country is now sparsely settled and the roads rougher. Some distance west of Dickinson, one enters the region known as the "Bad Lands of North Dakota," and in the very center of this basin of volcanic scoria, one crosses the Little Missouri River at Medora, either by ford or railroad bridge, according to the height of water.

The tourist enters the valley of the Yellowstone River near Glendive, Montana, and follows that stream, occasionally crossing or recrossing it by ferry or bridge, via Miles City, Custer and Billings to Livingston. Though the good-roads movement is making progress in this region, many stretches of rough going will be encountered. From Livingston an excellent road leads the 53 miles up the Yellowstone River, with its frequent narrow gorges, to Gardiner at the north entrance to Yellowstone National Park.

At Bozeman the route enters the Gallatin Valley, famous for its fertility, and at Three Forks the tourist will note where the Gallatin, Madison and Jefferson Rivers form the source of the father of waters, the mighty Missouri. Just east of Butte, the continental divide is crossed via Pipestone Pass, at an elevation of 6,950 feet. After a visit to the copper mines in Butte, and the Washoe Smelter at Anaconda, the largest in the world, the tourist proceeds via Deer Lodge and the canyon of Hell Gate River to Missoula. It is advisable to spend a day for a run over good roads down the Bitter Root Valley, famous for its cherries, apples and other fruit.

FOUR ROUTES ACROSS BITTER ROOT RANGE.

Where in 1912 no feasible route connected west from Missoula across the Bitter Root Range to Idaho, the route development work of the American Automobile Association has resulted in at least four routes being opened for 1913 travel: (1) The direct route via St. Regis to Wallace; (2) the Thompson Falls-Murray route to Wallace; (3) the Thompson Falls-Sand Point route to Spokane; and (4) the Flathead Lake-Kalispell (with connection to Glacier National Park) Libby-Sand Point route to Spokane. These routes are all wonderfully scenic.

The run across the Flathead Indian reservation,

Scene on Flathead Indian Reservation in Montana.

dotted with tepees, and along the shores of Flathead Lake to Kalispell, will prove very interesting to tourists. From Kalispell across the fertile plain to the foot of Kootenai Range, and along the gorges of the Flathead River a good road leads to the foot of McDonald Lake in Glacier National Park.

At Wallace, Idaho, the tourist is in the heart of the great lead-mining section. He proceeds from here through the Fourth of July canyon and along the shores of Coeur D'Alene Lake to the city of the same name, whence there is only a short ride over "The Great Apple Way" to hustling Spokane, the "Queen of the Inland Empire." Upon leaving the system of fine macadam roads some 25 miles west of Spokane and especially if the season is dry, the tourist plows through 70 miles of deep dust, of a volcanic nature, to Coulee City.

Through Grand Coulee and Moses Coulee the road is better to Waterville, and enters the valley of Columbia River through Coberly Canyon. From Wenatchee, located in the heart of a region of great apple orchards, the route leads up the Wenatchee River and Peshastin Creek via Blewett Pass over the Wenatchee Mountains. This Pass is very rough with some very steep pitches.

Emerging from the Pass, the going is good in the valley of the Yakima River through Cle Elum and excellent through Easton to Lake Keechelus. A new state road is being built along the east side of the lake, but if not finished the tourist will find a good ferry available. From the north end of the lake begins the ascent of Snoqualmie Pass through the Cascade Range. The ride up this steep pass and down the other side will long linger in memory both by reason of its execrable road surface and beautiful scenery. The route crosses at an elevation of 3,127 feet, and traverses a primeval forest, untouched by fire or axe, where towering pines of prodigious girth shut out every ray of sunlight. Miles of rotting corduroy make the going slow and precarious, but better conditions are promised in the near future, as improvements are scheduled. From the foot of the Pass to Seattle are all good roads.

FOLLOWING THE MIDLAND TRAIL.

It must be admitted that as a transcontinental route the Midland Trail has heretofore been an entirely unknown quantity, but it bids fair to rival if not outstrip all its competitors by reason of the strong efforts put forth by the Midland Trail Association, an organization formed for its improvement, with headquarters at Grand Junction, Col.; and also for the reason that it pierces the Rocky Mountains in a region offering the most magnificent scenery. In addition, it is the shortest of all the standard routes.

Unlike its rivals, which connect at Chicago with the many good routes from the Atlantic Coast, the Midland Trail connects at St. Louis with the historic old National Highway via Terre Haute, Indianapolis, Columbus, Wheeling, Pittsburg, Philadelphia and New York, or Cumberland, Baltimore and Washington. Its old historic association remains through Missouri, where it follows the Boon's Lick Trail and the old Santa Fe Trail to Kansas City, marked through the state with red, white and blue bands on telephone poles.

From Kansas City it follows the Golden Belt Route, marked with yellow bands on telephone poles and fence-posts, traversing the state of Kansas via Topeka, Abilene, Salina, Hayes and Colby to Burlington and Limon, Colo. So far the roads may be characterized as good, when dry. Two options are available between Limon and Wolcott, one called the "Lincoln Highway," marked with red, white and blue bands, via Colorado Springs, Canyon City, Buena Vista, Leadville, across the Tennessee Pass (10,000 feet elevation), and over the Rocky Mountains to Wolcott; the other via Denver, Golden, Idaho Springs, across the Berthoud Pass (11,000 feet elevation), over the Rocky Mountains, and via Fraser, Kremmling, Gore Canyon and State Bridge to Wolcott.

From Wolcott the way is via the splendid canyon of the Grand River, Glenwood Springs, Rifle and Debeque to Grand Junction, a beautiful ride all the way. Grand Junction, at the confluence of Grand and Garrison Rivers, is located in an irrigated valley famous for its peach and apple orchards.

IMPROVEMENTS UNDER WAY.

West of Grand Junction, via Mack, Col., and Cisco, Utah, Green River, Woodside, Price, and Provo, the route has up to this time been very difficult for motor touring, but the states of Colorado and Utah have combined upon a program of improvement from Denver to Salt Lake City along this route, which guarantees that it will be open for traffic with reasonable comfort all the way by July 1, 1913, and continual improvements effected until it will be in splendid shape throughout. Being a most scenic route all the way from Denver to the Mormon Capital, it will no doubt draw a large proportion of future transcontinental traffic.

Four different options have been surveyed through the desert section, between Salt Lake City and Ely, Nev. Though the interested authorities have not yet made a final choice of the route to be scheduled for improvement, it is probable that a choice will be made during the summer of 1913. In the meantime all the optional routes have rough stretches, though entirely feasible with the exercise of ordinary care. No doubt the Overland and Midland Trails will coincide over this stretch. Inquiries should be made in Salt Lake City, during 1913.

Around Ely are located many copper mines which will prove interesting to tourists. Unlike the Overland Trail, which in traversing Nevada crosses many mountain ranges, the Midland Trail veers southwesterly; and while it crosses a couple of low ranges, it dodges

Digitized by Google

around the base of most of them. It affords uniformly good natural surface conditions, mostly disintegrated granite. Tonopah is an active silver mining "camp" and Goldfield a gold mining "camp," though these so-called camps are really towns. From Goldfield the route leads via Lida and across the California State Line into Deep Spring Valley. The going is still uniformly good across White Mountains through Westgard Pass into Owens River Valley, with magnificent views of the Sierra Nevada Mountains towering precipitously just across the valley floor.

At the town of Big Pine, where the Midland Trail joins the El Camino Sierra route, it splits into two branches. One leads north via Bishop and Bridgeport, and at Lake Tahoe joins the Overland Trail on its way via Placerville to Sacramento and San Francisco. The other branch leads south through Owens Valley, skirting the very base of the Sierras, with Mt. Whitney towering above them all. It passes Owens Lake and for many miles parallels the Los Angeles aqueduct. It edges the Mojave Desert, and via Mojave, Palmdale, and Mint Canyon connects at Saugus with the magnificent road into Los Angeles. The Midland Trail is truly a scenic route.

THE PICTURESQUE TRAIL TO SUNSET.

The route of the Trail to Sunset has been carefully and deliberately chosen from a strictly touring standpoint, offering varied scenery and numerous points of historic interest. Starting at Chicago, the great meeting place of travel from the Eastern States, it traverses Illinois on good gravel roads to the Mississippi River, crossing same into Davenport, Iowa. From Davenport to Omaha it uses the River-to-River Road, graded and marked with a white band on telephone poles throughout its length.

Leaving Omaha, the route swings southward in the Missouri River Valley to Kansas City, where it enters the historic Santa Fe Trail, following same for the most part across the entire length of Kansas.

From La Junta, Cal., the route strikes southwest through the southeast corner of Colorado, still following the Santa Fe Trail to Trinidad, thence across the beautiful Raton Pass into New Mexico.

It follows closely the A. T. & S. F. R. R., and, still on the Santa Fe Trail, through Las Vegas to Santa Fe, traversing large cattle ranges and passing Mexican adobe houses and Indian pueblos. From Santa Fe to Albuquerque the route goes through several Indian towns. At Albuquerque two options to Springerville, Ariz., are available. The best road surface will be found at present on the route leading south from Albuquerque and crossing the Rio Grande at Socorro, thence west via Magdalena, San Augustine Plains, Datil Mountains and Rito Quemado to Springerville. But the most picturesque route crosses the Rio Grande at Albuquerque and leads west, necessitating the fording of the treacherous Rio Puerco, to the Indian pueblo of Laguna. Some miles beyond, at the small station of McCarty, the tourist will leave the railroad, not seeing it again for several hundred miles.

Travelers along this route now enter a country until two years ago practically unknown to tourists, but affording some of the most unusual scenery in the United States. The route is very rough and passes malapais (lava) beds, and skirts towering, many-colored sandstone cliffs. It touches the Laguna Salina de Zunia Lake, so penetrated with salt that it is asserted no one can sink in it. From the Mormon settlement of Springerville, Ariz., the route traverses the White Mountain National Forest, crossing the plateau of the White Mountain, 9,000 feet above sea level.

A visit is made to Fort Apache, a cavalry post of the United States Army, and then the route leads across the Natanes Mountain range, dipping into the desert near the Gila River at Rice in the San Carlos Reservation. It passes through the copper mining town of Globe, and thence over the magnificent state road leading via the famous Roosevelt Dam and down the splendid Salt River Canyon, dotted with giant cactus, to Phoenix, the capital of Arizona.

Between Phoenix and Los Angeles two routes are available; both are shown on the accompanying map. One leads the tourist via Yuma and San Diego, and the other is known as the Phoenix-Ehrenburg-Mecca route. The former route is 150 miles longer than the latter, but the roads are better and plans are under way for improving them still further.

MORE ACTIVITY NEEDED.

F. A. M. state commissioners throughout the country have recently received from Secretary G. B. Gibson copies of a circular letter requesting a broader spirit of co-operation and greater activity than have marked state operations in the past. State commissioners are invited to communicate with the secretary and to offer any suggestions possible relative to the development of Federation interests in their territory. The letter also calls attention to a recent decision of the F. A. M. Board of Directors that all printing of the organization shall be done under the supervision of Secretary Gibson. This action has been taken to standardize the stationery and simplify matters for the state officials. Some time in June each commissioner will receive from the secretary the credentials for the delegates to be sent from his state.

MY OLD CHUGGER.

OLD Squire Brown sez life's a fizzle, an' the things we most enjoy all are empty as a bubble. "Sure's you're born," sez he, "my boy. Things we need are someone else's —what we have ain't worth a durn, 'ceptin' fer to bring us trouble, an' we've sure got that to burn. Misery's our next-door neighbor, war an' famine may be near, so you can't blame me fer statin' life is empty—yessiree, an' drear!" Them's his words, but I ain't quakin—I can snicker, same as you—while I've got my good old chugger an' a kindly friend or two."

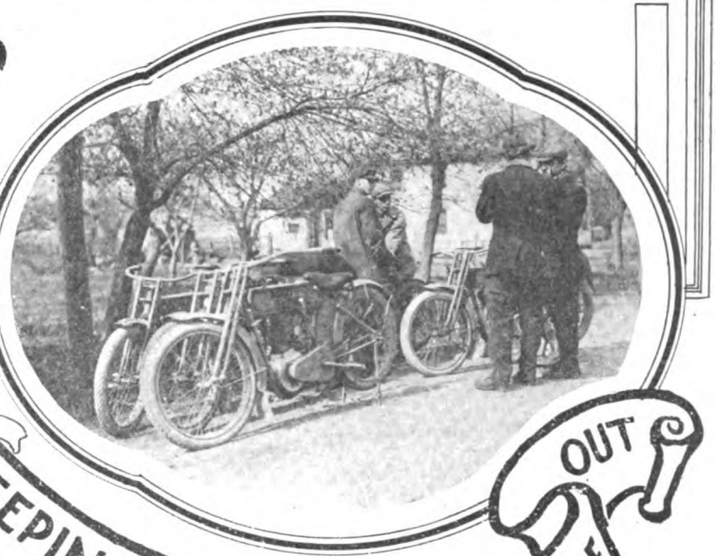
TIRES

The Timely Tipster

A FEW HINTS ON KEEPING THE AIR IN & TROUBLE OUT



ON returning from a Saturday afternoon jaunt into the country last week I decided to ride around to our club headquarters with a view of lining up a few of the boys for a run on the following day, and I was rewarded by finding half a dozen riders draped over their machines in divers grotesque postures at the curb in front of our official stamping-ground. When I was still fifty yards distant I became aware that an argument was under way, and as I pulled up beside the group one of the seasoned roadsters turned to me a bit excitedly with the greeting: "You're just in time to help me impart a little useful information to this gang. I've been telling them that their tire troubles——"

"Halt and give the countersign," I interrupted, raising a pacificatory hand. "I don't want to argue about tires. All I want is a promise that some of you folks will be on deck to go out with me tomorrow for a——"

"That'll come later," broke in the seasoned roadster. "But before we talk about anything else I want you to back me up in saying that fifty per cent. of all tire troubles are due to improper inflation. I made a remark to that effect a short time ago and this collection or barbarians fairly landed on my neck. What about it—am I right or wrong?"

"You're wrong," I answered. "You should have said that at least seventy-five per cent. of all tire troubles are creditable to careless inflation."

The veteran turned to the group with a satisfied smile. "I knew I had the right dope," he exulted, "for I have been poling up on tire information of late, and I notice that most of the prominent manufacturers credit at least fifty per cent. of all tire dissatisfaction to under-inflation. If a rider insists upon using his tires when they are so soft that they flatten noticeably under the load he is getting in line for trouble. I know that from personal experience. Why, it stands to reason that a soft tire is subjected to more kneading and twisting and grinding than it is ever intended to withstand, and if that sort of thing is continued for a short time it is certain to play havoc with the casing.

"What's more," continued the veteran, "no rider can guess at when his tires are pumped up to the proper pressure. He must use a tire gauge. He can prod the casings with his thumb and thump them with the heel of his shoe until dooms day and he won't have anything but a vague idea of the pressure. But a good tire gauge will do the trick in a few seconds, so there is really no excuse for taking chances. More than once I have been ready to swear that my rear tire held a pressure of fifty or fifty-five pounds when as a matter of fact the pressure was less than forty-five pounds. If I had ridden with the tire in that condition I would have been borrowing trouble.

"I find that the proper pressure for a 2½-inch tire is fifty pounds, and that sixty pounds is required for a 3-inch casing. In other words, the pressure should be twenty pounds to an inch of tire. Many tourists who subject their tires to the hard going of country roads never give a thought to the matter of inflation as long as the rim does not bump the ground. Is it a wonder that we hear them growling about tire mileage? The trouble is not with the tires, but with their users in nine cases out of ten.

"While I was over in Pennsylvania last summer," went on the veteran, warming to his subject, "I saw a motorcyclist bumping along on a rear tire that let the rim down hard every time an inequality in the road was encountered. We happened to pull up at the same garage and I made it a point to examine his rear casing. It was in awful condition, and the worst was yet to come. I asked him why he did not pump the tire up to the proper pressure and he replied that he could not see the use in buying pneumatic tires if they were to be pumped 'as hard as a stone.' And he is not the only rider who feels that way about it, unfortunately."

REGULAR TIRE INSPECTIONS.

"I can't help agreeing with all that has been said," I remarked, "and while we are on the subject of tires I am going to offer a suggestion or two myself. Assuming that the rider starts the season with his tires in good condition there is no reason why he should have any trouble with them. He should be careful in the beginning to have tires large enough to meet his requirements. I advise the use of a 3-inch tire on the rear wheel and a 2½-inch casing in front. With this equipment the rider may be certain that he will not overload his tires, and all that is necessary is proper inflation and regular inspections.

"The inspections are needed to guard against small cuts being enlarged to the point where they cause serious trouble, and to permit the rider to make little repairs from time to time. If a motorcyclist will examine his tires, say every week, he should be able to head off road trouble and heavy bills. It is cheaper to doctor tires than to buy new ones. I find, too, that it pays to follow the advice of the tire manufacturers concerning the use of soapstone or talc. There is considerable friction between the casing and the inner tube, especially on a long continuous run, and soapstone—acting as a rubber lubricant—will do much to relieve this. It should be used moderately, but it is a good plan to keep some between the cover

A YOUNG FLORIDA RIDER.

HORACE CLARK, a member of the younger squad of motorcyclists of Green Cove Springs, Fla., is shown in the accompanying photograph on his 1913 twin Harley-Davidson. Clark writes that he makes many long trips over the sandy roads of Florida, but has little or no trouble in negotiating them.

Digitized by Google

and the inner tube at all times. It's good policy."

"Right you are," agreed the veteran, "a little soapstone inside the casing is as beneficial as a little road grit is harmful. Let us keep the latter fact in mind as well as the former. A few grains of sand, or small particles of road crust will cause all kinds of trouble if permitted to creep in between the casing and the inner tube. For this reason too much care cannot be taken in replacing a tire after road repairs. The rider should be certain that there is absolutely no foreign matter in the cover before it is put on.

"It is not the occasional puncture that disgusts a motorcyclist with his tire service," continued the old roadster, "but the gradual breaking down of the whole casing in such a way that there is nothing to do but throw it on the scrap heap. This breaking down is directly traceable to neglect on the part of the rider. Instead of waiting for serious tire troubles the rider should attend to the little ones and the breaking down process will be indefinitely delayed.

"Tires should be kept away from heat and oil; these are deadly enemies of rubber and will help to undermine the strength of the casing. Care should also be taken to see that rims are in good condition, as if they are bent and dented they are often responsible for rim-cutting of the tires. I don't say that the tips we have given you will meet all tire emergencies on the road," said the veteran, turning to the little group of doubters, "but they'll help some if you observe them carefully. Buy tires large enough, keep them pumped hard enough and inspect them often enough and you'll come mighty close to solving the mileage problem."

Newarkers Ready For Two-Day Run

ARRANGEMENTS for the two-day endurance run of the New Jersey M. C., of Newark, are about complete. Leaving Newark at 5:30 a. m. on May 30, the riders will proceed to Delaware Water Gap by way of Hackettstown, a distance of 70 miles. The run continues from the Gap over Mt. Pocono to Scranton, where the riders will make an hour's stop for lunch and then proceed to Waverly, Lennox and Binghamton. After a short stop at this point the party will continue to Unadilla, 44 miles distant. The night control is located in this town, arrangements having been made for accommodations at the Griffin Hotel.

Starting at 6 a. m. the next morning the contestants will begin the hardest stretch of the run, which is over the 100-mile course to Kingston. Not less than 75 miles of this stretch is over dirt roads, seldom used for anything but farm trucking. From Kingston the route passes through Newburgh and Tuxedo to Suffern, 70 miles to the south. Leaving Suffern the riders will make the last leg of the run to Newark, a distance of 30 miles from Suffern. They are scheduled to reach Newark at 4:30 p. m.

With the exception of the 75-mile stretch of poor roadway between Unadilla and Kingston the run should prove ideal. The trip will be made regardless of weather conditions. Checking stations will be located at Hackettstown, Scranton, Binghamton, Unadilla, Kingston and Suffern.

The chief prize offered for the run will be a silver loving cup, 16 inches high, donated by T. C. Cornish, Newark Yale agent, as a manufacturer's trophy. Teams of three riders each, representing the Indian, Yale, Merkel, Excelsior, Harley-Davidson, Emblem, Pope and Henderson machines, will compete for this trophy. The Yale team, piloted by Wilmer Stevens, the club's crack endurance plugger, has won the trophy for the last two years.

BILLY ROSE AT WORK

WILLIAM ROSE, or, as he prefers to be known, "Wild Billy" Rose, the motordrome artist, of Savannah, Ga., opened his season with the Herbert A. Kline show at Flint, Mich., on May 10. His itinerary includes the Northwest, Canada and the Pacific Coast. As in previous years, Rose will ride an Indian in his whirls on a small saucer.

Fifty-Four Riders Finish Double-Century on Time

Invincibles Lead Eighty-Four Aspirants for Endurance Honors Out of Brooklyn, But Thirty Fall Behind the Schedule—Minor Spills Enliven Run on Long Island, But No One Is Seriously Hurt.

BROOKLYN, N. Y.—The second annual double century run of the Invincible Motorcycle Club was held Sunday, May 4, over Long Island roads. The route led from Bedford Rest, Brooklyn, via the Merrick Road, to Southampton, where the first checking control was located. From Southampton the route led back to Quogue, then across Long Island to Riverhead, where the dinner stop was made. The return journey was laid out along the North Shore, with checking stations at Port Jefferson and Jericho.

Early Saturday evening riders from New York, New Jersey and Connecticut assembled in the Invincible Club rooms, where the final details of the run were passed upon. Horace E. Stout, second lieutenant of the run, sprang a surprise on the riders when he explained the checking system. Automatic time clocks were located at every checking station, thus insuring an absolutely correct record of each rider's time.

Promptly at 6:30 Robert F. Graves, checker at Bedford Rest, mustered out the riders, and Fred H. Chase, official referee, started the boys on their long trip. Five teams were entered, as follows: Indian, Harley-Davidson, Excelsior, Reading-Standard and Thor. None of the teams had a perfect score, as one or more of the riders in each squad failed to check in at the controls on schedule time.

Eighty-four riders left Bedford Rest, eighty in the amateur class and four in the professional ranks. The professionals had a time schedule which was set ten minutes behind the amateurs. Among those who left Brooklyn on the long grind for the little gold medal was Miss Frances Loeb, of New York City. This young lady was mounted on her tourist two-speed Indian, which had been tuned up for the occasion. Unlike last year, when she lost her way, she skilfully piloted her machine over nearly half the trip. She had a nasty spill near Center Moriches which delayed her at the Southampton control, and caused her to lose her perfect score. Miss Loeb was not hurt, and the only damage to the machine consisted of a broken lamp.

Snapped during the luncheon stop; everybody in good humor.

Two sidecars were entered; one driven by Walter Ginger, with G. P. Jenkins and his dog "Sport" as passengers, had an exciting time. "Sport" has had the distinction of covering three double-century endurance runs, which is the long distance "canine" record in the East.

The other sidecar was an Indian, driven by Irving Barnard, with Oscar Brandt as passenger. This pair managed to reach Patchogue, but had to discontinue the trip at this point, due to mechanical trouble.

Some difficulty was experienced in awarding the special prize to the rider having the best score, at the finish, as a number of the riders received almost identical scores.

The competition committee finally awarded the prize to O. P. Warlick, who was only one minute late at one control. J. U. Constant, Indian; Leslie Vine, Excelsior, and William Hetherington, Jr., Indian, received credit for varying only two minutes from the schedule throughout the run.

The list of riders and machines that finished on schedule time follows: E. W. Allen, Excelsior; J. H. Abrams, Marsh-Metz; W. S. Blockston, Indian; Jos. Buckingham, Harley-Davidson; P. M. Boshen, Excelsior; A. C. Boshen, Excelsior; J. W. Breiver, Indian; J. Beveridge, Merkel; G. W. Barnes, Jr., Excelsior; C. R. Burbank, Pope; A. F. Baker, Harley-Davidson; J. U. Constant, Indian; Fred Cordex, Indian; John Cox, Indian; C. Corbin, Jr., Peugeot; J. C. Cartone, Indian; William Dill, Thor; Chas. J. Davis, Indian; A. H. Eocholz, Indian; Michael Enello, Marsh-Metz; J. H. Gest, Indian; Walter Ginger, Marsh-Metz; Frank G. Hart, Indian; William G. Hamburger, Harley-Davidson; William Hetherington, Jr., Indian; J. H. Hazenbush, Indian; S. W. Hanna, Indian; G. P. Jenkins and dog "Sport," Marsh-Metz; Gus Koster, Indian; Harry Kruse, Indian; P. N. Layton, Jr., Excelsior; Edward McClintock, Excelsior; Charles Meyer, Jefferson; J. A. McKeever, Marsh-Metz; G. G. Nason, Indian; Edward H. Olley, Indian; August Rust, Thor; A. J. Rochow, Indian; A. HENRY MESINGER

Digitized by Google

FEW men who are participating in the development of the American motorcycle field today are in a position to narrate more interesting life stories than Henry Mesinger, senior partner in the H. & F. Mesinger Manufacturing Company, the saddle makers. That comparatively little is known of the interesting stages by which Mr. Mesinger has progressed to his present standing in the manufacturing field is due to his natural reticence, and to the fact that he has been too busy achieving said interesting stages to find leisure for discussing them. For the same reasons Mr. Mesinger was a bit backward about furnishing data for the Editor of the "Who's Who in the Trade" Department, and this accounts for the brevity which marks the following paragraphs.

The energetic saddle manufacturer claims Rhineland, Germany, as his birthplace. He was born in 1866, and for the usual number of years devoted himself to the usual occupations of the usual boy. Later a tendency toward the unusual began to manifest itself, the symptoms being a studious turn of mind and a remarkable gift for untangling knotty engineering problems. He devoted himself to structural engineering and in 1885 left Germany for Brazil, where he engaged in bridge and railroad construction for a number of years. Later he spent three years in Buenos Ayres engaged in structural work.

A START IN THE SADDLE BUSINESS.

In the meantime Mr. Mesinger's brother Frederick had taken up horse-saddlery in Germany. The brothers had kept in communication with each other, and they decided at length that saddle-making was a business worthy of their best efforts. It was not until 1889, however, that Frederick sailed for America with a view of continuing his profession. Prior to this move he had devoted two years to saddle-making in London, where he gave the finishing touches to his experience under the tutelage of the master saddlers of England. On arriving in America in 1889 he was joined by his brother Henry, but not at once were their business plans launched. The brothers followed their individual vocations for two years, but managed to keep closely in touch with each other, and in 1892 they started the manufacture of horse saddles, bicycle tool-boxes and touring-bags.

At about this time they designed the first bent-wood bicycle frame, of which only one model was turned out, as the difficulty experienced in popularizing the type did not justify its manufacture. The next product of the firm was the Mesinger rattan saddle, which was placed on the market in 1895. At the outset of the business only two boys were employed, but one year later the payroll showed a total working force of over 300 men. In 1896 the business was incorporated as the Mesinger Saddle Company, but in the next year the Mesinger brothers resigned from that corporation, which was shortly afterward forced into the hands of a receiver.

ORGANIZATION OF THE NEW COMPANY.

Henry and Frederick then formed the H. & F. Mesinger Mfg. Co., and devoted all their energies to perfecting a new bicycle saddle. In 1901, simultaneously with the production of the first motorcycle in America, the Mesinger brothers built the first American motorcycle saddle. The Harley-Davidson, Marsh and Merkel machines were the first to use this Mesinger product. In 1903 the first Cavalry saddle was placed on the market, and its hand-padding feature made an immediate appeal.

From this time on the company was kept busy developing its plant in order to be abreast of the demands for its products, and this policy of rapid expansion has been continued to the present day. One of the latest bulletins from the busy headquarters of the Mesingers is to the effect that still another extension is planned and that it will be started without delay. Henry Mesinger is still a good structural engineer, but his friends insist that he is now a better saddle-maker, so it is unlikely that structural projects in picturesque but remote countries will ever again win a second of his interest.

"Almost any good engineer can build a bridge," says the redoubtable Henry, "but saddle-making is a fine art. If you don't like the feel of a bridge you can stay off, but once you buy a motorcycle saddle you want to stay on. Therefore it's important that every piece of work turned out be a good one. Let the other fellows build bridges—I'll look out for the saddles."

PITTSBURGH PRESS MEET

A RACE meet was held at Schenley Oval, Pittsburgh, by the Pittsburgh *Press*, on May 10. The weather was fine and no less than 40,000 people turned out: Summaries:

Five-mile novice, stripped stock machines.—Glenn Wheaton (T. Y. P.), Youngstown, O.; Sam J. Martin (Indian), Pittsburgh, and Ade Weixel (Pope), Pittsburgh. Time, 6:28.

Ten-mile open, racing machines.—A. G. Schmidt (Indian), Pittsburgh; Charles Seitz (Thor), Allegheny, Pa., and Richard Beacon (Harley-Davidson), Pittsburgh. Time, 12:32⅗.

Five-mile open, stripped stock machine, no ports.—Carl C. Kaiser (T. Y. P.), Youngstown, O.; John Ponti (Indian), Canton, O., and George A. Black (Reading-Standard), Pittsburgh. Time, 6:41⅗.

Five-mile open, racing machines.—A. G. Schmidt (Indian), Pittsburgh; Carl C. Kaiser (T. Y. P.), Youngstown, O., and Charles Seitz (Thor), Allegheny, Pa. Time, 6:15⅕.

Twenty-five-mile open, racing machines.—Charles Seitz (Thor), Allegheny, Pa.; Carl C. Kaiser (T. Y. P.), Youngstown, O., and John Ponti (Indian), Canton, O.

NO COUNTERFEIT CARDS

FROM the office of the F. A. M. Competition Chairman comes the announcement that referees will hereafter be called upon to adhere strictly to the rule which provides that riders must produce their Federation membership cards before participating in a race. In the past a few speedsters have "put something over" on the referee by claiming that their cards had been left at home, or by using the card of another rider who was a member in good standing.

If there is any question now as to a rider's membership standing he will be compelled to take out a new membership and pay his fee before starting; then if it is shown later that he really did possess a paid-up card when he appeared for the race he will have the second membership fee refunded by the referee.

JAMES SUYDAN, formerly manager of the St. Paul (Minn.) branch of the Goodyear Tire & Rubber Co., Akron, has been appointed manager of the Wisconsin branch.

The Proudest Boast of Motorcycle

ECLIPSE

MANUFACTURERS "ECLIPSE EQUIPPED"

The Brake You Can Trust

Wise manufacturers give prominence to the fact that their machines are **ECLIPSE EQUIPPED**. The presence of **ECLIPSE EQUIPMENT** adds prestige to their product.

The **ECLIPSE PERFECTION MULTIPLE DISC BRAKE** combines marvelous gripping power with practical indestructibility.

The **ECLIPSE PERFECTION MULTIPLE DISC BRAKE** is stronger, proportionately, than the most powerful automobile brake ever made.

The **ECLIPSE PERFECTION MULTIPLE DISC BRAKE** has a braking surface of more than 100 square inches. That means more than a square inch of perfect gripping surface to every three and a half pounds weight.

The discs of the **PERFECTION** are six in number, each 5¼ inches in diameter. These discs are mounted on one side of the hub, instead of inside it.

The **ECLIPSE PERFECTION MULTIPLE DISC BRAKE** has less parts than any other brake made, automobile or motorcycle.

The bearings contain ⅜-inch balls. Lubrication is a matter that will require very little attention, for the hub can be packed with hard oil at the start of the season, and this supply will last the entire year.

For tandem and sidecar work, the **ECLIPSE PERFECTION MULTIPLE DISC BRAKE** is ideal. Its unerring accuracy and bull-dog grip can bring the heaviest twin to an abrupt halt from full speed, not once, but with unfailing regularity. **AND WHAT IS MORE,** this kind of abuse in no way affects its durability.

Dealers—Your re-stock orders should be sent in at once. A tremendous demand is as inevitable as the dawn of a new day. Sit down and fill out that order blank **today.**

MOTORCYCLE ILLUSTRATED

Published every other Thursday at 51 Chambers Street, New York. Home subscriptions, $1.00 a year; foreign, $2.00; 10 cents a copy.

TELEPHONES 3690 AND 3691 WORTH.

Entered as second class matter July 6, 1908, at the Post Office at New York, N. Y., under Act of Congress March 3, 1879.

J. LEO SAUER, President.
H. N. CONDICT, Secretary.

WESTERN REPRESENTATIVE:

HARRY G. JACOBS

1220 First National Bank Building, Chicago. Telephones 5908 Central and Randolph 1022.

PAID CIRCULATION THIS ISSUE, 14,250 COPIES.

IMPORTANT.

OWING to its large circulation, it requires two full days of 24 hours each, after the last form has closed, to print, bind and mail a full edition of MOTORCYCLE ILLUSTRATED. In view also of the fact that this publication is read in more than 2,400 different cities, towns and villages in the United States, its wide distribution demands that each issue be placed in the mails not later than noon every other Thursday, the date of publication. In order to make the mails at this time, forms must close not later than 6 p. m. Tuesday, and advertising copy cannot, therefore, be handled if received later than Tuesday morning.

RECEIPT OF TEXT MATTER.

This applies also to text matter. Photographs should reach us not later than Monday morning preceding each date of issue. They will be given better attention if reaching us the Saturday preceding.

CORRESPONDENCE.

MOTORCYCLE ILLUSTRATED requires correspondence and subscription agents in many towns where the paper is not already so represented; we pay a liberal commission to subscription agents, and the best space rates for text-matter, drawings and photographs.

PHOTOGRAPHS.

Drawings, photographs and manuscript not suitable for publication will be returned if sufficient stamps are enclosed for the purpose. In every case, photographs should be plainly marked, so that they may be properly identified.

MORE TOURING ARTICLES.

WHILE we are confident that the present special number will meet all expectations as to the scope and quality of its contents, we are forced to admit that a number of interesting features were crowded out at the eleventh hour for lack of space. This is always the case; conditions would be no different if twice as many pages of text were used, and we mention the fact simply by way of calling attention to the special value of several profusely illustrated articles that have been held over for the May 29 issue.

We are preparing to give more attention than ever before to touring, in the belief that nothing can make a stronger appeal to the rider during the summer months, and the May 29 number will be indicative of what is to follow.

EDITORIAL VIEWPOINTS

WITH the touring season under way there is an increasing demand for information concerning state license regulations, and owing to the fact that such data is not always easily obtainable many riders undertake long trips without advance knowledge of the legal conditions they will have to contend with. It is obvious that such a system cannot give the rider satisfaction, and the time is at hand when specific information should be provided by all state officials, applying to visiting motorists. An effort is being made by the F. A. M. Touring Bureau to complete a file of such data, and that it will prove of great value is attested by the daily demand for it. Riders and F. A. M. officials having such material are requested to forward it to the Touring Bureau for the benefit of motorcyclists in general.

SOME FAR-FETCHED WITTICISMS.

EVERY so often, certain gentlemen more or less gifted with literary ability and a sense of humor, succeed in persuading the editor of a popular magazine to feature some of their "funny stuff" about the motorcycle. These writers thereupon promptly set to work building a story about the highly imaginary beginner who, having started his machine, finds himself at loss how to stop it and faces the sad predicament of having to ride until his gasoline gives out. As this would require a story long enough to run over into the pages usually devoted to advertising, the author is under the necessity of making something ridiculous happen to bring the machine to a stop. The attitude of these authors reminds us of a vote taken among Manhattan's elite early in the nineteenth century. The balloting showed a sentiment of about 10 to 1 against the "steam cars," the ten as against the one favoring the ancient stage and wondering why even an inconsequential minority of the business and social leaders of the day could see anything at all in the "new-fangled" method of transportation.

The illustrators of these stories, taking the cue from their writers, invariably seat a disreputable-looking individual astride a gas stove, grasping a broom handle or so, said illustration being foot-noted to the effect that no one need buy a motorcycle, when all the sensations of the sport are obtainable by the economical method pictured above, etc., etc.

Need we add that the gentlemen who indulge in such "witticisms," had they lived in 1813 instead of 1913, would have been among those who voted against the "steam cars" and prophesied that the railroads would soon go out of business?

A QUESTION OF WHEELS.

DURING the writer's recent tour of the United States, our opinion was often solicited in reference to the future of the so-called cyclecar in the United States. Furthermore, numbers of those interested in the manufacture and sale of motorcycles queried us as to the attitude of MOTORCYCLE ILLUSTRATED towards the cyclecar. We frankly admitted our utter inability to forecast the cyclecar's future in this country, and we were equally frank to admit that the ultimate outcome one way or the other would not be seriously affected by either friendliness or hostility on the part of the motorcycle journals. In any event, we hold that only narrow-gauged mentalities can possibly be responsible for any sentiment of hostility to the cyclecar.

As a matter of fact, we doubt whether anyone on either side of the Atlantic knows as yet just what a cyclecar is. We understand it to be arbitrarily defined in England as a three- or four-wheel motor vehicle built along motorcycle lines and limited in weight to six hundred pounds. If one were to place in a row twenty-five or thirty English products, starting with a full-fledged motorcycle and continuing through the sidecar and the so-called cyclecar to the genuine automobile, it would be more than difficult to draw the line at any point between the motorcycle and the cyclecar, or between the cyclecar and the automobile.

However, the machines which today go by the name of cyclecar cannot be put to the general uses which apply to both the motorcycle and the automobile. For service over city streets and elsewhere where smooth roads are available, the cyclecar may appeal to a certain clientele, though we cannot see how it will ever become a serious competitor, in the matter of either price or of other considerations, to the motorcycle even today, not to speak of the motorcycle of the future.

The phrase "motorcycle of the future," opens a very interesting field for conjecture and the exercise of one's imagination to the very limit. If the motorcycle of today proves itself to have approached the ultimate standard of the most economical form of rapid and handy transportation, well and good. If, on the other hand, a period of extensive development is still ahead, who shall attempt to prophesy what the motorcycle of the future will be, even in a general way, aside from such an unimportant consideration as the number of its wheels? It is our opinion that this latter point will be determined by expediency and that, no matter what the solution of the problem may be, the motorcycle trade cannot help but benefit. When, if ever, the small four-wheeler demonstrates superior qualities from all the points of view from which the manufacture of motorcycles must be regarded, then, and not until then, will the cyclecar be given whatever attention it may deserve by responsible manufacturers.

The use of the word "motorcycle" is by no means limited to a motor vehicle having but two wheels. The application of the word has thus been limited for obvious reasons, principal among them being the fact that the two-wheeler has met all the requirements of moderate pricedness, economy of operation, ease of handling, convenience and speed, in nicer proportions than any other vehicle. It is our opinion that this condition will continue indefinitely, although there may be an opening for a goodly number of cyclecars without their manufacture and sale in any way interfering with the steady growth of the motorcycle industry. At all events, no first-class manufacturer of motorcycles has anything to worry about, if only for the reason that the two-wheeler will always be in a class of its own and always deservedly popular among hundreds of thousands to whom its numerous excellent qualifications will always appeal.

Finally, there's enough room in the field to make crowding, except of the inefficient, altogether improbable.

The WARNING SIGNAL

by PATHFINDER

IN three seasons of fairly consistent road work the writer has been given numerous opportunities to observe the value of a dependable warning signal, and has finally placed this adjunct second only to a good lamp in his touring creed. I have no patience with a motorcyclist who begs trouble by riding at night without an efficient lighting system, and I have come to exhibit the same lack of sympathy for the rider who takes chances on the road by failing to equip his mount with a reliable horn or whistle. What foolish economy it is to refrain from spending a few dollars for a device that will last as long as the machine, when a single mix-up due to the absence of a signal may cost ten times as much—not to speak of personal injuries.

There was the experience of my friend Williams, for example. Well, perhaps that isn't his regular blown-in-the-bottle name, but Williams will serve our purpose. He joined the ranks of motorcyclists about three weeks ago and took me around to see his new machine. I enthused properly. Always do, I wouldn't give two hurrahs for a rider who didn't like to hear his machine praised. Then I called attention to the fact that he had neither lamp nor horn and gave him advice.

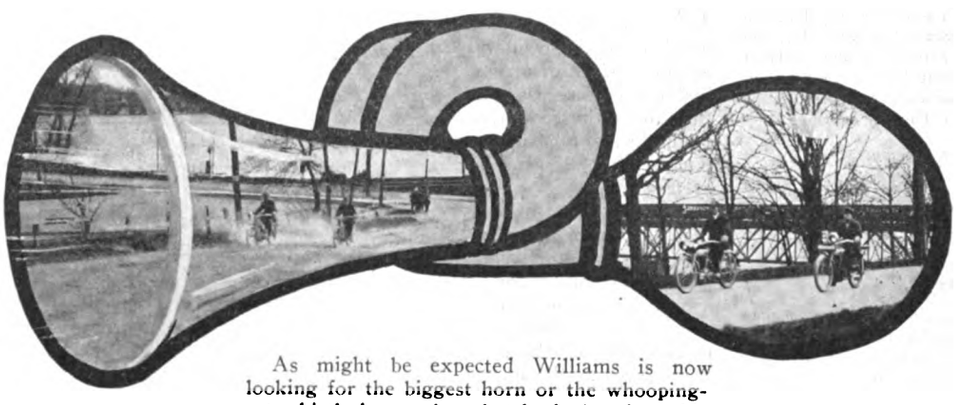
"Better get some kind of a warning signal," I suggested. "There are fifty-seven kinds of trouble lying in wait for the chap who tries to ride without one. If you can't afford a horn or a whistle, fit a cow-bell temporarily, but above all things don't go out on the road with nothing but your exhaust to warn road-users of your approach. Don't you know that—"

"No I don't," he interrupted, "and what's more, I am not in a hurry to spend money and clutter my machine up with fittings that I can dispense with. I ride carefully and keep my eyes open. Instead of warning other people to clear the way for me, I watch them and get out of their way. I'm new at the game, of course, but I always have my machine under perfect control and if I find myself in a tight place I simply stop."

WHAT HAPPENED TO WILLIAMS.

So much for my advice. Four days later Williams was in bed and his brand new machine was in a repair shop. It was this way. Sunday afternoon trip into the country; long hill with a bend at the bottom; milk wagon coming out of a cross-road; driver didn't hear the motorcycle; rider could not see the wagon; bing!

It was not an unusual accident. In fact, it was of the commonest variety. If Williams had given a warning signal when he was say, two hundred yards from that curve, the milk-wagon driver would not have driven out of the crossroad and blocked the main highway. If—but what's the use? Williams didn't have a horn or a whistle, and obviously could, not blow one. He could have bought a dozen horns with the money he spent as a result of that accident. After settling with the family physician and the repairman he had to go down into his jeans for $12 to cover repairs on the milk wagon. No economy in that.



As might be expected Williams is now looking for the biggest horn or the whooping-est whistle he can buy, but he had to have his costly lesson first. A humble milk wagon taught him what he would not accept from me. So goes it.

"Quite a few of the boys are puzzled as to just what kind of a warning signal they should use and how they should fit it," remarked a dealer of my acquaintance, as we were discussing Williams' experience, "but I always advise them that they need not be finicky about the style of their warning signal—as long as it signals. That's the main idea. Let 'em know you're coming; don't sneak up and then expect folks to turn handsprings getting out of your way. You may encounter a trolley car or a brewery wagon some day that has only a limited knowledge of ground and lofty tumbling, and then there'll be a fuss.

CHOOSING A SUITABLE HORN.

"I find that a medium-sized horn, fitted on my handlebar, meets all my requirements," continued the dealer. "I would advise getting one with a fairly high-pitched tone. This gives extra carrying power and is easily distinguishable from other road noises. In other words, I prefer a squeak to a toot. Some motorcyclists use a low-pitched Mississippi-steamboat sort of horn in the belief that road-users will pay more attention to a signal that sounds as if it might be coming from an automobile, but I don't believe the theory pans out. All you need is a warning. You don't require a horn that sings a bass solo.

"If the rider must have something out of the ordinary let him buy a siren horn, or an exhaust whistle. Quite a few of the boys are going in for the whistles, and I find that they give satisfaction. They certainly can be heard far ahead on the road, and the only seeming objection to them is that they entail a little more trouble than a horn in fitting. Once you get 'em attached they are great road-clearers and they do not easily get out of order. In fact, there isn't much to be said about keeping the warning signal in trim: makers of whistles and both bulb and electric horns are turning out such high-grade offerings that the selection of one simply comes down to a question of personal choice.

"If a bulb horn is being fitted care should be taken to place it so that the vibration of the machine will not cause the rubber bulb to chafe against the handlebar. If this is not guarded against the bulb will wear through before its time, and a new one will have to be bought. It should also be seen to that the horn is protected against damage in spills as far as is possible. If the horn is turned so that it comes on the inside of the handlebar it is not likely to be smashed in any ordinary fall, and it will be just as handy to operate as if on the outside or the upper side of the bar."

RULES FOR USING A SIGNAL.

"I have noticed that even when a rider does carry a warning signal he is often careless about using it," I remarked. "It strikes me that a set of rules would help a little."

"Nothing to that," said the dealer. "No one could frame rules for all the emergencies that arise on the road. No, the rider must use his head—and then his horn. There are certain general rules, however, that always hold good. The motorcyclist should sound his signal when approaching any curve in a road; when about to cross any intersecting street or crossroad; when about to pass around from behind any vehicle; when approaching any car or carriage from which people are alighting; when passing any point where his view of the road ahead is shut off

Digitized by Google

for even a moment. It is a simple matter to give a toot of a horn or whistle, and it may prevent a lot of trouble.

"On the other hand, it is not necessary to romp up and down the country with a siren wailing like a revenue cutter in distress or an exhaust whistle letting out shrieks after the manner of a band of Apaches holding up the traditional stage-coach. There is a happy medium. Horns and whistles are not toys. They should be used only when needed—and then they should be resorted to promptly and unfailingly. Most cities specify their use, but regardless of municipal regulations no motorcycle should be used without a signaling device.

"There is a great variety of warning devices on the market—almost any one of which will fill the bill. Let the rider drop a line to any of the leading manufacturers or call on some dealer in his district and he will have no trouble in making a selection. The main point is to equip the motorcycle with a signal before there is trouble. It doesn't pay to be a Williams."

At this point the writer strolled out to the curb, flung a leg across the saddle and gave his horn a few staccato toots preparatory to getting under way. My friend, the dealer, waved his hand from his doorway.

"Keep at it," he called, "and you'll be on the safe side. A toot in time is worth half a dozen after the accident."

Makers of Warning Signals

Culmer Engineering Co., 6 Church street, New York. (Keco electric horn.)

Barco Brass & Joint Co., Chicago, Ill. (Barco exhaust chime.)

Coming Mfg. Co., Railway Exchange, Chicago, Ill. (Trinity Chimes motor horn.)

Star Electric Co., State and 64th streets, Chicago, Ill. (Samson electric motorcycle horn.)

Aermore Mfg. Co., 1536 Michigan Blvd, Chicago, Ill. (Aermore exhaust horn.)

Riley-Klotz Mfg. Co., 17 Mulberry street, Newark, N. J. (Nightingale exhaust whistle.)

Randall Faichney Co., Franklin Square, Boston, Mass. (Jericho exhaust horn.)

Dean Electric Co., 603 Taylor street, Elyria, Ohio. (Maxo electric horn.)

Purdy Bros., 49 E. Garfield Blvd, Chicago, Ill. (Purdy exhaust whistles.)

Sarco Engineering Co., 112 Broad street, New York. (Acme siren.)

RESTRICTING THE AMATEUR

CHAIRMAN THORNLEY, of the F. A. M. Competition Committee, reports a carrying vote of the Federation Board of Directors on the resolution recently submitted to prohibit an amateur rider from receiving expenses from any person excepting a senior member of his own family, and the regulation is therefore approved. While the vote was being taken a member of the Directorate suggested that the resolution have the additional clause: "provided said senior member of the family is not a motorcycle dealer or agent," inserted to carry the prohibitive effect still further, and the competition chairman is now requesting a vote of the directors on this change.

PRESIDENT PATTERSON has appointed G. R. Morse, 760 Bayard avenue, St. Louis, State F. A. M. Commissioner of Missouri.

Touring Inducements of Pennsylvania

UNTIL quite recently, the Keystone State as a whole has not figured as prominently as it should in general motorcycle touring, largely on account of its long-established reputation among non-residents for its rough and hilly roads. For instance, strangers from Chicago or West, bound for the New Jersey coast, Philadelphia, and even Baltimore or Washington, have been accustomed to take the much longer way via Cleveland, Buffalo, the Hudson River and New York, rather than the short-cut across eastern Ohio and central Pennsylvania. However, this is now being gradually changed, especially by the rebuilding in good shape of the Pittsburgh-Philadelphia turnpike between Greensburg, Ligonier and Bedford, formerly the toughest, most wearing stretch on any of the several routes between the east and the west.

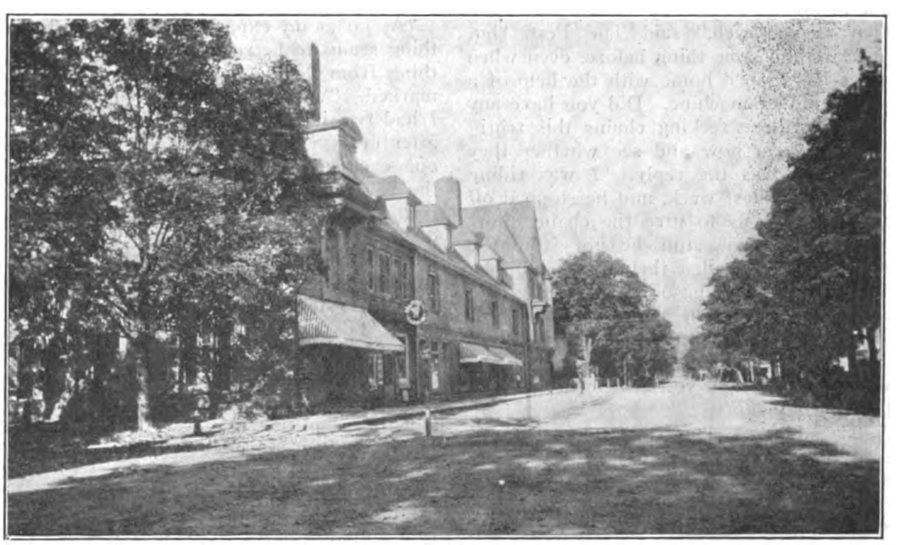
Great improvements are also being made in other sections, and of course nothing is more beautiful than pleasant hill country, so long as it can be traversed by good roads. Pennsylvania has the pleasant valley of the Delaware River, the majestic Susquehanna, the Allegheny, Blue Ridge and Pocono Mountains, Valley Forge, Gettysburg and many other localities of scenic and historic interest, all of which are being made more accessible for the motorcyclist. Hotel accommodations will average nearly as good as in New York state, and the toll gates that have been characteristic of the through routes in Pennsylvania are gradually being abolished as the State road system gains headway.

The poet, Edmund Clarence Stedman, is quoted as saying that he had more pleasure in "gazing" at the Raymondskill Falls, in Pike Co., Pa., than at Niagara Falls; however, this is but one of the beautiful falls of northeastern Pennsylvania, where the mountain streams take their final leaps down to the Delaware, for their long, winding way to the seas. Central Pennsylvania has several views of wondrous beauty that are unknown to motorcyclists residing within one day or two days' ride of them.

One of these is from the junction of Terrace Mountain and Sideling Hill, a few miles below Huntingdon; the other is from the crest of Bald Eagle Mountain, near Bellefonte. An appreciative traveler who has been exploring the valleys and mountains along the "Blue Juniata," speaks with enthusiasm of the view to be obtained from Mine Hill, on the road leading from Nickel Mines to Strasburg, Lancaster county, and of the wide expanse of picturesque country visible from the highest point of the Columbia and Marietta pike, or from Ephrata Mountain.

From the ridge in Montgomery county, which divides the waters that flow towards the Delaware from those flowing into the Schuylkill, from the crest of the valley hills just above Valley Forge, where the spectator can take in the sweep of the Chester Valley and of the Schuylkill Valley, to the Blue Mountains nearly forty miles away, with only turning on the heel; from the mountain summits of Sullivan County, especially from North Mountain, where the lower mountains appear to roll like ocean waves below the spectator for a distance of fifty or sixty miles, and from the summit of Moosic Mountain, in Wayne County—from all these points and many others, some nearer and some more remote, but all accessible to the motorcyclist, are views which profoundly impress the fortunate beholder with both the force and the infinite variety of nature.

Like the point in the Lehigh Valley Railroad at which the Wyoming Valley bursts upon the vision, the spot referred to in Wayne county, from which undoubtedly is to be seen the most extensive view in Pennsylvania, is called Fairview. According to the traveler whose observation has already been quoted, the lakes visible from Fairview, Wayne county, number fourteen. Plainly seen in a clear atmosphere are the Catskill Mountains, ninety miles away. Before the spectator is a wilderness—mountains, forests and glimmering mountain lakes, and over all broods the unbroken stillness that prevailed there when the Indian alone had ever gazed upon the inspiring scene. Some of the places mentioned are little known, but will be more popular as touring interest increases. The tourist is in no danger of being crowded, and isolation often has its charms.



View of picturesque main street in Milford, Pa.

BELT CHAIN & COMBINATION DRIVES

by N·A·W·

IT was with a sinking heart that I heard the voices of The Pest, The Photographer, and The Speed-Maniac as they came along the garden path toward where I was doing a little cold-vulcanizing. I was experimenting with a new acid-cure and it was pretty poor stuff, so that visions of having to turn the work over to a repairman came to me, meaning much delay before I could start riding again. However, there was no help for it and with the trio of visitors at hand, I realized that I was in for an argument or two.

After inquiring what I was doing and how it was getting along, the Speed-Maniac led off. He is a devout advocate of the chain drive, and like The Pest, who is a flat-belt fanatic, thinks his choice is the only transmission worth having. The Photographer, like the writer, is a V-belt user, so the three common transmission forms were represented.

"Had a fine trip yesterday, out to the Lake and back in five hours," said the Speed-Maniac. "Of course, I stayed out there part of the day, but came home in time for dinner. The roads are fine and naturally, I had no trouble at all."

"That sounds well," said The Pest, "but we've heard the same thing before, even when the rider has limped home with the help of a rope and another machine. Did you have any trouble with those reeking chains this trip?"

"Look at them now and see whether they reek or not," was the reply. "I was riding with the Doctor last week, and he stopped off long enough for us to give the chains thorough baths in some stuff he got from the chain-maker. We boiled them first and then scrubbed them with gasoline, before giving them a hot bath in the chain solution. All I've used on them since is a brush at night and a stick of graphite. It's the same as the chain on a bicycle and you remember how we used to clean them."

"Well," admitted The Pest, "the Doc. is wise to quite a few wrinkles. But I don't have to bathe my belt when it's been out on the road; all I do is wipe it off and rub a little dressing on it. Then it's ready to pull my machine anywhere. Which do you think is the best transmission, old top?" This was addressed to me.

I could see the filler gradually coming away from the sides of the cut I had been working on and was far from pleased by the fact.

"Write to the papers about it," I advised, "or ask The Photographer here; he rides a belt mount. But if you want to discuss it at length, there is room on the front porch."

The Photographer, who measures everything in relation to its color value on a plate, withdrew his countenance from the hood of his camera.

"While I ride a machine which (like everyone else's), has the best form of transmission possible, I can see that it depends a great deal on the user as to which is the most desirable drive for general work. About all I do with my belt is keep it free from stones and mud, not to mention water, and give it some dressing now and then. I keep the pulleys in line, just as if it were a chain-drive machine, and use efficient guards. I've ridden over 1,800 miles since November, and haven't had any trouble yet. With the slack adjuster, I can set the belt tight for hills and loosen it again for level running, and a flat-belt rider can do the same. This slacking and tightening stunt isn't done as much as it ought to be on belt machines, but if you tour a little you will soon see how much more service you can get out of any belt by doing it."

Strange to say, the filler I was experimenting with had decided finally to adhere to the lips of the cut in my tire, and in a few minutes the job was complete. After washing it with the fixing solution, I laid it aside and relighted my pipe.

"As far as my experience has gone, the main thing seems to be regular inspection of everything from the motor to the rear hub," I remarked. "When I used to tour considerably I had two inspection systems, one to be made after every run and the other before starting out each time. The first included cleaning the belt or chain and lubricating it, and then trying out the clutch. After seeing that the drive and clutch were O. K., I looked to the alignment of the wheels and drive. Before starting off I took a short run for a clutch and brake trial, and was then ready to proceed. The whole inspection did not take more than two minutes in the morning and about five or ten after the run, unless the roads were unusually bad. Consequently, punctures and poor gas were the only troubles I used to have, unless something hit me or I hit something."

"I suppose the belt-vs.-chain argument will continue till the crack of doom," broke in The Pest. "How about the belt-and-chain drive? Is anyone trying that out now?"

"One of the big accessory men is experimenting with a chain drive to the countershaft and a V-belt to the rear wheel," I informed him. "That ought to satisfy both parties, as it has the advantages of each form: the flexibility of the belt and the positiveness of the chain. It is known that it will work on a 4 or 5 h. motor, but on a 7 or 8 h. twin—well, lots of people need to be 'shown.' It's the transmission of the future, unless the shaft becomes better developed."

"Speaking about the shaft-drive, do you think it will be used much in the future?" asked the Speed-Maniac. "Might be," said The Photographer, "when they get better clutches or when a compensating device is fitted between the motor and the rear wheel. But for touring the shaft ought to be the best ever, as you would simply let it alone, giving it oil only at long intervals, say every month."

"The combination belt-and-chain drive might be all right," said The Pest, "but you'd have to carry spare links for the chain and couplings for the belt as well."

"Why?" asked The Photographer. "There wouldn't be any breakage of either, as the belt would slip and relieve the chain when the shocks came." That closed the discussion for the time and the trio departed a few minutes later, the Speed-Maniac getting away as usual with the most noise and in the least time. And we still have the transmission problem left open for another argument.

CURE FOR CLOGGING PILOT JET

WITH the give-and-take gasoline obtained by riders in all kinds of places, there are frequent occasions when the pilot-jet of a two-jet carbureter becomes clogged through dirt and other foreign substances. In order to obviate this, A. T. Merrick, a well-known New York rider, suggests putting a wad of finest grade steel wool in the passage below the jet.

RE-MAKING the HISTORIC TRAILS

ONE of the most interesting and far-reaching good roads developments of the present time is seen in the great efforts being made by the people of the West to restore to general use the picturesque old trails which, in the early part of the last century, carried most of the emigration beyond the Mississippi and the Missouri rivers. That was by far the greatest movement of its kind in all history; and as a result the nation gained in population, wealth and territory beyond the dreams of the forefathers. This migration was necessarily made altogether over roads not much changed from the primitive Indian trails; of course there were no railways and no navigable east-and-west waterways between the "Big Muddy" and the Pacific Coast.

At first, Kansas City, Leavenworth, Atchison and St. Joseph—later on Omaha and Sioux City also—were the strategic beginnings of these "trails" of from 1,500 to 2,000 miles in length, which in a single generation penetrated the Far Central West, the Southwest and the Northwest, gradually eliminating the old frontier. Now the prosperous and progressive States of Kansas, Nebraska, Colorado, and Wyoming, Utah, Nevada, New Mexico, Arizona and California are taking up these important trunk-line routes, not only for the purpose of preserving their historic interest, but to transform them as rapidly as possible into great interstate highways for the accommodation of the increasing number who travel by automobile or motorcycle.

Ten years ago nothing was heard about this; and insofar as the movement can be traced to any one person, it should be credited to Ezra Meeker, a pioneer and historian of the Northwest, who started out several years ago to retrace the route followed by him in 1852 from the Missouri River to Oregon and Washington. As if forgetting all improvements in travel through the intervening years, he drove a yoke of oxen from the vicinity of Olympia, Wash., to Omaha, Indianapolis, New York City and then to Philadelphia, Baltimore and Washington—one of the notable trips of modern times, taking the better part of two years.

HOW MEEKER AROUSED ENTHUSIASM.

The writer watched his progress overland with great interest, and after some preliminary correspondence, went to Oneida, N. Y., to ride with him to Utica, a distance of about 22 miles. This trip took fully ten hours, as the average progress was only about two miles an hour; after having ridden over the same stretch many times in less than sixty minutes, the sensation of being passed by pedestrians was at least a novel one. There is no such thing as hurrying a yoke of oxen, but they "get there" just the same, as amply proven in the days of the pioneers. During that ten hours' ride, I received more information and clear-cut impressions about old-time travel in the West than I have been able to secure before or since; the old veteran was excellent "company," and except for the long time necessary to do it, I would have liked nothing better than to have crossed the prairies with him.

En route Mr. Meeker (who was already well-to-do and made the trip for the novelty of it as well as to arouse enthusiasm), delivered many addresses, in that way raising funds for the erection of suitable monuments to the pioneers, which has since been done in a number of places. Whatever might have been thought of this fantastic reproduction of an overland trip by one of the few survivors among the original "trail-makers," it attracted wide attention, especially when Meeker and his ox-drawn "prairie schooner" was received by President Roosevelt in front of the White House. The occasion was a memorable one.

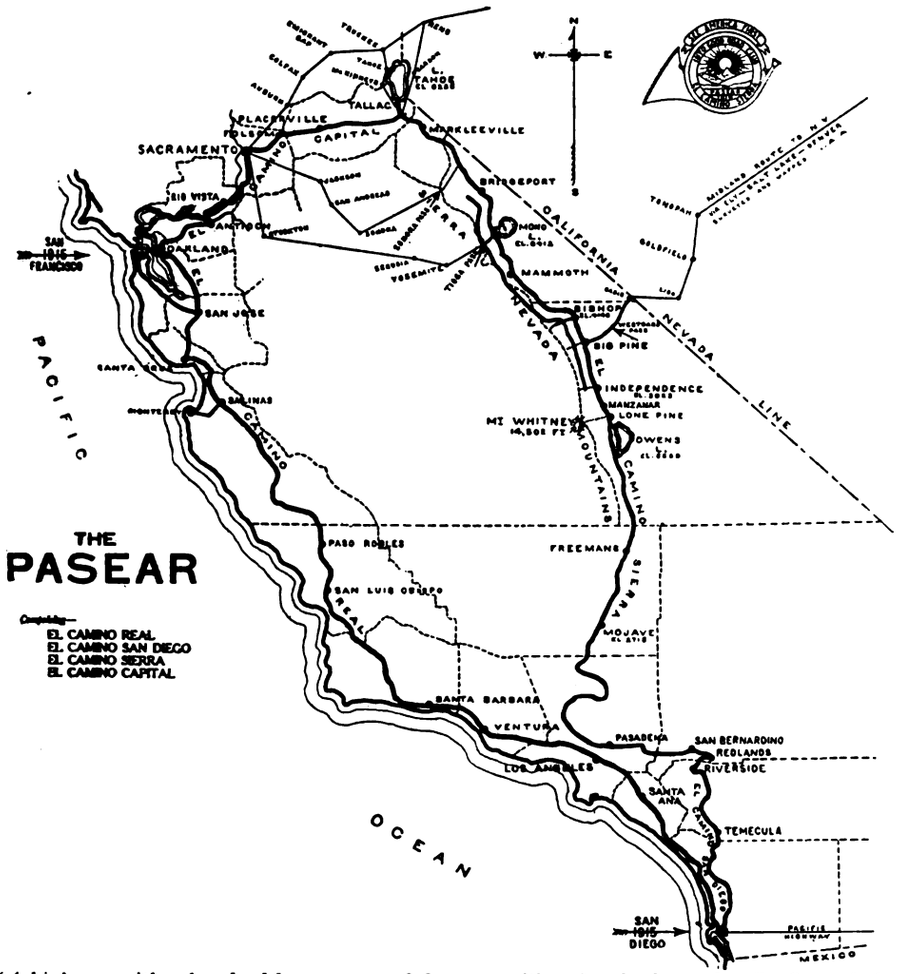
View of a typical old mission in California.

Everyone with something of the western fever in his blood, whether it had come from experience, or from catching the spirit of Parkman and the early travelers, crowded around the old pioneer and his wagon to wish him luck on the long journey. In fact, the trip was a continuous ovation from beginning to end—the public's response to his effort to awaken interest in the movement to definitely mark out and restore the old roads leading into the Far West before first-hand knowledge of them could be lost. The same interest spread rapidly to other routes, and within the last ten years two-thirds of the trans-Missouri country has been more or less committed to the idea.

KANSAS HEADS THE ROAD BOOM.

In actual working out of this plan, Kansas has been from the first leading all the other States, which is especially appropriate considering that in the early days, Kansas City was the most important

Digitized by Google



"A highway with a hundred by-ways—each by-way with a hundred wonders." One of the most interesting route developments in California.

single gateway to the West and immediately across the Missouri River, the level Indian trails of Kansas stretched for hundreds of miles toward the Rockies and the Pacific Coast. The program started when twelve of the western counties came together in convention to consider the question of improving their means of intercommunication by road.

It was found that the pathways by which the lumbering prairie schooners had made their way beyond the great rivers, over which the "pony express" had carried the mails by swift relays, and along which cattle were driven by thousands, were the logical routes for development under the new dispensation. in most cases their courses were as scientifically correct as if a commission of eminent modern engineers had laid them out.

Upon the basis of these old roads, the movement for improved through highways grew until now the New Santa Fe Trail is being made a thirty-foot speedway running from Kansas City through Emporia, Hutchinson and Dodge City, Kansas, La Junta and Trinidad, Colorado, Raton and Las Vegas, N. M., to the old city of Santa Fe. In some parts this differs from the Old Santa Fe Trail, and their rivalry has helped to make two good roads instead of one from Kansas City to Lyons, Kan., with a number of closely related developments gradually tending to improve the roads of the entire State.

"Trail Day" has become an established institution in the Kansas Public Schools, for two reasons: First, to acquaint the children of a new generation with the history of the Santa Fe Trail, and, second, to popularize a movement to raise funds for the purpose of permanently marking the old road's course across the Sunflower State. The youngsters were expected to learn the "Emigrants' Song," which some one of the older generation wrote, and which begins:

"We cross the prairie, as of old
The Pilgrims crossed the sea,
To make the West, as they the East,
The homsteads of the free."

This is not very good poetry, nor wholly sound logic, for New England, New York, New Jersey, Pennsylvania and Virginia were always as free as Iowa and Kansas are now; but it expresses something of the pioneer spirit, which in a remarkably short time created a dozen "Inland Empires." The majority of those who passed westward over these long trails were real seekers after homes, with plenty of "elbow room," even when that meant absence of neighbors and the discomforts of the primeval wilderness and the unbroken prairie. California's gold rush drew thousands, as did the report of fortunes to be made in the fur trade of the Northwest, and in the early commerce with Mexico; but these were movements of limited duration, overshadowed by the greater migration that swarmed over the different trails.

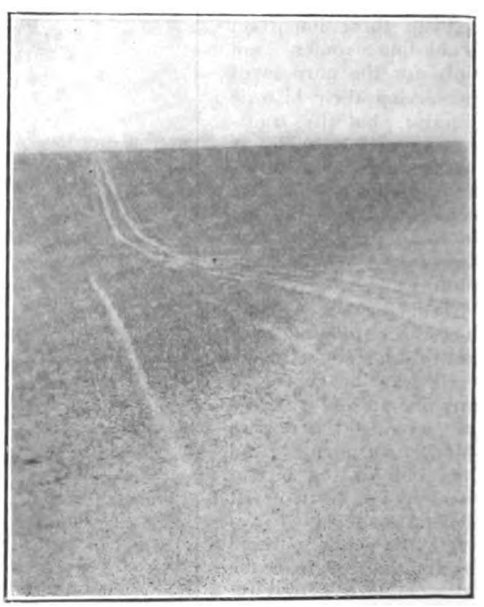
HIGHWAYS FOLLOW THE OLD TRAILS.

The latter were open continuously, in the case of the Northwest, practically from the time Lewis and Clark found their way into the Oregon country in 1805; and in the case of the route to Santa Fe after Zebulon Pike blazed the way to the Colorado Rockies only two or three years later. From these early dates until the railways were constructed across the plains, these trails were the great highways of advancing civilization. They and their connections reached the Pacific Coast by two routes which serve exactly the same purpose today, though steam, gasoline and electricity have multiplied the speed of travel.

Other nearly parallel routes in Kansas and Nebraska were gradually developed, until there are today five complete and fairly distinct lines of travel from the Missouri to the Rockies. Connecting lines have also been improved through Iowa and across northern Illinois, until it is now possible to travel from Chicago through Omaha or Kansas City or both to Colorado by a wide choice of routes and return without going over a single mile covered on the outbound trip.

In addition to the Santa Fe Trail's original extension across New Mexico and Arizona to Southern California, it has a good connection from La Junta through Rocky Ford and Pueblo to Colorado Springs or Denver, at either or both of which cities it joins the Colorado Scenic Highway. The latter, partly completed but with some portions still under construction, continues west via Buena Vista, Glenwood Springs and Grand Junction, Colo., Green River, Price and Provo, Utah, to Salt Lake City. It is expected that by 1915 trips can be made across that way without the admitted inconveniences that exist today. This route not only crosses the Continental Divide of the Rocky Mountains at a greater elevation than any of the other routes, but taps the principal side roads leading into the heart of the Great Hills.

The road built is not uniform in material, and varies considerably in its cost per mile, the plan being to take advantage of the natural conditions of soil, road building materials, drainage necessities, etc., as they are found to exist in different localities. For instance, where rock is plentiful, the road is macadamized. Where sand predominates, it is graded, or piked, and the surface covered with a mixture of sand and clay or gumbo, as the case may be, the surface thoroughly



Crossing the Laramie Plains, Wyo., a distance of 70 miles between stations.

Digitized by Google

compacted and smoothed, making a road impervious to water, almost of the consistency and appearance of asphalt; and, of course, at vastly smaller expense.

In other cases, the road is simply graded and dragged, the natural soil conditions serving to make the road practically as good as the other, and with very slight expense. Concrete culverts of artistic design and great durability are fast replacing the former ugly and temporary wood or steel structures. The construction of these highways is being done under the supervision of engineers heartily cooperating in the movement, and who are giving their personal attention to the many details of building constantly arising in work of this kind.

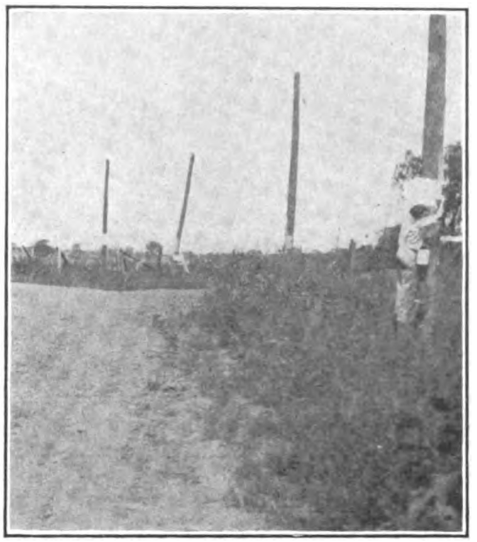
ALONG EL CAMINO REAL.

Another trail-marking project that has made great headway is that to transform into a State highway the old Camino Real, over which the Jesuit mission builders pushed up from old Mexico into what is now California, at the time the trade with the Santa Fe Trail was developing. This road is good throughout almost its entire length, and extends from San Diego on the south to San Francisco on the north; in fact, during the Spanish occupation of this territory, it reached for several hundred miles into Lower California, still Mexican territory.

The first mission within what is now the State of California was founded by Fra Junipero Serro in 1769, near San Diego, and was called Mission San Diego de Alcala. During the following forty years other missions were established in a chain extending north along the coast, and were connected by trails across the mountains and through the forests, over which traveled the robed padres of the Franciscan order. These pathways, worn by the footsteps of the good old priests, became El Camino Real—the "Kings Highway."

On this highway, or close by it, are located some twenty missions of varied architecture, and these, with their histories, offer attractions to tourists to be found nowhere else in America. It is true that while many of these missions, some built of stone and others of adobe, are in a deplorable state of disrepair, this condition emphasizes the age of the wonderful structures, and lends an added charm to their inspection. At frequent intervals along the route will be found road signs, surmounted by a bell, symbolic of the mission bells.

The route from San Diego to San Francisco is 596 miles long. From San Diego north as far as San Juan Capistrano it skirts the Pacific Ocean; for many miles the waves lap the very edge of the road, and between Los Angeles and San Francisco it crosses the following mountain passes: Cahuenga Pass, East and West Casitas Pass, Gaviota Pass, Cuesta Pass, the Jolon Grade, and San Juan Pass. Between these passes across the various mountain ranges will be found fertile valleys where groves of oranges, lemons, olives and walnuts, besides great vineyards, are to be seen, and wild flowers are abundant all along the route.



Sign-posting on the River-to-River Road across Iowa, a carefully worked-out system.

THE PICTURESQUE MISSIONS.

These attractions, combined with distant views of snow-capped mountains, bracing air and cool breezes from the Pacific Ocean, and bright sunshine, will make the trip one long to be remembered. The route is dotted with prosperous villages and many fine resorts where the rose-embowered bungalow is much in evidence, as well as several palatial tourist hotels. The missions scattered along or near the route are:

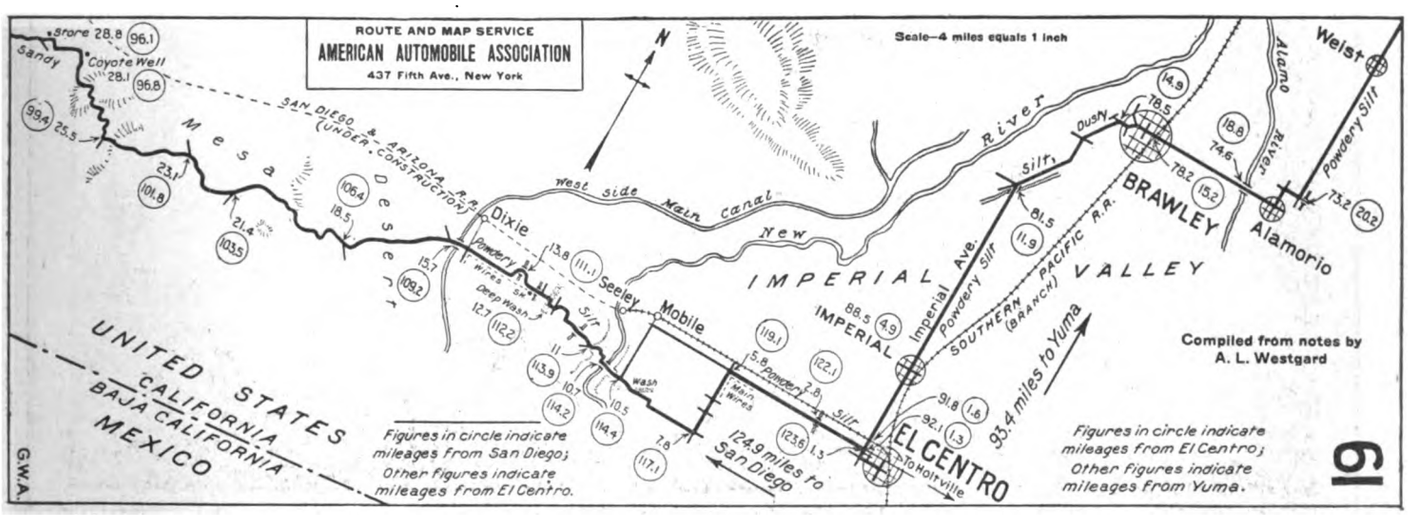
Mission San Diego de Alcala (1769), located 6 miles east of San Diego; Mission San Luis Rey (de Francia) (1798), located 4 miles east of Oceanside; Mission San Juan Capistrano (1776), located at Capistrano; Mission San Gabriel (Archangel) (1771), located about 9 miles east of Los Angeles; Mission (Nuestra Senora Reina de) Los Angeles, located at Los Angeles; Mission San Fernando (Rey de Espana) (1796), located 22 miles northwest of Los Angeles; Mission San Buena Ventura (1783), located at Ventura; Mission Santa Barbara (1786), located at Santa Barbara; Mission Santa Ynez (1804), located 6 miles south of Los Olivos; Mission La Purissima Concepcion, located near Lompoc; Mission San Luis Obispo (de Tolosa) (1772), located at San Luis Obispo; Mission San Miguel (Archangel) (1797), located at San Miguel; Mission San Antonio (de Padua) (1771), located near Jolon; Mission La Soledad (1791), located at Soledad; Mission San Carlos Monterey (1770), located at Monterey, 20 miles west of Salinas; Mission San Juan (de Bautista) (1797), located at San Juan; Mission Santa Cruz (1791), located at Santa Cruz, 38 miles south of San Jose; Mission San Jose (de Gaudalupe) (1797), located 17 miles north of San Jose; Mission San Francisco (Dolores) (1776), located at San Francisco.

Southern California is undoubtedly destined to be the winter mecca for tourists, owing to its pleasant climate, good roads and numerous places of scenic and historic interest. A network of good roads is fast covering the State, and these roads will take the tourist through beautiful agricultural and fruit country, across magnificent mountain ranges and interesting desert stretches.

A REGION OF WONDERFUL VARIETY.

On a run of 200 miles the tourist may experience these various scenic attractions, and enjoy splendid sunshine for weeks at a time. The best season for touring in that section is during the months of April, May and June, but with the exception of a few rainy days, it may be said that touring is pleasant in this part of the state throughout the winter, while during the middle of the summer the heat will have dried up the foliage and rendered the roads dusty.

How the gold-hunters followed the different trails into California is another story of intense dramatic interest; and the routes of their caravans from St. Louis, Kansas City, Leavenworth, Atchison or Omaha westward to Salt Lake City and across the Sierras is



How road notes, taken across the desert in Southern California, are worked up for the guidance of tourists.

Digitized by Google

worth tracing for the benefit of those who are not too busy to be interested in a past phase of American history. Meanwhile, what has become known as the "Pacific Highway" is being agitated to connect San Diego, Cal., with Vancouver, British Columbia—naturally the largest single project up to this time on the Western coast.

Even though Europe may have some attractions that this country lacks, a journey overland on any of the four routes that are now practicable is worth while for all who can take the time to make it. Nothing else gives so impressive a lesson on the vastness of the country, discloses the most magnificent farming area in the world, takes the tourist to handsome cities that have sprung up out of the wilderness, shows him as he mingles with their citizens that we are indeed one people, and as he travels on causes him to feel so strangely the spell of the great plains and the desert.

There is no highway to the West that does not abound in interest, and the Pacific Coast itself is wonderfully attractive. True, its people have so much of conscious pride in their surroundings that their claims are sometimes treated with levity, but they are able to "make good." California certainly has a glorious climate, and the variety and beauty of its scenery well repay a trip across the continent, by rail or road. Northward in Oregon and Washington, there is another revelation of picturesque America, such as one can never get from books.

The 1915 exposition that is inviting you—the latest in a long series—is guaranteed with the greatest confidence, and there is every reason to believe that it will prove novel, interesting and instructive. The Northwest is growing so fast that its own people are amazed by their most sober calculations; each approaching day is a great future in itself.

Beyond the great plains are more mountains, more Switzerlands of America, such an embarrassment of riches that the time one wishes to give to them becomes a serious question. With money and time there is employment for months, and there is much to enjoy even under those restrictions to which most of us are obliged to submit. The old trails helped to make all of these localities accessible, as they showed the way to the railroad builders of a later day.

HARKING BACK TO THE OLD DAYS.

Scenes like that pictured by Gregg, who made his first trip to Santa Fe in 1831, are described by many early travelers. Gregg's caravan had come to Round Mound of the San Carlos range of mountains, in what is now New Mexico. As it passed under the northern base of the Mound "it presented a very fine and imposing spectacle to those who were upon the summit. The wagons marched slowly in four parallel columns, but in broken lines, often at intervals of many rods. The unceasing 'crack, crack' of the wagoners' whips, resembling the frequent reports of distant guns, almost made one believe that a skirmish was actually taking place between two hostile parties."

The camp with the wagons drawn up in a square and chained wheel to wheel, the watchful guards on patrol outside the quadrangle, the occasional stampede, when horses, oxen and men were off together in a wild race across the prairie, the tragic days when the Indians attacked a train, and the lurid incident of Mountain Meadow—all these are suggested by the trail historian. Richard Burton's poem, "The Old Santa Fe Trail," though less vivid and specific than the early narrative, appeals with its broader sweep of fancy:

"It wound through strange scarred hills, down
canyons long,
Where wild things screamed, with winds for
company;
Its milestones were the bones of pioneers."

"The bones of pioneers" are, however, unsubstantial marks; real milestones, with distances, are wanted. By providing them, the West is doing American history a true service, and meanwhile is inviting an immense amount of road travel that would not otherwise come. A unique and interesting feature of this work is the selection of some characteristic sign, like the large "R" of the River-to-River Road, by which the tourist may tell at a glance that he is on the right track.

This design was originated two or three years ago by Robert N. Carson, of Iowa City, Iowa, and in a few months it was put up all the way from Davenport through Des Moines to Council Bluffs. Other road associations are adopting their own symbols, and fastening them to telegraph poles or elsewhere in a conspicuous position, to be read "on the go." Gradually the "old trails" are being made not only the best through routes, but are carefully marked for the benefit of the stranger, who usually returns home a permanent walking advertisement for these sections of the country that have the enterprise to do so good a work in so thorough and satisfactory a way.

MOTORCYCLISTS of Ann Arbor, Mich., will hold a Memorial Day run to Detroit.

Yale—Consolidated Mfg. Co., 1730 Fernwood avenue, Toledo, Ohio; 5-6 h. single and 7-8 twin models, chain or belt drive.

MAKE-UP OF LEAGUE TEAMS

Board Track Racing Season Opens with Meets in Chicago, Cleveland and St. Louis—Crack Squads in Initial Programs.

ONLY three of the five tracks included in the circuit of the American League of Professional Motorcycle Riders were in condition to hold meets on May 14, the date set for the general opening. The season opened with meets at Chicago, Cleveland and St. Louis, with the following teams competing: Chicago home team and St. Louis road team, at Riverview; Cleveland home team and Chicago road team, at the Cleveland track, and the St. Louis home team and the Cleveland road team at St. Louis.

Three meets will be held every week at each track, on Wednesday, Saturday and Sunday evenings. An F. A. M. sanction will be obtained to cover the three meets for each week. After the road team has covered the entire circuit it will automatically become the home team, and the riders formerly composing the home teams will take to the road. The tracks not yet in condition to open are located at Detroit and Cincinnati.

The teams now riding are composed of the following riders: Chicago—home team: Walters, Caffarello, Harmor, Fischer, Hamilton and Walsh; road team: Werrill, Wetherspoon, Blavin, Pinter, Hubbard and Holsinger. Cleveland—home team: Carslake, Seliga, Walker, Savalak and Harding; road team: Johnson, Glenn, Sudduth, Biggers and Bennett. St. Louis—home team: Standen, Henikman, Barolay, Good and Johnson; road team: Bibson, Smiley, Pitts, Pineau and Chable.

HIGHWAY FOR PLATTE CANYON

NOT wishing to be outdone by Denver and surrounding counties, the Platte Canyon Improvement Association has started to build a broad highway up this beautiful canyon. It is stated that when completed this will be one of the most attractive highways in the country from a scenic standpoint.

A THREE-CLUB RUN

Members of National Capitol, Washington and Maryland Motorcycle Squads Make Pleasant Trip to Ridgeville Over Fair Roads.

NO less than 150 riders took part in the three-club run of the National Capitol, Washington and Maryland Motorcycle clubs, the first two of Washington, D. C., and the last of Baltimore. The outing, which was held on May 4 to Ridgeville was considered one of the most successful ever held in this section. Nearly 75 members of the National Capitol M. C., and about 25 riders from the Washington M. C., were lined up in front of the headquarters of the former club for the start.

Traveling via the Baltimore-Washington Boulevard, the fork in the road leading to Ellicott City, which is located about halfway between Laurel and Elkridge, was reached in less than an hour. Here a halt was made and the riders were sent on in small squads, the road being too narrow to accommodate any great number of machines.

At the outskirts of Ellicott City the Washington riders were joined by the delegation from the Maryland club, about 50 strong. The newcomers acted as escorts over the Frederick pike to Ridgeville, which was reached by 1 p. m. Some of the riders remained here for dinner, while others rode on to Frederick, about 15 miles distant. The Washington riders returned to the National Capitol by way of Damascus, Washington Grove and Rockville, making 150 miles for the day.

Harry F. Seamark, agent for the Flying Merkel and Emblem, left early Sunday morning with his usual bunch of riders for Ridgeville, going by way of Rockville and Washington Grove. Most of this squad returned to Washington with the club riders, but Seamark and three other riders continued on over the Frederick pike to its junction with the new state road leading to Skyesville.

MEMBERS of the motorcycle club of Johnstown, Pa., recently made a run to Pittsburgh.

Three Perfect Scores at Savannah

DETAILED reports of the double reliability trials of the Savannah (Ga.) M. C., held April 26 and 27, show that there were three perfect scores in the three hundred mile event, while in the 200 mile run the highest scorer received 995 points.

The scores of those finishing are as follows for the 300-mile event—W. C. Everett, Harley-Davidson 4, 1,000; M. Schoreder, Thor 7, 1,000; J. W. Gregorie, Thor 7, 1,000; G. F. Balmer, Harley-Davidson 5, 995; L. G. Buckner, Indian 4, 995; A. Raven, Harley-Davidson 7, 990; J. Balmer, Henderson 7, 990; F. Laird, Excelsior 7, 985; E. E. Jones, Indian 4, 980; J. S. Cafiero, Indian 7, 980; E. S. Waters, Indian 7, 975; G. Cleary, Thor 7, 956; U. S. Ard, Harley-Davidson 7, 940; W. S. Mell, Indian 4, 925, and George Adams, Henderson 7, 895.

Two-hundred mile event—W. A. McIntyre, Excelsior 7, 995; O. A. Meyer, Excelsior 7, 990; W. C. Carraway, Indian 7, 950, and Dennis Downing, Pope 7, 945.

On the twenty-second of this month the club will hold a picnic at Tybee, for which 2,000 tickets have already been sold. Races will be held on the 2½-mile beach in both the morning and afternoon. The club has also completed arrangements for a sociability run to be held June 14 and 15 to Augusta over the 250-mile course. From Savannah to Statesboro the roads are in bad condition, but from the latter point to Augusta the going is mostly over boulevards. A feature of the run is the fact that Mayor Davant, of Augusta, has consented to act as official starter for the return trip, thus giving official sanction to the program.

SHIPPING JERICHO HORNS

OWING to the inability of the Randall Faichney Co., of Jamaica Plain, Boston, Mass., to make deliveries of its Jericho horn for motorcycles the firm has found it necessary to delay the forwarding of catalogs to many riders who have applied for them of late, and the manufacturers are anxious to have the situation called to the attention of patrons in explanation of any seeming discourtesy. The company is now prepared to deliver the Jericho motorcycle horn and to guarantee its patrons the satisfaction that has always been attendant upon the use of the Randall Faichney products. Literature can accordingly be obtained on request, and prompt shipments are assured.

INCREASE IN OUTPUT

AS a result of the persistent demands made by Harley-Davidson dealers for more of the 1913 models the company has decided to increase its output by 2,000 machines. An output of 17,000 machines was originally scheduled for the season. Many of the dealers who have written to the factory of late state that they have practically exhausted the shipments of machines to which they are entitled under their present contracts and it is to supply them with additional machines that the factory will now be put on a night and day schedule.

JOHN SYKES, JR., of Trenton, N. J., agent for Indian and Henderson machines, who has sold 100 twin Indians and two singles (1913 models), credits a large portion of his business to his plan of easy payments.

ECONOMY AND GREATER SPEED

FOR the motorcyclist who demands the best that is in his motor at all times in addition to perfect simplicity of control, one of the most interesting devices recently placed on the market is the "Speedler," produced by the Lydon Mfg. Co., and handled by the Fulton-McCutchan Co., 1146 Michigan avenue, Chicago, as distributors. The Speedler is placed in the intake pipe and its outer end is fitted with a graduating shutter which permits of admitting varying amounts of air to assist in breaking up and thoroughly vaporizing the mixture on its way to the explosion chambers. The tube of the Speedler which protrudes into the intake pipe has numerous perforations through which the extra air is liberated to assist in the vaporizing process, and because of the thoroughness with which this process is carried through considerably more speed is obtainable. In addition the Speedler works for economy, keeps the motor cooler and has a tendency to prevent the accumulation of carbon. The device is controlled by a handy fitting on the handlebar, a flexible cable being carried to the air shutter on the Speedler to permit of ready adjustment.

STRONG ADVERTISING

OWING to the fact that considerable comment has been excited of late by the snappy, straight-from-the-shoulder methods used in presenting the advantages of the Mondex-Helix Mixer, marketed by the Aristos Company, it is of interest to note that this firm's advertising is being handled by the Frank Kiernan Advertising Company, of New York City. As a result of the strong campaign waged by the Kiernan folks the Aristos Company is working at top speed to fill orders for its mixing device. Incidentally the Mondex-Helix Mixer is making friends of its own among riders who demand maximum motor efficiency with gasoline economy.

NEW ATLAS HEADQUARTERS.

HAVING moved into new and more commodious quarters at 221 Michigan avenue, in the heart of Automobile Row, the Atlas Specialty Manufacturing Company, of Chicago, is now in a position to catch up with deliveries, and prompt shipments are being made of the firm's specialties. Slight delays in shipping were unavoidable owing to the moving operations, but the staff is now working night and day to meet orders. The Atlas company has added to its line a new legging, heavily reinforced at the knee to prevent injury to the knee-cap in a spill. Among other new offerings are an improved tail lamp for motorcycles and a complete line of lamp brackets to fit all standard machines.

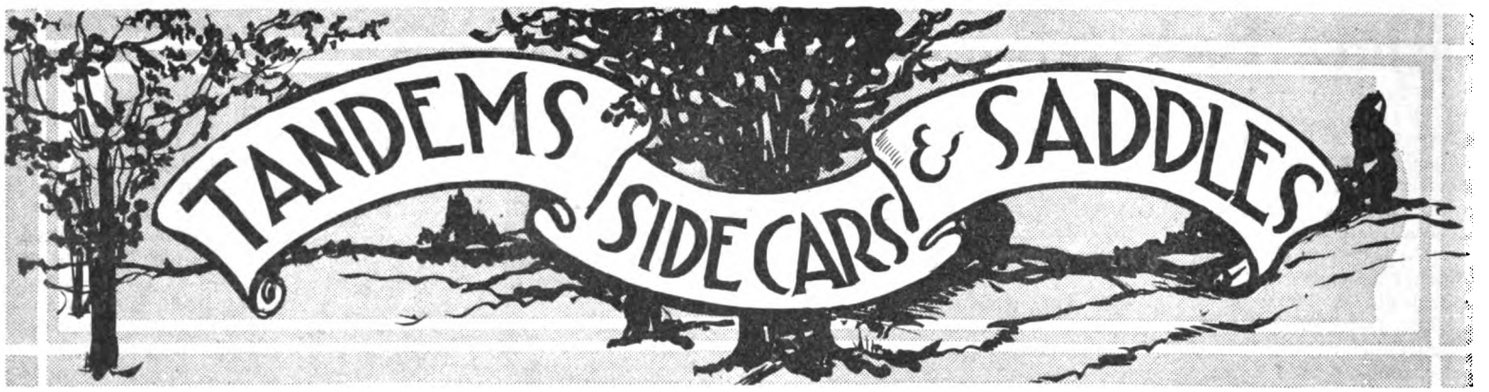
TO MAKE EARLY START

A REPORT from the Aurora Automatic Machinery Co. is to the effect that manufacturing of the Thor two-speed in conjunction with the improved motorcycle coaster hub will be started in the new Chicago plant within ten days or two weeks. In about forty-five days samples will be ready for the trade. Requests for the Thor two-speed as equipment on 1914 machines are now on file from several manufacturers throughout the country.

A RUN TO WOODSTOCK

AN old-fashioned chicken dinner was a feature of a recent run of the Poughkeepsie (N. Y.) M. C. Leaving the clubhouse the riders headed northward up the Hudson River to Woodstock, where the dinner was served.

Digitized by Google



WE had just loaded our after-luncheon pipes on the veranda of a little hotel not more than thirty miles up-state from New York City and my friend Jamison, who has spent five seasons in the saddle, was speaking.

"Don't entertain the idea that the tandem attachment is without friends simply because we are paying more attention to the sidecar than ever before," he advised, "for if you had kept as keen an eye on road developments as I have you would know that the tandem seat is a mighty popular fitting. Some folks who are supposed to be in touch with motorcycledom seem to think that the spread of interest in sidecars necessarily implies a falling off in tandem attachment sales, but I'd like to wager a pair of new goggles that the tandem makers are as busy as the proverbial bee."

Several motorcycles with sidecars had passed while we were sitting on the veranda, and one of our party had suggested that motorcycle passenger-carrying would soon be confined to the third-wheel attachments. Hence the remarks from Old Scout Jamison.

"I'm a full-fledged sidecar booster," he continued, "but I want it understood that I have a good word for the tandem seat too. I believe in taking a broad view of a big sport like motorcycling and making allowances for the preferences of all riders. The tandem has its friends and so has the sidecar, and if we get the idea that either of them is going to crowd the other out of the reckoning we are mistaken.

SPEAKING FROM EXPERIENCE.

"You've had experience with both, of course," remarked the recent recruit, with a sly wink at the other members of our party.

"You can bet I have, youngster," answered the veteran, with another wink, "and if I had a nickel for every mile I've covered either on a tandem seat or in a sidecar I could buy you another spread like the one we've just enjoyed and never miss the money. I've covered upward of four thousand miles, with either or both of our standard motorcycle passenger fittings attached to my machine. I have found that there are trips for which the tandem seat fills the bill in fine shape, and other outings on which I have felt like having a sidecar hooked up with my old chugger. So there you are.

"If a rider is going to invest in a tandem attachment I believe he should buy a good one," he continued, "for such a fitting is subjected to considerable strain and should have the material and the workmanship to stand the pace. The frame of the attachment should be so sprung that the passenger will benefit by resiliency without having to take chances on weakened construction, and there are a number of tandems on the market that are built on just that basis. The actual make-up of the tandem fitting must be left to the individual rider, but I advise him to give special attention to the springing, as mentioned above, the saddle proper and the footrests.

"I do not believe a tandem saddle can be too large, and it should be adjusted with great care. On a tandem trip much of the success of the program depends upon the comfort of the passenger, and he should have the easiest seat possible. Another point: if the springs of the attachment itself are adjustable, they should be tensioned carefully to the weight of the rider. Carrying persons of widely varying weights on one spring tension is foolish if the manufacturer has gone to the trouble and expense of providing for adjustments.

VALUE OF EFFICIENT MUDGUARDING.

Jamison gave his pipe a fresh start before continuing. "And when it comes to the footrests," he said finally, "I rather lean toward the folding type. In the little spill which the best of us will take sooner or later the folding footrest simply doubles up, jack-knife fashion, and escapes being broken—and no other part of the tandem attachment is likely to be damaged at any time. I also believe that the passenger should be supplied with handlebars, but the form and position of these must be left to the person who is to use them. Bars that would suit one rider might prove very comfortable for another.

"Mudguarding is another big item for the tandemite, especially for a woman rider. A woman's skirts should be completely protected from contact with the wheel. Some attachments are supplied with efficient side guards of canvas or leather, and when they are not it is a comparatively simple matter to attach suitable guards at home."

"All that Old Scout Jamison has said about tandem attachments is true," remarked Peterson, the holder of the mileage record in our club for the 1912 season, "but I don't see how I could get along without my sidecar. I always want to carry a lot of luggage on my summer trips, in addition to a passenger, and the third-wheeler gives me the extra room I need. It's surprising the amount of stuff you can stow away in and around a sidecar, if you go about the job carefully.

MAKING THE MOST OF THE SIDECAR.

"The sidecar I bought was not supplied with a rear luggage rack, but I had one made and attached at a small outlay, and in addition to providing for a good-sized case for general luggage it leaves room for a combination toolbox and battery holder. I use electric lighting on the sidecar, and thus avoid trouble when I want to detach the outfit from the machine. A gas tank supplies the motorcycle headlight.

In addition to the material carried on the rear rack I can stow away quite a lot of stuff in the foot of the car itself without bothering the passenger. I always carry a serviceable robe to protect my companion against dust and mud, should we be caught in a shower, and oilskins are also to be found in the sidecar kit. Some of the new model sidecars have neat tops and side curtains, so that travel

Harley-Davidson M. C., of New York City, on a Recent Sunday Outing.

Digitized by Google

is fairly comfortable even in rainy weather, and I think I'll invest in one of those when I make a change.

"Once the sidecar is properly attached there will be no trouble, but some indifferent riders hook up a third-wheeler almost any old way and expect perfect service. Very often they don't get it. They're not entitled to it under such conditions. To begin with, the sidecar must be in proper alignment. Its wheel must be parallel to the wheels of the motorcycle. If it is otherwise the outfit will not handle well, extra strain will be imposed and the tire on the sidecar wheel will be subjected to unnecessary wear. No tire can stand up properly if it "toes in" or is continually trying to pull away from the car and run off on a tangent of its own.

"See that the connections are properly figured out, that the strain is being placed on the motorcycle at points where it will do the least harm and that the wheels run true, and any sidecar will stand up to its work month in and month out. If four-point suspension of the sidecar is possible let the rider arrange for it, by all means. Four connecting bases give extra strength and rigidity, but the extra mooring is not essential. I have gone through all kinds of roads with my passenger attachment fastened to the machine at only three points.

GENERAL MAKEUP OF THE SIDECAR.

"I never advise a rider to buy a sidecar that is not easily cleaned," said the mileage record-holder, "for if an outfit is to be kept in presentable condition it will have to be cleaned frequently. Dust and mud are certain to collect rapidly on the sidecar body, and a wicker finish may give some trouble now and then. On the other hand a smooth enamel finish must be treated carefully if its lustre is to be preserved, so the choice is up to the individual rider. All sidecars that are being made by representative firms are well upholstered and stanchly built and no fault can be found with their springing, so that little can be said relative to the selection of a car. The rider who buys from any reliable manufacturer will be safe, for he can always tack on a wrinkle or two of his own if he feels so inclined, and he will find the maker ready to co-operate with him."

"Well," said the recent recruit, as he settled the front legs of his chair on the porch, "I am neither a tandemite nor a sidecarrist, but I am a dyed-in-the-wool motorcyclist, and when you chaps devote so much time to talking about comfort on the road you make me feel like putting in a little of that easy-riding conversation on my own hook. I use a regulation saddle of a make that is known from coast to coast, and if it isn't just as comfortable as Jamison's tandem seat or Peterson's sidecar I'll eat it. It's a broad saddle type, one built on generous and commonsense lines, and it gives me the maximum springing effect without being 'bouncey.' There's a good deal in that. If a motorcyclist is going in for long trips he should see to it that the tension of his saddle springs is just right, neither too stiff nor too weak. A saddle springing system should absorb all serious road shocks, of course, but it should never produce a rocking-chair effect.

THE SADDLE A NO-TROUBLE FITTING.

"There was a time," asserted the recent arrival in the ranks, "when the saddle problem was with us day and night, but in these days it is a simple proposition to obtain a motorcycle seat that will be both comfortable and serviceable. As for the springing, there are several leading systems, differing considerably in make-up but each guaranteeing satisfaction.

"Now and then I see a motorcyclist using a small saddle with a sharp pommel, evidently with the idea that such a seat looks 'really devilish' when the mount is jacked up on the stand somewhere in a public place, but this is a wild notion. Non-riders are more impressed with an appearance of comfort about a motorcycle saddle than with any leaning toward racing types, so it is hardly worth while to use a small, hard saddle in the effort to create an impression. It pays to try out several large well-sprung saddles so that the one best suited to the individual rider may be chosen.

"One more point: it never does a saddle any good to sprint along the road and vault aboard with a thump that strains every part of the old chugger. Machines of today do not require such strenuous methods; the rider is able to take his place in the saddle quietly and purr away without any display of acrobatics. This vaulting business is hard on saddle springs, and it is unnecessary. Therefore, let's cut it out."

Old Scout Jamison looked at his watch. "Holy smoke!" he ejaculated, "we've been gabbing until the best part of the afternoon has gone over the hill. It's almost 3 o'clock. I'm going to streak it for home and any of my friends who feel so inclined are at liberty to fall in."

We knew this announcement meant some excitement on the homeward run, so we were not long in getting under way, but I believe we all benefited, at least indirectly, by our little chat on the veranda, and I would not mind resuming it on some quiet Sunday afternoon.

LIVING UP TO A NAME

IN THE accompanying photograph is shown a salesman who strives to make "Enterprise" something more than a name. He is in the employ of the Enterprise Motor & Cycle Company, of Oklahoma City, Okla., and most of his time is spent on the road, skipping about from prospect to prospect and lining up orders. The photograph is reproduced primarily to show the extremely neat method used by the rider to carry the case which contains his catalogs and other literature. It is fastened on a specially constructed rear luggage rack.

WORK has begun on a five-story addition to the Morgan & Wright Company's plant at Detroit. The new building will be 94 feet by 250 feet and will cost $100,000.

KEEPING the SPEEDOMETER in TRIM

T.D.M

THERE having been a shake-up in the police department in the city where our club has it headquarters, quite a number of the members had been summonsed for speeding so as to show the "men higher up" that the motorcycle cops were on the job. Our club treasurer went about with a melancholy air, for with brother riders shelling out at the rate of five plunks each, the club dues were extremely likely to suffer. Most of those that paid toll to the city took it as a matter of course, but several disconsolate ones still grouched over the fines. The talk soon came around to speedometers, as several defenses on speedometer indications had been broken down by the officials and the unfortunate ones fined more heavily than those that pleaded guilty.

"That's the trouble with a front-drive speedometer," said one of the grouchy riders. "When I was riding up the avenue, the holes in the asphalt made the hand wig-wag like sixty. There was a blur there, and I knew I was going somewhere between 11 and 44 miles an hour, so when Jones nabbed me it was all off. He swore to 30, and I had to let it go at that. 'Five good round iron men,' said the judge, or words to that effect. Now I neither am sure how fast I went nor how far I've been since I put the meter on."

"The flipping to and fro of the hand only helped out the cop," said the secretary. "The meter I have rigged on the front of my machine was steady as a die, but when I showed my maximum hand at 15 miles, the judge's argument in rebuttal, as the lawyers say, was 'seven dollars!'" The secretary turned to the previous speaker. "You say that the hand of your speedometer vibrates," he remarked. "How have you got the meter rigged on?"

FRONT AND REAR DRIVES.

"The usual way," answered the melancholy one, "gear-ring on the wheel, pinion on the moving fork member and meter on the bar. I oil the sliding parts regularly, but the hand still wobbles badly when the roads are rough. I guess it's the meter that needs refitting; I'll take it over tomorrow to the works."

"If you must have the meter driven from the front wheel, why not fit a flexible drive of some sort," argued the secretary. "As far as following a Blue Book or route card is concerned, you need a front-drive instrument. There's no slip to a front wheel, and where it comes to tenths of a mile in unknown places and there are two crossings close to each other, an error in the meter may send you on the wrong road. Ask our honorable vice-president there; he's got a rear-drive meter." "And both stand and road mileage, too," said a voice. "Lots of the former."

"There may not be any slip in a front wheel, but it must also be admitted that there is no wobble in a rear wheel speedometer," said the official just maligned. "As to the question of stand mileage, I have a cluch in the shafting which I have conscientiously tried to release every time the machine has been put on the stand. So successful have I been with this clutch that I rode over 20 miles at one time without reengaging the clutch and got no record of speed or distance whatsoever. Consequently, I think that the charge of counting in stand mileage is unfair.

"It depends upon the speedometer itself, it seems to me," he continued. "There are some instruments that will get wobbly as soon as wear of any kind occurs, while others seem to give steady readings after they have been in hard service for months at a time. If anyone were to ask me what speedometer he should buy, I might tell him the name of one that I use, but if he wanted a front drive one, why, there are lots of good ones.

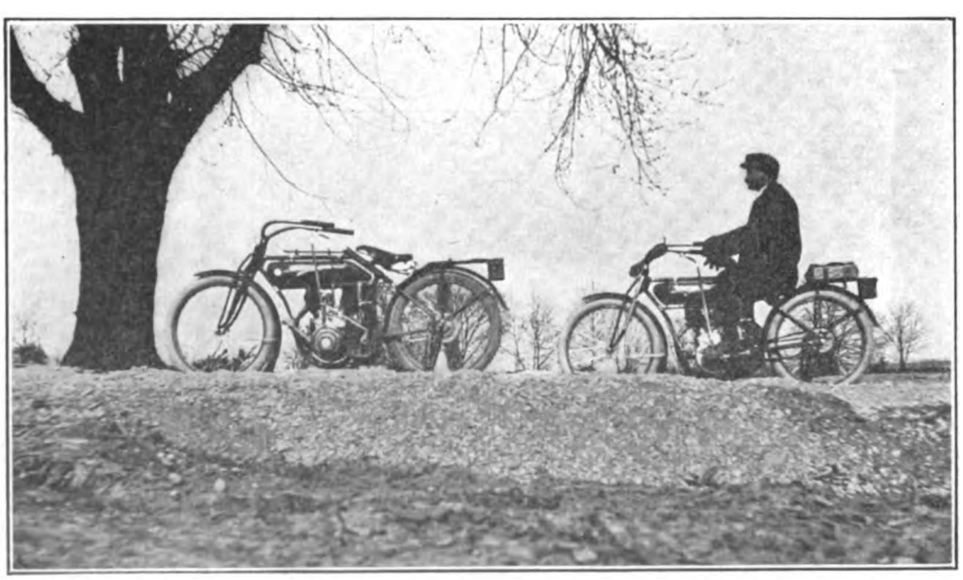
REASONABLE ATTENTION NEEDED.

"Then there's the human end of it. Provided the rigging is made all right, and the instrument is good, it's up to the rider to take care of the whole apparatus. The meter needs no oiling, so the care should be given the driving mechanism. If a shaft is used, the casting should not hammer or pound any part of the motorcycle and a little lubricant will not do the gearing and shaft any harm; neither will keeping it free from dirt and water. By lubricant, I mean something that lubricates, and this lets out vaseline, which is only a rust-preventer.

"You can't do anything with a badly-worn speedometer nor with one that is badly built. The best way, particularly if you are going to tour, is to get a reputable instrument and have it fitted by the makers. if possible, or their agents. In running with it for some little time, you will get to know what its errors are. Quite a few of them have some trifling error or other which develops in course of time. My particular instrument is two miles per hour too fast and about 100 yards out in three miles. Neither of these errors is serious, unless I am to be judged by my speedometer hand for speeding.

ON OHIO'S DAMAGED ROADS

BECAUSE of the recent floods in Ohio, miles and miles of what formerly constituted excellent highways have been totally destroyed. Motorcycle tourists, therefore, will do well to steer clear of the Miami Valley and other affected parts of the state. In many places temporary roads have been built, a sample of which is shown in the accompanying photograph. F. L. Valiant, advertising manager of the Miami Cycle & Manufacturing Company, recently traveled fifty miles through the flood zone and reports that the roads were in such bad condition in places that it was necessary to push, even with a two-speed machine. Numerous bridges are down.



Digitized by Google

"When you fit a speedometer," continued the club president, "see that the gearing will run equally well forward or backward, and examine it regularly to see that nothing has slipped out of place. The meter is a good check in all kinds of riding, for if you find that you go only so many miles per gallon one day and less over the same route later on, something may be wrong with the bus, which you wouldn't have found out until you, possibly, found it disabled. It is the same with speed as with mileage per gallon."

"I judge that you're strong for centrifugal speedometers, but would you recommend a magnetic drag instrument?" asked the secretary.

"Personally, I would not," answered the president, "as I haven't much faith in them. In all fairness, though, I know of fellows who have had excellent service out of such meters and were more than pleased with them. This refers to the first-class article only, of course. Between a badly-built centrifugal meter and a magnetic one in the same class, there's mighty little to chose. Then again, there are new models of magnetic meters coming out regularly, and as I cannot afford to rig up my bus with three or four meters at one time I am unable to say anything about them from experience. Maybe after I had used one of them I might have more confidence than I now have in them as a class."

A WORD FOR THE MAGNETIC TYPE.

"You have a curious method of arguing," remarked the secretary. "You say you wouldn't recommend one fitting because you haven't much faith in it, and then you turn around and say that with recent improvements taken into consideration you may be wrong about the whole business."

"I think that's quite right and stick to it," said the president. "I can't try out everything, and because I prefer one principle is no reason for saying all other principles are bad. The latter brand of argument I leave to young riders with powerful twins and a mania for high-speed runs over short distances. I'm not arguing to carry my point in a contest of words."

"Well, I've used a magnetic type meter for over a year and have had satisfaction from it," replied the secretary. "It is compensated for temperature changes and front-rigged with a flexible shaft drive and I must in fairness say a good word for it."

THE MONDEX-HELIX MIXER.

MOTORCYLISTS who are giving attention to gasoline economy and the obtaining of maximum results from their fuel mixtures will be interested in a neat little booklet that has been issued by the Aristos Company, 250 West Fifty-Fourth street, New York City, telling the story of the "Mondex-Helix" mixer. This device is credited with breaking the fuel particles to unusual fineness and thus diffusing them thoroughly and evenly with the air. The result is a mixture of remarkable efficiency with which the motor is enabled to put forth its best efforts at all times and with minimum gasoline consumption. The Mondex-Helix booklet is worth having. It tells the whole story in interesting form.

WITH PASADENA RIDERS

MORE than 100 motorcyclists of Pasadena, Cal., participated in the first run of the season, held under the auspices of the Pasadena Motorcycle Club. The course was through Hollywood, Lankershim, Owensmouth, Van Nuys and Calabasas to Topango Canyon, noted for its beautiful scenery. The return was made by way of Santa Monica.

Twenty members of the Pasadena Club are planning to take part in the Sunset Ramble with 300 members of the Los Angeles M. C. This run, which is to cover ten days, will bring the riders through San Francisco and other points of interest in the northern part of California. Part of the time will be passed at the State Convention of the California State F. A. M., to be held in San Jose. Leo Owen, of Pasadena, who is State F. A. M. commissioner and president of the State organization, will preside at the convention.

MOTORCYCLISTS of St. Cloud, Minn., are planning to place route signs on the roads leading from their city.

ECLIPSE CLUTCH SUITS

IT IS believed that at least one of the cases instituted by the Eclipse Machine Co., of Elmira, N. Y., for alleged infringement of the Ellett patents covering multiple disc clutches will be disposed of in June. The Eclipse company is seeking injunctions and damages in a Pennsylvania case against the Hendee Mfg. Co. and George S. Maslen, the latter handling the Indian machines in Philadelphia, on the ground that the Ellett patents have been infringed by the defendants in the manufacture and sale of Indian motorcycles. The New Jersey case is against Walter Goerke, Indian agent in Newark, and the New York action is against Arthur H. Patterson, who distributes Indian products in Brooklyn.

It is understood that in these cases the Eclipse Machine Co. claims that the inventions covered by their patents have largely advanced the motorcycle industry by making an effective multiple disc clutch available, and that therefore its rights broadly cover motorcycle clutches of that type. The Eclipse Company is represented by Lawyer Archibald Cox, of New York City.

BROOKS BACK FROM THE SOUTH

C. B. BROOKS, of the Twentieth Century Mfg. Company's hustling staff, has just returned from a successful trip through the southern states, where he found the outlook brighter than ever before in the motorcycle and accessory field. After a day or two at the headquarters of the company he started on another business journey which will carry him through all the larger cities in the States of New Jersey and Pennsylvania.

AT AN average cost of $13.20 per year a policeman of Somerville, N. J., claims to have ridden his motorcycle more than 14,000 miles during the past three years.

PATHFINDER PLANT BUSY

LATE reports from the headquarters of the Pathfinder Lamp Company, 149 North Fourth street, Columbus, Ohio, are to the effect that the demand for its motorcycle product is exceeding all expectations. The Pathfinder company succeeds Bennett & Morse, and has already perfected an organization that insures a continuance of high-class manufacturing methods and of prompt deliveries.

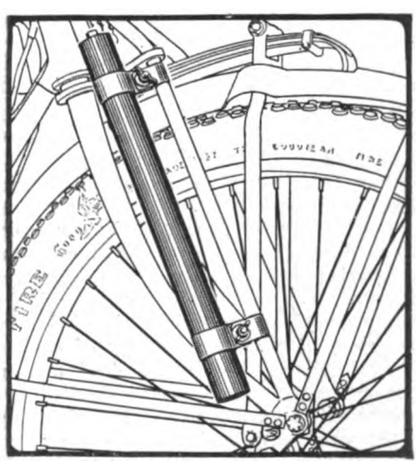
The Pathfinder lamp has a body that is hand-made from one piece of heavy-gauge brass. The front door is of spun brass, hinged, and is fitted with a removable glass 5½ inches in diameter. The rear door is also hinged and the handle by which the lamp is turned on its swivel base is riveted to the double-reinforced back. The swivel feature is a novel one in motorcycle lighting. The lamp is so mounted that it may be turned to throw a beam to the side of the road as well as directly ahead. The burner is of German lava on a one-piece cast holder and is adjustable for focusing. The brackets are neatly designed and an individual pattern is provided for each standard make of motorcycle. All parts of the lamp and brackets are heavily nickeled.

MERKEL SUB-AGENCIES

P. I. HAYNES & CO., of Chestnut and Fourth streets, Columbus, Ohio, distributors for the Harley-Davidson, announce the following sub-agencies: Arnold & Bowers, Raymond; Reese & Miller, Plain City, and G. W. White, Delaware.

AUXILIARY FUEL SUPPLY.

ONE of the latest motorcycle accessories is the Non-Push Gasoline Tube, which has just been placed on the market by the Parisian Novelty Company, of Chicago, a firm that has specialized on machinery and tools for years past. The Non-Push tube weighs about 16 ounces and will hold enough gasoline to run a motorcycle eight to ten miles. It can be attached to any make of machine by self-adjusting brackets which are furnished with it.



The new product will no doubt be welcomed by riders who have been compelled to push their mounts to a garage when the tank supply of fuel was exhausted on the road, and it also helps to solve the transportation problem. There are many other conditions under which the Non-Push tube would prove very valuable, and that it will meet with a ready sale seems certain. Full information can be obtained by addressing the Parisian Novelty Company.

Fifteen Riders Finish Newark M. C. Run

OF THE twenty-six riders who started on the 200-mile reliability run of the Newark Motorcycle Club, of Newark, N. J., fifteen signed the final checking sheet shortly after 6 p. m. Sunday, May 11. Eleven of the fifteen riders finishing the run were members of the New Jersey M. C., of Newark. A few of the survivors believe that they came through without demerits, but the official announcement has not yet been made. The start was made from the club headquarters, Broad street and Belleville avenue, and when Allentown, Pa., the turning point of the run, was reached, twenty of the participants were on hand.

The roads throughout New Jersey were good with few exceptions, but in Pennsylvania the going was bad, and especially so from Easton to Allentown. At Easton the party was met by a delegation of fifty members of the Allentown M. C. There were four secret controls, three of which were located at Pine Brook, Hackettstown and Chester, while the fourth was a roving one, looked after by William James, the referee.

Those finishing the run on schedule time were: Herbert A. Weakliem, William Sincox, Joseph Hester, Mr. and Mrs. S. E. Holten, Watson J. Klueczk, P. Wilmer Stevens, G. H. Riechey, O. W. Stevens, Edward MacDougall, H. Gertenner, Carl Bush, Andrew Bohsen, Seth Eberhardt and William Allen. All of the withdrawals from the run were due to breakdowns. Mrs. S. E. Holten, who finished the run, was the only woman entrant.

HENDEE MAKES DONATION.

THROUGH Howard French, of Baltimore, the Hendee Manufacturing Company has subscribed to the Legal Action Fund of the National Capital Motorcycle Club the sum of $25 to be used in the club's fight to determine what rights a motorcyclist has in the use of his property. This fight has been going on since January 6 last, and no doubt will be quite long drawn out, as it is recognized by both the club and the District of Columbia authorities that the case will set a precedent for country-wide use.

The Legal Action Committee of the club is hampered in the fight by the fact that there are practically no precedents which can be cited in this case, and a decision as to the unreasonableness of the local police regulations is hard to secure on account of the unfamiliarity of the presiding judges with the subject of motorcycling.

THIEM CONVERSION SET

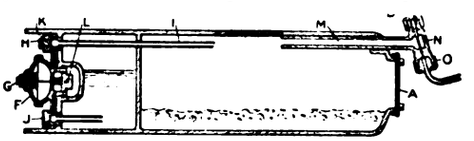
ONE OF the most interesting offerings recently marketed for the motorcyclist is the Thiem Conversion Set by which any standard belt-driven machine may be equipped with a planetary system of two-speed and free-engine transmission. It is sold by the Perfection Two-Speed Hub Co., of Fairfax, Minn., and is designed, as the name implies, to meet the requirements of the rider, whose mount is not originally fitted for two speeds. The company's slogan "It's all in the hub and starts with a crank" tells part of the story, and the remainder is embodied in a neat booklet that will be sent upon request.

In making the attachment of the conversion set it is necessary to do away with the original rear wheel, pedals, etc., and to widen the rear forks about one inch. The fitment adds less than ten pounds to the weight of the machine, is noiseless in operation, permits of coasting free with engine and pulley rim dead, picks up the spark instantly and gives no shock in gear changing. The device can be locked in high and the machine pushed along to start, without using the crank. When starting on the stand on high gear it is cranked direct, on the right side, but when starting on the ground in free position the crank is operated on the left side and rearward through the gears. In operation the axle travels forward with the rear wheel when in high; is held stationary when in low and revolves backward when free. Thus the gears are never out of mesh.

MEMBERS of the Shelbyville (Ind.) M. C. recently made a Sunday run to Connersville

SIMPLE LIGHTING TANK

AN unusually compact tank for motorcycle lighting purposes has recently been placed on the market by the Tank O'Gas Company, of Portland, Me. One of the most interesting features is that the tank may be recharged by the user without difficulty and more economically than an ordinary generator. The tank is made in two sizes for motorcycle service, one type weighing seven pounds and the other five. When the tank is to be refilled it is stood on end, the cap A is removed and about two pounds of carbide are placed in the receptacle.



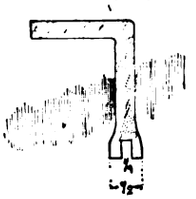
The tank is then inverted and the nut B is removed to permit of filling another chamber with water. The nut B is replaced firmly and the tank is placed horizontally with the valve D upward. An air pump is then attached at the valve C and the tank is supplied with a light air pressure. After this it is ready for use, and is attached to the motorcycle at a convenient point, with the valve D upward. The working pressure may be varied by adjusting the headless screw G.

FREED INCORPORATES

A. FREED, of San Francisco, Cal., Pacific coast distributor for Thor motorcycles, has incorporated under the name of the Pacific Motor Supply Company. Mr. Freed has been called upon to make extensions of late in order to keep pace with the heavy demand for 1913 Thors on the Coast.

NEW MECO OFFERING

"WE HAVE made it a rule not to catalog an accessory unless it has merit and not to manufacture a part unless it is badly needed by motorcyclists," writes the Motorcycle Equipment Company, of Hammondsport, N. Y., "and working on this basis we have decided to add to our list the Meco clutch adjuster for Indian motorcycles. As there is no screw-driver on the market suitable for clutch adjustments, and riders are frequently reminded of the need of one, we believe the latest Meco offering will find a ready sale. It retails at 25 cents, with a discount to the trade."



BOSCH MAY GIVE TROPHY

MOTORCYCLISTS throughout the country, as well as speedsters who intend to compete in the championship events at the coming F. A. M. convention in Denver, will be interested in the statement that the Bosch Magneto Company is likely to give another handsome trophy for the amateur rider showing the highest score for the series of races. The company has not made a definite announcement as yet, but it is strongly intimated that the record-chasers will once more be given an opportunity to strive for combination honors, the amateur title and the Bosch trophy that goes with it.

NEW SIMPLEX PLANT

IN ORDER to obtain better manufacturing facilities the Simplex Machine Co. will move from its old headquarters in Brooklyn, N. Y., to a larger plant at Forty-first street, near Third avenue, in the same city. In the new quarters the firm will have double the floor space that was available in the old factory, and it will be possible to make extensions in all departments. The company is giving special attention to its delivery vans, for which there is an unusual demand, and a number of congratulatory letters have been received from firms that are using the vans in light commercial service.

JOHNSON HAS RECORD WEEK

FROM the Frank D. Johnson Company, of 660 Main street, Worcester, Mass., comes the announcement that the company has just made a record for a week's deliveries by shipping 25 machines. Mr. Johnson has been forced to put in some overtime work in order to keep abreast of the demand for Indians in his territory.

BUYING LAMP INSURANCE

By Rodman Barry

WHEN I speak of "Buying Lamp Insurance" I may not be shooting my idea across with the Socratic directness to which I have accustomed you in previous articles (boy, page Mr. Socrates and slip him our apology) but I am using those three words because they really tell a big story for the motorcyclist. When a rider invests in a reliable lighting system for his machine he is purchasing the finest kind of insurance, an even better brand than we receive from the big companies when we take out standard policies, for the latter simply protect us against loss after the trouble has occurred, while a dependable lamp wards off the trouble. Thus it may be regarded as a means of genuine insurance.

So persistently has the lamp doctrine been preached of late that riders must be few indeed who fail to recognize the importance of the lighting system, so that this phase of the situation need not be dwelt upon here. Instead it will be the aim to discuss from a non-technical viewpoint some of the ordinary questions that present themselves to the rider who is equipping his mount with a lighting outfit. The average rider of today is somewhat at sea as to whether he should buy a tank, generator or electric system, and on a recent visit to the leading agency in our town I decided to probe the proprietor for a little inside information along these lines.

"Are there any hard and fast rules to determine which system will give best results in general service?" I asked.

"Not a single rule," was the reply. "I have satisfied patrons among users of each of the systems, and if you talk with these riders you will find that each one can point out advantages in the form of lighting he uses. Therefore it is unfair to attempt comparisons. The main idea should be to purchase the lighting outfit from a reliable manufacturer or dealer, and to follow instructions closely for fitting and operating it. The maker of a lamp knows the conditions under which his product will give greatest satisfaction, so that it always pays to accept his advice. Buy a good lamp in the beginning and then give it reasonable attention to keep it good.

FITTING THE LIGHTING SYSTEM.

"I find that the average rider is not as much puzzled in the selection of a system as he is in fitting it to his machine," continued the dealer. "It may seem like a simple proposition to attach a lighting plant, but the careful motorcyclist knows that there are quite a few points to be kept in mind. If a tank or separate generator system is used care must be taken to place the source of supply so that it will not disfigure the machine or be exposed to serious damage in a spill, and so that the pipe line will not be in the way. If a close-coupled lamp and generator are used the problem is somewhat simplified.

"There are a number of suitable places for fitting a gas tank on the standard motorcycle, and the selection of one is largely a matter of individual choice. The tank may be placed on the top tube, just back of the steering-head; on the front mudguard; across the handlebars; on the fork or on the luggage-carrier. There may be other positions but those mentioned are the ones commonly used. I prefer the top-tube position, for several good reasons. When the tank is in that position it does not affect the balance of the machine, is not noticeably in the way and is easily connected with the lamps. It is always well to keep in mind that a gas tank placed on the front fork or across the handlebars may affect the balance or steering of the mount. The luggage-carrier position does not affect balance, but is not always handy. Still there are several neat and economical devices now on the market by which a tank can be carried on the luggage-carrier if the rider does not favor the top-tube position.

HOW TO AVOID TROUBLE ON THE ROAD.

"What about the electric system" I inquired. "Do riders experience any trouble in fitting one, as a rule?"

"I have not heard of a case where difficulty was encountered," answered the dealer, "but it should be stated that the rider will do well to follow instructions and not experiment to any extent on his own account. The motorcyclist who is interested in the electric system will find practically all of his problems solved in an article by William Hetherington, Jr., that appeared in April 17 issue of MOTORCYCLE ILLUSTRATED. This writer discussed the electric outfit in all its phases, and showed practical diagrams for wiring and fitting the lamps.

"Once the electric system is properly wired and the lamps adjusted it is not likely to give trouble on the road. The same may be said of the tank and generator outfits, but I believe the latter will require a little more attention to keep them at their best. For example, the rider should always see to it that the water in his generator is as high as possible when leaving home for a trip, and that it is renewed for each run. The latter operation implies opening the drip valve to drain the old water off. Adherence to these rules will help to keep the generator up to the mark. When the machine is put up for the night the carbide chamber should be removed from the generator, the sides should be scraped and the whole interior wiped dry. Then the carbide supply in the basket should be attended to and the water chamber refilled. The lamp will then be ready for service again as soon as the water is turned on."

MOTORCYCLE LAMP SIZES.

"Some of the motorcycle lamps I notice these days are almost as large as those fitted on automobiles," I remarked. "Do you favor an exceptionally large lamp for the single-tracker?"

"There is a limit, of course," answered the dealer, "but I prefer seeing a lamp oversize rather than the other extreme. The rider cannot have too much light on his night trips. He should also focus the beam so that it reaches ahead as far as possible for country road work, while a more diffused light is advisable for town service. Then there is the matter of care for the burner. If the flame is turned too low carbonizing will follow and the tip will be clogged, while a flame turned too high may crack the reflectors. There is a happy medium and the rider should adhere to it. It will pay him to do so.

Digitized by Google

"I noticed a tip in one of the trade journals recently," continued the agent, "that may be found worth while on some foggy night. If difficulty is experienced in seeing the road ahead the lamp should be tilted downward as far as possible (care being taken not to bring the flame too close to the reflector), or a piece of cardboard may be used to throw the rays toward the road. Ordinarily the rays are projected in all directions and those rising upward in front of the rider interfere with his vision ahead, especially when there is fog. I regard this as a valuable tip, and it will pay the rider to try it when caught in foggy weather.

"There is one general suggestion that is always applicable," said my friend the dealer, as I pulled on my gauntlets and moved toward the door, "and that concerns the advisability of buying the lighting outfit from a reliable firm. A good lamp is always worth what is paid for it, and economy in lighting may be carried too far. Pay a fair price and then give the lamp such attention that it is always ready for service. You may not count upon night riding when you leave home, but you may need the lamp before you return, and it should be in condition for efficient service. A poor light may be almost as dangerous as none at all, and with our up-to-date illuminating outfits there really is no excuse for poor lighting."

TRENTONIANS TO ASBURY

MOTORCYCLISTS of Trenton, N. J., made a Sunday run to Asbury Park on May 4. There were only 18 riders in line for the start, but others joined on the route.

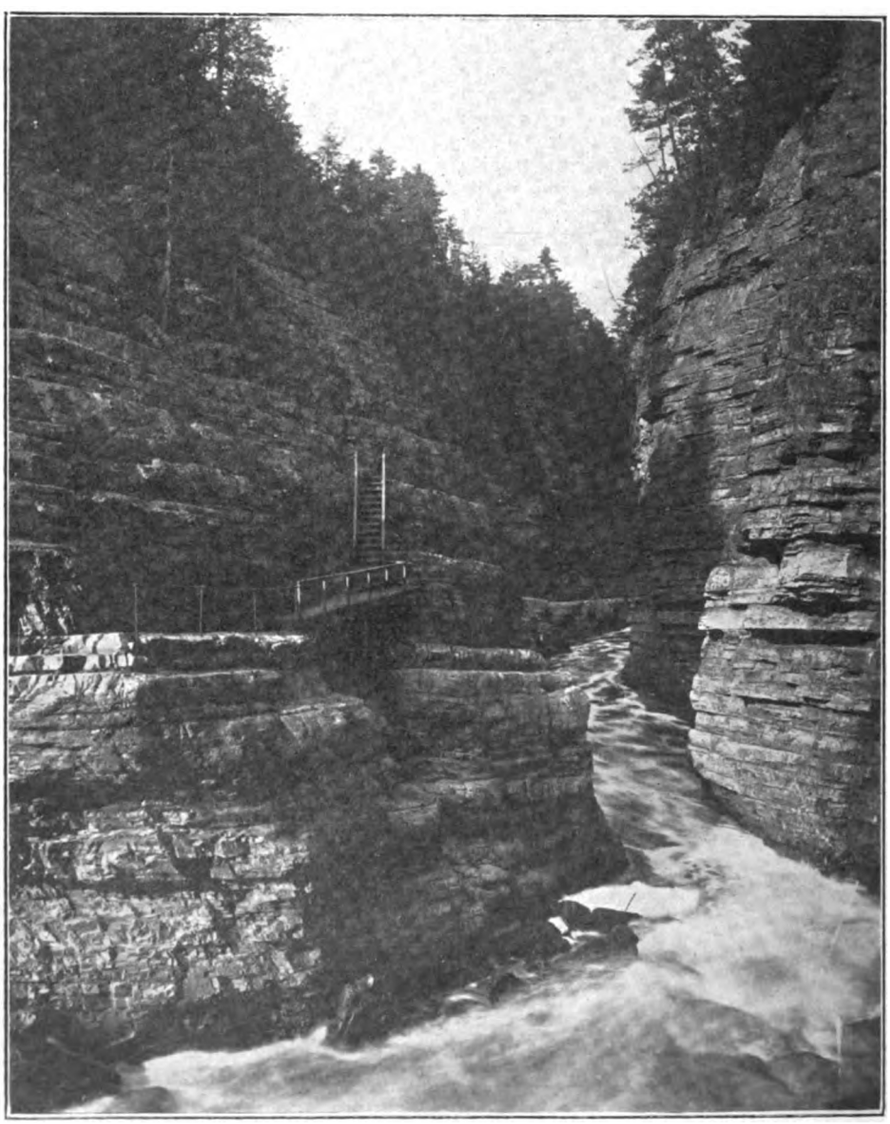
How the Tourist May Reach Ausable Chasm

ONE of the chief points of interest in northeastern New York state is the deep chasm formed by the Ausable River on its way from the heart of the Adirondacks to Lake Champlain. Picturesque throughout its entire length, at this point the river tumbles down a gorge worn through solid rock on one side so precipitous that no one attempts to scale it, though on the other side a series of steps have been built, as shown in the illustration. In summer this is a favoriate spot for visitors, most of whom come to Port Kent by the D. & H. R. R. or by boat, and then go inland four miles by the Keeseville, Ausable Chasm and Lake Champlain R. R., a rather high-sounding name for an electric line with a total length of only six miles.

Neither one of the trunk-line highways north and south on the New York side of Lake Champlain passes the Chasm; but it is easily accessible from either. Going north on the through route from Saratoga, Glens Falls, Schroon Lake and Elizabethtown, you cross the Ausable line at Keeseville, and ordinarily take the left-hand road at the prominent fork beyond, which becomes the State road through Peru to Plattsburg. To reach the locality shown in the picture, take the first right-hand road beyond the bridge, coming to the hotel grounds, which are on high ground not far from the gorge. Here it is best to leave your motorcycle and make the rest of the trip on foot, or, if convenient, by the hotel bus.

One planning to continue north to Plattsburg will ordinarily do best to return to the State road just out of Keeseville, because that gives unbroken macadam through Peru. There is, however, another route nearer the lake, which is all right in dry weather, but inadvisable in wet weather on account of the clay. This option would not require going back to Keeseville, but takes a rather circuitous route from Ausable Chasm through Valcour.

Motorcyclists using the Lake Champlain boats from points below, bound for Ausable Chasm, will ordinarily land at Port Kent, taking the main road west, following the general line of the electric railway to the Chasm. Of course, the option already referred to—going north via the State road through Peru or via Valcour—still holds good.



Ausable Chasm, N. Y., a short distance from Lake Champlain and well worth a visit.

Bosch Plugs

AS GOOD AS BOSCH MAGNETOS

WHEN an accessory has performed so consistently and is considered the zenith of perfect construction it is the standard by which all others are judged; it is the accessory which you, as a careful motorcyclist, should choose.

The Bosch Plug is such an accessory.

Bosch Plugs have won more important racing events than all other spark plugs combined. In the 14 prominent automobile road races of 1912 Bosch Plugs were used by every winner—14 long trying contests—14 proofs of superiority.

The tests included the

Vanderbilt Cup	**500 Miles Sweepstakes**
Grand Prize	**Tacoma Races**
Elgin Trophy	**Aurora Trophy**
Santa Monica Races	**World's Auto Road Record**

But why should these excellent performances interest you, a motorcyclist?

Because: When the majority of prominent racing drivers and manufacturers entering cars in important road races use one make of plug, you can be absolutely positive that reliability and efficiency are in that plug to the utmost degree. You can be assured of the Bosch Plug meeting every requirement which you might intentionally or otherwise impose upon it.

You make no mistake when you buy Bosch Plugs.

13,332 Bosch Motorcycle Magnetos SOLD in April

$1.00 EACH

Obtainable from most dealers, but if they have not stocked as yet can be obtained prepaid on receipt of price, from Bosch Magneto Company or Branches.

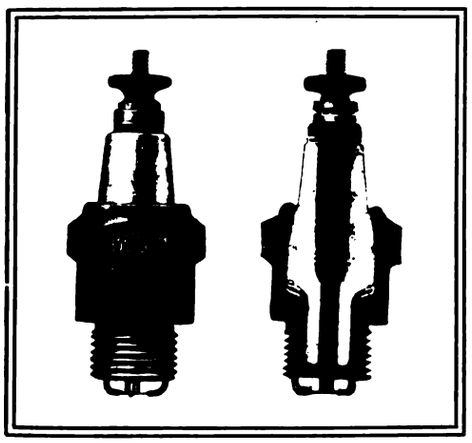
BOSCH MOTORCYCLE PLUGS.

IN THE accompanying illustrations are shown two views of the latest Bosch spark plug for motorcycles, constructed along the lines of the famous Bosch plug for automobile service. The plug illustrated has several distinguishing features, among them being the knife-edged, crescent-shaped electrodes which cause the spark to jump across the gap in the form of a ribbon of flame instead of a thin line from a point to a point. In this way the effective surface of the electrical discharge is considerably increased and the gas is ignited more rapidly.

Another advantage of the Bosch electrodes is that they offer minimum electrical resistance; the spark jumps more readily across the gap and easier starting of the



motor is thus obtained. Sooting of the Bosch spark plug, even when the motor is operating under adverse conditions, is practically impossible because the electrodes are kept at a high temperature and the oil splashed upon them is quickly burned away. Careful experiments have shown that there is no danger of pre-ignition, this detail having been taken care of in the general design of the plug. The Bosch plug is made gas-tight without the use of wedge-shaped nuts, packing washers, etc., a special metallic packing being utilized and a pressing over of the steel body under very heavy hydraulic pressure insuring complete satisfaction. The Bosch plugs are supplied in ½ in., ⅞ in. and metric sizes, and also in a special metric size for motorcycles.

CANADIAN REGULATIONS

INFORMATION comes from S. D. Dunn, Indian dealer at 35 Main street, east, Welland, Ontario, that motorcyclists with American machines may, after making representation to the department at Ottawa, enter Canada as tourists, by depositing $10 and giving a personal bond for the return of the machine. The money is returned when the tourist leaves Canada. This is about the same arrangement as the United States customs officials make with riders of foreign machines entering the United States. Mr. Dunn extends to American riders who cross at Buffalo a cordial invitation to stop at Welland, which he calls the "liveliest, fastest-growing, and busiest little city in North America."

AFTER riding his motorcycle for two years, E. E. Castle, of Reckemeyer, Ill., states that his total expenditure for repairs was the outlay for two piston rings.

FULTON-McCUTCHAN LEADERS

AMONG late trade bulletins from Chicago is one to the effect that the Fulton-McCutchan Co., 1146 Michigan avenue, selling agents for the Victor Auto Parts Co., of Cincinnati, is breaking all its previous records for sales of the Victor specialties. The Fulton-McCutchan firm is calling special attention to the Victor vulcanizer, which is made in two sizes, the smaller for motorcycles and bicycles and the other for automobile service. The device is simple and compact and retails for $1.25, complete.

Another rapid seller on the Fulton-McCutchan list is the "Old Reliable" motorcycle lamp, also made by the Victor Auto Parts Co. This lamp is unusually large, having a front diameter of 8¼ inches, and is designed to provide the motorcyclist with greater lighting power than he is likely ever to need. The lens and the body of the lamp proper are 6½ inches in diameter. High-grade material and careful workmanship feature the product, and these qualities, combined with its unusual size, keep it well to the fore as a business-getter.

The New Grinnell Glove

Grip-Tite

will make the going easier for you—

You *will* the direction, and "Grip-Tite" does the guiding, so sure, and easy is the control afforded. You cannot know the fullest measure of motorcycling skill, and pleasure, until you are properly acquainted with

Grinnell "Grip-Tite"

Ventilated Motorcyling Gloves

612 W. Highland Ave.
Redlands, Calif.
Oct. 14, 1912.

Morrison-Ricker Mfg. Co.,
Grinnell, Iowa

Gentlemen:
I wish to say in regard to the "Grip-Tite" Gloves which you made for me some time back, that as the boys express it, they are "just dandy."
As I run my own motorcycle I find them a source of great comfort, as with the ordinary woman's gauntlets I would invariably return from a long trip with blistered hands.
They are being greatly admired among my motorcycling friends and I think for handling a machine they would be hard to beat.

Yours truly,
MISS MINNIE E. WADDELL.

Vancouver, British Columbia.
November 18, 1912.

Morrison-Ricker Mfg. Co.,
Grinnell, Iowa

Dear Sirs:
We beg to thank you for your favor of the 13th inst., also for the information that you are giving us the very best terms. You will appreciate our desire to secure rock bottom prices, in view of the fact that we have to sell your gauntlets in Canada at an advance of 35% over cost to cover the duty, which makes the prices rather high when compared with English made gloves, subject to a duty of 20% only.
However, we have found your goods more satisfactory than any of the gauntlets of other makes which we have handled and trust the order just received is only the beginning of a big business between us.

Yours truly,
JOHN MILLEN & SON.

It "*Fits the Hand*" with flexible smooth comfort from the moment you put it on—so soft and pliable is the leather. Yet this velvet Colt-skin is tough and serviceable as rawhide—it will outlast several pairs of ordinary gloves, even without the reinforcement of the

"Grip-Tite" corrugated double palm and inner thumb, which doubles the wear, and then—this "Grip-Tite" feature, our latest Grinnell triumph, adds much to the pleasure of motorcycling, because its *firmer non-slip grip* makes steering remarkably *easy*—gives you constant, sure control with slightest physical effort.

You've no idea how much this "Grip-Tite" improvement reduces the physical strain of motorcycling—until you try it.

Ventilation, by tiny perforations, on the back (too small for dust), admits constant air circulation, evaporates perspiration, keeps the hand *always* clean, dry and cool.

Flexibility and utmost freedom of finger play in steering, manipulating or minute adjustments and repairs, is another strong Grinnell Glove feature, not to be overlooked.

Style 4827

Don't *think* of buying motorcycling gloves until you see the "Grinnell 'Grip-Tite'"—at most dealer's, or—

MOTORCYCLE MART

One time, three cents a word; twice, two cents a word each insertion. Agents' cards, five cents per word; two or more times, three cents per word each insertion. No advertisement for less than fifty cents.

FOR SALE OR EXCHANGE

FOR SALE.—One 1912 Emblem motorcycle with sidecar; $125. One 2 h. p. M. and M. twin motor; carburetor, coil and muffler, $50. H. Haskel, Spencerville, Ohio.

HAVE YOUR license on neat and strong. Blue prints of five-minute-made holders for Indian 10 cents by first mail. G. W. Haywood, Kingsland, New Jersey.

FOR SALE.—1912 4 h. p. Harley-Davidson, in splendid condition, equipped with speedometer, Purdy exhaust whistle and luggage tandem. Address Wm. Lauterbach, Mendota, Ill.

MOTORCYCLES CHEAP.—Every motorcycle in stock must be sold this month; need room for large shipment of 1913 Eagles. Write for list "I." American Motor Co., 2724 Michigan avenue, Chicago, Ill.

WE HAVE on hand 25 twin type and 25 single type Herz magnetos of the 1913 model. These are new instruments and it will pay to investigate. Address D-H, c/o MOTORCYCLE ILLUSTRATED.

FOR SALE.—1913 Indian twin, 3-inch tires, Corbin-Brown speedometer, run 114 miles. Purchased May 3. Above machine with all tools and extras will sacrifice for $225 cash. J. G. Sanctuary, Kings Park, L. I.

FOR SALE.—New 1912 Flanders motorcycle, 4 h. p. With Splitdorf magneto, flat belt, machine complete with full set of tools for $119 f. o. b. Athens, Ga. A. A. Jordan, Athens, Ga.

WHY BURN or shock your fingers? Air adjuster for Pilot Jet on Indian carbureter—25 cents by first mail. G. W. Haywood, Kingsland, New Jersey.

FOR SALE.—1912 Indian twin, two speed, completely equipped, tandem attachment, Prest-O-Lite tank, lamp, Stewart speedometer, horn, watch, pump, Brookes B400 saddle, new large tires, other extras. Ridden 3,000 miles. Guaranteed perfect. Price $225. J. L. Hollings, 104 Columbia Heights, Brooklyn.

WANTED.—To exchange a 1-horse combination lunch, cone and popcorn wagon costing $387, used one season, fully equipped, for twin motorcycle not older than 1912, equipped and in A1 condition; Indian preferred. Write for photo and description of wagon to Fred T. Gilbert, Box 345, Delhi, N. Y.

1912 PIERCE, 4 cylinder, almost new; guaranteed perfect condition; some 1913 improvements and equipment; 29 x 3 tires; best offer. H. E. Stout. 315 Washington street, New York.

SOL. LAZARUS 216 East 59th Street
(The man with the goods) (at Queensboro Bridge)

PIERCE four-cylinder—new—$275. Attachments, bargain. Aufmkolk, Room 611, 49 Wall street, New York.

FOR SALE.—Harley 1912 single. Run 400 miles. A1 condition. With equipment. Best offer over $135 takes it. W. D. Brooks, Cloverdale, Mich.

FOR SALE OR EXCHANGE, for single cylinder machine, 7 h. Merkel twin, chain-drive; run 300 miles; like new. A. Ehresman, Gary, Minn.

HENDERSON four-cylinder for sale. Perfect condition; run 500 miles; cost $325. Will sell for $200. A. A. Wheat, Wheeling, W. Va.

"SELF-CURING INSTANTANEOUS PUNCTURE PATCHES." By mail, 50 cents. Box of ten. Special prices by gross or half gross lots. F. J. Schumann, 31 So. Walnut street, Akron, O.

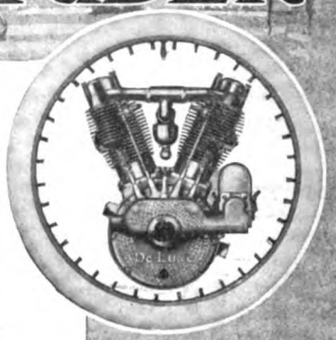
MR. MOTORCYCLE RIDER:



The joy of riding is enhanced when you ride a DE LUXE Motor equipped motorcycle.

Because there are four notable features of DE LUXE Motors:

SILENT CLEAN
FAST POWERFUL

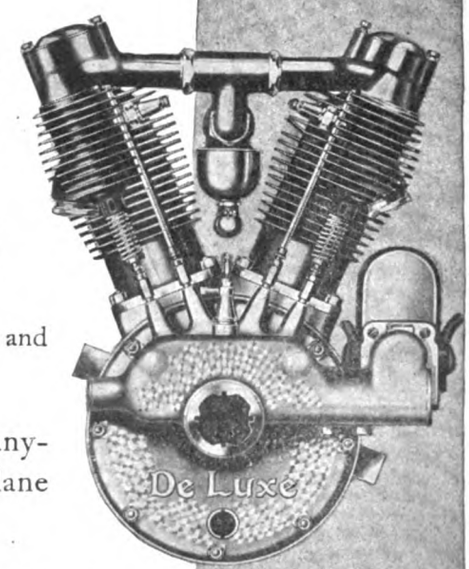
De Luxe Motors
The Heart of the Motorcycle

SO SILENT—that you almost forget that you have a motor running under you. It is like riding in a Pullman.

SO FAST—that you can pull away in an instant from any of your companions, and stay ahead of them.

SO CLEAN—that when you return from a run, your motor may be covered with gray dust, but will not look as if it had not been cleaned for a month.

SO POWERFUL—that you can climb the steepest hills and pull through the deepest sand, where others walk.



DE LUXE Motors have done more than anything else to elevate motorcycling to the high plane where no apology is necessary for it.

You cannot afford to be without these advantages, so choose a DE LUXE Motor equipped motorcycle and be a year ahead of the others.

Victor Universal Bracket.
A pair of these brackets will fit any motorcycle handle bar and accommodate any standard lamp on the market. All parts are drop forged and highly finished. This bracket is a great boon to jobbers as it will take the place of an assortment of possibly twenty different styles of motorcycle lamp brackets. List price, per pair, $1.50. packed one in a box.

Victor motorcycle lamps lead everywhere. It's a family of winners in point of perfection of finish, unparalleled durability and tremendous efficiency. Their flawless service is the logical result of accurate manufacture, discriminating selection of the highest quality materials —and, which is most important of all, an ingenuity of designing which can **never** be copied.

The PATHFINDER LAMP is made in two sizes, large and small.

Large	Front Diameter	6½ inches
	Mirror	6½ "
	Size of Body	6½ "
Small	Front Diameter	6 "
	Mirror	6 "
	Size of Body	6 "

Equipped with fork and swivel attachment. Black enamel.

Dealers—If you are groping in the dusk of indecision, vainly debating as to which line is the line for you, let our catalog enlighten you. You'll reach a decision mighty quickly. Get it today.

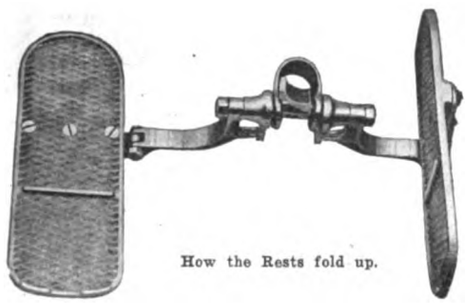
Mr. Dealer: There's a great demand for

Redmond Foot Rests



How the Rests fold up.

Price $5.00

In working position.

They can be fitted to any make of machine without the aid of tools.

No matter how old the motorcycle, Redmond Foot Rests can be attached.

They add elegance and class to the machine.

They cost so little any rider can afford them.

When not in use they can be folded out of the way.

Redmond Foot Rests are made of the best grade aluminum.

The arm is of crucible steel and the clamp so arranged that they can be made secure at any angle.

Redmond Foot Rests are sold under a positive guarantee—money refunded if not absolutely satisfactory.

Once the motorcycle rider knows you handle Redmond Foot Rests, you will find it difficult to supply the demand.

Write for special circular and dealers' discount.

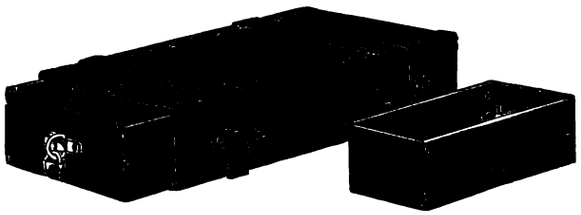
The Ideal Touring Outfit



A Monarch Big 10-14 "Dreadnought" and a "Lowe Tourist Kit"

The Monarch Motorcycle is the most powerful built, and its big motor simply romps up the stiffest grades. It starts extremely easily and can be throttled down to a walk, and there is where you realize the comfort of its fourteen horse power, as it will deliver the power at a slow speed—a feature not possible with light high-speed motors. It is a machine for day-after-day service. "Built to stand hard knocks."

The Lowe Tourist Kit Fits Any Luggage Carrier

THIS is a strong, **indestructible, waterproof** case of imported fibre, containing a sliding drawer of same material. Put together with **steel** rivets—no stitches to break in the seams and cause the loss of tools, as in leather cases.

It will be noted from the illustration that our method of fastening the case permits the drawer to be opened and contents exposed to easy access without the necessity of touching the straps.

An extra removable compartment of imported fibre for holding two inner tubes free from damage by contact with tools, etc., can be furnished to fit the drawer at slight extra cost and will be found invaluable for this purpose.

A strong feature of this case is its **lightness,** as it weighs less than the smaller leather tool bags now in use.

In brief, we offer you in this article, not a toy, but a **substantial, roomy luggage carrier,** such as motorcyclists have needed for years, and which will be an ornament to your machine.

PRICE $4.00, Complete with lock and keys. You won't sell it for twice that after you have used it.

Extra inner tube compartment to fit case.....**35 cents.**

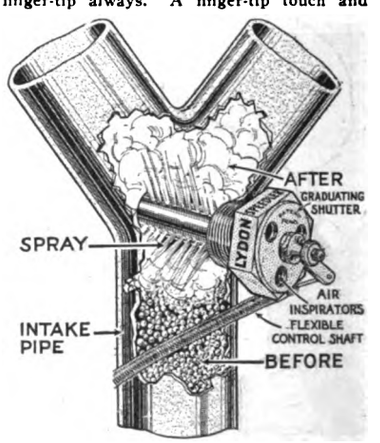
Speedler

With Handle Bar Control

Attach to handle bar in a few minutes. The marvelous speed spray for motorcycles. Lydon Speedler fits every motorcycle. For speed. For power. For cooling. For economy. Gives your motorcycle a marvelous increase in speed. Removes carbon. Primes engine. Keeps engine cooler. Positively guaranteed on 30 days' free trial. Your money back if it does not pay for itself in a month.

More Speed

A Lydon Speedler gives your motorcycle more speed when you want it. Control at your finger-tip always. A finger-tip touch and you have a marvelous increase of power, of speed and saving of gas. It's the spray that does it. The powerful cross-current air spray of the Lydon Speedler remixes the mixture to the highest degree of combustion. Speedler will give more life and value and higher speed in your motorcycle than any device ever perfected.



Increases Engine Power

Get more power and speed. Make every explosion sharp and snappy. Get greater power and quicker action in every piston stroke. Add 20 per cent to your present engine power by attaching a Lydon Speedler. Make your engine run smoother. Speedler is a perfect decarbonizer and handy primer. Pays for itself every month. It has our absolute money-back guarantee.

Use it on 30 Days' Free Trial

The Lydon Speedler is sold on thirty days' free trial. Use it for thirty days and get your money back if you are not entirely satisfied. Dealers everywhere are authorized to give thirty days' free trial. If your dealer is not supplied, write to us for full description of this marvelous money saving, power making speed device, postpaid free.

Price With Handle Bar Control $3 The price of motorcycle Speedler, complete with the additional handle bar control together with four feet of flexible cable conduit connection is only $3. If your dealer cannot supply you, send direct to us. Enclose only $3. We will send the Speedler to you, all charges prepaid, upon receipt of price. When you send direct to factory kindly give us the name of your dealer.

The True Worth of a Chain

The real value of a chain, or in fact, of any transmission, is most accurately gauged by its action under conditions such as shown here. That is the only way to bring out its true qualities. **No** road or weather conditions, or any combination of the two, can affect in the slightest the supreme efficiency of

"The Coventry" Chain

"The Motor's True Mate"

The conscientious, quality construction of "The Coventry" Chain prohibits its affording other than consistently perfect transmission service at all times. Its remarkable silence, speed, suppleness and non-stretching qualities make it the PERFECT DRIVE for every occasion.

Write for "The Coventry" Catalog and send 10c. (to pay postage) for our Tiger Color Pennant.

THE NEW BABY

They're all talking about it—riders—dealers—manufacturers.

And they're saying such nice things!
"How small it is and yet how husky!
Some kid—what?"
"Gee, but it's full of life!"
"Peach of a shape for such a little gink!"
Etc., etc.

No wonder we're proud and happy, is it?
No wonder more and more machines are being added to our list of users who have standardized on "The Baby Berling!"

Watch for the lusty new baby on your neighbor's perambulator—the one just ahead of you.

How'd you like to have a "Baby Berling" in your home! Ask mother.

ERICSSON MFG. CO., *Makers*
1115 Military Road, Buffalo, N. Y.

Digitized by Google

THE 1913 motorcyclist who rides by night is guided either by the bright moonlight or a headlight—preferably the "LUNAR" Motorcycle Lamp—the light that rivals even the brightest moonlight in penetration and brilliancy. The "LUNAR" is made of heavy gauge brass, double nickel plated. Shell being in one piece with no rings or pockets to permit of the collection of dust. Positive lock prevents rattle and jarring open of door.

Most Powerful Lamp Made

The "LUNAR" is the most powerful motorcycle light made, lighting both sides of the road by means of the beveled silvered reflector, in addition to the spot light, which is generated by the large ground glass fire test Mangin mirror, double reflecting.

Let us send you our 1913 circulars. Your dealer handles the "LUNAR" or write direct to us.

The "LUNAR" may be used with any gas generating system and is furnished regularly with a pair of full nickeled adjustable brackets at no extra cost. Allowance will be made if brackets are not wanted.

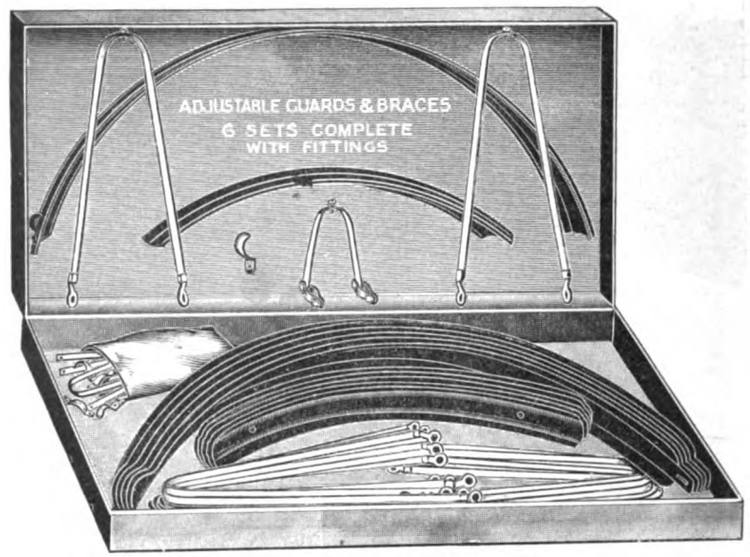
Bicycle Dealers and Repairmen

You can attach these mud guards and braces while your customer waits — and he waits only a few minutes.



We furnish 6 complete sets of these adjustable Guards and Braces packed in a corrugated paper two-cover box in a convenient package for jobbers to handle.

They fit any standard make of bicycle. Furnished in plain, black, or colored enamel and colored striped. Made of heavy gauge steel, specially treated. Attached without disturbing front wheel. Once properly attached they can never rattle or work loose. Great labor and time saver for the repairman. Enamel is of true color and won't come off unless scraped off. Our work is guaranteed—our deliveries prompt.

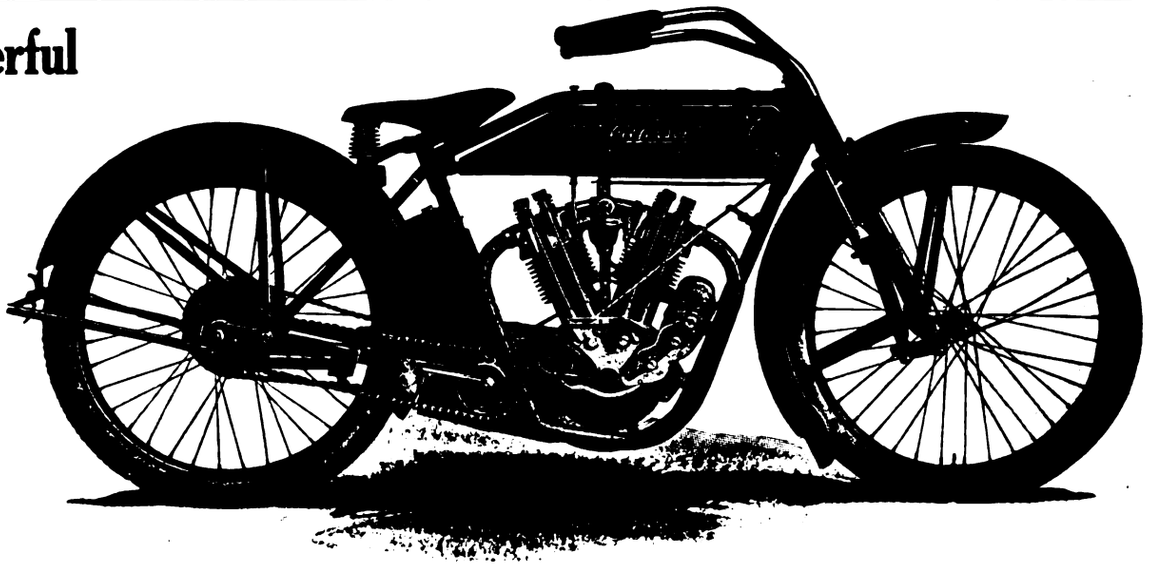
The Wonderful Jefferson Motor



For quick acceleration, tremendous power, smooth, vibrationless, clean-cut action, the Waverley Engine is easily the peer of motorcycle motors. Bosch Armored Magneto Mechanical overhead valves, large ball-bearing parts and perfect balancing complete a motor that cannot help but be perfect in service.

The perfected automobile leaf springs, for which the Jefferson holds original patents, make comfort a foregone conclusion and immeasurably strengthen the frame of the Jefferson.

For the rider who desires power, speed, appearance, comfort, durability in his mount; for the dealer who wants to make the 1913 season spell "Big Business" to him, we prescribe THE JEFFERSON.

TWO RECENT JEFFERSON PERFORMANCES.

At the first race meet held under the auspices of the Western Federation of Motorcyclists at Sacramento, Cal., on April 27th, Tompkins, riding a JEFFERSON, won the Capital City M. C. Championship and also won a twenty-mile race for trade riders. In this last race, he also made the fastest mile of the day. An amateur rider, who had owned his machine only four days, finished the New York-South Hampton 200-mile endurance run with a perfect score, winning a gold medal. Machine used was a 7 h. p. twin Jefferson. Run May 4th.

WAVERLEY MFG. CO., Waverley Place, Jefferson, Wis.

The HAGSTROM SPARK PLUG

"IT SHOWS WHAT YOUR MOTOR CAN DO"

No other spark plug brings out the true efficiency of your motor as does the Hagstrom. Its clean, crisp, sizzling spark finds every atom of charge in your motor's cylinders. It gives more power on less gasoline.

The porcelain and mica feature is an exclusive Hagstrom idea.

The electrodes are genuine imported "Meteor" metal—so expensive that few plug makers are using it.

The "Hagstrom" is the regular equipment on 1913 "Yales"—"Marvels"—"Indians" and "Velies."

Your dealer has them or will get them for you.

$1.00 EACH

Send 35c. in stamps today for a sample roll (60 inches) of Genuine "Zim" Pulley Lag—the first correct-in-principle lagging offered to the riders of America. Doubles the life and adds to the pulling power of your belt.

Your money back if "Zim" is not the best you've ever used.

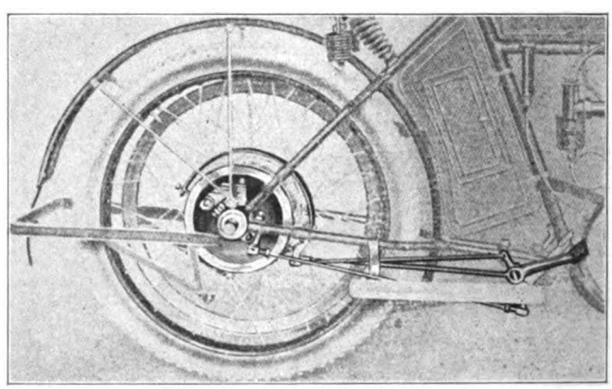
THIEM Conversion Set



Method of starting the modern motorcycle. Planetary System of Two-Speed and Free Engine Transmission which can be applied to any make or model belt-driven motorcycle.

- It does not change the general lines of machine in the least.
- It adds less than 10 pounds weight and doubles efficiency of motor.
- It is noiseless in operation.
- It can coast perfectly free with engine and pulley rim dead.
- Picks up spark instantly, same as with ordinary machine.
- There is absolutely no shock in gear changing.
- Impossible to get back kick from motor on starting crank.
- Rider can lock in high, push along and start without use of crank, if desired.
- It starts on stand in high, cranking direct on right side.
- It starts on ground in free, cranking backwards on left side through gears.
- It is not necessary to change your motor pulley.
- Starting lugs on both ends of axle.
- Twin motors as easily started as the singles, either on stand or wheel on ground and crank through gears.

"IT'S ALL IN THE HUB AND STARTS WITH A CRANK"—SOLD WITH AN ABSOLUTE GUARANTEE.

At Last—A Real Motorcycle Spark Plug!

MADE OF HEAT DEFYING, PERFECTLY INSULATING PORCELAIN—AND DESIGNED FOR MOTORCYCLES ONLY

No need any longer to use the inferior mica plug or a makeshift porcelain. This new Motorcycle Standard Spark Plug, built by the greatest manufacturer of spark plugs in the world, gives motorcycle riders a plug with a porcelain insulator that is faultless, defies heat and insures perfect ignition.

MOTORCYCLE STANDARD SPARK PLUG—$1.00

Leading motorcycle engineers of the country have pronounced this plug right in principle and construction. The length over all is 2¼"—just the right size for the limited dimensions available for a spark plug in the motorcycle motor. The porcelain is made in our own potteries. Heat cannot crack it. The bushings are case hardened. The terminal nut will take ordinary wire, ring, or special "Indian" terminal.

Comes in half-inch or metric sizes. Your dealer will supply you—or sent prepaid on receipt of price and size. Our guarantee—"Your money back or a new plug, unless you are absolutely satisfied."

A GASOLINE GAUGE Combined with Filler Cap and Pump

Just What You've Wanted Many Times

The Float signals INSTANTLY amount of gasoline in tank. It is necessary simply to turn cover of gauge rod to one side and permit it to rise. The purpose of the Cap is, of course, self evident, while the pump is useful for priming, repairing punctures, cleaning machine, or lubricating, in fact for numerous purposes where a small amount of gasoline or oil is required.

ASK OUR DEALER TO SHOW IT TO YOU. Made to fit Indian, Harley-Davidson, Excelsior (1912), Thor, and Merkel machines. All pumps are made long enough to reach bottom—not the short kind which are useless excepting when tank is nearly full.

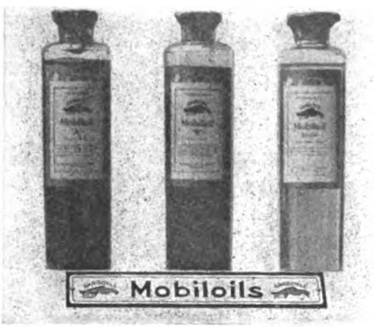
Why several grades?

Here are three 4-ounce bottles. Each is filled with a different grade of Gorgoyle Mobiloil.



The grades all differ in thickness or "body."

These oils meet the most severe physical tests that have ever been exacted from motorcycle lubricating oils. In sheer lubricating quality they stand alone.

But that, of itself, is not sufficient.

To properly reach the many friction points the oil's "body" must be suited to your feed system.

To make this condition plainer, a homely illustration may be taken from the sewing room:

A fine thread is often too light for the wear required. A heavy thread is often too thick to pass through the eye of the needle.

Neither meets requirements.

So it is with motorcycle lubricating oil.

Quality equal, the heaviest-bodied oil will prove the most durable. But to be of service it must be able to properly pass through your lubricating system.

The conditions to be met are complex. The problem is serious.

Motors differ.

Feed systems differ.

Before the oil which best combines durability with ability to meet the feed requirements of your machine can be determined, the construction of your motor must be known and carefully considered.

We have undertaken this problem with the thoroughness that has established our standing in the general lubricating field.

Every year we analyze the motor construction of each of the season's models. Guided by this analysis and by practical experience we determine the correct grade of Gargoyle Mobiloil for each make of car.

Our findings we list in a lubricating chart, which will be sent you on request.

The oil specified for your machine in this chart is the scientifically correct grade for your motor.

The superior efficiency of these oils has been thoroughly proven by practical tests.

If you use oil of lower lubricating quality, or of less-correct "body" than that specified for your motorcycle, loss of power, unnecessary friction, and ultimate serious damage must result.

A word about ourselves.

Lubrication with us is both a business and a profession.

Throughout the world the lubricating counsel of the Vacuum Oil Company is sought by engineers who must meet the most rigid efficiency standards.

Our clientele includes thousands of manufacturing plants—located in practically every civilized country.

We supply the floating armaments of the world's leading naval powers.

We supply the aeroplane fleets of the leading military powers.

Outside of the home field we supply over seventy foreign automobile manufacturers.

In buying Gargoyle Mobiloil from dealers, it is safest to order either a full barrel, half-barrel, or a sealed five-gallon or one-gallon can.

Make certain that you see the name and our red Gargoyle on the container.

A booklet, containing our complete lubricating chart, together with points on lubrication, will be mailed you on request.

GARGOYLE

Mobiloil

A grade for each type of motor

The various grades, refined and filtered to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

They are put up in 1 and 5 gallon ***sealed cans,*** in half-barrels and barrels. ***All are branded with the Gargoyle, which is our mark of manufacture.*** They can be secured from all reliable garages, automobile supply stores, and others who supply lubricants.
